Control mechanism for related control of operated mechanisms. C. A. Arens. 2,439,356, Apr. 6.
Control of rotating wing aircraft. C. F. Hodson. 2,439,089, Apr. 6.
Control panel. J. M. Wilson. 2,439,326, Apr. 6.
Controlling the temperature of gases. F. B. Halford. 2,438,998, Apr. 6.
Conversion of hydrocarbons, Method and apparatus for. T. P. Simpson, R. Lee, and F. E. Ray. 2,439,348, Apr. 6.
Conveyor slat securement. H. L. Cohen. 2,439,040, Apr. 6.
Cooler for bottled beverages, Forced air circulation. C. F. Munshower. 2,439,261, Apr. 6.
Cooling means, Shaft and bearing. W. H. Dailey, Jr., and E. A. Di Nucci. 2,439,127, Apr. 6.
Copolymer of dichlorostyrene, butadiene-1,3 and piperylene. C. C. Clark. 2,439,076, Apr. 6.
Copolymers of alpha, beta-ethylenically unsaturated phosphonic acid derivatives. R. V. Lindsey, Jr. 2,439,214, Apr. 6.
Copolymers of fumarodinitrile and alpha-substituted styrenes. R. B. Seymour. 2,439,226, Apr. 6.
Counter, Shoe. J. S. Kamborian. 2,438,920, Apr. 6.
Couplers, Alkoxy pyrazolone. H. D. Porter, A. Weissberger, and W. A. Gregory. 2,439,098, Apr. 6.
Coupling: *See*—
  Piston type quick disconnect coupling.
  Universal joint coupling.
Coupling device. G. A. Borg. 2,439,199, Apr. 6.
Course softening system. T. M. Ferrill, Jr. 2,439,044, Apr. 6.
Cover: *See*—
  Milk bottle cover.
Crayon container. J. A. Bouffard and J. G. Greemen. 2,438,895, Apr. 6.
Crossover flow device. M. T. Works. 2,439,327, Apr. 6.
Crutch. W. S. Peacock. 2,439,316, Apr. 6.
Crystal contacts of which one element is silicon. C. E. Ransley. 2,438,944, Apr. 6.
Curing pneumatic tires. T. A. Te Grotenhuis. 2,438,952, Apr. 6.
Decoy. M. E. Jackson. 2,439,167, Apr. 6.
Delayed-action switch. G. W. Anderson. 2,439,069, Apr. 6.
Detector, Magnetic field. D. H. Cunningham and H. Belar. 2,438,964, Apr. 6.
Detector, Magnetic flaw. E. G. Parvin. 2,439,184, Apr. 6.
Device for sharpening drills. J. Perkins. 2,439,144, Apr. 6.
Diamond die production and the like. C. G. Peters, F. K. Harris, W. B. Emerson, I. L. Cooter, and K. F. Neffen. 2,438,941, Apr. 6.
Diaryl paraffins and their production. M. G. Sturrock, T. Lawe, and W. E. Kemp. 2,439,228, Apr. 6.
Display rack. J. S. Lesko. 2,439,049, Apr. 6.
Distillation column with top feed, Plural section. W. F. Barthel. 2,438,988, Apr. 6.
Dithiadecane diester. H. W. Jacobson. 2,439,212, Apr. 6.
Door or drawer latch. F. J. Russell. 2,439,057, Apr. 6.
Dried meat, Producing. H. H. McKee, H. W. Keefer, and W. J. McCue. 2,439,180, Apr. 6.
Drill stand and gauge. J. F. Kellem. 2,439,008, Apr. 6.
Drying machine of the air circulating, rotary drum, and enclosing casing type. E. W. Forney. 2,438,995, Apr. 6.
Duplicating machine. R. W. Bailey and M. M. Harding. 2,439,070, Apr. 6.
Ear protector. B. O. Fanslow. 2,439,289, Apr. 6.
Electric circuit breaker. R. N. Buttrey. 2,439,126, Apr. 6.
Electric control apparatus for rapidly placing a load in any desired position. M. N. Yardeny. 2,439,329, Apr. 6.
Electric iron. T. F. Saffady. 2,439,059–60, Apr. 6.
Electric motor control system. J. R. Pattee. 2,439,096, Apr. 6.
Electric soldering iron. G. A. Hawkins. 2,439,296, Apr. 6.
Electric switch. W. E. Paul. 2,439,264, Apr. 6.
Electrical apparatus collector conditioning. F. P. Vacha. 2,439,114, Apr. 6.
Electrical circuit. R. E. Meagher. 2,439,313, Apr. 6.
Electrical circuit. M. A. Starr. 2,439,321, Apr. 6.
Electrical circuit. R. M. Walker. 2,439,324, Apr. 6.
Electrical outlet box. H. C. Keating. 2,439,090, Apr. 6.
Electrical outlet box mounting. H. C. Keating. 2,439,091, Apr. 6.
Electrical switch. C. A. Fox. 2,439,164, Apr. 6.
Electrical translating materials and devices and making them. J. A. Becker. 2,438,892, Apr. 6.
Electromagnet. A. A. Ambrose. 2,438,985, Apr. 6.
Electromechanical transducer. W. P. Mason. 2,438,936, Apr. 6.
Electromotor. E. E. Gregory. 2,439,248, Apr. 6.
Electron discharge device. P. G. Chevigny and G. J. Lehmann. 2,438,899, Apr. 6.
Electron discharge device. D. B. Langmuir. 2,439,173, Apr. 6.
Electron objective lens, Compound. J. Hillier. 2,438,971, Apr. 6.
Electronic modulation and modulation correction circuits. J. W. Rieke and R. J. Shank. 2,438,947, Apr. 6.
Electroplating rack. L. E. Schroeder. 2,439,190, Apr. 6.
Engine: *See*—
  Internal-combustion engine.
Eraser holder. W. Edwards. 2,439,162, Apr. 6.
Extruding apparatus. D. D. Jones. 2,438,974, Apr. 6.
Fabricating tanks. S. B. Settle. 2,439,266, Apr. 6.
Fastener: *See*—
  Snap fastener.
Feeder: *See*—
  Staple feeder.
  Two-way cattle and hog feeder.
Feeder for hay balers. W. A. and M. Stockton. 2,439,152, Apr. 6.
Filler, Shoe forepart bottom. E. I. Le Chapelle. 2,439,172, Apr. 6.
Fish lure. F. M. Bell. 2,439,123, Apr. 6.
Fitting, Plastic tube. G. B. Thayer and R. D. Lowry. 2,439,351, Apr. 6.
Flashless propellant powder composition. G. Barsky. 2,439,281, Apr. 6.
Flashlight lamp. J. H. de Boer. 2,438,993, Apr. 6.
Flat single bed knitting machine. G. Huber. 2,439,300, Apr. 6.
Flexible joint. B. Kujawski. 2,439,009, Apr. 6.
Flexible sheet material comprising a surface coating containing polyvinyl chlorides. J. H. McGill. 2,439,051, Apr. 6.
Float valve. T. G. Beckett. 2,439,282, Apr. 6.
Floating pressure cam. J. E. Shafer. 2,439,268, Apr. 6.
Floor clip. O. E. Rothfuchs. 2,439,220, Apr. 6.
Flotation of iron with organic acid and petroleum sulfonate. R. B. Booth and E. C. Herkenhoff. 2,439,200, Apr. 6.
Fluid flow regulator. C. Johnson. 2,438,973, Apr. 6.
Fluid seal for fittings. J. C. De Weese. 2,439,244, Apr. 6.
Fluxing method in soldering. J. F. Dillinger and C. C. Patton. 2,439,159, Apr. 6.
Foam suppressing apparatus. W. B. Leaf. 2,438,929, Apr. 6.
Forming machine. G. O. Conner. 2,439,077, Apr. 6.
Forming porous artificial masses. O. A. Battista. 2,439,034, Apr. 6.
Frame: *See*—
  Collapsible display frame.
Frame and harness for dog baths. F. L. Short. 2,438,979, Apr. 6.
Full view peep sight. W. W. Hanley. 2,439,086, Apr. 6.
Furnace and operating the same, Industrial. G. G. Lloyd. 2,439,309, Apr. 6.
Furnace with selectively controlled radiator structure, Air-heating. C. S. Stout. 2,439,109, Apr. 6.
Gamma-acetyl pimelic acid and diesters thereof. A. B. Boese, Jr. 2,438,961, Apr. 6.
Garment, Slipover. E. A. Smicker. 2,439,149, Apr. 6.
Garment hanger. R. H. Wollin. 2,439,355, Apr. 6.
Gasket. C. D. Laidley. 2,439,306, Apr. 6.
Gauge for spark plugs, Gap. L. A. Habicht and H. H. Vogel. 2,439,363, Apr. 6.

Gear: *See*—
  Valve gear.
Gear and locking device, Lawn mower. F. E. Thompson. 2,438,980, Apr. 6.
Generator: *See*—
  Oscillation generator.
  Pulse generator.
Gin, Pole. J. A. Baker. 2,439,122, Apr. 6.
Glass, Silicoborate. K.-H. Sun and T. E. Callear. 2,439,192, Apr. 6.
Governing arrangement with servomotor. F. Wiesendanger. 2,439,325, Apr. 6.
Gown, Safety. E. H. H. Rogers. 2,439,101, Apr. 6.
Grill, Broiler. I. K. Bennett. 2,439,283, Apr. 6.
Grinder, Centerless. H. S. Indge. 2,439,303, Apr. 6.
Grinder having a perforated disc, a presser plate, and a rotary knife, Food. E. V. Taylor. 2,439,028, Apr. 6.
Grinding machine for operating upon workpieces. H. N. Seyferth. 2,439,106, Apr. 6.
Grinding wheel dresser. E. A. Overstedt. 2,439,263, Apr. 6.
Grounding system for gas tank welders. W. A. Sandberg. 2,439,371, Apr. 6.
Guard device for lock mechanism. N. J. Ressetar. 2,439,099, Apr. 6.
Guide, Band. L. Hornbostel. 2,439,251, Apr. 6.
Handle for knives, hatchets, etc., Detachable. L. H. Basham. 2,439,071, Apr. 6.
Hanger: *See*—
  Garment hanger.
  Safety soap and washcloth hanger.
Harvester-loader. A. R. Wurtele. 2,439,278, Apr. 6.
Heat exchanger. W. Glover. 2,439,208, Apr. 6.
Heat-resistant copolymer of styrene and parachloro-alpha methylstyrene. J. P. Kispersky and R. B. Seymour. 2,439,213, Apr. 6.
Heating system. J. C. Sharp. 2,439,270, Apr. 6.
Heel, Detachable. F. M. Mancuso. 2,439,310, Apr. 6.
High-frequency cable. A. J. Warner. 2,438,956, Apr. 6.
High-frequency coil. H. Walker. 2,439,277, Apr. 6.
High-frequency filter structure. W. W. Hansen. 2,438,913, Apr. 6.
High-frequency terminating impedance. W. W. Hansen. 2,438,915, Apr. 6.
Highway traffic guard. E. V. Camp. 2,438,991, Apr. 6.
Holder: *See*—
  Eraser holder.
  Welding rod holder.
Holder for cards and photographs. M. B. Hall. 2,438,997, Apr. 6.
Holder for small articles, Sanitary. L. A. Casnati. 2,439,335, Apr. 6.
Honing, Cylinder. V. W. Peterson. 2,439,317, Apr. 6.
Hot clamp. H. M. Pernini and N. F. Contardi. 2,439,347, Apr. 6.
Hydraulic jack. H. E. Page. 2,439,183, Apr. 6.
Hydraulic overload-release device or cushion for presses. W. T. Stephens. 2,438,951, Apr. 6.
Hydrocarbon conversion. T. P. Simpson. 2,439,372, Apr. 6.
Hydrocarbon conversion process. S. P. Robinson. 2,439,023, Apr. 6.
Hydrocarbon-substituted thiacyclopentane-1,1-dioxide. R. C. Morris. 2,439,345, Apr. 6.
Hydrocarbons, Preparation of saturated. H. T. Quigg. 2,439,021, Apr. 6.
Ice removing covering for aircraft. R. G. Campbell. 2,439,037, Apr. 6.
Identifying goods and identifying labels used therewith. C. Emmey and M. Katzenstein. 2,439,082, Apr. 6.
Ignition lock. C. E. Wilkes. 2,439,155, Apr. 6.
Impact clutch. F. P. Forss. 2,439,337, Apr. 6.
Impedance transformer. W. W. Hansen, J. R. Woodyard, and M. Reison. 2,438,912, Apr. 6.
Impedance transformer, Wave guide. W. W. Hansen. 2,438,914, Apr. 6.
Incubator. L. M. Porter. 2,439,145, Apr. 6.
Indicator: *See*—
  Pressure indicator.
  Vibration actuated indicator.
Indicator adjustment for sextants. C. O. Rothweiler. 2,439,102.
Indium-gold article and method. H. D. Ellsworth. 2,438,967, Apr. 6.
Infeed for grinding machines. W. L. Drown. 2,439,360, Apr. 6.
Insecticide comprising mono-alkylated diphenylene sulfides and using same. S. Tryon and P. L. de Benneville. 2,438,955, Apr. 6.
Insulation composition of polyvinyl chloride and polyalkylene polysulfide, Electric. T. R. Scott and A. A. New. 2,439,949, Apr. 6.
Intermittent current operated motor. C. S. Weyandt and E. J. Missien. 2,439,230, Apr. 6.
Internal-combustion engine. W. M. Schroeder. 2,439,265, Apr. 6.
Internal-combustion engine. F. H. Smith. 2,439,150, Apr. 6.
Invalid transfer device. M. M. Farmer. 2,439,163, Apr. 6.
Iron: *See*—

Rack. E. Belmont. 2,438,886, Apr. 6.
Radiator and reflector, Overhead gas-fired. W. G. Cartter. 2,439,038, Apr. 6.
Radio direction finding system. A. G. Richardson, F. O. Chesus, and F. G. Thomas. 2,438,946, Apr. 6.
Radio navigational aid. C. E. G. Bailey. 2,438,987, Apr. 6.
Radio object detector training device. E. C. Andrews and O. Cesareo. 2,438,888, Apr. 6.
Radio object locating system training device. T. C. Campbell. 2,438,898, Apr. 6.
Railway journal bearing. J. J. Hennessy. 2,439,297, Apr. 6.
Range and azimuth simulating system for radar instruction. D. H. Pennoyer. 2,438,940, Apr. 6.
Reactance compensation system. G. H. Brown. 2,439,235, Apr. 6.
Recovering metal values from slags. A. M. Gronningsaeter. 2,438,911, Apr. 6.
Recovery and purification of cyclopentadiene. H. R. Legatski. 2,439,307, Apr. 6.
Rectifier. W. R. Koch. 2,439,224, Apr. 6.
Rectifier system. O. H. Schade. 2,439,223, Apr. 6.
Reel: *See*—
  Casting reel.
Refrigerated display case. C. F. Hoffman. 2,438,972, Apr. 6.
Regulator: *See*—
  Fluid flow regulator.
Regulator system, Cabin supercharger. F. E. Crever. 2,439,239, Apr. 6.
Remote control system. H. G. Evers. 2,439,205, Apr. 6.
Remote radio receiver tuning indicating apparatus. R. A. Clark, Jr. 2,439,201, Apr. 6.
Renewable valve seat. H. N. Ruebel. 2,439,024, Apr. 6.
Resilient wheel. J. E. McGlaun. 2,439,312, Apr. 6.
Resiliently mounted bearing. J. E. Shafer. 2,439,267, Apr. 6.
Resonance inspection method. F. A. Firestone. 2,439,131, Apr. 6.
Retaining expansible lasts. J. S. Kamborian. 2,438,921, Apr. 6.
Retracting type theater chair. M. K. Orton. 2,439,370, Apr. 6.
Rivet. A. J. Lautmann. 2,438,976, Apr. 6.
Riveting machine. E. F. Tuttle. 2,439,323, Apr. 6.
Rocky Mountain spotted fever diagnostic antigen and preparation of the same. J. Vanderscheer and E. H. Hull. 2,439,229, Apr. 6.
Rolling machine. F. M. Kratoville and F. M. Cunningham. 2,439,170, Apr. 6.
Roof. B. J. Mitchell. 2,439,095, Apr. 6.
Rudder machine for automatic pilots. G. Wünsch, B. Weinkauff, W. Sadowski, and H. Kobischke. 2,438,957, Apr. 6.
Rule, Set shift parallel. D. T. E. Fielding. 2,439,291, Apr. 6.
Rule, Slide. G. W. Sammons. 2,439,025, Apr. 6.
Ruler and making the same, Parallel. J. Nash. 2,439,346, Apr. 6.
Safety clip. H. D. Miller. 2,439,018, Apr. 6.
Safety means for receptacles. R. F. Hatala and A. Kimber. 2,439,132, Apr. 6.
Safety soap and washcloth hanger. L. L. Collins. 2,439,238, Apr. 6.
Sandblasting machine. A. J. Porcelli. 2,438,943, Apr. 6.
Sanding device. C. E. Rosemeyer. 2,438,977, Apr. 6.
Sharpener, Saw-tooth. B. R. Andrus. 2,439,279, Apr. 6.
Scoop, Ice-cream. G. N. Bolinger. 2,439,125, Apr. 6.
Scoop, Power. R. G. Le Tourneau. 2,439,139, Apr. 6.
Screen: *See*—
  Luminescent screen.
Seal construction. J. P. Butterfield. 2,439,073, Apr. 6.
Seal construction. J. A. Newton and N. Hoertz. 2,439,315, Apr. 6.
Seat: *See*—
  Renewable valve seat.
Selective tripping of circuit breakers in a system. H. C. Graves, Jr. 2,439,165, Apr. 6.
Selenium elements, Making. C. A. Kotterman. 2,438,923, Apr. 6.
Self-sealing container. L. McLaughlin. 2,439,366, Apr. 6.
Self-sealing fuel tank. P. J. Dasher. 2,438,965, Apr. 6.
Separating benzene hexachloride isomers. W. H. Cooke and J. C. Smart. 2,438,900, Apr. 6.
Servomotor control circuit. A. V. Bedford. 2,439,198, Apr. 6.
Sharpener, Pencil. C. E. Jordan. 2,439,252, Apr. 6.
Sheath, Oriented polymeric. C. D. Coxe. 2,438,901, Apr. 6.
Shoe having a heel covering and making same, Open heel. G. Naidor. 2,439,217, Apr. 6.
Shoe machine. F. Ashworth. 2,438,986, Apr. 6.
Shoulder pad. L. G. Lenske. 2,438,930, Apr. 6.
Shutoff valve mechanism. R. D. McIntosh. 2,439,052, Apr. 6.
Shutter, Signal and searchlight. O. J. Zander. 2,439,330, Apr. 6.
Shuttle car. R. M. Hippard. 2,439,001, Apr. 6.
Shuttle eye, Self-threading. W. F. Daboll. 2,439,158, Apr. 6.
Shuttle, Sewing machine. C. A. Newhall. 2,438,938, Apr. 6.

Signal device for thermostatic switches. H. B. Fuge and J. W. Momberg. 2,439,338, Apr. 6.
Signal system for refrigerators, Warning. R. D. Bean. 2,439,331, Apr. 6.
Silk treatment. B. W. Rowland and D. Fronmuller. 2,439,221, Apr. 6.
Simultaneous dimerization and reduction. R. M. Leckley. 2,439,308, Apr. 6.
Skate, Snow. E. Maybery. 2,439,311, Apr. 6.
Slice receiving mechanism for reciprocating carriage slicing machines. C. L. Metzler. 2,438,937, Apr. 6.
Slot, Wing air. E. H. Polk. 2,438,942, Apr. 6.
Small motor, particularly synchronous fractional horsepower motor. E. Weber, R. Pudelko, C. Bollmann, and H. Wermelile. 2,439,193, Apr. 6.
Smoke jack. E. L. Wiseman. 2,439,353, Apr. 6.
Snap fastener. H. E. Hasenzahl. 2,439,000, Apr. 6.
Solder, Soft lead. G. H. Worrall. 2,439,068, Apr. 6.
Speed control apparatus. R. L. Wilson. 2,438,983, Apr. 6.
Speed control by means of tuning forks. W. E. Stewart. 2,439,065, Apr. 6.
Speed responsive apparatus. L. Hammond and J. M. Hanert. 2,439,295, Apr. 6.
Spot welding apparatus. F. B. Yingling. 2,439,233, Apr. 6.
Stabilizer, Tire pressure. E. R. Sage. 2,439,188, Apr. 6.
Stand with an adjustable reception-plate capable of being tipped over in every direction. H. Wild. 2,439,194, Apr. 6.
Staple feeder. W. Schafroth. 2,439,189, Apr. 6.
Steering control apparatus. L. Hammond. 2,439,294, Apr. 6.
Sterilizing glasses, dishes, or the like, method and apparatus. C. V. Di Pietro. 2,439,042, Apr. 6.
Stop motion for pile wire looms. S. S. Wilson. 2,439,031, Apr. 6.
Strut, Shock. C. E. Tack and F. E. Bachman. 2,439,349, Apr. 6.
Submarine mine. C. N. Hickman. 2,439,211, Apr. 6.
Supervisory signal system for water softeners. H. Wolcott. 2,439,354, Apr. 6.
Support device. J. K. Wood. 2,439,067, Apr. 6.
Support for drying paste products. S. Viviano. 2,439,115, Apr. 6.
Support for insulators, Mechanical. E. Pohle. 2,439,186, Apr. 6.
Surface and shear wave method and apparatus. F. A. Firestone. 2,439,130, Apr. 6.
Switch: *See*—
  Capacitor switch. Electrical switch.
  Delayed-action switch. Preset switch.
Switch operating and locking means, Railway. O. Nell. 2,439,020, Apr. 6.
Switching device for oscillographs, Vibratory. H. R. Mallory. 2,439,050, Apr. 6.
Table: *See*—
  Massage table.
Table and electrically heated hot plates, Combined. F. J. Jenkins. 2,439,133, Apr. 6.
Table top construction. J. Stanitz. 2,439,027, Apr. 6.
Tank: *See*—
  Self-sealing fuel tank.
Telemetering actuator, Rate of flow. S. L. Adelson. 2,439,121, Apr. 6.
Telephone set. C. A. Knorr. 2,438,922, Apr. 6.
Telephone substation set. H. F. Obergfell. 2,439,218, Apr. 6.
Temperature compensated meter. W. H. Marsh. 2,438,934–5, Apr. 6.
Terminal fitting, Flat. W. A. Meighan. 2,439,141, Apr. 6.
Ternary interpolymers of styrene, maleic anhydride and acrylonitrile. R. B. Seymour and J. P. Kispersky. 2,439,227, Apr. 6.
Testing cables. A. Mahren. 2,438,932, Apr. 6.
Thermoplastic composition. R. C. Feagin. 2,439,207, Apr. 6.
Thermoplastic compositions containing cellulose acetate butyrate. L. W. A. Meyer. 2,439,093, Apr. 6.
Thermostatic valve. E. J. Dillman. 2,439,336, Apr. 6.
Thin rubber films, Making. M. A. Chavannes. 2,439,157, Apr. 6.
Timer for heating apparatus, Thermal. E. J. Meyers. 2,439,017, Apr. 6.
Timer for internal-combustion engines. T. R. Arden. 2,438,889, Apr. 6.
Timing circuit. H. W. Lord. 2,439,256, Apr. 6.
Timing system. L. A. de Rosa. 2,438,904, Apr. 6.
Tire removing device, Movable base mounted axially collapsing type. T. M. Johnson and E. G. Reed. 2,439,135, Apr. 6.
Tire repair device. E. E. French. 2,439,083, Apr. 6.
Tire, Vaned. J. O. Antonson. 2,439,033, Apr. 6.
Tool: *See*—
  Machine tool.
Tool for manipulating rubber. F. S. Sternad. 2,439,064, Apr. 6.
Tools, Making hand. L. R. Ryan. 2,439,058, Apr. 6.
Toothbrush, Dispensing. W. J. Hoffman and O. P. Olson. 2,439,166, Apr. 6.
Torpedo director. A. S. Halsey. 2,439,209, Apr. 6.
Toy bank. E. Kahn. 2,439,136, Apr. 6.
Toy helicopter. S. P. Nemeth. 2,439,143, Apr. 6.
Training device. R. E. Kittredge. 2,439,169, Apr. 6.
Transit concrete mixer. L. G. Hilkemeier. 2,439,250, Apr. 6.
Translating device. C. A. Bieling. 2,438,893, Apr. 6.
Transmission. I. F. Davidson. 2,439,079, Apr. 6.
Transmission mechanism. W. Howald. 2,439,003, Apr. 6.
Transmission system, Speech. G. Guanella. 2,439,293, Apr. 6.
Trousers. L. Markin. 2,438,933, Apr. 6.
Truck and trailer, Industrial. T. P. Wyman and P. B. Ruppe. 2,439,232, Apr. 6.
Tumbling barrel finishing and material and production thereof. C. H. Castle. 2,439,156, Apr. 6.
Turbo-jet engine for aircraft propulsion. A. G. Silvester. 2,439,273, Apr. 6.
Two-way cattle and hog feeder. T. P. Keithley and L. O. Chandler. 2,439,007, Apr. 6.
Undergarment. I. Pierce. 2,439,097, Apr. 6.
Universal joint coupling. H. G. Whitehouse. 2,439,231, Apr. 6.
Utilizing gas mixtures in the alkylation of aromatic hydrocarbons. J. A. Davies. 2,439,080, Apr. 6.
Vacuum pump. M. Matricon. 2,439,258, Apr. 6.
Valve: *See*—
  Braced head dome valve. Thermostatic valve.
  Float valve.
Valve. G. N. Strike. 2,439,110, Apr. 6.
Valve construction, Pump. R. R. Curtis. 2,439,242, Apr. 6.
Valve controlling mechanism. G. B. Thieme. 2,439,113, Apr. 6.
Valve gear. W. G. Lundquist. 2,439,175, Apr. 6.
Valve grinding machine. H. Durat. 2,438,994, Apr. 6.
Variable condenser. C. V. Litton. 2,438,931, Apr. 6.
Ventilator. J. B. Shaver. 2,439,271, Apr. 6.
Vibration actuated indicator. E. Abrahamson. 2,438,958, Apr. 6.
Vibrator circuit. I. M. Slater. 2,439,107, Apr. 6
Viscosity instrument. L. C. Eltzen. 2,439,287, Apr. 6.
Vote indicating system. L. F. Crabtree. 2,439,041, Apr. 6.
Vulcanizer. L. J., G. A. Larkin, and J. J. Regan. 2,439,011, Apr. 6.
Wave guide mode transformer. R. E. Clapp. 2,439,285, Apr. 6.
Welding rod holder. P. Brown. 2,438,990, Apr. 6.
Well cementing apparatus. R. O. Childers. 2,438,992, Apr. 6.
Wheel: *See*—
  Resilient wheel.
Wheel. C. L. Eksergian, R. B. Temple, and E. P. Hawthorne. 2,438,966, Apr. 6.
Wheel and axle construction. H. B. Ledford. 2,439,012, Apr. 6.
Wheel construction. S. Hendrickson. 2,439,340, Apr. 6.
Window sash control. F. D. Grim. 2,439,046, Apr. 6.
Wiping device for oil gauge rods. B. R. Kreider. 2,439,171, Apr. 6.
Work holding nest. H. Havstad. 2,438,916, Apr. 6.
Workpiece feeding device for centerless grinding and like machines. A. Scrivener. 2,439,225, Apr. 6.
Wrist band or strap for watches. T. Spector. 2,439,274, Apr. 6.

CLASSIFICATION OF PATENTS

ISSUED APRIL 6, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number=class, second number=subclass, third number=patent number

1— 3.1: 2,439,189
2— 21: 2,438,901

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

BAIN ET AL.
v.
HASSELSTROM ET AL.

No. 5364. Decided November 29, 1947. Petition for rehearing January 27, 1948

[— F.2d —; 76 USPQ 306]

1. INTERFERENCE—MOTION TO DISSOLVE ON GROUND APPLICATION IS ABANDONED—RULE 77 CONSTRUED.

Where an application stands under rejection at the time the Examiner suggests a claim for the purpose of interference, and where, at the time the claim was copied, the six months period for responding to the rejection had not expired, but the interference was not declared until after the expiration of the six months period, and no response to the rejection was made, *Held* that the application is not abandoned.

2. SAME—PRIORITY—QUESTION OF ABANDONMENT ANCILLARY THERETO.

The question of abandonment is ancillary to priority, and where it is held that the application in interference is not abandoned, an award of priority was proper.

APPEAL from the Patent Office. Interference No. 81,577.

AFFIRMED.

Charles E. Carney (*A. Ponack* of counsel) for Bain et al.

Herbert H. Porter and *Mason & Porter* for Hasselstrom et al.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

GARRETT, *P. J.*:

This is an appeal from the decision of the Board of Interference Examiners of the United States Patent Office, holding that the question of abandonment of an application alleged to exist on the part of appellees, is ancillary to the question of priority, and, upon finding that appellees had not abandoned it, awarding them priority.

A single count which originated in the Bain et al. application is involved. It reads:

> The process of producing stabilized abietyl compounds which comprises heating abietyl compounds with up to about 10 percent of sulfur at a temperature above 200 degrees C.

The case was submitted before us upon a stipulation of facts agreed to by counsel for the respective parties and approved by the Commissioner of Patents, the decision of the Primary Examiner denying appellants' motion to dissolve and the decision of the Board upholding that of the Examiner and awarding priority to appellees being attached to such stipulation.

It may be said that at one time the interference included a third party who was the "juniormost" party but he was eliminated before the Examiner upon an order to show cause.

The facts are not in dispute and only questions of law require decision.

Apparently there have been no court decisions in cases involving a state of facts analogous to that existing here, but there have been numerous decisions by tribunals of the Patent Office, and some of these are hereinafter reviewed.

We may state at this point that because of what we conceived to be the importance of the case upon the question of practice we requested the Commissioner of Patents (counsel for the respective parties being consulted at the hearing before us and expressing their approval) to cause a brief to be filed as amicus curiae discussing the issues. Such brief was duly filed and we hereinafter allude to it again.[1]

The application of Hasselstrom et al., Serial No. 402,562, for patent on "Art of Stabilizing Rosin" was filed July 15, 1941, and the application of Bain et al., Serial No. 431,835, for patent on "Abietyl Compounds" was filed February 21, 1942. So the latter is the junior application.

On December 14, 1943, the Primary Examiner entered a letter in the proceedings relating to the Hasselstrom et al. application denying all of the claims then in the application upon grounds unnecessary to be recited here. To this rejection Hasselstrom et al. made no response, nor did they take any other action as to those particular claims within the six months period fixed by the statute. See 4894 R. S. (35 U. S. C. sec. 37) as amended by the act of August 7, 1939, 53 Stat. 1264, the pertinent provisions of which read:

> All applications for patents * * * upon failure of an applicant to prosecute the same within six months or such shorter time, not less than thirty days or any extension thereof, as shall be fixed by the Commissioner of Patents in writing to the applicant after any action therein, of which notice shall have been given to the applicant * * * shall be regarded as abandoned by the parties thereto unless it be shown to the satisfaction of the Commissioner of Patents that such delay was unavoidable * * *.

Paragraph 3 of rule 77 of the Patent Office which is based upon the foregoing statute provides:

> In no case can any extension be granted which will carry the date on which response to an action is due beyond six months from the date of the action.

[1] We herewith express our appreciation to the Commissioner and to the Solicitor for the Patent Office who prepared the brief.

Vol. 609 • No. 1 Tuesday, April 6, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

Paragraph 4 of rule 77 provides:

Whenever action upon an application is suspended upon request of an applicant, and whenever an applicant is requested to put his case in condition for interference, the period of six months running against the application shall be considered as beginning at the date of the last official action preceding such actions.

The six months period fixed by the statute during which appellees took no action with respect to the claims involved in the rejection of December 14, 1943, expired about June 14, 1944, and, as to those claims there was never any effort made by appellees either before or after the latter date to have further action upon them.

However, on April 22, 1944, some seven weeks before the expiration of the six months statutory period, the Primary Examiner suggested the involved count to Hasselstrom et al. for purposes of interference, and on May 24, 1944, some three weeks before the expiration of the six months period, they copied the claim. The Primary Examiner states in his decision that it was made "within the time limit set by the letter suggesting the claim."

The interference was declared July 4, 1944, some twenty days after the expiration of the six months period following the rejection letter of December 14, 1943.

Preliminary statements were duly filed, Hasselstrom et al. alleged conception in August 1940, with reduction to practice in September 1940. Bain et al. alleged both conception and reduction to practice in July 1941. The stipulation states:

No motions were brought to amend said interference and no motions to dismiss for unpatentability over the prior art or for lack of right to make the count were filed against either Hasselstrom et al. or Bain et al.

It appears, however, that on September 21, 1944, which was during the motion period following the declaration of interference, Bain et al. moved to dissolve on the ground, as stated in the decision of the Board, "that there had been such informality or irregularity in declaring the interference that it would preclude the proper determination of the question of priority of invention."

The Board said further:

Specifically, the party Bain et al. alleged that the application of the party Hasselstrom et al. had become abandoned for failure to file a responsive amendment to the Office action of December 14, 1943.

In a decision rendered February 1, 1945, the Primary Examiner, after citing and discussing different authorities, held that the Hasselstrom et al. application had not been abandoned and denied the motion of Bain et al. to dissolve, but, of course, made no award of priority.

No testimony was taken by either party and on February 17, 1945, Bain et al. entered a motion that the case be set down for hearing by the Board of Interference Examiners under rule 130 of the Patent Office, on the following question:

• • • Whether the application of the party Hasselstrom and Brennan had become in fact abandoned at the time the interference was declared, and that therefore no interference can actually exist.

It was alleged, "The question is ancillary to priority," *Dalton et al.* v. *Wilson*, 1913 C. D. 197, 193 O. G. 1018, and *Dalton et al.* v. *Wilson*, 44 App. D. C. 249; 1916 C. D. 142, 224 O. G. 741, being cited.

The Board of Interference Examiners delivered an elaborate opinion wherein numerous prior decisions of tribunals of the Patent Office were analyzed and reviewed.

It is our view that the decision correctly states the law applicable to the controversy and the reasons underlying the conclusion reached, and as such we commend it (and the decision of the Primary Examiner as well) to those interested for guidance in the practice.

The amicus curiae brief filed in response to our request by the Solicitor for the Patent Office, after stating in substance that the decision of the Board conformed in principle to a decision of the Commissioner rendered in 1902 and followed since, states:

• • • It would appear that this interpretation of the rule, which has been followed for forty-five years, should not be disturbed now, unless it is found to be wholly without rational basis, which does not appear to be the case (*Allen* v. *U. S. ex rel. Lowry et al.*, 26 App. D. C. 8, 1905 C. D. 643).

Patent Office rule 171 provides that "Prosecution of an application to save it from abandonment must include such proper action as the condition of the case may require." What such action is, is largely a matter of Patent Office practice and the Patent Office tribunals are, ordinarily, in the best position to determine whether any particular response by the applicant meets the requirements of the case.

We think the statement is reasonable and sound, and that in cases of this nature, great weight properly attaches to the Patent Office practice, but aside from that, as has been indicated, we regard the position of the Board as being sound in law.

In view of the comprehensive discussion by the Board, we deem prolonged comment on our part unnecessary.

[1] We are of opinion that the Primary Examiner's rejection, on December 14, 1943, of all the claims then in the case was an official action to which it was necessary for Hasselstrom et al. to make response if they desired further to prosecute the application. (If the Examiner's decision at that time was marked final—a matter not appearing from the record—the response ordinarily would have been an appeal to the Board of Appeals if they desired further to prosecute.) Upon the facts here shown such response was required within six months after December 14, 1943, but not before that date.

So, at the time (April 22, 1944) the Examiner, in conformity with his statutory duty, suggested the claim found in the Bain et al. application to Hasselstrom et al. for the purpose of interference, and at the time (May 24, 1944) the latter copied it, their application was alive and pending.

As is stated in substance in the brief filed by the Solicitor for the Patent Office as amicus curiae, there can be no doubt that if the present interference had been declared within a period of six months after December 14, 1943, there would be no basis for considering the application of Hasselstrom et al. abandoned.

Upon both reason and authority we are convinced that the fact that the interference was not declared until more than six months after December 14, 1943, does not affect the legal situation upon the matter of abandonment. The leading case is that styled *Coulson* v. *Callender and Callender* (apparently the style should be reversed), reported in 1902 C. D. 395, and in 101 O. G. 1607. The facts in that case are summarized in the Commissioner's decision as follows:

The record shows that Coulson's claims were rejected on April 22, 1901, and without any response from him having been received the Examiner on April 21, 1902, wrote a letter under rule 96 suggesting to him claims which had been allowed to Callender and Callender. This letter was within the year allowed by law, and the applicant promptly thereafter presented the suggested claims. He presented them on April 28, which was more than one year after the letter of April 22, 1901, and he did not take action in reference to the requirements in that letter.

It should be noted that the statutory limitation in effect at that time was one year instead of the six months period applicable in the present case.

The Commissioner (Allen) stated further:

If the Examiner had not written his letter of April 21, 1902, the delay beyond April 22d would undoubtedly have resulted in the abandonment of the application in the absence of a showing that it was unavoidable. The question is: Did that letter prevent the abandonment of the application on April 22, 1902?

He then declared that the Examiner's letter suggesting the claim for interference was not a mere notice to comply with requirements previously made as contemplated by the provision of rule 77 (now expressed in paragraph 4 of that rule as hereinbefore quoted) but that the letter "*contained entirely new requirements, which necessitated a new consideration and decision by the applicant as to the action which he should take*" [italics supplied] and held, "New action being required of him, it would clearly not be just to hold him bound by the time limit fixed as to a different requirement."

Accordingly, the Commissioner affirmed the Examiner's decision, refusing to dissolve the interference, motion for which had been made by *Callender et al.*, supra, upon substantially the same grounds as those presented by Bain et al. in the instant case.

It will be observed that there are two distinctions between the facts of that case and those of the instant case, viz: (*a*) the letter suggesting the claims to Coulson was not written until just one day before the date of expiration of the period within which he was required to respond to the previous rejection of his earlier claims, and (*b*) he did not copy those suggested until a few days after the expiration of that period. In the instant case the claim was both suggested and copied some weeks before the expiration of the six months period. In a sense, appellees here are in an even more favorable situation than Coulson was in the *Coulson* case, supra.

Another published decision in point is that of *Ex parte Kohn et al.*, 1932 C. D. 9, 421 O. G. 853, wherein First Assistant Commissioner Kinnan said:

Where claims are suggested to an applicant for interference purposes such action is deemed, as held in the above referred to *Coulson* v. *Callender et al.* decision, a *new action in the case.* In effect such action is an offer to the applicant of the allowance of claims for his invention if presented in the suggested form and if he can prove he is the prior inventor. The provisions of rule 77 are not deemed to extend to actions in cases in which claims are suggested for interference provided of course such claims are presented within the designated period. [Italics supplied.]

In that decision the Assistant Commissioner also took note of the decision of Commissioner Allen in *Ex parte Hess*, 1907 C. D. 58, 126 O. G. 3041, which has been cited by Bain et al. in the instant case, and pointed out the distinction between it and the *Coulson* case, supra, saying:

The distinction between the decision in the *Coulson* v. *Callender et al.* case and that in *Ex parte Hess*, above referred to, should not be overlooked. In the former case the claims suggested were made within the period granted, while in the latter case the suggested claims were not made within the period granted nor indeed had they been made eight months later when the year following the previous office action on the merits of the case expired.

Certified copies of four unpublished or manuscript decisions have been brought to our attention by counsel, but the facts in the cases are so different frm those in the case at bar that we do not think that a review of them would add anything of value to this decision, so far as the legal question relative to abandonment itself is concerned, but in one of them, *Ellis* v. *Smidth*, Interference No. 78,644, the decision by Assistant Commissioner Van Arsdale said to be recorded in volume 165 p. 508, reiterates the rule stated in numerous decisions of tribunals of the Patent Office, some of which are cited in the decision, to the effect that the question of abandonment is clearly ancillary to priority.

Some at least of the cases cited by Bain et al., as well as some of those cited by Hasselstrom et al. were cited before the Board and amply discussed in the Board's decision. Each of them is clearly distinguishable as to the facts from the case at bar, and from the prior cases of *Coulson* v. *Callender et al.* supra, and *Ex parte Kohn et al.*, supra, and the Board sufficiently pointed out such distinction.

[2] We agree that there was no abandonment of the Hasselstrom et al. application and that the question of abandonment is ancillary to priority, making an award of priority proper. Upon the facts here appearing, no award of priority could be made to appellants.

The decision of the Board of Interference Examiners is affirmed.

AFFIRMED.

On Petition for Rehearing

GARRETT, *P. J.*:

Following our decision in this case, rendered November 29, 1947, appellants filed a petition for rehearing which has been considered. The reasoning and argument accompanying the petition for rehearing are substantially the same as those presented originally, but, in view of the fact that our decision seems to be of interest and of probable importance upon a question of procedure, some further observations on our part are deemed appropriate.

Appellants reiterate the contention originally made to the effect that it was incumbent upon appellees to make response to the Examiner's action on December 14, 1943, rejecting all the claims then in appellees' application. It will be observed that we held it was necessary if they desired to further

prosecute the application. The persistent argument by counsel for appellants on this point, might justify the conclusion that counsel thought appellees were charged by the statute with the duty of responding whether or not they desired to prosecute the case further. Such is not our view. All that the statute says is that where there is a failure to respond within six months, or less if a shorter time is fixed by the Commissioner, the application "shall be regarded as abandoned," unless the Commissioner finds that the delay was unavoidable.

The gravamen of appellants' position, it seems to us, is actually to be found in the contention that the suggestion to appellees of the claim, which became the count in issue, by the Examiner, on April 22, 1944, did not constitute an Office action within the meaning of the word "action" as used in sec. 4894 R. S. (35 U. S. C. § 37) as amended, the pertinent part of which is quoted in our original decision of November 29, 1947. Counsel for appellants made that contention originally and reiterate it quite emphatically in the petition for rehearing, citing *Ex parte Hess*, 1907 C. D. 58, 126 O. G. 3041, and *Ex parte Larner*, 1929 C. D. 18, 381 O. G. 743.

In the statement accompanying the petition for rehearing we find the following:

> The *Coulson* v. *Collender et al.* and Kohn et al. cases hold a letter suggesting claims is an action. The Hess and Larner cases hold that a letter suggesting claims is not an action.

The immediately foregoing assertion is largely responsible for our action in writing this statement supplementing our original decision.

Appellants obviously have misunderstood those decisions. Neither the Hess case, supra, nor the Larner case, supra, holds that a letter of an Examiner suggesting claims for interference purposes (the occasion of the suggestion in both those cases and in the instant case) is not an action.

On the contrary, it is clear that in both instances the Commissioner held the suggestions to be actions. In the Hess case, supra, the applicant failed because he did not make timely response to what was an action. In the Larner case, supra, while the applicant did not make timely response, it appeared that his failure to do so was occasioned by an omission of final action by the Examiner which led the Commissioner to hold that the delay was unavoidable within the sense of the statutory language of sec. 4894 R. S., "unless it be shown to the satisfaction of the Commissioner of Patents that such delay was unavoidable."

Appellees here had until approximately June 14, 1944, to make response to the Examiner's rejection of December 14, 1943, no shorter time having been fixed by the Commissioner. The claim which became the count here involved was suggested to them by the Examiner, in conformity with his official duty, April 22, 1944, and copied by them May 24, 1944. Their application was alive and pending on the latter date and their failure to make any response to the rejection of December 14, 1943, had no effect with respect to the interference count.

The petition for rehearing is denied.

U. S. Court of Customs and Patent Appeals

HUNTINGTON LABORATORIES, INC.
v.
ONYX OIL AND CHEMICAL COMPANY
No. 5369. Decided January 6, 1948
[165 F.2d 454; 76 USPQ 319]

1. TRADE-MARK—APPEAL—POINT ARGUED BUT NOT INCLUDED IN REASONS OF APPEAL.
   Where in appellant's brief it is alleged that appellee's use of its mark was not established by the stipulated statement of facts introduced for appellee, nor otherwise than by the allegation of use as stated in appellee's application, but there is no allegation of error in this point in the reasons of appeal, *Held* that it is not incumbent upon us to consider it simply upon the brief.
2. SAME—OPPOSITION.
   The statement in the oath accompanying appellee's application as to use was not challenged in appellant's notice of opposition, and, so far as the record here shows, nothing occurred which made it incumbent upon appellee to furnish any further evidence of use than was furnished in the oath to the application.
3. SAME—SAME—DOMINANT PART OF MARK—SECONDARY MEANING.
   A word or syllable may constitute the dominant part of a trade-mark without having acquired a secondary meaning and a word or syllable which has acquired a secondary meaning does not thereby necessarily become the dominant part of a mark.
4. SAME—SAME—DESCRIPTIVENESS—"SAN."
   The notation "San" has never been regarded as a descriptive term, though it evidently bears some relation to the word "sanitary" and like words, and it is admittedly suggestive when applied to appellant's products, disinfectants, and deodorants.
5. SAME—SUGGESTIVE MARKS—SECONDARY MEANING.
   It has never been deemed necessary in order to establish the validity of a suggestive mark to show that it had a secondary meaning.
6. SAME—OPPOSITION—"DERMA-SAN" AND "ONYXSAN."
   Where the prefixes "Derma" and "Onyx" differ widely in appearance, pronunciation, spelling and meaning and where except for the suffix there is not the remotest resemblance between "Derma-San" and "Onyxsan," *Held* that there is no likelihood of confusion growing out of the concurrent use of the marks, and that the decision of the Commissioner dismissing the opposition is affirmed.

APPEAL from the Patent Office. Opposition No. 23,278.

AFFIRMED.

Ralph G. Lockwood, Dwight B. Galt and *Elmer L. Goldsmith* for Huntington.

Kenneth H. Murray, Murray and Parker and *Albert M. Parker* for Onyx.

GARRETT, *P. J.*:

This is an appeal from the decision rendered by the First Assistant Commissioner of Patents, the late Honorable Leslie M. Frazer, affirming the decision of the Examiner of Interferences in a trade-mark registration opposition proceeding, *Huntington Laboratories, Inc.*, v. *Onyx Oil and Chemical Co.*, 69 USPQ 440.

On January 4, 1944, appellee filed its application for registration under the Trade-Mark Registration Act of February 20, 1905, of the word "ONYXSAN" for use as a trade-mark for "a quaternary ammonium antiseptic compound for pharmaceutical purposes." The application alleged continuous use

"since March 1938," and was verified by oath of the president of the company.

On April 12, 1944, appellant filed notice of opposition, the notice being in conventional form and embracing the customary allegation respecting appellant's belief that it would be damaged by the registration sought by appellee, and, as stated by the Assistant Commissioner, relied "upon one registered mark and three that are unregistered. The registered mark is 'Derma-San' for 'disinfectant.' The unregistered marks are 'Deo-San,' applied to an 'odorless defactor'; 'Minto-San,' applied to a 'mint formaldehyde spray'; and 'Cabinet-San,' applied to a 'bedside cabinet deodorant'." The Derma-San mark was registered September 13, 1932, upon an application filed May 16, 1932. Use of the mark was alleged "since January 2, 1932." "Deo-San" is alleged to have been used "since 1938"; "Minto-San * * * since 1930"; and "Cabinet-San * * * since 1936."

Neither party took depositions, but both introduced stipulated evidence. In that on behalf of appellant there is included a list of twenty-nine hyphenated marks stated to have been used by it on different of its products. In twenty-six of these "San" constitutes the suffix; in one the prefix; and two have the prefix "Sana." Ten of those having the suffix "San" are stated to have been registered. Those hereinbefore named relied upon by appellant are included in the list.

In the brief before us appellant devotes considerable space to two allegations which were not referred to in either the decision of the Examiner of Interferences or that of the First Assistant Commissioner, and only one of them is mentioned in the reasons of appeal to us.

[1], [2] The allegation not covered by the reasons of appeal is to the effect that appellee's use of "Onyxsan" was not established by the stipulated statement of facts introduced for appellee, nor otherwise than by the allegation of use as stated in appellee's application. Since there is no allegation of error on this point, it is not incumbent upon us to consider it simply upon the brief, but it is not amiss to say that the statement in the oath accompanying appellee's application as to use "since March 1938" was not challenged in appellant's notice of opposition, and, so far as the record here shows, nothing occurred which made it incumbent upon appellee to furnish any further evidence of use than was furnished in the oath to the application.

The second allegation which was not discussed by either of the tribunals of the Patent Office is that the term "San" has acquired a secondary meaning. The failure of the Examiner of Interferences to find this was assigned as error in the appeal to the Commissioner, but, as has been indicated, the First Assistant Commissioner did not discuss it nor pass upon it. In the first of the reasons of appeal to us it is alleged:

> The Commissioner erred in not holding that, as to the particular goods, opposer's extensive use of the suffix "SAN" for many years in association with *prefixes descriptive of the goods*, has established in "SAN" a secondary meaning wherein it constitutes the predominant part of opposer's trade-marks as opposer's family name denoting source of origin. * * *. [Italics supplied.]

We note that the allegation of error by the Examiner of Interferences did not embrace any statement that appellant's prefixes used with "San" are "descriptive of the goods," such as is embraced in the reasons of appeal to us. Other than as there suggested, there is nothing in the record to indicate that appellant's prefixes have been regarded as being other than suggestive.

It will be noted that the allegation in the reason of appeal quoted to the effect that appellant's use of the syllable "San" has established a secondary meaning for it, is coupled with the clause reading "wherein it constitutes the predominant part of opposer's trade-marks * * *."

It is not altogether clear to us whether it was the intention of counsel for appellant to express the view that in order to be held the dominant part of appellant's mark "San" must be held to have acquired a secondary meaning. The brief is not as definite upon that point as could be wished, but upon the whole we think it was probably not so intended. However, lest we may have misunderstood counsel's argument in this regard, we may say that we do not think a secondary meaning for "SAN" has been established by appellant's use of it, or otherwise. There was included in the stipulated evidence on behalf of appellee a list of 45 marks (taken from the records of the Patent Office) registered to others than appellant consisting of words having the suffix "San," several of these being hyphenated. A number of them bear registration dates prior to the first use of "San" shown by appellant, and others indicate concurrent use. The products for which they were registered are not named on the list, but the prefixes of many of them suggest goods of the same general class as the products of appellant. The registrations were not introduced for the purpose of questioning the validity or scope of appellant's registration, but for the sole purpose of showing that appellant had not established a secondary meaning for the term, and we think they properly may be looked to upon that point, although they could not be considered on the question of validity.

[3] Aside from this, we think it would not be a matter of any consequence upon the question of what constitutes the dominant part of appellant's mark if it were established that "SAN" has a secondary meaning as applied to appellant's goods. A word or syllable may constitute the dominant part of a trade-mark without having acquired a secondary meaning and a word or syllable which has acquired a secondary meaning does not thereby necessarily become the dominant part of a mark.

[4], [5] So far as we know, the notation "San" has never been regarded as a descriptive term. Evidently it bears some relation to the word "Sanitary" and like words. As such, it is admittedly suggestive when applied to appellant's products, and it may be said that, so far as we are advised, it has never been deemed necessary in order to establish the

validity of a suggestive mark to show that it had a secondary meaning. Indeed, an effort to show that a word has acquired a secondary meaning carries with it an implication that such a word is regarded by its proponent as being either descriptive or geographic or as having some quality which would normally preclude its registration as a trade-mark.

The brief on behalf of appellant asserts:

> The Commissioner and court have heretofore held that "San" ["a" and "n" printed with small capitals in text] comprises the predominant part of said trade-marks, indicating the source of origin.

It is pointed out that the Assistant Commissioner in the case of *Huntington Laboratories, Inc.* v. *Mathieson Alkali Works*, 517 O. G. 823, 46 USPQ 388, held that "Aqua-San" and "Lustra-San" were likely to be confused with appellant's marks "Liqua-San," "Auto-San," and "Derma-San." It will be noted that the latter is one of the marks which appellant pleads in its notice of opposition here. The Assistant Commissioner there indicated a belief that "San" predominated.

In his decision in the instant case the Assistant Commissioner referred to his decision in the case so cited and stated his reasons for differentiating the two, saying:

> But the present applicant's mark, "Onyxsan," is not hyphenated; nor is it in any sense suggestive of applicant's goods. It differs in appearance from each of opposer's marks, and when considered as a whole does not resemble either of them in sound or significance. Cf. *Syncromatic Air Conditioning Corporation* v. *Williams Oil-O-Matic Heating Corporation*, 27 CCPA 1010, 109 F.2d 784.

In this case he expressed no view as to "San" predominating.

Appellant also cites the case of *The Hygienic Products Company* v. *Huntington Laboratories, Inc.*, 54 USPQ 111, wherein Assistant Commissioner of Patents Van Arsdale affirmed the decision of the Examiner of Interferences holding the notation "Sana-Porce" (mark of the Huntington Laboratories, Inc.) for a porcelain cleaner in powder form used on porcelain coated sinks, wash basins, and the like, to be unregistrable over the Hygienic Products Company's mark "Sani-Flush," used upon a cleanser for the same kind of articles. No question as to descriptiveness of the respective marks taken as a whole, or of any portion of them, was there raised, nor was there any finding as to what was regarded as the dominant part of the mark. It was simply held that, notwithstanding the difference in the prefixes, the suffixes "Sana" and "Sani" were so similar that their concurrent use upon goods of the same descriptive properties would be likely to result in confusion.

Another case (seemingly a proceeding to cancel) referred to in appellant's brief, styled *Huntington Laboratories, Inc.* (appellant in the instant case) v. *Hillyard Chemical Company*, apparently involved "Velva-San" and appellant's registered mark "Liqua-San." The brief states that "Velva-San" was canceled. There is, however, no citation of any publication in which the decision may be found. We assume that it was a manuscript decision of some tribunal of the Patent Office which has not been printed. There is nothing said of it in the brief which indicates that it would be helpful in the decision of the instant case.

The decision most emphasized by appellant before us is that of this court in the case of *Hygienic Products Co.* v. *Huntington Laboratories, Inc,* (appellant here and hereinafter so referred to), 31 CCPA (Patents) 773, 139 F.2d 508, 60 USPQ 205, 559 O. G. 709.

There appellant made application for registration of the notation "Toilet-San" as a trade-mark for a preparation designed for use as a cleansing powder for water-closet bowls and the like, the prefix "Toilet" being disclaimed in the application. Hygienic Products Company opposed the registration, alleging ownership of the registered trade-mark "Sani-Flush" for goods of the same descriptive properties. The Examiner of Interferences dismissed the notice of opposition and the Commissioner (speaking through Assistant Commissioner Van Arsdale) affirmed his decision. 54 USPQ 112. Upon appeal we reversed the Commissioner's decision (a comprehensive opinion being written by LENROOT, *J.*, and BLAND, *J.*, dissenting) and denied the registration sought.

Nothing was there said as to appellant's suffix, "San," having acquired a secondary meaning, but it was held to be the dominant portion of the particular mark of appellant—"Toilet-San"—there involved. A careful study of our decision in that case will, we think, convince the reader that our holding as to the dominance of the suffix, grew out of the fact that the prefix "Toilet" was admittedly descriptive with respect to the goods there involved. In that particular instance, as is asserted in substance in the brief for appellee, the suffix actually was the only registrable portion of the mark.

Of course, there was no holding in that case to the effect that "San" constituted the dominant part of any mark of appellant other than the one there involved, and we do not regard that case as being controlling in the instant case.

For the purpose of this case we may disregard the three unregistered marks specified in appellant's notice of opposition and compare only "DERMA-SAN" with appellee's mark "ONYXSAN."

Derma is a word found in the lexicographies, the meaning of which, according to Webster's New International Dictionary, is "The sensitive layer of the skin beneath the epidermis." "San" relates to "sanitary" which is defined by the same authority: "* * * Of or pertaining to health; designed to secure or preserve health * * *." So, "Derma-San" applied to a disinfectant implies or suggests that the preparation is suitable for use in preserving or restoring the health of the skin. The definitions given by other lexicographers examined are the same in purport and need not be quoted.

The term "Onyx," comprising the first two syllables of appellee's mark is apparently purely arbitrary as applied to appellee's product. Funk & Wagnalls Standard Dictionary defines it as a particular variety of quartz consisting of layers of different colors, etc. Webster's New International Dictionary gives as definitions "a claw, finger nail, a veined gem * * *." It also gives: "3. *Med.* A collection of pus in the anterior chamber of the eye, resembling a finger nail." There is nothing in the record which indicates that appellee's quaternary ammonium antiseptic compound is used in the treatment of such eye infection. The stipulated evidence on appellee's behalf shows that appellee has used quite a number of trade-marks embracing "Onyx," in some as a prefix and in others as a suffix, presumably for a variety of products.

We take it that the suffix "San" has the same meaning in the marks of both parties. So, in appellee's case it suggests that the preparation on which "ONYXSAN" is used is sanitary—that is suitable for use in preserving or restoring health.

[6] It is obvious that except for the suffix there is not the remotest resemblance between the marks here placed in issue. Furthermore, both the prefix and the suffix of appellant's pleaded marks are suggestive (indeed in the case of "Derma-San" it might be argued that the prefix is descriptive) while the prefix of appellee's mark is arbitrary and apparently without suggestiveness as to the goods upon which it is used. It would be difficult to find marks, the prefixes of which differ more widely in appearance, pronunciation, spelling, and meaning than those of appellant and that of appellee.

We are convinced that there is no likelihood of confusion growing out of the concurrent use of the contesting marks, nor do we think appellant has acquired rights in the suffix "San" which places him in position to prevent its use by others with suffixes which do not render the mark as a whole confusing.

The decision appealed from is affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

APOLLO SHIRT COMPANY

v.

THE ENRO SHIRT COMPANY, INC.

No. 5372. Decided January 6, 1948

[165 F.2d 469; 76 USPQ 329]

1. TRADE-MARKS—CANCELLATION—GOODS OF THE SAME DESCRIPTIVE PROPERTIES.

   Although appellant's registered mark "Sportmaster" is for use on men's dress, work, or undershirts, the prefix "Sport" in appellant's trade-mark is merely descriptive of the goods upon which its mark is used, and therefore, the trade-mark "Sportmaster" on the goods upon which the mark is used, includes sport shirts.

2. SAME—SAME—CONFUSING SIMILARITY—"SPORTMASTER" AND "SPORTSTER"

   Since it is well known in the commerce of the United States, of which the court may take judicial notice, that so-called "sport shirts," "undershirts," "work shirts" and "dress shirts" are sold in the same stores to the general public, and since such goods possess the same descriptive properties, *Held* that the marks "Sportmaster" and "Sportster" are confusingly similar, and the decision of the Commissioner sustaining appelee's petition for cancellation is affirmed.

3. SAME—CANCELLATION OR OPPOSITION PROCEEDINGS—MARKS SHOULD BE CONSIDERED IN THEIR ENTIRETIES.

   We have frequently held in opposition and cancellation proceedings that trade-marks should be considered in their entireties and that the public should not be required to dissect or analyze trade-marks in order to avoid confusion as to the origin of the goods.

APPEAL from the Patent Office. Cancellation No. 4375.

AFFIRMED.

Mock & Blum (*Asher Blum* and *Charles R. Allen* of counsel) for Apollo.

Edward A. Brand for Enro.

HATFIELD, *J.*:

This is an appeal in a trade-mark cancellation proceeding from the decision of the Commissioner of Patents, 69 USPQ 443, affirming the decision of the Examiner of Interferences sustaining appellee's petition for the cancellation of appellant's registered trade-mark "SPORTMASTER" for use on "men's dress, work, and under shirts."

Appellant's mark, registration No. 336,803, was registered July 21, 1936, under the Trade-Mark Act of February 20, 1905, on an application filed March 9, 1936.

Appellee's petition for cancellation of appellant's registered trade-mark was filed March 22, 1944, and was based upon the use of the trade-mark "SPORTSTER," registered June 15, 1926, on an application filed April 1, 1925, registration No. 214,199, for use upon sport shirts.

No testimony was introduced by either of the parties, and the only evidence in the case consists of the trade-mark registrations of the parties. Although counsel for appellant gave notice under rule 154(*c*) of the Rules of Practice in the United States Patent Office that they would rely at final hearing in the Patent Office on various trade-mark registrations, they are not in the record before us and no reason is given in the brief of counsel for appellant as to the purpose of introducing them.

It is not questioned here by counsel for appellant that the goods of the parties possess the same descriptive properties, and the sole issue in the case is whether the respective marks of the parties are confusingly similar, within the purview of section 5 of the Trade-Mark Act of February 20, 1905.

The petition for cancellation of appellant's mark was filed by appellee under section 13 of the Trade-Mark Act of February 20, 1905, and it is not claimed here by counsel for either of the parties that the Trade-Mark Act of July 5, 1946 (effective July 5, 1947), has any application to the issues here involved, although the appeal was pending in this court on the effective date of that act.

The Examiner of Trade-Mark Interferences and the Commissioner of Patents concurred in holding that the registered marks of the parties were confusingly similar; that appellant was not entitled to use its mark on its goods on the date of its application for registration; and that, therefore, its registration should be canceled.

It is contended here by counsel for appellant that the cumulative differences in the respective marks of the parties and of the goods upon which they are used are such that the concurrent use of the respective marks by the parties would not be likely to cause confusion in trade, and that appellee is not injured by appellant's registration of its mark. In support of that statement, it is argued by counsel for appellant that the dominant feature of appellant's registered mark "SPORTMASTER" is the suffix "MASTER"; that the dominant feature of appellee's mark is the suffix "TER"; that the prefix "SPORTS" in appellee's mark is merely the plural of the prefix "SPORT" in appellant's mark; that the prefix "SPORT" or "SPORTS" is merely descriptive of the goods of each of the parties; that the suffix "MASTER" in appellant's mark and the suffix "TER" in appellee's mark being the dominant features of the respective marks, are the only portions of the involved marks which indicate origin of the respective goods of the parties; and that the suffix "MASTER" in appellant's mark is sufficiently distinguishable from the suffix "TER" in appellee's mark so that confusion as to the origin of the respective goods of the parties would not be likely to occur.

Counsel for appellant quoted, evidently with approval, the following statement from the decision of the Commissioner, which reads:

> I agree with respondent [appellant] that the word "sport," as applied to wearing apparel generally, and to shirts particularly, is descriptive. The dictionaries so indicate. In consequence, neither of the marks in question is dominated thereby.

[1] It would seem to be evident, from the argument of counsel for appellant that although appellant's registered mark "SPORTMASTER" is for use on "men's dress, work, and under shirts," the prefix "SPORT" in appellant's trade-mark is merely descriptive of the goods upon which its mark is used, and that, therefore, the trade-mark "SPORTMASTER" on the goods upon which the mark is used, includes sport shirts, or that in the natural extension of its business, appellant contemplates the use of the trade-mark "SPORTMASTER" on sport shirts.

As hereinbefore noted, each of the tribunals of the Patent Office concluded that considering the marks in their entireties, and the goods upon which they were used, the marks were confusingly similar and that appellee would be injured by the use of appellant's mark on its goods.

[2] It is well known in the commerce of the United States, of which the court may take judicial notice, that so-called "sport shirts," "undershirts," "work shirts," and "dress shirts" are sold in the same stores to the general public, so the question presented is whether, considering the goods of the parties and their respective marks, confusion in trade would be likely to occur by the concurrent use of the marks of the parties on their goods.

We are of opinion, as were the tribunals of the Patent Office, that the marks are confusingly similar and that appellee would likely be injured by the use of the registered mark "SPORTMASTER" on shirts possessing the same descriptive properties as those on which appellee uses its mark "SPORTSTER." It clearly appears that the last four letters of the marks end in the letters "STER" and that the only difference is that appellant's mark has the letters "MA" which do not appear in appellee's mark. It is true that neither of the parties is entitled to the exclusive use of the word "SPORT" as a trade-mark, as it is merely descriptive of the goods upon which the mark is used by each of the parties.

We have given careful consideration to the arguments presented here by counsel for appellant, and the cases cited upon which they rely, but are unable to hold that the trade-mark "SPORTMASTER" for use on appellant's goods is not confusingly similar to the trade-mark "SPORTSTER" as used by appellee on its goods, and that appellee would not likely be injured by the use of the trade-mark "SPORTMASTER."

[3] We have frequently held in opposition and cancellation proceedings that trade-marks should be considered in their entireties, and that the public should not be required to dissect or analyze trade-marks in order to avoid confusion as to the origin of goods. It is unnecessary that we cite decisions in support of those statements.

After careful consideration we are of opinion that the tribunals of the Patent Office reached the right conclusion. Accordingly, the decision of the Commissioner of Patents is affirmed.

AFFIRMED.

BLAND, *J.*, sat during the argument of this case, but resigned before the opinion was prepared.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,432,354. HOLLOW BUILDING WALL. Patented Dec. 9, 1947. This invention relates to a hollow building wall for the circulation of air therethrough. Prefabricated metallic panels are used, the door and window frames secured in place at time of fabrication of panels. After the panels are erected, brick or stone veneer is added. Air spaces are provided between the joists. A large conduit extends through the foundation wall. One end, extending exteriorly of building close to the ground, is provided with a damper for controlling the admission of air. The other end is centrally placed in basement for the delivery of incoming air. Air is circulated underneath the floor structure and upwardly through the walls to attic, where ventilators are provided in roof for exit of the air. For winter use the damper is closed, and warm air from basement circulated through walls and attic. (Owner) Clyde Temple, Redfork Station, Box 31, Tulsa, Okla. Groups 32—51; 33—81. Reg. No. 9,447.

Pat. 2,433,553. SPEED RESPONSIVE CONTROLLED ONE-WAY ENGAGING CLUTCH. Patented Dec. 30, 1947. A free-wheeling clutch for helicopters which automatically connects the rotor with the drive shaft when the speed of the engine passes a predetermined value and disconnects when either the motor speed falls too low or the rotor speed greatly exceeds that of the engine. It comprises a driving disk, and a driven ring around the disk, with rollers between, which are forced against the ring by cam surfaces on the disk. Cooperating shoulders hold the rollers at low points on the cam surfaces out of driving contact with the ring. Centrifugally operated means move with the disk to release the shoulders from the rollers above a definite speed of the drive shaft so the rollers can be forced by the cam high points into driving contact with the ring. (Owner) Carl Paul Heintze, Clocks Blvd., Amityville, Long Island, N. Y. Group 35—66. Reg. No. 9,448.

Pat. 2,387,016. MAGNETIC POLARITY CHANGING CIRCUIT. Patented Oct. 16, 1945. In contrast to conventional field flux paths generally used, the exciting flux in this motor is supplied to the armature from a magnetic spider having alternate magnetic poles, and without the necessity of current switching devices. The outer frame of the motor is of aluminum or other non-magnetic material, the flux-carrying spider, U-shaped polar units, and armature being made of magnetic material. A change in polarity is produced by a relatively small rotation of the spider, which shifts the poles of the spider and reverses the rotation of the armature. The spider may be moved by a handle or by means of remote control. (Owner) Helen J. Hall, % Electronics Enterprises, 1619 Shatto St., Los Angeles 14, Calif. Group 36—19. Reg. No. 9,449.

Pat. 2,433,952. SAFETY PARACHUTE. Patented Jan. 6, 1948. A parachute for bringing an airplane down safely in the event of engine trouble or damage to the aircraft. A parachute is provided in a box placed forwardly of an upstanding tube from the fuselage. The box is covered by a curtain having one end attached to a spring-operated roller. A pull line passes around a wheel at upper end of tube, runs downwardly through the tube, passes around a wheel at bottom of the tube, and moves forwardly for connection with a rotatable drum operated by a crank. The other end of the line connects with sleeve of tube for elevating the lifting hook, which lifts the parachute from the box. (Owner) Samuel J. Hines, 1908 Mason St., Alexandria 12, La. Group 37—21. Reg. No. 9,450.

Pat. 2,320,440. BOTTLE CARRIER. Patented June 1, 1943. Opposite ends of a blank of cardboard are folded inwardly to form a base of double thickness and a handhold of double thickness extending centrally upwardly from the base. On opposite sides of the handhold the base is provided with rows of holes which are of restricted diameter at their outer ends. A removable keeper in the form of a narrow strip of cardboard is slid inwardly between the folds of the base. When keeper is in one position, arcuate notches in its edges register with the holes to permit bulbous heads of bottles to be placed upwardly through the holes. The keeper is then slid inwardly so that the unnotched portions of its edges will wedgingly force and retain the necks of the bottles outwardly in the restricted portions of the holes. When the carrier is lifted, the bottles are suspended therefrom. (Owners) Charles H. Kruea and Dorella A. Kruea, 49 Indiana Ave., Fort Thomas, Ky. Group 26—61—66. Reg. No. 9,451.

Pat. 2,231,886. METHOD OF PRESERVING DRESSED AND DRAWN FOWL. Patented Feb. 18, 1941. Groups 20—15; 35—84. Reg. No. 9,452.

Pat. 2,309,046. APPARATUS FOR PRESERVING DRESSED AND DRAWN FOWL. Patented Jan. 19, 1943. Groups 20—15; 35—84. Reg. No. 9,453.

These two patents describe the preservation of dressed and drawn fowl by refrigeration. In Patent 2,231,886 a long paraffined paper tube is passed through the carcass of a fowl which has been cleaned. The legs and wings of the fowl are trussed and the cleaned cavity is filled with water. The fowl is placed in apparatus described in Patent 2,309,046, which includes inlet and outlet connections to refrigerating apparatus and a mold, a portion of which is contoured to the shape of the normal breast of a fowl. Projecting ends of the paper tube are coupled to the refrigerating apparatus and brine pumped through the tube to freeze the water in the cavity. Suction is then applied to drain the tube, which is then uncoupled so that the carcass may be taken to a hardening room and frozen dry. The ends of the tube are turned in to seal the air passage and the fowl glazed by dipping the carcass into cold water until a coating of ice forms. The carcass is then wrapped in an airtight bag and maintained in cold storage. A fowl processed according to the method outlined is ready for cooking without further cleaning or dressing as soon as the block of ice is melted or removed with the paper freezing tube. (Owner) John N. Crider, R. D. 1, Shippensburg, Pa.

Pat. 2,433,017. DIAPER GARMENT. Patented Dec. 23, 1947. This garment consists of a shirt and an oblong diaper fastened together without pins and applied without turning the infant to which the garment is being fitted. The shirt has buttonholes at each side of its lower edge to receive fasteners of the head-and-socket type inserted in pairs at the corners of a multi-ply diaper composed of moisture-absorbing fabric. The diaper is attached to the shirt so that the diaper corners overlap. Provision is made for stockings to be fastened to the diaper in the same manner as the shirt. (Owners) Rose Morby Romanowski and Stanley Romanowski, 1021 College St., Nanticoke, Pa. Group 23—41—99. Reg. No. 9,454.

Pat. 2,226,065. FISH LURE. Patented Dec. 24, 1940. Lure has a tapering plastic body and metal head in which are embedded a swivel line-attaching eye at the forward end and a swivel hook-attaching portion at the rear end. When pulled through the water, rotary movement of the lure is produced by laterally projecting curved fins. (Owner) George Mesaros, 225 East Price St., Linden, N. J. Groups 39—49; 40. Reg. No. 9,455.

Pat. 2,433,058. CIRCULAR CUTTING AND EJECTING DIE. Patented Dec. 23, 1947. Die has two main portions: an open cylindrical piece or cutter and an ejector. The lower end of the piece is frusto-conical in shape and forms a cutting edge, a sleeve being freely mounted on a shoulder above the edge. The upper edge of the cutter is threaded to the head of a die shank inserted in a drill press. A knurled collar is also threaded to the shank, the lower face of the collar providing a recess for an annular ring connected to guide rods slidable in the shank head and attached to the ejector head. The collar is gripped to effect movement of the ejector so that circular elements punched from sheet material are discharged without distortion upon retraction of the die. The sleeve engages the edge of the opening of punched material, lessening friction between the upper portion of the die and the punched openings. (Owner) George Mesaros, 225 East Price St., Linden, N. J. Groups 33—51; 35—43. Reg. No. 9,456.

Pat. 2,188,989. SNOW REMOVER. Patented Feb. 6, 1940. Snow remover, adapted to be detachably connected to the rear end of a truck, will automatically scoop up snow and convey it into truck body. The remover comprises an elongated trough having a pair of wheels at its rear end and clamps on its forward end for connection to the tail gate of a truck so that the remover will trail the truck in slanting position. A conveyor inside trough is operated when the wheels revolve. An arcuate structure attached to the rear end of the trough consists of a combined bladed scoop, a guide trough, and guide flange. The scoop is arched over one wheel in fender-like fashion and extends laterally beyond the wheel close to the ground with the mouth of scoop facing forwardly. Snow entering the scoop is directed by the guide trough and flange in a curved path to the lower end of the conveyor, which delivers it into truck body. (Owner) August F. Werner, 20005 Woodcrest Drive, Detroit 24, Mich. Group 38—11. Reg. No. 9,457.

Pat. 2,432,080. DEVICE FOR FORMING HELICAL COILS. Patented Dec. 9, 1947. Device may be used to form coil springs of either the closed or compression type. It includes a disc having a series of holes extending substantially circumferentially around a central point (for receiving mandrels of different diameters) and a circular spacing plate of smaller diameter centrally mounted at one side of the disc. The peripheral surface of this plate, which barely clears any inserted mandrel, gradually increases in diameter from a narrow thin leading edge to a trailing edge of maximum thickness for determining coil pitch. The plate may be rotatably adjusted to bring any selected peripheral edge portion next to the mandrel so that such selected edge will fit between and space adjacent coils of wire being wound on the mandrel to form a spring of desired pitch. When it is desired to form closed coil springs, a notch in the plate where the leading and trailing edges meet is brought next to the mandrel. The plate is also longitudinally adjustable to accommodate wire of different gauge. (Owner) Charles Anthony, 5537 Hunter St., Philadelphia 31, Pa. Group 33—49. Reg. No. 9,458.

Pat. 2,427,843. BOILER TUBE SLITTER. Patented Sept. 23, 1947. A tool for slitting boiler tubes lengthwise and removing them from their header plates. The cutting blade is pivotally mounted on a cylindrical carrier block and projects laterally from one side. As the tool travels along inside of tube under the impact of a pneumatic hammer to which it is coupled, it cuts a recess in wall of tube and turns the removed material inwardly. At the conclusion of a cutting operation tool is withdrawn and the tube collapsed and removed from header plate. (Owner) Horace F. Dugger, Dora, Ala. Groups 33—51; 35—42. Reg. No. 9,459.

Pat. 2,338,702. GARMENT HANGER. Patented Jan. 11, 1944. Hanger has an extensible and contractible hanger bar carrying a pair of spring clips (with finger-like jaws) from which trousers are suspended by the cuffs. Top looped section of hanger, which supports a coat, is formed from a single piece of resilient wire having its ends connected to the outer ends of hanger bar. The loop section (which is wound at its center to form a coil spring) normally urges the bar into extended position so that the spring clips will move away from each other to stretch the cuffs. Ends of loop may be collapsed to contract hanger bar sufficiently to permit attachment of clips to cuffs. A foldable suspension hook is attached to the coil spring. Modification is shown. (Owner) John J. Cavanagh, 1 Walnut St., Farmingdale, Long Island, N. Y. Groups 33—49; 40. Reg. No. 9,460.

Pat. 2,066,238. GAME DEVICE. Patented Dec. 29, 1936. Miniature playing cards may be arranged within this pocket-sized holder for solitaire and like games. The holder is a sheet metal frame having vertical end and side walls enclosing a central and several transverse partitions which form open-ended pockets or compartments. Each of the pockets is bordered on three sides by a top flange and is provided with a spring-urged follower plate which moves upwardly to contact the flanged top so that cards are yieldingly held in place and easily slidable in an outward direction. Crossword puzzles, anagrams, and other games may be worked in the holder, its handy size making it ideal for use while traveling. (Owner) Walter T. Supina, P. O. Box 16, Penns Park, Pa. Group 39—41. Reg. No. 9,461.

Pat. 2,432,596. AMUSEMENT TARGET. Patented Dec. 16, 1947. A target in the form of a wooden comic figure with a mouth that opens and serves as a target for balls thrown therein. The mouth is provided with upper and lower doors in the form of teeth pivoted to head portion and operable by pulleys. When a ball strikes upper door, it swings door upwardly, and a striker attached thereto rings a bell attached to head portion. Modifications shown. (Owner) John Goodill Tindale, 223 North 4th St., Iola, Kans. Group 39—41. Reg. No. 9,462.

Pat. 2,328,913. SUPPORT RACK FOR CARTONS OF BOTTLES OR THE LIKE. Patented Sept. 7, 1943. A floor rack for storing and displaying a number of cartons of soft drinks or the like in such a manner that the advertising on the cartons is visible. Reinforced horizontal hanger bars are supported between pairs of arms which extend upwardly at an angle from a pair of uprights which support the rack. Spaced double hooks are provided on the hanger bars from which the cartons, having elongated hand-hole openings, are suspended. The bar is notched between the hooks for easy hanging or removal of the cartons. Modifications shown. (Owners) Charles H. Kruea and Edwin H. Creutz, 49 Indiana Ave., Fort Thomas, Ky. Group 25—41. Reg. No. 9,463.

Pat. 2,433,915. CHILD'S UNDERSHIRT. Patented Jan. 6, 1948. This undershirt slips on arms and wraps around child from front to back and crosses in the back. Tapered ends are brought forward through slots under each arm and fastened in the front as a belt. (Owner) Mrs. Olive L. Long, Route 2, Box 444, Mesa, Ariz. Groups 22—45; 23—41. Reg. No. 9,464.

Des. Pat. 135,934. DESIGN FOR A COMBINED ASH TRAY AND SAFETY MATCH HOLDER. Patented July 6, 1943. Substantially oval tray, flattened at one end, provides a well for ashes at one side, opposite which is a long slot centered between a pair of smaller wells (for used matches or a similar purpose). The slot has overhanging shoulders for firmly holding a box or book of matches. (Owner) Michael Mayer. Address correspondence to William Isler, 416 Leader Bldg., Cleveland 14, Ohio. Groups 32—29; 40. Reg. No. 9,465.

Pat. 2,433,141. HAIR CURLER. Patented Dec. 23, 1947. Collapsible rubber curler is small so that a number of them may be placed on scalp. The curler has a solid base (with a slot in one side) connected to a rigid ventilated cap by a collapsible bellows. Strands of hair are wound around the bellows to form a curl. Curler is then collapsed and held so until curl sets. When collapsed, flange of cap rests on base and encloses curl. To hold curler collapsed, a rubber band having a locking ball near its lower end is provided. The band extends downwardly through a hole in the cap with its lower end secured to base. With curler collapsed, band and ball are pulled upwardly and then moved laterally so that the ball will overlie a restricted slot in cap. In a modification a coil spring covered with fabric is used instead of the rubber bellows. (Owner) Mina M. McPherson, Box 358, Anchorage, Alaska. Groups 30—31—32; 39—91. Reg. No. 9,466.

Pat. 2,430,912. GRASS TAMPING ATTACHMENT FOR LAWN MOWERS. Patented Nov. 18, 1947. Device is used for tamping grass cuttings in a conventional type of grass catcher which trails mower. It consists of a swinging arm having a tamper blade on its lower end and a yoke on its upper end. The arm, near its center, is pivotally connected to one end of a push-pull rod. An operating lever has its lower end pivotally connected to the opposite end of the rod. To attach device to mower, the center of the lever and the yoke are each pivotally connected to one leg of the usual U-shaped mower handle. The free end of the lever curves rearwardly and downwardly, terminating in a lateral semi-circular hand-grip which will snap down over the transverse mower hand-grip to maintain tamper blade elevated well above grass catcher. Releasing and manipulating lever actuates tamper blade to sweep cuttings in catcher toward the rear and tamp them. (Owner) Carl G. Christian, Box 201, La Salle, Colo. Group 35—22—69. Reg. No. 9,467.

Pat. 2,225,133. ARTICLE CONTAINER. Patented Dec. 17, 1940. Cardboard carton for radio tubes is made up of an inner and outer shell, so constructed that a tube may be tested without removing it from the carton. The tube is completely enclosed except that the top and base terminals project through openings provided at each end. The carton features a tongue portion on the outer shell which is inserted through a pair of slits on the inner shell and stapled. This enables the inner shell to have limited sliding movement for testing purposes and yet retain the tube safe from damage or substitution. (Owner) Henry Silver. Address correspondence to Harry Langsam, 12 South 12th St., Philadelphia 7, Pa. Group 26—61. Reg. No. 9,468.

Pat. 2,345,594. AUTOMATIC WINDOW SASH OPERATING MECHANISM. Patented Apr. 4, 1944. This patent describes a concealed automatic window-raising and -lowering mechanism. A plunger rod centered on the bottom rail of a window sash is connected through reduction gearing to a reversible motor housed in the wall under the sill. The motor is operated by a double and single throw switch, the latter normally closed. The switches are automatically operable by a pair of projections on the plunger rod, the lower projection operating the double throw switch to reverse the motor only when the sash is fully raised. The upper projection, which is vertically adjustable on the rod (to allow the sash to be raised to a selected height) operates both switches to stop the motor only when the sash is fully lowered. The mechanism may be timed by adjusting the switches. (Owner) C. C. Gardner, 605 Forest City Bank Bldg., Rockford, Ill. Group 36—19. Reg. No. 9,469.

Pat. 2,433,133. PORTABLE AND COLLAPSIBLE STAND FOR CAMERAS. Patented Dec. 23, 1947. A stand for cameras which are used for reproducing maps, documents, etc. Also useful as a projecting stand for portable moving- or still-picture projectors, reading projectors, and the like. The stand consists of two upright grill-like frames inclined toward each other at the top. Each frame has four longitudinally extending bars connected by cross bars at top and bottom, with the two intermediate longitudinal bars of each frame having telescoping extensions at their upper ends for supporting a camera between the frames. A sheet of pliable material is provided at base of frames for supporting the article to be copied. Adjustable reflectors and lights are mounted on the inner side of each frame for illuminating the article being copied. The stand is constructed of light metal, wood, or plastic and is easily collapsible to fit into a carrying case. (Owner) Henry K. Lindsey, 2290 Liliha St., Honolulu, T. H. Group 39—12. Reg. No. 9,470.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 6, 1948

[VOL. 609. NO. 1]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 510,860. PETROLEUM SPECIALTIES COMPANY, St. Louis, Mo. Filed Oct. 14, 1946.

PetroResin

The word "Res'n" is disclaimed apart from the mark.

FOR POLYMERIZED OLEFINIC HYDROCARBONS OF GENERALLY CYCLIC NATURE FOR GENERAL USE IN THE INDUSTRIAL ARTS.

Claims use since July 13, 1945.

Ser. No. 513,385. BOSTON WOVEN HOSE & RUBBER COMPANY, Cambridge, Mass. Filed Nov. 29, 1946.

The words "Boston Woven Hose and Rubber Company" are disclaimed apart from the mark as shown.

FOR PLASTIC MATERIAL IN THE FORM OF RIGID, SEMI-RIGID, AND FLEXIBLE SHEETS, AND CONTINUOUS EXTRUSION PLASTIC STRIPS FOR FABRICATION INTO VARIOUS MANUFACTURED ARTICLES.

Claims use since Oct. 26, 1946.

Ser. No. 522,832. EAGLE-OTTAWA LEATHER COMPANY, Grand Haven, Mich. Filed May 22, 1947.

LAST EZY TUFTOE

FOR LEATHER.

Claims use since January 1946.

Ser. No. 522,979. ANGLO AMERICAN LEATHER CO., INC., Newark, N. J. Filed May 24, 1947.

Glamé

FOR PROCESSED SKINS AND LEATHER.

Claims use since May 1, 1947.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 516,067. PHILIP FLORIN, INC., New York, N. Y. Filed Jan. 21, 1947.

FOR WALLETS.

Claims use since June 1939.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 482,777. ADVANCO LABORATORIES, INCORPORATED, Saginaw, Mich. Filed Apr. 30, 1945.

The words "Keep Slick and Clean With" are disclaimed apart from the mark as shown.
FOR CLEANING AND WASHING COMPOUND.
Claims use since Apr. 3, 1945.

Ser. No. 493,687. THE IRWIN-NEWMAN PRODUCTS CORP., Brooklyn, N. Y. Filed Dec. 21, 1945.

All the wording except "Fasuds" is disclaimed, except in connection with the mark shown. The representation of the woman shown in the drawing is merely fanciful. This pictorial feature showing the woman using the goods is disclaimed except in combination with the rest of the mark as shown.
FOR SOAPLESS CLEANING POWDER.
Claims use since October 1945.

Ser. No. 511,472. HELP, INC., Chicago, Ill. Filed Oct. 25, 1946.

The drawing is lined for blue, red and yellow.
FOR GENERAL HOUSEHOLD CLEANING PREPARATION WITH INCIDENTAL WATER SOFTENING PROPERTIES IN POWDER OR LIQUID FORM.
Claims use since Sept. 15, 1925.

Ser. No. 525,419. SUN OIL COMPANY, Philadelphia, Pa. Filed July 1, 1947.

SUNOCO

FOR CHROME CLEANER, DRY CLEANING FLUID, SPARK PLUG ABRASIVE AND CLEANING SAND, CHEMICALLY TREATED POLISHING CLOTH.
Claims use since Apr. 18, 1944.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 500,430. U. S. INDUSTRIAL CHEMICALS, INC., New York, N. Y. Filed Apr. 17, 1946.

SIL-O-SIL

FOR ORGANO-SILICON COMPOUNDS HAVING A GENERAL UTILITY IN THE INDUSTRIAL ARTS.
Claims use since Mar. 31, 1944.

Ser. No. 500,910. SPLENDOR LTD., Nottingham, England. Filed Apr. 25, 1946.

SPLENDOR BRAND

The word "Brand" is disclaimed apart from the mark.
FOR MEDICATED FOOT OINTMENTS AND FOOT POWDERS.
Claims use since 1936.

Ser. No. 501,314. DOMINICK F. DE ANGELIS, doing business as De Angelis Pharmacal Co., Brooklyn, N. Y. Filed May 2, 1946.

B-STRON

The letter "B" is disclaimed apart from the mark as a whole.
FOR MEDICINAL TABLETS CONTAINING STRONTIUM BROMIDE AND THIAMIN CHLORIDE FOR USE AS A MILD SEDATIVE, FOR SIMPLE NERVOUSNESS, IRRITABILITY, AND OCCASIONAL INSOMNIA.
Claims use since Apr. 20, 1946.

Ser. No. 501,699. VERMEX COMPANY OF AMERICA, Glendale, Calif. Filed May 8, 1946.

VERMEX

FOR INSECTICIDES.
Claims use since November 1940.

Ser. No. 501,871. ALMA I. RAULLERSON, Albany, N. Y. Filed May 10, 1946.

ELODIA

FOR HAIR PREPARATION FOR THE STIMULATION OF THE SCALP AND THE PREVENTION OF FALLING HAIR AND DANDRUFF.
Claims use since December 1944.

Ser. No. 503,389. MATO REESE INC., Chicago, Ill. Filed June 6, 1946.

THE GLASS MENAGERIE

FOR TOILET PREPARATIONS — NAMELY, COLOGNE, PERFUMES, BATH CRYSTALS, BATH OILS, AND BUBBLE BATH.
Claims use since Apr. 23, 1946.

Ser. No. 508,969. BOYLE AND COMPANY, Los Angeles, Calif. Filed Sept. 13, 1946.

Tansan

FOR SUN TAN LOTION.
Claims use since Apr. 23, 1946.

Ser. No. 509,624. EMELIE B. ALLARD, Ottawa, Ontario, Canada. Filed Sept. 24, 1946.

The signature is a facsimile of the signature of the applicant. No claim is made to the words "Vie" and "Life." The portrait is that of Emelie B. Allard.
FOR REMEDY FOR THE SCALP AND FOR THE HAIR, USED FOR THE TREATMENT OF DANDRUFF, AND PROMOTING ITS GROWTH.
Claims use since June 1, 1938.

Ser. No. 510,139. FRANK VON, doing business as Vonett Sales Company, Los Angeles, Calif. Filed Oct. 2, 1946.

PET-A-GREE

FOR SHAMPOO FOR DOGS.
Claims use since Mar. 14, 1936.

Ser. No. 512,788. IRENE MARQUIS, doing business as Del-Mar Products, Oakland, Calif. Filed Nov. 18, 1946.

The portrait is fanciful.
FOR HAIR SHAMPOO AND CREAM LOTION HAIR DRESSING.
Claims use since May 1946.

Ser. No. 513,134. P. A. LABORATORIES, INC., South Bend, Ind. Filed Nov. 23, 1946.

P.A.

FOR UNDERARM PERSPIRATION DEODORANT.
Claims use since Nov. 12, 1946.

Ser. No. 513,543. R. T. VANDERBILT COMPANY, INC., New York, N. Y. Filed Nov. 30, 1946.

VeeCote

FOR PYROPHYLLITE OR TALC USED AS AN INGREDIENT OF COSMETICS, SUCH AS FACE, BODY, AND TALCUM POWDERS.
Claims use since Nov. 8, 1946.

Ser. No. 514,569. JEROME A. STIFFMAN, doing business as Green Hornet Drug Company, Lansdowne, Md. Filed Dec. 19, 1946.

Green Hornets

FOR MEDICINAL TABLETS USED IN THE TREATMENT OF SIMPLE COLDS, NEURALGIA, AND HEADACHES.
Claims use since Nov. 15, 1946.

Ser. No. 514,846. JOHN A. RAY, doing business as The Cool-Amp Co., Portland, Oreg. Filed Dec. 26, 1946.

COOL-AMP

The color lining on the drawing represents brown.
FOR POWDER FOR SILVER PLATING ELECTRICAL BUS BARS, CONNECTORS, AND THE LIKE.
Claims use since July 26, 1946.

Ser. No. 514,856. SVENSKA AKTIEBOLAGET "RATIN," Stockholm, Sweden. Filed Dec. 26, 1946.

RATININ

FOR PREPARATION FOR THE EXTERMINATION OF RATS.
Claims use since 1907.

Ser. No. 518,316. OXFORD LABORATORIES, INCORPORATED, Dayton, Va. Filed Feb. 28, 1947.

Rescolin

FOR GUAIACOL CARBONATE WITH VITAMINS FOR THE TREATMENT OF SYMPTOMS ASSOCIATED WITH COLDS AND GRIP.
Claims use since June 15, 1946.

Ser. No. 519,297. SERAN COMPANY, INC., Springfield, Mass. Filed Mar. 19, 1947.

SERAN

FOR SHAMPOO, SKIN CREAM AND LOTION, PERFUME, LIPSTICK, NAIL POLISH, MOUTH WASH, TOOTH POWDER, DEODORANT.
Claims use since Jan. 7, 1947.

Ser. No. 520,414. PYROXYLIN PRODUCTS, INC., Chicago, Ill. Filed Apr. 9, 1947.

PROX-PEEL

No request is hereby made to register the word "Peel" apart from the mark as shown.
FOR FAMILY OF COATING COMPOSITIONS MADE FROM SEVERAL FILM-FORMING BASES FOR APPLICATION AS MELTS, OR IN SOLUTION FORM IN VOLATILE SOLVENT, FOR PROVIDING ADHERENT TRANSPARENT-TO-OPAQUE PROTECTIVE COATS READILY PEELABLE AS A TOUGH FILM FOR REMOVAL TO EXPOSE THE PROTECTED SURFACE.
Claims use since Feb. 7, 1944.

Ser. No. 520,664. JOHN H. WOOD COMPANY, Philadelphia, Pa., assignor to Skinner Manufacturing Company, Omaha, Nebr., a corporation of Nebraska. Filed Apr. 14, 1947.

NIL

FOR DEODORANT IN PASTE OR SEMI-PASTE FORM FOR APPLICATION TO THE HUMAN BODY.
Claims use since June 5, 1915.

Ser. No. 522,084. TRIO CHEMICAL WORKS, INC., Brooklyn, N. Y. Filed May 8, 1947.

KLEER-X

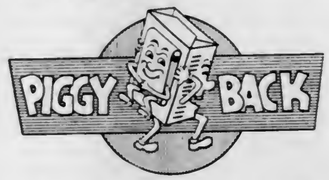
FOR PINE DISINFECTANT.
Claims use since January 1941.

Ser. No. 523,295. F. C. TURNER, doing business as Agricultural Chemical Mills, Marion, Ill. Filed May 29, 1947.

Gardener's Friend

No claim is made to the word "Gardener's" apart from the mark as shown.
FOR GARDEN INSECTICIDES, BOTH SPRAYING AND DUSTING.
Claims use since Apr. 1, 1944.

Ser. No. 524,690. STEPHEN A. CONDREY, Wilmington, Mass. Filed June 24, 1947.



STEPCO PACKS

No claim is made to the word "Packs" apart from the mark.
FOR POULTICES IN THE FORM OF POROUS BAGS CONTAINING FLAXSEED.
Claims use since May 17, 1947.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 507,925. NOVIL-T COMPANY, North Hampton, N. H. Filed Aug. 23, 1946.

The vertical color lining on the circular disk symbolizes red and the horizontal color lining on the rectangular area symbolizes blue.
FOR MATCHES.
Claims use since Apr. 9, 1946.

CLASS 10

FERTILIZERS

Ser. No. 519,500. EMMERT R. WILSON, doing business as The M16 Products Co., Stockton, N. J. Filed Mar. 24, 1947.

M16

FOR FERTILIZERS.
Claims use since June 1945.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 505,854. PANETTES COMPANY, Pittsburgh, Pa. Filed July 18, 1946.

Panettes

FOR THIN METAL OR FOIL LINERS SERVING TO LINE COOKING UTENSILS.
Claims use since June 26, 1946.

Ser. No. 514,339. GEORGE F. HADDICAN, Delano, Calif. Filed Dec. 15, 1946.

HADCO

FOR CAST IRON PIPE FITTINGS—NAMELY, Y's, T's, BENDS, SANITARY T's, TAPPED T's, ADAPTERS, AND COMBINATIONS.
Claims use since Oct. 15, 1946.

Ser. No. 519,706. ULTRA SLIDE FASTENER CORP., New York, N. Y. Filed Mar. 27, 1947.

ULTRA

The representation of the goods is disclaimed apart from the mark.
FOR SEPARABLE FASTENERS OF THE SLIDER CONTROLLED TYPE.
Claims use since Jan. 15, 1947.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 499,446. TENSALUM CORPORATION, Franklin Park, Ill., assignor to Kurt R. Schnellhardt, Ingleside, Ill. Filed Apr. 1, 1946.

TENSALUM

FOR ALUMINUM ALLOYS—NAMELY, ALLOYS USED FOR GREEN SAND CASTING, HIGH PRESSURE CASTING, DIE CASTING, PERMANENT MOLD CASTING, EXTRUDED BARS, WIRES AND STRUCTURAL SHAPES, ROLLED SHEETS AND STRIPS, AND FOR WELDING, FORGING, STAMPING, SPINNING, DRAWING AND TUBING.
Claims use since Aug. 21, 1945.

Ser. No. 513,746. LANSDOWNE STEEL & IRON COMPANY, Morton, Pa. Filed Dec. 5, 1946.

LANSCO

FOR METAL FORGINGS.
Claims use since September 1927.

Ser. No. 517,078. NASSAU SMELTING & REFINING COMPANY, INCORPORATED, New York, N. Y. Filed Feb. 6, 1947.

NHE

FOR COPPER INGOTS, COPPER INGOT BARS, COPPER WIRE BARS, AND COPPER ANODES OF ELECTROLYTIC QUALITY.
Claims use since September 1932.

CLASS 15

OILS AND GREASES

Ser. No. 484,194. COMMERCE PETROLEUM COMPANY, Chicago, Ill. Filed June 6, 1945.

SOL-PRO

FOR FUEL OIL FOR HEATING PURPOSES.
Claims use since Feb. 1, 1945.

CLASS 19

VEHICLES

Ser. No. 511,649. IRVING SIMON, doing business as Alltex Products Company, New York, N. Y. Filed Oct. 28, 1946.

NATIONAL

FOR VEHICULAR BRAKE BLOCKS.
Claims use since May 1, 1935.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 505,747. GORDON SPECIALTIES COMPANY, Chicago, Ill. Filed July 17, 1946.

ANTEN -A- CATOR

FOR APPARATUS FOR REMOTELY INDICATING AND CONTROLLING THE POSITION OF ROTATABLE ANTENNAS.
Claims use since June 14, 1946.

Ser. No. 505,748. GORDON SPECIALTIES COMPANY, Chicago, Ill. Filed July 17, 1946.

ROTO-BEAM

The word "Beam" is disclaimed apart from the mark.
FOR ROTATABLE ANTENNAS.
Claims use since June 14, 1946.

Ser. No. 508,844. FLOODBEEM FLASHLIGHT COMPANY, Detroit, Mich. Filed Sept. 11, 1946.

Floodbeem

FOR FLASHLIGHTS.
Claims use since Aug. 5, 1945.

Ser. No. 517,185. CRYSTAL RESEARCH LABORATORIES, INCORPORATED, Hartford, Conn. Filed Feb. 8, 1947.

AmpliMuse

FOR ELECTRON TUBE AMPLIFYING UNITS FOR AMPLIFYING MUSIC FROM MUSICAL INSTRUMENTS, GUITARS, PIANOS, ORGANS, PHONOGRAPHS, AND FOR USE IN PUBLIC ADDRESS SYSTEMS, AND FOR AMPLIFYING SOUND GENERALLY.
Claims use since Jan. 31, 1947.

Ser. No. 523,203. FUSITE CORPORATION, Cincinnati, Ohio, Filed May 28, 1947.

HERMETICAN

The word "Can" is disclaimed except in the connection shown.
FOR MOISTURE PROOF PROTECTIVE CASINGS USED TO RECEIVE ELECTRICAL APPARATUS AND EQUIPMENT SUCH AS CONDENSERS, ETC.
Claims use since Jan. 1, 1946.

Ser. No. 525,949. RADIO CORPORATION OF AMERICA, New York, N. Y. Filed July 3, 1947.

RCA

FOR ARTICLES COMPOSED WHOLLY OR IN PART OF NATURAL AND/OR SYNTHETIC RUBBER SOLD AS PARTS FOR AND AS REPLACEMENT PARTS OF RADIO, TELEVISION, ELECTRONIC AND SOUND PRODUCTS—NAMELY, BUSHINGS, BUMPERS, GROMMETS, TIRES, CUSHIONS, PADS, SHOCK MOUNTINGS, SPACERS, GASKETS, DAMPING BLOCKS FOR PHONOGRAPH PICK-UPS, CAPS FOR ELECTRICAL PHONOGRAPH TURNTABLE SPINDLES TO PREVENT SLIPPAGE, MASKING CUSHIONS FOR CATHODE RAY TUBES, FLEXIBLE COUPLINGS FOR PHONOGRAPH TURNTABLES AND MOTOR SPINDLES, COMBINATION PLUNGER FOR ACTUATING SWITCHES AND REST FOR PHONOGRAPH PICK-UPS, COVERS FOR HOOKS MOUNTED ON DRIVE-IN THEATRE LOUDSPEAKERS TO PREVENT SCRATCHING OF METAL CAR DOORS, RINGS FOR MICROPHONES, TIPS FOR MOTOR SPINDLES, SUCTION CUPS FOR AUTO RECEIVER AND PORTABLE RECEIVER ANTENNAS, EAR CUSHIONS OR CAPS FOR SOUND POWERED TELEPHONES.

Claims use on bushings, bumpers, and damping blocks for phonograph pick-ups since January 1935; on grommets since September 1939; on tires since October 1940; on cushions, pads and shock mountings since January 1939; on spacers since June 1940; on gaskets since December 1940; on caps for electrical phonograph turntable spindles to prevent slippage since March 1938; on masking cushions for cathode ray tubes since April 1939; on flexible couplings for phonograph turntables and motor spindles since December 1938; on combination plunger for actuating switches and rest for phonograph pick-ups since November 1939; on covers for hooks mounted on drive-in theatre loudspeakers to prevent scratching of metal car doors since September 1944; on rings for microphones since May 1940; on tips for motor spindles since March 1942; on suction cups for auto receiver and portable receiver antennas since the spring of 1935; and on ear cushions or caps for sound powered telephones since June 1942.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 496,022. ZADEK FELDSTEIN CO., INC., New York, N. Y. Filed Feb. 5, 1946.

Snow Baby

The word "Baby" is disclaimed.
FOR TOY RATTLES, DOLLS, TOY CHAINS AND TOY NECKLACES, TOY HOOP ELEMENTS HOLDING BEADS AND SMALLER HOOPS.
Claims use since March 1942.

Ser. No. 496,188. CHARLES L. YANCEY, Norristown, Pa. Filed Feb. 7, 1946.

Terrapool

FOR COMBINATION POOL AND CROQUET GAME.
Claims use since Aug. 1, 1944.

Ser. No. 500,901. SAXON TOY CORPORATION, Brooklyn, N. Y. Filed Apr. 25, 1946.

roll-lite

FOR ROULETTE AND PUT AND TAKE GAME.
Claims use since Mar. 1, 1946.

Ser. No. 505,529. STONY BROOK INDUSTRIES, Old Saybrook, Conn. Filed July 12, 1946.

Stony Brook

FOR FISHING RODS, FISHING TIP-UPS, AND FISHING REELS.
Claims use since May 1, 1946.

Ser. No. 509,010. MELVILLE KEIM, Chicago, Ill. Filed Sept. 13, 1946.

DAKOTA

FOR HUNTERS' BELTS WITH ATTACHMENTS FOR CARRYING SHELLS AND SMALL GAME.

Campana
Italian

FOR LOTIONS FOR THE SKIN.
Claims use since June 28, 1939.

Reg. No. 377,475. Registered May 7, 1940. DR. PETER FAHRNEY & SONS CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

All the wording except "Forni's" "Magolo," "1780," "P. Fahrney, M. D.," and "Dr. Peter Fahrney & Sons Co.," is disclaimed.
FOR PREPARATION FOR ACUTE, RELAXED, AND DISTURBED CONDITION OF THE STOMACH AND BOWELS.
Claims use since July 25, 1939.

Reg. No. 377,476. Registered May 7, 1940. Dr. PETER FAHRNEY & SONS CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

All the wording is disclaimed except "Dr. Peters," "Magolo," "1780," "P. Fahrney M. D.," and "Dr. Peter Fahrney & Sons Co."
FOR A PREPARATION FOR ACUTE, RELAXED, AND DISTURBED CONDITIONS OF THE STOMACH AND BOWELS.
Claims use since July 27, 1939.

Reg. No. 377,563. Registered May 7, 1940. JONATHAN P. B. FISKE, Auburndale, Mass. Republished by Fiske Inc., Waltham, Mass., a corporation of Massachusetts.

FIRE MAGIC

FOR FLAME COLORING MATERIAL.
Claims use since September 1939.

Reg. No. 378,593. Registered June 11, 1940. GENERAL ANILINE & FILM CORPORATION, Binghamton, N. Y., a corporation of Delaware. Republished by registrant, present location New York, N. Y.

ANSCO

FOR CHEMICALS AND PREPARATIONS AND COMPOUNDS THEREOF USED IN PHOTOGRAPHIC PROCESSES.
Claims use since July 1, 1902.

Reg. No. 383,839. Registered Dec. 24, 1940. CAMPANA CORPORATION, Batavia, Ill. Republished by Campana Sales Company, Batavia, Ill., a corporation of Delaware.

OLD SOUTH

Cotton Blossom

FOR LOTIONS FOR THE SKIN.
Claims use since July 9, 1940.

Reg. No. 391,642. Registered Nov. 18, 1941. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

STABILIDE

FOR STABILIZED ASSIMILABLE IODIDE-CONTAINING SUBSTANCES.
Claims use since May 16, 1941.

Reg. No. 393,106. Registered Jan. 27, 1942. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

PROPAZONE

FOR SUBSTITUTED OXAZOLEDIONES AND SALTS THEREOF USEFUL AS HYPNOTICS AND ANAESTHETICS.
Claims use since July 11, 1941.

Reg. No. 398,059. Registered Oct. 6, 1942. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

METHASAN

FOR COMPOUNDS USED AS VULCANIZATION ACCELERATORS IN THE CURING OF RUBBER ARTICLES.
Claims use since about Apr. 29, 1942.

Reg. No. 400,173. Registered Feb. 16, 1943. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

THIOFIDE

FOR DIBENZOTHIAZYL DISULFIDE USED AS A VULCANIZATION ACCELERATOR IN THE CURING OF RUBBER ARTICLES.
Claims use since about June 6, 1935.

Reg. No. 401,927. Registered June 15, 1943. FLOWER FOODS, INC., Maywood, Ill., a corporation of Illinois. Republished by registrant.

ROSELIFE

FOR COMPOSITION CONTAINING CHEMICAL INGREDIENTS FOR STRENGTHENING, FEEDING, AND PROMOTING THE DEVELOPMENT OF CUT PLANTS.
Claims use since July 29, 1926.

Reg. No. 403,275. Registered Sept. 14, 1943. CAMPANA CORPORATION, Batavia, Ill., a corporation of Delaware. Republished by registrant.

Solitair

The right to exclusive use of a circular label or a pink label is disclaimed apart from the mark.
FOR MAKE-UP PREPARATION.
Claims use since Feb. 18, 1943.

Reg. No. 406,680. Registered Apr. 18, 1944. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

drene

FOR SHAMPOO.
Claims use since Oct. 25, 1933.

Reg. No. 412,639. Registered Mar. 20, 1945. E. S. MILLER LABORATORIES, INC., Los Angeles, Calif., a corporation of California. Republished by registrant.

TESTRONE

FOR MEDICINAL PREPARATION WHOSE ACTIVE CONSTITUENTS ARE COMPOSED SOLELY OF NATURAL ANDROGENS DERIVED FROM MAMMALIAN TESTIS MATERIAL INDICATED FOR THOSE SYMPTOMS ASSOCIATED WITH THE MALE CLIMACTERIC, DYSMENORRHEA, MENOMETRORRHAGIA AND IN THE INHIBITION OF LACTATION.
Claims use since Feb. 26, 1942.

Reg. No. 412,940. Registered Apr. 3, 1945. CAMPANA SALES COMPANY, Batavia, Ill., a corporation of Delaware. Republished by registrant.

ANJOU

FOR COLOGNES AND PERFUMERY.
Claims use since May 26, 1944.

Reg. No. 418,214. Registered Dec. 11, 1945. CAMPANA CORPORATION, Batavia, Ill., a corporation of Delaware. Republished by registrant.

FASHION POINT

FOR LIPSTICK.
Claims use since Nov. 14, 1944.

Reg. No. 423,751. Registered Sept. 10, 1946. ELGIN SOFTENER CORPORATION, Elgin, Ill., a corporation of Illinois. Republished by registrant.

ELGEX

FOR PREPARATIONS FOR USE IN TREATMENT OF WATER AND STEAM FOR THE PURPOSE OF PREVENTING CORROSION.
Claims use since Feb. 11, 1943.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 387,505. Registered May 20, 1941. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

ALL-IN-ONE

FOR CARBON PAPERS AND TYPEWRITER RIBBONS.
Claims use since May 31, 1928.

Reg. No. 387,506. Registered July 5, 1947. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

BALANCED

FOR CARBON PAPERS AND TYPEWRITER RIBBONS.
Claims use since July 24, 1934.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 233,048. Registered Sept. 20, 1927. THE WOODVILLE LIME PRODUCTS COMPANY, Toledo, Ohio, a corporation of Ohio. Republished by registrant.

BLUE BAND

FOR LIME.
Claims use since Dec. 31, 1926.

Reg. No. 237,551. Registered Jan. 10, 1928. THE PARKERSBURG RIG AND REEL COMPANY, Parkersburg, W. Va., a corporation of West Virginia. Republished by registrant.

The drawing is lined for the colors green, gold, and red. The words appearing on the drawing except the name of the applicant corporation are disclaimed.
FOR BELT HOUSES, ENGINE HOUSES, BULL-WHEEL HOUSES, PUMP HOUSES, AND STAIRWAYS FOR TANK BATTERIES.
Claims use since Aug. 5, 1920.

Reg. No. 282,593. Registered Apr. 28, 1931. THE PRESS-TITE ENGINEERING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

ENAMELITE

FOR ASPHALT COMPOUNDED WITH OTHER INGREDIENTS FOR USE IN PRODUCING A CEMENT.
Claims use since May 1, 1929.

Reg. No. 370,950. Registered Sept. 12, 1939. HOWE & FRENCH, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

SYNTHE-WOOD

The word "Wood" is disclaimed.
FOR CEMENTITIOUS MATERIAL CONSISTING OF WOOD IN PASTE FORM WHICH HARDENS WHEN EXPOSED TO AIR.
Claims use since May 29, 1931.

Reg. No. 374,726. Registered Jan. 23, 1940. KEASBEY & MATTISON COMPANY, Ambler, Pa., a corporation of Pennsylvania. Republished by registrant.

The words "Best in Asbestos" are disclaimed.
FOR ASBESTOS CEMENTS, ASBESTOS PAPERS, ASBESTOS MILL BOARD, WOOL FELT INSULATION, FURNACE COVERINGS, ASBESTOS BOARDS, SLABS, TILES, SHEETS AND SIDINGS, WALLBOARDS, PIPE COVERINGS, BLOCK INSULATION, ASBESTOS LUMBER, MINERAL WOOL, HAIR FELT, MAGNESIA INSULATION COMPRISING MAGNESIUM AND ASBESTOS FIBRE, AND COMPOSITION BOARDS.
Claims use since about Oct. 1, 1937.

Reg. No. 378,028. Registered May 21, 1940. KEASBEY & MATTISON COMPANY, Ambler, Pa., a corporation of Pennsylvania. Republished by registrant.

"Century" BOARD

The word "Board" is disclaimed.
FOR FIRE RESISTANT BUILDING BOARDS, INSULATING AND SOUND DEADENING BOARDS, COMPOSITION BOARDS, AND PARTICULARLY ADAPTED FOR USE AS A BUILDING MATERIAL, PARTITIONS, STEAMSHIP INTERIOR CONSTRUCTION MATERIALS AND FOR OTHER BUILDING AND CONSTRUCTION PURPOSES.
Claims use since about Nov. 16, 1939.

Reg. No. 395,473. Registered May 26, 1942. ARMSTRONG CORK COMPANY, Manheim Township, Lancaster County, Pa., a corporation of Pennsylvania. Republished by registrant.

CUSHIONTONE

FOR FIBROUS ACOUSTICAL INSULATING MATERIAL.
Claims use since July 21, 1941.

Reg. No. 402,277. Registered July 13, 1943. KEASBEY & MATTISON COMPANY, Ambler, Pa., a corporation of Pennsylvania. Republished by registrant.

K&M "Century" APAC BOARD

The word "Board" is disclaimed.
FOR ASBESTOS BOARDS, ASBESTOS SHEETS, ASBESTOS LUMBER, AND ASBESTOS BUILDING MATERIALS IN FLAT AND SHEET FORM.
Claims use since Sept. 25, 1942.

Reg. No. 407,792. Registered June 27, 1944. PAGE & HILL CO., Minneapolis, Minn., a corporation of Delaware. Republished by registrant.

PENTA

FOR TREATED WOOD POLES FOR THE SUPPORT OF POWER LINES AND COMMUNICATION LINES.
Claims use since Sept. 5, 1941.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 149,347. Registered Dec. 13, 1921. THE BASSICK COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

WIZARD SWIVEL

The word "Swivel" is disclaimed.
FOR CASTERS.
Claims use since January 1919.

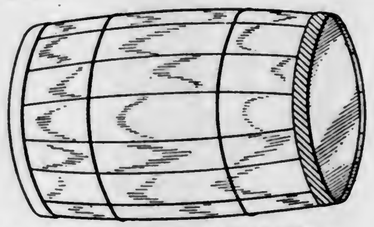
Reg. No. 149,348. Registered Dec. 13, 1921. THE BASSICK COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

UNIVERSAL

FOR CASTERS.
Claims use since 1904.

Reg. No. 150,727. Registered Jan. 10, 1922. THE BASSICK COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

The Neglected Inch



FOR CASTERS.
Claims use since May 13, 1921.

Reg. No. 211,388. Registered Apr. 13, 1926. THE WAGNER MANUFACTURING COMPANY, Sidney, Ohio, a corporation of Ohio. Republished by registrant.

WAGNER

FOR POTS, KETTLES, TEA KETTLES, PANS, BAKING PANS, SAUCEPANS, FRYING PANS, SKILLETS, ROASTERS, DUTCH OVENS, STEAM COOKERS, WAFFLE IRONS, GRIDDLES, AND PERCOLATORS.
Claims use since 1891.

Reg. No. 233,175. Registered Sept. 27, 1927. KEYSTONE STEEL & WIRE COMPANY, South Bartonville, Peoria, Ill., a corporation of Illinois. Republished by registrant.

The representation of the keg is disclaimed.
FOR NAILS.
Claims use since Apr. 15, 1927.

Reg. No. 234,403. Registered Oct. 25, 1927. KEYSTONE STEEL & WIRE COMPANY, South Bartonville, Peoria, Ill., a corporation of Illinois. Republished by registrant.

GREEN TIP

FOR BALE TIES.
Claims use since on or about Apr. 5, 1927.

Reg. No. 238,257. Registered Jan. 31, 1928. KEYSTONE STEEL & WIRE COMPANY, South Bartonville, Peoria, Ill., a corporation of Illinois. Republished by registrant.

Red Line

FOR WIRE FENCE.
Claims use since July 26, 1927.

Reg. No. 391,965. Registered Dec. 2, 1941. CONTINENTAL COFFEE COMPANY, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

CONTINENTAL

FOR COFFEE URNS.
Claims use since January 1933.

Reg. No. 395,433. Registered May 26, 1942. THE BASSICK COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

BACO-SOL

FOR FURNITURE CASTER WHEELS.
Claims use since on or about Aug. 1, 1941.

Reg. No. 417,471. Registered Oct. 30, 1945. HILL-SHAW COMPANY, Chicago, Ill. Republished by Hill-Shaw Company, Chicago, Ill., a corporation of Delaware.

VACULATOR

FOR ALUMINUM AND STAINLESS STEEL UPPER BOWLS FOR VACUUM TYPE COFFEE BREWERS, AND RUBBER BUSHINGS, AND MOLDED PLASTIC HANDLES FOR VACUUM TYPE COFFEE BREWERS.
Claims use since about 1932 on aluminum upper bowls; since about 1938 on stainless steel upper bowls; and since about September 1930 on rubber bushings and handles.

Reg. No. 418,882. Registered Jan. 15, 1946. FEDERAL ELECTRIC COMPANY INC., Chicago, Ill., a corporation of New York. Republished by registrant.

FEDRALITE

FOR PLASTIC PIPE AND TUBING.
Claims use since Sept. 8, 1940.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 233,751. Registered Oct. 11, 1927. ACME STEEL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

SilverStitch

FOR GALVANIZED STAPLING WIRE.
Claims use since Apr. 5, 1927.

Reg. No. 234,322. Registered Oct. 25, 1927. WILLIAMS AND COMPANY, INC., Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

WELDFLO

FOR WELDING WIRE ADAPTED TO BE DEPOSITED ON A METAL ARTICLE IN THE PROCESS OF WELDING.
Claims use since Nov. 16, 1926.

Reg. No. 369,959. Registered Aug. 8, 1939. INTERNATIONAL HARVESTER COMPANY, Chicago, Ill., a corporation of New Jersey. Republished by registrant.

FOR FERROUS METAL CASTINGS AND FORGINGS.
Claims use since on or about Mar. 1, 1906.

Reg. No. 395,921. Registered June 16, 1942. KLOSTER STEEL CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

V-76

FOR DIE AND TOOL STEEL.
Claims use since August 1936.

Reg. No. 397,914. Registered Sept. 29, 1942. THE SYMINGTON-GOULD CORPORATION, Rochester, N. Y., a corporation of Maryland. Republished by registrant.

FOR CARBON STEEL, ALLOY STEEL, SEMISTEEL, MALLEABLE AND GREY IRON CASTINGS.
Claims use since October 1908.

Reg. No. 419,588. Registered Feb. 26, 1946. DODGE MANUFACTURING CORPORATION, Mishawaka, Ind., a corporation of Indiana. Republished by registrant.

FOR CASTINGS COMPRISING PARTS FOR POWER-TRANSMISSION MACHINERY—NAMELY, CAST IRON SHAFT SUPPORTS, SHAFT HANGERS, BEARING HOUSINGS AND SUPPORTS, GEARS, SPROCKETS, PULLEYS, SHEAVES, COLLARS, CLUTCH PARTS AND SHAFT-COUPLING PARTS; AND PARTS FOR ELEVATING AND CONVEYING MACHINERY—NAMELY, CAST IRON CONVEYER ROLLS AND CONVEYER ROLL SUPPORTS, BUT NOT INCLUDING TEXTILE MACHINERY OR SPECIAL PARTS SPECIFICALLY INTENDED FOR USE THEREWITH.
Claims use since July 15, 1903.

CLASS 15

OILS AND GREASES

Reg. No. 254,907. Registered Apr. 2, 1929. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

DARK POCO

The word "Dark" is disclaimed.
FOR LUBRICATING OILS.
Claims use since Sept. 10, 1924.

Reg. No. 396,570. Registered July 28, 1942. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

POCOTOL

FOR LUBRICATING OIL.
Claims use since Aug. 1, 1931.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 232,759. Registered Sept. 13, 1927. RÖHM & HAAS COMPANY, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

ORTHO-CLEAR

The word "Clear" is disclaimed.
FOR CELLULOSE-ESTER LACQUERS.
Claims use since Jan. 8, 1927.

Reg. No. 235,296. Registered Nov. 15, 1927. THE MORGAN COMPANY, Peoria, Ill. Republished by Hockaday, Inc., Chicago, Ill., a corporation of Illinois, by merger.

MORALIN

FOR PASTE PAINT.
Claims use since about May 1, 1921.

Reg. No. 235,850. Registered Nov. 29, 1927. TRUE-TAGG PAINT COMPANY, Memphis, Tenn., a corporation of Tennessee. Republished by registrant.

TRU-LAC

The word "Lac" is disclaimed.
FOR BRUSHING LACQUERS, PREPARED SHELLAC SUBSTITUTES, AND VARNISHES.
Claims use since about Jan. 1, 1920.

Reg. No. 349,406. Registered Aug. 24, 1937. I. F. LAUCKS, INC., Seattle, Wash. Republished by Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware.

LAUX REZ

FOR UNDER OR PRIMING COAT FOR WOOD, CEMENT, PLASTER OR BRICK, AND FOR A FILLER, SEALER, AND GRAIN RAISING INHIBITOR FOR LUMBER AND PLYWOOD.
Claims use since Apr. 21, 1937.

Reg. No. 350,790. Registered Oct. 5, 1937. I. F. LAUCKS, INC., Seattle, Wash. Republished by Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware.

REZ-I-TEX

FOR READY MIXED, DRY, PASTE, AND POWDERED PAINTS—VIZ., FLAT PAINTS AND GLOSS PAINTS, AND FOR WALL TEXTURE OR STIPPLING FORMING MATERIAL.
Claims use since June 10, 1937.

Reg. No. 391,784. Registered Nov. 25, 1941. THE DAVIES-YOUNG SOAP COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

The words "Liquid Wax" are disclaimed. The drawing is lined for the color blue.
FOR PREPARED LIQUID WAX FOR POLISHING FLOORS, WOODWORK, ETC.
Claims use since on or about Jan. 17, 1941.

Reg. No. 417,619. Registered Nov. 6, 1945. CORK IMPORT CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant, present location, Englewood, N. J.

NOVOID

FOR ASPHALTIC PAINTS, AND ASPHALTIC PRIMING AND SEALING PAINTS.
Claims use since on or about Dec. 1, 1938.

CLASS 19

VEHICLES

Reg. No. 239,162. Registered Feb. 21, 1928. HUNT-SPILLER MANUFACTURING CORPORATION, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

HSGI

FOR BRAKE DRUMS AND BRAKE DISCS FOR AUTOMOTIVE VEHICLES AND OTHER APPARATUS.
Claims use since on or about Jan. 1, 1923.

CLASS 20

LINOLEUM AND OILED CLOTH

Reg. No. 423,610. Registered Sept. 3, 1946. ARMSTRONG CORK COMPANY, Lancaster, Pa., a corporation of Pennsylvania. Republished by registrant.

AIROFLOR

FOR LIGHTWEIGHT FLOOR, WALL AND SIMILAR SURFACE COVERINGS OF THE LINOLEUM TYPE.
Claims use since about Sept. 4, 1935.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 260,926. Registered Sept. 3, 1929. THE BUDA COMPANY, Chicago and Harvey, Ill., a corporation of Illinois. Republished by registrant, present location, Harvey, Ill.

BUDA DIESELIGHT

The word "Dieselight" is disclaimed.
FOR ELECTRIC LIGHT AND POWER GENERATING SETS.
Claims use since Aug. 10, 1928.

Reg. No. 351,355. Registered Oct. 26, 1937. GLOBE-UNION INC., Milwaukee, Wis., a corporation of Delaware. Republished by registrant.

SPINTEX

FOR STORAGE BATTERIES AND SEPARATOR PLATES FOR STORAGE BATTERIES.
Claims use since Nov. 2, 1936.

Reg. No. 361,642. Registered Oct. 25, 1938. DYNAMATIC CORPORATION, Kenosha, Wis., a corporation of Delaware. Republished by registrant.

VARIOSYN

FOR ELECTRIC MOTORS.
Claims use since June 2, 1938.

Reg. No. 365,866. Registered Mar. 21, 1939. DYNAMATIC CORPORATION, Kenosha, Wis., a corporation of Delaware. Republished by registrant.

VARIO-MOTOR

The word "Motor" is disclaimed.
FOR ELECTRIC MOTORS.
Claims use since May 25, 1938.

Reg. No. 380,181. Registered Aug. 13, 1940. AUTOMATIC PRODUCTS COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FOR ELECTRIC SOLENOIDS, TRANSFORMERS, CONVERTERS, AND CONDENSERS.
Claims use since Oct. 6, 1931.

Reg. No. 386,447. Registered June 20, 1939. APPLETON ELECTRIC COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

LOXBOX

FOR CONNECTORS FOR SECURING CABLES OR CONDUITS TO OUTLET BOXES OR CONNECTION BOXES.
Claims use since Jan. 4, 1939.

Reg. No. 390,430. Registered Sept. 23, 1941. DYNAMATIC CORPORATION, Kenosha, Wis., a corporation of Delaware. Republished by registrant.

DYNAVARIO

FOR ELECTRICAL GOVERNORS FOR MOTORS.
Claims use since Mar. 26, 1941.

Reg. No. 392,634. Registered Jan. 6, 1942. THE EDWIN F. GUTH COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

FUTURLITER

FOR ELECTRIC LIGHTING EQUIPMENT AND MORE PARTICULARLY LIGHT FIXTURES.
Claims use since Apr. 15, 1941.

Reg. No. 403,807. Registered Oct. 19, 1943. AMERICAN PHENOLIC CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

COPOLENE

FOR ELECTRICAL CABLE.
Claims use since September 1941.

Reg. No. 409,963. Registered Oct. 31, 1944. HARNISCHFEGER CORPORATION, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

P & H

FOR ELECTRICAL MOTORS, ELECTRICAL BRAKES, ELECTRICAL LIMIT SWITCHES, ELECTRICAL DRUM CONTROLS, ELECTRICAL DIAL CONTROLS, FULL MAGNETIC ELECTRICAL CONTROLS, ELECTRICAL RESISTORS, VARIABLE SPEED PUSH BUTTON ELECTRICAL CONTROLS, PROTECTIVE ELECTRICAL PANELS AND HIGH SPEED LOWERING ELECTRICAL RELAYS.
Claims use since Dec. 24, 1917.

Reg. No. 412,286. Registered Feb. 27, 1945. FEDERAL ELECTRIC COMPANY, INC., Chicago, Ill., a corporation of New York. Republished by registrant.

FOR ELECTRIC SOCKETS; ELECTRIC BUSHINGS; ELECTRIC SIGNS; ELECTRIC ADVERTISING DISPLAYS; ELECTRIC ALARMS, BELLS, HORNS, SIRENS AND SIGNALS; ELECTRIC OSCILLATING LIGHTS; FLUORESCENT LIGHTING FIXTURES; CENTRAL STATION TRANSMITTERS; ELECTRIC UNIFORM TIMING RELAYS; ELECTRIC TRANSMITTER AND ALARM BOX CODE WHEELS; FIRE ALARM BATTERIES; PUSH BUTTONS FOR ELECTRICAL APPLIANCES; COLD CATHODE ELECTRIC DISCHARGE LAMPS; ELECTRIC LINE RELAYS; ELECTRIC ROTARY AIR COMPRESSORS; MAGNETIC STARTERS FOR SIRENS; ELECTRIC LINE RELAYS AND RECTIFIERS; ELECTRIC THERMAL FLASHERS; ELECTRIC FIRE ALARM TIMERS; ELECTRICAL APPARATUS FOR FIRE ALARM SIGNAL TELEGRAPHING; HIGH-FREQUENCY INDUCTION HEATERS; ELECTRIC RESISTORS; AND SEALED ELECTRICAL RELAYS.
Claims use on electric sockets since November 1903; on electric bushings since December 1905; on electric signs since October 1911; and other dates on various articles.

Reg. No. 416,719. Registered Sept. 25, 1945. ERIE RESISTOR CORPORATION, Erie, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR ELECTRICAL RESISTORS AND ELECTRICAL CONDENSERS.
Claims use since May 28, 1941.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 70,994. Registered Oct. 20, 1908. E. J. MARTIN'S SONS, Rockville, Conn. Republished by The Horton Manufacturing Company, Bristol, Conn., a corporation of Connecticut.

KINGFISHER.

FOR FISHING-LINES.
Claims use since 1882.

Reg. No. 135,263. Registered Sept. 28, 1920. THE HORTON MANUFACTURING COMPANY, Bristol, Conn., a corporation of Connecticut. Republished by registrant.

LUCKIE

FOR FISHING-LINES.
Claims use since Jan. 21, 1920.

Reg. No. 303,259. Registered May 16, 1933. THE HORTON MANUFACTURING COMPANY, Bristol, Conn., a corporation of Connecticut. Republished by registrant.

Bristol

FOR FISHING LINES, STEEL SHAFTS FOR GOLF CLUBS, FISHING REELS, AND GOLF CLUBS.
Claims use since Jan. 21, 1920, in connection with fishing lines; since Dec. 9, 1921, in connection with steel shafts for golf clubs; since July 15, 1931, in connection with fishing reels; and since Dec. 9, 1921, in connection with golf clubs.

Reg. No. 383,070. Registered Nov. 19, 1940. THE AMERICAN FORK & HOE COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

DYNAMIC

FOR FISHING RODS, FISHING ROD HANDLES, FISHING ROD CASES, FISHING REELS, RUBBER GRIPS FOR FISHING ROD HANDLES, GOLF CLUBS, GOLF CLUB SHAFTS, GOLF CLUB HEADS, SKIS, SNOWSHOES, BOWS FOR ARCHERY, ARROWS, BOWSTRINGS AND ARCHERY TARGETS.
Claims use since May 1, 1940.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 65,063. Registered Sept. 3, 1907. WILLIAM M. DUDGEON, executor of Richard Dudgeon, New York, N. Y. Republished by Richard Dudgeon, Inc., New York, N. Y., a corporation of New York.

UNIVERSAL

FOR HYDRAULIC JACKS.
Claims use since Nov. 1, 1906.

Reg. No. 65,066. Registered Sept. 3, 1907. WILLIAM M. DUDGEON, executor of Richard Dudgeon, New York, N. Y. Republished by Richard Dudgeon, Inc., New York, N. Y., a corporation of New York.

FOR HYDRAULIC JACKS.
Claims use since Nov. 1, 1906.

Reg. No. 65,611. Registered Oct. 8, 1907. JNO. HY. ANDREW & Co. LD., Sheffield, England. Republished by Andrews Toledo Ltd., Sheffield, England, a company incorporated under the laws of the United Kingdom of Great Britain.

FOR MACHINE KNIVES, MACHINE TOOLS, TWIST DRILLS, AND MILLING AND OTHER CUTTERS.
Claims use since 1883.

Reg. No. 66,207. Registered Nov. 12, 1907. PETER HENDERSON & Co., New York, N. Y., a corporation of New Jersey. Republished by registrant.

HENDERSON

FOR LAWN MOWERS.
Claims use since 1865.

Reg. No. 200,447. Registered June 30, 1925. TURNER DAY & WOOLWORTH HANDLE COMPANY, Louisville, Ky. Republished by The American Fork and Hoe Company, Cleveland, Ohio, a corporation of Ohio.

The words and letters "Louisville, Ky., U. S. A." are disclaimed.
FOR WOODEN TOOL HANDLES.
Claims use since Jan. 1, 1910.

Reg. No. 200,448. Registered June 30, 1925. TURNER DAY & WOOLWORTH HANDLE COMPANY, Louisville, Ky. Republished by The American Fork and Hoe Company, Cleveland, Ohio, a corporation of Ohio.

The letters and words "Louisville, Ky., U. S. A." are disclaimed.
FOR WOODEN TOOL HANDLES.
Claims use since Jan. 1, 1910.

Reg. No. 200,449. Registered June 30, 1925. TURNER DAY & WOOLWORTH HANDLE COMPANY, Louisville, Ky. Republished by The American Fork and Hoe Company, Cleveland, Ohio, a corporation of Ohio.

The words and letters "Made in Louisville, Ky., U. S. A." are disclaimed.
FOR WOODEN TOOL HANDLES.
Claims use since Jan. 1, 1910.

Reg. No. 200,450. Registered June 30, 1925. TURNER DAY & WOOLWORTH HANDLE COMPANY, Louisville, Ky. Republished by The American Fork and Hoe Company, Cleveland, Ohio, a corporation of Ohio.

FOR WOODEN TOOL HANDLES.
Claims use since Jan. 1, 1910.

Reg. No. 380,180. Registered Aug. 13, 1940. AUTOMATIC PRODUCTS COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FOR HYGROMETERS, THERMOSTATS, HUMIDITY CONDITIONING CONTROL UNITS, THERMOSTATIC HEATING CONTROL UNITS, SOLENOID VALVES, THERMOSTATIC VALVES AND CONVERSION UNITS FOR CONVERTING OIL CONTROL VALVES FROM MANUAL TO AUTOMATIC CONTROL.
Claims use since Oct. 6, 1931.

Reg. No. 385,672. Registered Mar. 11, 1941. GENERAL ANILINE & FILM CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant.

CONVIRA

FOR LIGHT-SENSITIVE PHOTOGRAPHIC MATERIAL, PARTICULARLY PHOTOGRAPHIC PAPER.
Claims use since Nov. 2, 1933.

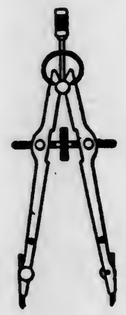
Reg. No. 385,673. Registered Mar. 11, 1941. GENERAL ANILINE & FILM CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant.

PLENACHROME

FOR LIGHT-SENSITIVE PHOTOGRAPHIC MATERIAL, PARTICULARLY PHOTOGRAPHIC FILM.
Claims use since Dec. 18, 1930.

Reg. No. 388,782. Registered July 8, 1941. GENERAL ANILINE & FILM CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant.

TRIPLE S



FOR LIGHT-SENSITIVE PHOTOGRAPHIC MATERIAL, PARTICULARLY PHOTOGRAPHIC FILM.
Claims use since Aug. 25, 1938.

Reg. No. 396,655. Registered July 28, 1942. V. & E. ENGINEERING CO., Pasadena, Calif. Republished by V. & E. Manufacturing Co., Pasadena, Calif., a firm.

VEMCO

FOR DRAFTING MACHINES AND DRAWING INSTRUMENTS COMPRISING COMPASSES, DIVIDERS, BOW COMPASSES, DRAWING PENS, PROTRACTORS, RULERS AND SCALES.
Claims use since Feb. 23, 1942.

Reg. No. 399,580. Registered Jan. 19, 1943. V. & E. ENGINEERING CO., doing business as V. & E. Manufacturing Co., Pasadena, Calif. Republished by V. & E. Manufacturing Co., Pasadena, Calif., a firm.

The representation of the compass is disclaimed.
FOR DRAWING INSTRUMENTS — NAMELY, COMPASSES AND BOW COMPASSES.
Claims use since June 26, 1940.

Reg. No. 409,153. Registered Sept. 19, 1944. L. J. MUELLER FURNACE COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

Season-stat

FOR ELECTRICALLY ACTUATED, THERMOSTATIC CONTROL FOR HEATING APPARATUS.
Claims use since Oct. 28, 1941.

Reg. No. 409,390. Registered Oct. 3, 1944. GENERAL ANILINE FILM CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant.

SPEEDEX

FOR SENSITIZED PHOTOGRAPHIC PAPER.
Claims use since January 1939.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 370,313. Registered Aug. 22, 1939. THE WATSON COMPANY, Attleboro, Mass., a corporation of Massachusetts. Republished by registrant.

CHILDCRAFT

FOR FLATWARE AND HOLLOWWARE COMPOSED WHOLLY OR IN PART OF STERLING SILVER.
Claims use since Apr. 11, 1939.

Reg. No. 403,814. Registered Oct. 19, 1943. CREST SPECIALTY COMPANY, Chicago, Ill. Republished by Crest Specialty, Not Inc., Chicago, Ill., a limited partnership.

Spiffy

FOR COLLAR STAYS MADE OF SEMI-PRECIOUS METAL.
Claims use since Oct. 5, 1932.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Reg. No. 237,292. Registered Jan. 3, 1928. LAWRENCE H. GOELLER, doing business as Kippy-Kit Company, Circleville, Ohio. Republished by registrant.

Kippy-Kit

The word "Kit" is disclaimed.
FOR CLOTHES BRUSHES AND WHISKS AND LEATHER CASES, SOLD AS A UNIT.
Claims use since July 1, 1926.

CLASS 31

FILTERS AND REFRIGERATORS

Reg. No. 353,666. Registered Jan. 11, 1938. UNIVERSAL WATER SOFTENER CO., Maywood, Ill., a corporation of Illinois. Republished by registrant.

UNIVERSAL

FOR FILTERS AND WATER SOFTENERS, AND PARTICULARLY TO WATER SOFTENER DEVICES HAVING BEDS OF ZEOLITE.
Claims use since on or about Feb. 1, 1926.

Reg. No. 369,426. Registered July 25, 1939. PEPSI-COLA COMPANY, Long Island City, N. Y., a corporation of Delaware. Republished by registrant.

FOR BEVERAGE COOLERS SOLD IN TRADE EMPTY.
Claims use since Feb. 15, 1896.

Reg. No. 374,138. Registered Jan. 2, 1940. BROQUINDA, INC., St. Petersburg, Fla. Republished by The Broquinda Corporation, St. Petersburg, Fla., a corporation of Florida.

The words "System Refrigeration" are disclaimed.
FOR FILTERS AND REFRIGERATOR UNITS FOR REFRIGERATORS, REFRIGERATED TRUCKS, AND RAILWAY CARS.
Claims use since May 29, 1939.

CONTINENTAL

CONTINENTAL COFFEE COMPANY.

FOR COFFEE, TEA, MUSTARD, GELATIN DESSERTS, BAKING POWDER, MAYONNAISE, AND SALAD DRESSING.
Claims use since March 1915.

Reg. No. 401,748. Registered June 8, 1943. C. F. SIMONIN'S SONS, INC., Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

POPSIT

FOR EDIBLE VEGETABLE OIL FOR USE AS A COOKING OIL, SEASONING OIL, OR AS A SHORTENING.
Claims use since Feb. 9, 1942.

Reg. No. 402,239. Registered July 13, 1943. CHARLESTON MILLING COMPANY, Charleston, W. Va., a corporation of West Virginia. Republished by registrant.

44

FOR WHEAT FLOUR.
Claims use since July 1930.

Reg. No. 402,262. Registered July 13, 1943. CONSOLIDATED TEA COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

SWEE-TOUCH-NEE

FOR TEA.
Claims use since 1938.

Reg. No. 406,285. Registered Mar. 21, 1944. SPRINGBROOK PACKING CO. COOPERATIVE, Springbrook, Oreg., a corporation of Oregon. Republished by registrant.

SPRINGDAY

FOR CANNED FRUITS AND VEGETABLES.
Claims use since Sept. 30, 1924.

Reg. No. 406,286. Registered Mar. 21, 1944. SPRINGBROOK PACKING CO. COOPERATIVE, Springbrook, Oreg., a corporation of Oregon. Republished by registrant.

SPRINGDELL

FOR CANNED FRUITS.
Claims use since May 1, 1923.

Reg. No. 406,287. Registered Mar. 21, 1944. SPRINGBROOK PACKING CO. COOPERATIVE, Springbrook, Oreg., a corporation of Oregon. Republished by registrant.

SPRINGWATER

FOR CANNED FRUITS.
Claims use since May 1, 1923.

Reg. No. 409,818. Registered Oct. 24, 1944. CONTINENTAL COFFEE COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

HAF-PAK

The word "Pak" is disclaimed.
FOR COFFEE.
Claims use since Mar. 10, 1943.

Reg. No. 410,661. Registered Dec. 12, 1944. PILLSBURY FLOUR MILLS COMPANY, Minneapolis, Minn. Republished by Pillsbury Mills, Inc., Minneapolis, Minn., a corporation of Delaware.

Pillsbury's XXXX PATENT

FOR WHEAT FLOUR.
Claims use since Jan. 1, 1870.

Reg. No. 411,660. Registered Jan. 30, 1945. FRUEN MILLING COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

Fruen's

FOR ROLLED WHEAT BREAKFAST FOODS.
Claims use since Sept. 1, 1894.

Reg. No. 412,778. Registered Mar. 27, 1945. COUNTRY GARDENS, INC., Gillett, Wis., a corporation of Wisconsin. Republished by registrant, present location Milwaukee, Wis.

CRYSTAL BROOK

FOR CANNED VEGETABLES.
Claims use since May 10, 1909.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 376,419. Registered Mar. 26, 1940. THE GEO. WIEDEMANN BREWING CO., INC., Newport, Ky., a corporation of Kentucky. Republished by registrant.

FOR BEER.
Claims use since on or about Jan. 1, 1882.

Reg. No. 379,035. Registered June 25, 1940. MINNEAPOLIS BREWING COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

Friendly

FOR BEER.
Claims use since Aug. 15, 1937.

Reg. No. 379,037. Registered June 25, 1940. MINNEAPOLIS BREWING COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

"The Friendly Beer"

The word "Beer" is disclaimed.
FOR BEER.
Claims use since Jan. 14, 1937.

Reg. No. 386,852. Registered Apr. 22, 1941. MINNEAPOLIS BREWING COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

MINNEHAHA

FOR ALE.
Claims use since on or about Nov. 27, 1940.

Ser. No. 402,361. Registered July 13, 1943. MINNEAPOLIS BREWING COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

FOR BEER.
Claims use since Mar. 1, 1943.

Reg. No. 405,265. Registered Jan. 18, 1944. BURLINGTON BREWING COMPANY, Burlington, Wis., a corporation of Wisconsin. Republished by registrant.

The words "Van Merritt," "Brand," and "Beer" are disclaimed.
FOR BEER.
Claims use since about Jan. 1, 1941.

Reg. No. 412,856. Registered Mar. 27, 1945. CHR. HEURICH BREWING CO., Washington, D. C., a corporation of Virginia. Republished by registrant.

FOR MALT BEVERAGES—NAMELY, BEER AND ALE.
Claims use since Oct. 15, 1935.

CLASS 50

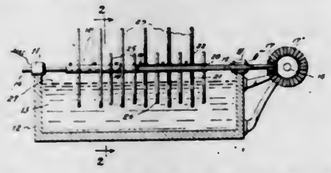
MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 350,201. Registered Sept. 21, 1937. PEPSI-COLA COMPANY, Long Island City, N. Y., a corporation of Delaware. Republished by registrant.

PEPSI-COLA

FOR BOTTLE CLOSURES, PARTICULARLY CROWNS.
Claims use since Aug. 1, 1901.

Reg. No. 418,516. Registered Jan. 1, 1946. ARMSTRONG CORK COMPANY, Manheim Township, Lancaster County, Pa., a corporation of Pennsylvania. Republished by registrant.

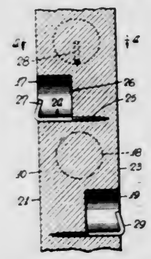


HYDROCORK

FOR BLOCKS OR SLABS OF CORK COMPOSITION FOR VARIOUS PURPOSES IN THE INDUSTRIAL ARTS.
Claims use since on or about Aug. 4, 1944.

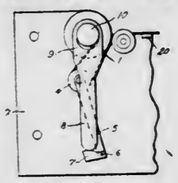
PATENTS

GRANTED APRIL 6, 1948



2,438,885
APPARATUS FOR ELECTROPLATING RINGS AND DISCS
Henderson M. Bell, III, Cleveland, Ohio, assignor to Chromium Corporation of America, New York, N. Y., a corporation of Delaware
Application October 16, 1943, Serial No. 506,546
1 Claim. (Cl. 204—212)

An apparatus for plating annular articles which comprises in combination a plating tank holding an electrolytic plating bath, open bearings mounted on top of opposite walls of said tank, a work-holding cathode shaft journaled in said bearings, means for rotating said shaft; said bearings and said rotating means permitting the lifting of the shaft and the work bodily out of said bearings and said tank; a plurality of work-holding hubs having elongated sleeve portions adapted to be slipped on said shaft in abutting relationship in such manner that the length of the sleeve portions determines the spacing of said articles and the shaft is protected from the plating bath, three annularly spaced spokes mounted on and radiating from each of said hubs, two of said spokes being of fixed and equal length while the third is adjustable in length, said spokes having outer ends adapted to engage the inner rims of said annular articles in order to support and hold said articles concentrically and in predetermined positions about said hubs, a plurality of anodes mounted in the tank inbetween and in spaced relationship with said articles, a shoulder on said shaft forming a stop against which said hubs are abutted to determine their spacing from said anodes, and means for supplying plating current to said shaft and said anodes.

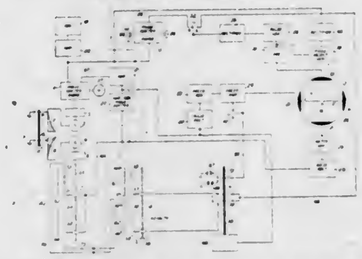


2,438,886
RACK
Edgar Belmont, Port Chester, N. Y.
Application February 3, 1945, Serial No. 576,059
3 Claims. (Cl. 211—178)

1. A rack of the character described, comprising a pole of polygonal cross-section defining a series of adjacent substantially plane side walls, said pole having a pointed end adapted to enter the ground and thereby support the pole in substantially upright position with said side walls in substantially vertical planes, said side walls having a plurality of recesses therein inclined at an angle to the horizontal with outer openings in certain of said side walls respectively, each recess extending only partially through the pole and being longitudinally offset from each adjacent recess in an adjacent side wall, and a hook fixed substantially within the confines of each recess and occupying less than the full height of said recess opening so as to permit access thereto for applying and removing an article to be suspended thereon, said hook having a shank with an inner portion thereof in fixed

engagement with the base of the recess, whereby the tendency of the pole to tip under load is minimized.

2,438,887
AUTOMATIC BRAKING DEVICE
Harry W. Allen, Dayton, Ohio
Application August 18, 1944, Serial No. 550,110
1 Claim. (Cl. 242—75)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

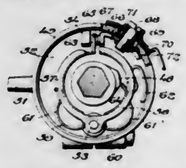


An automatic brake for intermittent web unreeling rolls comprising a rotatable reel shaft, a reel fixed on the shaft, a support therefor, a brake drum on the shaft, an elongated brake bar slidable longitudinally on said support radially in relation to the drum and having its medial line arranged in a radial plane of the shaft and drum, a shoe yoke formed on the bar having an opening therein receiving the said drum loosely therewithin, said opening being elongated in the direction of sliding movement of the bar to clear the drum at times, resilient means coengaged between the support and brake bar tending to apply the shoe to the drum in one direction of sliding movement of the bar, a brake release arm pivoted a distance from said shaft and closely adjacent said radial plane of the shaft, the free end of the arm being toward the shaft and movable toward and from said plane between the shaft and the pivot of the arm, an idler roll carried by the free part of the brake release arm positioned to receive thereabout a loop of web when such loop is extended from said reel generally at a substantial angle across said plane, and a crank arm fixed with the release arm engaged across and bearing on a part of the brake bar, said crank arm extending from the release arm in a direction to move the bar against action of said resilient means under pull of a web loop engaged around said idler.

2,438,888
RADIO OBJECT DETECTOR TRAINING DEVICE

Ernest G. Andrews, Baldwin, N. Y., and Orfeo Cesareo, Washington Township, Bergen County, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application December 6, 1943, Serial No. 513,042
6 Claims. (Cl. 35—10)



1. In an apparatus for training students in the art of radio locators the combination of a source of base phase and frequency, means for varying the phase of a wave from said source in accordance with the changing position of a point movable over a given course, an oscilloscope, means responsive to said wave of varying phase for generating a linear trace on the oscilloscope screen, means responsive to said wave of varying phase for producing a reference mark in said trace, means responsive to a wave of the base phase for producing in said trace a moving object mark representing the location of said point, and means controlled by the student for varying the phase of said last-mentioned base wave to move said object mark into juxtaposition with said reference mark.

2,438,889
TIMER FOR INTERNAL-COMBUSTION ENGINES

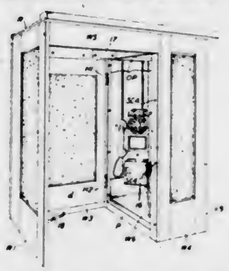
Thomas R. Arden, Danbury, Conn., assignor to Bard-Parker Company, Inc., Danbury, Conn., a corporation of New York

Original application December 10, 1943, Serial No. 513,752, now Patent No. 2,412,195, dated December 10, 1946. Divided and this application April 23, 1946, Serial No. 664,260
3 Claims. (Cl. 200—30)

1. A timer comprising a rotatable cam, a housing surrounding said cam, a pair of opposed substantially semi-circular breaker arms pivoted at adjacent ends to said housing and having their other ends free, spring means tending constantly to rock said arms to urge their free ends against one another and to swing the two arms as a unit in one direction, an abutment carried by said housing to be engaged by the leading arm as regards the direction of unitary swinging movement of said arms by said spring means thus to limit unitary swinging movement of said arms by said spring means, a back contact carried by said leading breaker arm, a fixed contact carried by said housing, and a projection carried by the trailing breaker arm and engageable by said cam whereby said trailing breaker arm is rockable by said cam in a direction counter to the direction in which it is urged by said spring means, said trailing breaker arm being rockable by said cam a greater amount than is required to permit said spring means to rock the leading breaker arm to engage its contact with said fixed contact, whereby the free end of said trailing arm becomes spaced from the free end of said leading breaker arm to be caused by said spring means to strike the free end of said leading breaker arm a hammer-like blow to cause quick separation of said contacts when the cam releases said trailing breaker arm.

2,438,890
METHOD OF MAKING BITUMEN COATED FIBROUS MATERIAL

Charles M. Baskin, Toronto, Ontario, Canada, assignor to Standard Oil Development Company, a corporation of Delaware



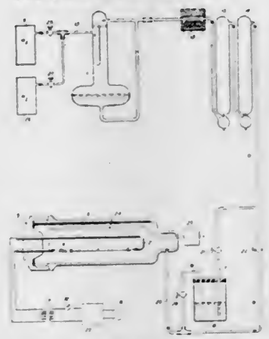
No Drawing. Application July 29, 1944, Serial No. 547,278
4 Claims. (Cl. 117—30)

1. The method of preparing a water repellent bituminous coating composition capable of adhering in damp weather to a moist surface which comprises impregnating a fibrous material with a bituminous saturant and coating said material with a pulverized asphalt of high melting point mixed with a powdered metallic salt of stearic acid.

2,438,891
TELEPHONE BOOTH

Harry I. Beardsley, Chatham, N. J., and Howard W. Meehan, Scarsdale, N. Y.; said Beardsley assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York, and said Meehan assignor to American Telephone and Telegraph Company, a corporation of New York

Application May 11, 1944, Serial No. 535,152
2 Claims. (Cl. 20—3.5)

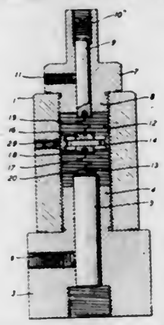


1. A telephone booth having a rear wall, two side walls, a front wall section and a roof, a partition having a door dividing said booth and forming in cooperation with one of said side walls, a portion of said rear wall and roof a compartment for the patron using the booth, said partition cooperating with the remaining portion of said rear wall, the other of said side walls and said front wall section to form a compartment for the telephone apparatus, the said one side wall cooperating with said front wall section and said roof to form an entrance for the booth, said door in the open position giving access to the telephone apparatus from the first-mentioned compartment.

2,438,892
ELECTRICAL TRANSLATING MATERIALS AND DEVICES AND METHODS OF MAKING THEM

Joseph A. Becker, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application July 28, 1943, Serial No. 496,417
9 Claims. (Cl. 250—31)



1. The combination in an electrical translating device of a translating element comprising a metallic base having a layer of silicon deposited thereon, and a fine spring contact wire making a point-contact with the surface of said silicon layer.

3. An electrical translating element for the translation of microwaves comprising a base of a metal of the group consisting of tantalum, platinum, tungsten and molybdenum having a layer of silicon deposited and fused thereon.

2,438,893
TRANSLATING DEVICE

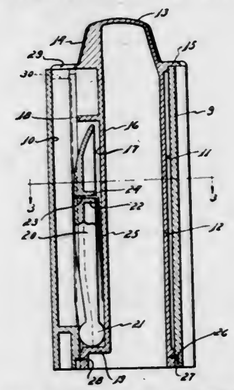
Carl A. Bieling, Westfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application December 29, 1943, Serial No. 516,051
9 Claims. (Cl. 250—31)

1. The combination in a translating device of an insulating housing, a plurality of translating units mounted within said housing and connected in electrical series with each other, each translating unit comprising an element of rectifying material and a fine contact wire making a point-contact engagement with the surface of said element, and adjustable means mounted on said insulating housing for adjusting the pressure of each of said contact wires on the associated rectifying element.

2,438,894
PRODUCTION OF DERIVATIVES OF 3-SUBSTITUTED 2,4 DIKETONES

Albert B. Boese, Jr., Pittsburgh, Pa., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York



No Drawing. Application July 7, 1945, Serial No. 603,754
8 Claims. (Cl. 260—483)

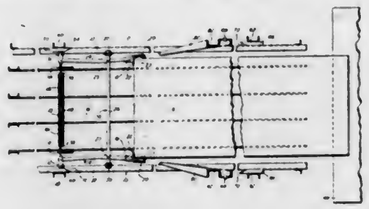
6. Process which comprises hydrolyzing a γ-cyanoethyl dione-2,4 substituted in the γ-position with a radical selected from the group consisting of the alkyl and aralkyl radicals, by heating such dione and water in the presence of an hydrolysis catalyst, thereby splitting off an acyl group from said dione, and forming a γ-acetyl butyric acid substituted in the γ-position with a radical selected from the group consisting of the alkyl and aralkyl radicals.

2,438,895
CRAYON CONTAINER

Joseph A. Bouffard, Garden City, and John G. Greemen, Detroit, Mich., assignors to Cecil B. Gates, Detroit, Mich.

Application May 26, 1945, Serial No. 596,022
5 Claims. (Cl. 120—23)

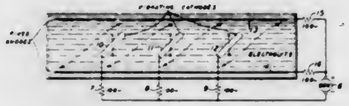
1. A device of the class described for reception of elongated bodies comprising: an outer shell having a central bore and provided with a plurality of circumferentially spaced apart compartments, opening at one side into the bore; a core rotatably mounted in said bore and projecting at one end beyond the end of said bore; a peripheral flange upon the projecting end of said core, overlying and covering the ends of said compartments, said core being rotatable relatively to said shell and having a notch formed in said flange adapted for successive registration with said compartments upon relative rotation of said shell and said bore.



2,438,896
MULTIPLE PRESS LOADING AND/OR UNLOADING APPARATUS

Rees Tate Bowen, Adam W. Head, and Frank G. Lesniak, Laurel, Miss., assignors to Masonite Corporation, Laurel, Miss., a corporation of Delaware

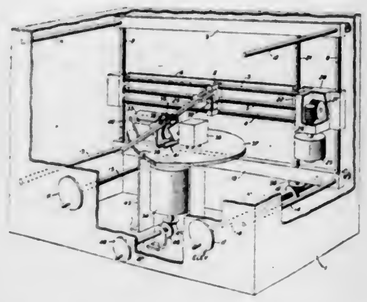
Application August 5, 1942, Serial No. 453,698
12 Claims. (Cl. 214—1)



1. An apparatus for loading and unloading multi-platen presses with sheets, comprising a rack containing a multiplicity of compartments

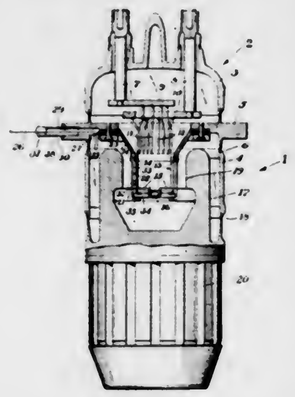
and a pair of sheet gripping members associated with each compartment and movably mounted therein, said gripping members of all compartments being connected and adapted to be moved

simultaneously within the limits of the compartments and therebeyond, and movable means mounted on the rack to simultaneously actuate the gripping members of each compartment away from each other.



2,438,897
METHOD OF PLATING CONTACT SURFACES OF MAGNETIC REEDS
John T. L. Brown, Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 26, 1943, Serial No. 500,049
1 Claim. (Cl. 204—23)

In the manufacture of electrical apparatus consisting of glass sealed magnetic reed contact elements, the step of plating the contact surfaces of the reeds with a noble metal by placing each of a plurality of said reeds in an individual cathode circuit including an individual fixed resistance of approximately 100 ohms and completing said circuits in parallel through a noble metal plating electrolyte to a common anode to render the current in each said individual cathode circuit substantially uniform and equal to the current in each other of said parallel circuits regardless of variations in the individual resistances of the reeds.



2,438,898
RADIO OBJECT LOCATING SYSTEM TRAINING DEVICE
Thaddeus C. Campbell, Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 6, 1943, Serial No. 513,041
11 Claims. (Cl. 35—10)

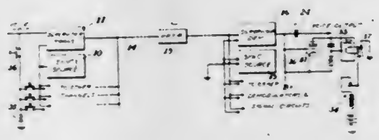
1. In a mechanism for simulating courses of movement of an object in space, said object being related to a reference point by a dimension which varies in magnitude, the combination of a driving shaft, a movable element associated with said shaft, means for operating said shaft for driving said element along a path to generate courses which simulate the courses of said object, means for translating said movable element to any desired position to select any desired course, means controlled by said movable element for varying an electrical quantity to represent the variation in said dimension caused by the movement of the

object along said selected course, and means for utilizing said varying electrical quantity.

2,438,899
ELECTRON DISCHARGE DEVICE
Paul Georges Chevigny and Gerard J. Lehmann, New York, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application June 26, 1944, Serial No. 542,076
10 Claims. (Cl. 250—27.5)

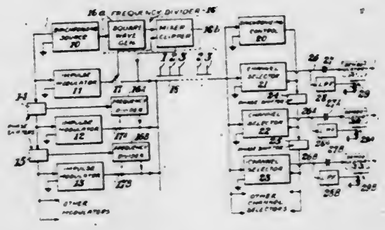
1. An electron discharge device comprising an envelope, a plurality of electrodes mounted therein, means within said envelope reactively coupling two of said electrodes with one another, a relatively low impedance lead at high frequencies at which the electron device is adapted to operate, extending through said envelope and connected to one of said two electrodes, and a relatively high impedance lead at said high frequencies extending through said envelope and connected to the other of said two electrodes, the reactive coupling between said two electrodes being low at said high frequencies whereby through said coupling said low impedance lead may supply high frequency potential to both of said two electrodes to maintain them at substantially the same high frequency potential.

2,438,900
PROCESS FOR SEPARATING BENZENE HEXACHLORIDE ISOMERS
William Herbert Cooke, Liverpool, and James Crosby Smart, Widnes, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application April 2, 1945, Serial No. 586,260. In Great Britain April 3, 1944
13 Claims. (Cl. 260—648)



1. A process for treating crude benzene hexachloride to obtain a mixture of isomers containing an enhanced proportion of the γ-isomer, which comprises extracting the crude benzene hexachloride with an amount of a selective solvent taken from the class consisting of aliphatic hydrocarbons, chlorinated aliphatic hydrocarbons, and cycloaliphatic hydrocarbons having a 6-carbon atom ring sufficient to dissolve γ-isomer and leave a substantial proportion of the α-isomer undissolved, and separating the solid α-isomer from the γ-isomer-enriched solution.

2,438,901
ORIENTED POLYMERIC SHEATH
Charles D. Coxe, Bridgeport, Conn.
Application July 19, 1944, Serial No. 545,679
5 Claims. (Cl. 2—21)

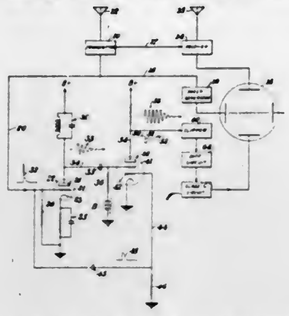


1. An anatomical sheath or cover formed of polymeric material, at least an effective part of the sheath body having substantial molecular orientation in the circumferential direction, said part by reason of such orientation being substantially larger in circumference than the member to be encased thereby, and being capable of permanent axial extension and concomitant circumferential contraction to transform said part to the diameter and shape of said member and to cause said part to fit said member snugly.

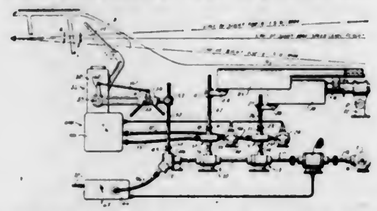
2,438,902
PULSE MULTIPLEX SYSTEM EMPLOYING FIXED PULSE-TIME DISPLACEMENT FOR SIGNALING
Edmond M. Deloraine, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application October 4, 1943, Serial No. 504,881
8 Claims. (Cl. 179—15)

6. In a multi-channel transmission system wherein each channel of the system comprises a train of impulses displaced in time in accordance with the intelligence to be transmitted, the impulses of each channel being spaced in time with respect to one another to enable separation, a signaling system for operating a signal controlled device over any selected channel to indicate a call, comprising transmitter means for each channel to produce and transmit a train of impulses, signal means for operating on said selected transmitter to produce a fixed displacement of the impulses from said selected transmitter, individual receivers for receiving said trains of impulses from the respective transmitters, signal responsive devices for each of said receivers, and means responsive to said fixed displacement to operate said signal device at the selected receiver.

2,438,903
PULSE COMMUNICATION SYSTEM EMPLOYING PULSE FREQUENCY REDUCTION FOR SIGNALING
Edmond M. Deloraine, New York, and Donald D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application October 11, 1943, Serial No. 505,778
6 Claims. (Cl. 179—15)



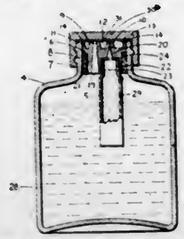
5. In a multi-channel communication system wherein communication is carried on between a plurality of transmitters and a corresponding plurality of receivers over a common transmission medium, each of said transmitters providing a train of impulses spaced apart by a regular time interval to produce a cadence frequency above the highest frequency at which intelligence is normally to be transmitted, and each of said receivers serving to receive and demodulate the corresponding train of impulses from the transmitters and apply it to an individual output line, a system for selectively signaling from any one of said transmitters to the corresponding receiver comprising a frequency divider means for each said transmitter to provide for reduction of said cadence frequency to a signal frequency, means for selectively connecting each frequency divider in the output of its corresponding transmitter, and signal responsive means tuned to respond to said signal frequency, coupled to the output transmission line at each receiver.



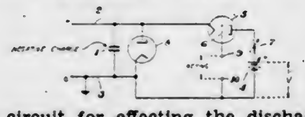
2,438,904
TIMING SYSTEM
Louis A. de Rosa, Staten Island, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application November 23, 1942, Serial No. 466,557
13 Claims. (Cl. 250—27)

13. A method of producing a short wave train having a series of oscillations of substantially constant amplitude comprising producing a wave having a decay characteristic which determines

the duration thereof, and compensating the decrease of energy of said wave at a rate substantially proportionate to the progressive decay thereof.



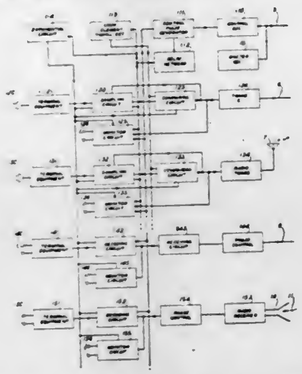
2,438,905
AUTOMATIC COMPENSATING GUN CONTROL SYSTEM
Harry L. Donicht, Richard F. Fischer, and Ernest B. Baldridge, Dayton, Ohio
Application April 18, 1941, Serial No. 389,200
10 Claims. (Cl. 89—41)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. In combination with an aircraft, a plurality of guns mounted thereon, adjusting means for varying the angle of elevation of each of said guns with respect to the longitudinal axis of said aircraft, reversible power means for actuating said adjusting means, control means responsive to changes in velocity of said aircraft for controlling said power means to maintain the plane of fire of said guns substantially parallel with the instant flight path of said aircraft and separate means independent of said power means and associated with each respective gun adjusting means to cause an additional variation in the elevation thereof to compensate for the change in trajectory with the computed value of the range of a target object.

2,438,906
CLOSURE
William D. Elsas, Kew Gardens, Paul Lowengardt, Forest Hills, and Alexander Scheftel, New York, N. Y.
Application April 21, 1945, Serial No. 589,542
1 Claim. (Cl. 215—6)

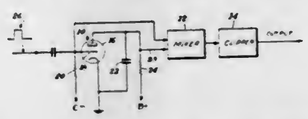
A dispensing container having two separate compartments and a mouth opening, a stopper for insertion into said mouth opening to seal the same and having a pair of spaced apart discharge openings formed therein, each of said discharge openings leading to one of the separate compartments, and a separate projection formed about each of said discharge openings at the upper end of the stopper, said projections having separate concave saucer-like depressions having edges located in substantialy the same plane upon the upper surfaces of said projections in communication with said discharge openings for facilitating the return of liquid therein to the discharge openings for dispensing, the width of each saucer-like depression being more than twice its depth.



2,438,907
CONDENSER DISCHARGE CONTROL CIRCUIT
Sidney Frankel, Forest Hills, and Martin Silver, New York, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application November 2, 1944, Serial No. 561,610
10 Claims. (Cl. 320—1)

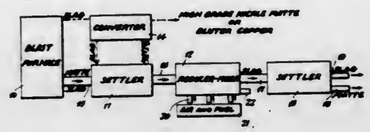
1. A circuit for effecting the discharge of a storage capacitor charged to a potential of a given polarity, comprising voltage means for supplying a potential to said capacitor in opposition to the charge thereon, normally blocked coupling means connecting said voltage means to said capacitor, means responsive to a keying potential for unblocking said coupling means whereby the potential of said voltage means charges said capacitor to a given point, and means for maintaining said capacitor charged to said given point by providing a low impedance path across said capacitor, said last named means being rendered operative when the capacitor has been charged to said given point.

2,438,908
PULSE CODE MODULATION COMMUNICATION SYSTEM
William M. Goodall, Oakhurst, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 10, 1945, Serial No. 592,958
13 Claims. (Cl. 179—1.5)



10. In a communication system for the transmission of complex wave forms representing information, apparatus for sampling the instantaneous amplitude of said wave form at predetermined intervals of time, equipment for generating a continuously varying exponential wave for each of said samples, means for adding together the magnitude of said sample and the exponential wave individual thereto, apparatus operative at predetermined instants of time during said wave for reducing the magnitude of said sample when said sum exceeds the predetermined quantity, other apparatus operative incident to the reduction of said sample for the transmission of a pulse of a predetermined character, equipment responsive to said pulses, other equipment for generating another exponential wave for each series of said pulses, apparatus for varying the magnitude of each of the pulses of a given series and equipment for reconstructing a complex wave from said pulses of varying magnitude.

2,438.909
POLYMERS OF LINEAR FORMALS
William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Original application May 6, 1941, Serial No. 392,127. Divided and this application January 8, 1945, Serial No. 571,956
10 Claims. (Cl. 260—2)

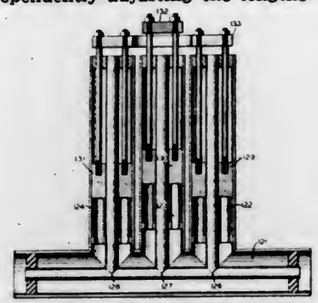


1. A process of making polymerization products from an alkyl hydroxyalkyl formal consisting of introducing an alkyl, hydroxyalkyl formal into a reaction zone and subjecting it therein to polymerization in the presence of an inorganic acid catalyst and thereafter neutralizing the catalyst to stabilize the polymer.

2,438,910
PULSE GENERATOR
Donald D. Grieg, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application December 20, 1943, Serial No. 514,999
8 Claims. (Cl. 250—27)

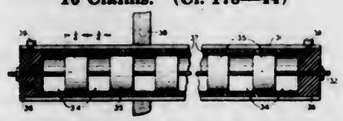
1. The method of producing an edger pulse comprising producing from a rectangular input pulse a shaped pulse at least one edge of which is curved, mixing the energy of this shaped pulse with the input pulse energy in opposite polarity to said input pulse to produce a pulse portion one edge of which is substantially vertical according to one of the vertical edge portions of the input pulse, and the other opposite edge is curved according to said curved edge, said vertical edge portion being contiguous to said opposite curved edge.

2,438,911
PROCESS FOR RECOVERING METAL VALUES FROM SLAGS
Anton Martin Gronningsaeter, New York, N. Y., assignor to Falconbridge Nickel Mines, Limited, Toronto, Ontario, Canada, a corporation of Canada
Application April 21, 1945, Serial No. 589,674
17 Claims. (Cl. 75—24)



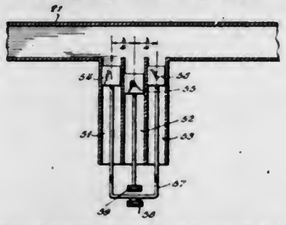
1. In the method of treating at least two slags of differing composition obtained in the production of nickel and copper by smelting ores of those metals, said slags containing a relatively small but valuable amount of nickel and copper in the form of oxides, silicates and sulfides and a relatively large amount of iron compounds mostly in the form of silicate and relatively small amounts in the form of magnetite and sulfide, one of the slags being relatively high in iron and high in sulfides of copper, nickel and iron in solution in the iron silicate, the other slag being relatively low in iron and low in sulfides of copper, nickel and iron in solution in the iron silicate, the improvement which comprises passing the slags while molten into a reducing and mixing zone, collecting a body of matte in a quiescent zone below the reducing and mixing zone and maintaining the body of matte in contact with the superposed body of slags to facilitate settling out of matte prills, mixing the combined molten slags above the quiescent body of matte sufficiently to salt out a substantial amount of the sulfides of copper, nickel and iron held in solution by the slag high in iron, subjecting the molten slags while undergoing mixing to reduction with a reducing agent at a suitably elevated temperature, said reducing agent being employed in amount sufficient selectively to reduce the oxides and silicates of the nickel and copper, converting the reduced nickel and copper into sulfides of nickel and copper with iron sulfide, said reducing agent being employed in amount insufficient to reduce a substantial amount of the iron compounds present in the slags, permitting the resulting mixture to remain substantially quiescent in a settling zone, allowing matte prills to merge with matte at the bottom of the settling zone, and separating the final slag from the final matte containing the desired nickel and copper.

2,438,912
IMPEDANCE TRANSFORMER
William W. Hansen and John R. Woodyard, Garden City, and Morris Relson, Kew Gardens, N. Y., assignors to The Sperry Corporation, a corporation of Delaware
Application June 29, 1942, Serial No. 448,992
17 Claims. (Cl. 178—44)



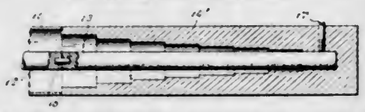
6. An impedance transformer for transforming an arbitrary impedance to another desired impedance, comprising a section of transmission line connected to said arbitrary impedance, a pair of concentric transmission lines connected in shunt to said first section and spaced a

quarter-wavelength apart therealong, and means for independently adjusting the lengths of said



shunt lines, whereby said desired impedance may be derived at the other end of said first section.

2,438,913
HIGH-FREQUENCY FILTER STRUCTURE
William W. Hansen, Garden City, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Original application October 31, 1941, Serial No. 417,229. Divided and this application September 2, 1942, Serial No. 457,095
16 Claims. (Cl. 178—44)

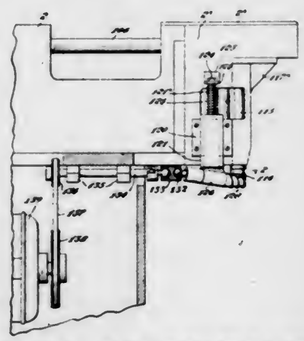


1. A high frequency filter comprising coextensive inner and outer conductors, means providing a plurality of axially separated sections of relatively small interconductor spacing within said filter, and means providing a plurality of axially separated sections of relatively large interconductor spacing within said filter alternating with said first sections and being equal in length to said first sections, the relative interconductor spacing in said sections being such that said filter suppresses high frequency energy and passes low frequency and unidirectional wave energy.

2,438,914
WAVE GUIDE IMPEDANCE TRANSFORMER
William W. Hansen, Garden City, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application June 19, 1943, Serial No. 491,429
5 Claims. (Cl. 178—44)

1. An adjustable wave guide impedance transformer comprising a principal wave guide section, a plurality of further wave guide sections connected in shunt with said principal section and respectively spaced apart a distance substantially equal to one-quarter wavelength at the operating frequency, an adjustable shorting means for each of said further sections, and means for adjusting two of said shorting means independently of one another to transform an impedance at one end of said principal section to a desired value at the other end of said principal section.

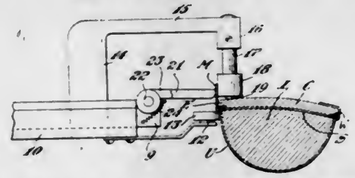
2,438,915
HIGH-FREQUENCY TERMINATING IMPEDANCE
William W. Hansen, Garden City, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application July 30, 1943, Serial No. 496,715
5 Claims. (Cl. 178—44)



5. A high frequency terminating impedance comprising a section of concentric transmission line having an outer resistive conductor of uniform inner diameter and uniform resistance per unit length, and an inner conductor whose diameter varies in steps along the length thereof, said steps being selected to provide a constant ratio of successive step diameters along said section.

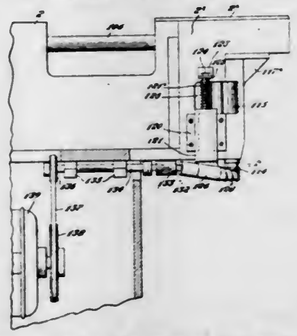
2,438,916
WORK HOLDING NEST
Harald Havstad, Northport, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 24, 1945, Serial No. 618,343
3 Claims. (Cl. 51—161)

1. In a lapping mechanism, a work holding nest comprising a circular metallic plate and a metallic ring attached to the periphery of said plate for maintaining it under tension, said plate being of a metal with a coefficient of thermal expansion substantially greater than that of said metallic ring.



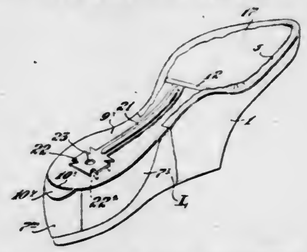
2,438,917
APPARATUS FOR LASTING FOOTWEAR
Jacob S. Kamborian, West Newton, Mass.
Application December 30, 1943, Serial No. 516,303
18 Claims. (Cl. 12—7)

1. In a lasting machine of the kind having upper gripping means, including a rotating work-



engaging roll, designed to stretch the upper snugly about the last and wherein the point of application of the stretching force is progressively shifted relatively to the last along the periphery of the last, a tapering rotating wiper having a helical wiping element, means for rotating the wiper, and means for supporting the wiper so that its point of effective engagement with the work is progressively shifted relatively to the last concomitantly with the shift in the point at which the pulling stress is applied.

2,438,918
METHOD OF AND APPARATUS FOR USE IN LASTING FOOTWEAR
Jacob S. Kamborian, West Newton, Mass.
Application September 28, 1944, Serial No. 556,108
18 Claims. (Cl. 12—1)



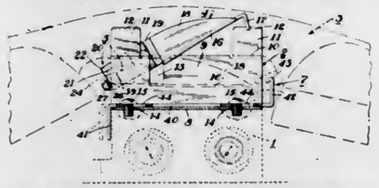
1. A machine of the class described comprising a hold-down engageable with a bottom surface of the shoe, an abutment element associated with the hold-down and which has a cylindrically curved surface engageable with the inner surface of the upturned marginal portion of the upper and so arranged as to tend to hold said marginal portion upright, a wiper element movable transversely across the edge of the shoe bottom in a path closely adjacent to the line of contact of the marginal portion with the abutment element, and means for moving the wiper element, the abutment being so located relatively to the wiper path that as the wiper advances it bends the marginal material around the abutment.

2,438,919
METHOD OF LASTING SHOES
Jacob S. Kamborian, West Newton, Mass.
Original application December 30, 1943, Serial No. 516,303. Divided and this application January 15, 1945, Serial No. 572,771
7 Claims. (Cl. 12—145)

1. That method of lasting a shoe which comprises as steps applying up-drafting stress to a narrow area of the margin of the upper, thereby to draw the upper snugly about the last, shifting the point of application of such up-drafting stress uninterruptedly along the margin in such a way that as a fresh area of the margin is subjected to such stress an area just previously subjected to stress is relieved of such stress, and wiping each successive area of the margin, as the up-drafting stress is being released therefrom, inwardly across the edge of the last bottom by a smooth uninterrupted screw thrust whose point of application to the margin is constantly and progressively shifted without intermission at the same rate that the point of application of inwiping stress is shifted so as always to remain at the same distance from the point of application of up-drafting stress.

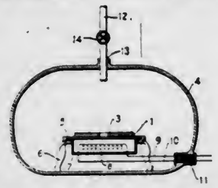
2,438,920
SHOE COUNTER
Jacob S. Kamborian, West Newton, Mass.
Original application September 22, 1943, Serial No. 503,338. Divided and this application November 1, 1945, Serial No. 626,110
3 Claims. (Cl. 36—68)

1. A counter for a shoe comprising a single piece of sheet material shaped to conform to the contour of the rear portion of the shoe which is to be made, said counter having side walls substantially coextensive with the quarter portions of said shoe, the rear ends of said side walls terminating in overlapping flaps which collectively form a double thickness rear wall for the counter, and a continuous bottom wall integral with each side wall and coextensive with the heel and shank portions of said shoe.



2,438,921
RETAINING MEANS FOR EXPANSIBLE LASTS
Jacob S. Kamborian, West Newton, Mass.
Application November 27, 1946, Serial No. 712,677
4 Claims. (Cl. 12—103)

1. The retaining device for use with a longitudinally expansible shoe last, comprising independent heel and forepart portions having substantially parallel, opposed faces and a guide rod fixed at one end in one of the last parts and sliding in a bore in the other last part, said retaining device comprising a body portion having substantially parallel front and rear surfaces spaced apart a distance equalling the desired maximum spacing of the desired last parts, said body portion comprising means for engagement with the guide



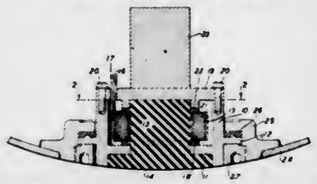
rod, thereby to suspend the retaining device in the proper operating position between the last parts, and handle means for manipulating the retaining device.

2,438,922
TELEPHONE SET
Camillo A. Knorr, East Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application February 12, 1945, Serial No. 577,472
6 Claims. (Cl. 179—100)

1. In a telephone set, a cradle member, a support, a shaft rotatably mounted on said support, a lever attached to said shaft and turnable within the said cradle, spring means normally urging said lever to an upward position, and a switch actuated by the turning of the said shaft, whereby said lever is adapted to be moved downwardly and said switch actuated upon the placing of a hand set in said cradle.

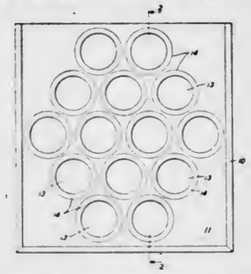
2,438,923
METHOD AND MEANS FOR MAKING SELENIUM ELEMENTS
Chester A. Kotterman, Livingston, N. J., assignor to Federal Telephone & Radio Corporation, New York, N. Y., a corporation of Delaware
Application February 11, 1943, Serial No. 475,568
5 Claims. (Cl. 175—366)

1. The method of making a selenium element which comprises applying a layer of vitreous selenium to a carrier plate, heating to cause melting of the selenium layer on the carrier plate, cooling the molten selenium to cause solidification and then subjecting the plate to an elevated gas pressure while heating it to a temperature not exceeding the melting point of selenium.



2,438,924
MUZZLE CLOSURE DEVICE FOR GUNS
Alexander E. Kramer, Hyattsville, Md., and Victor F. Lucht, Washington, D. C.
Application October 30, 1946, Serial No. 706,786
17 Claims. (Cl. 89—31)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

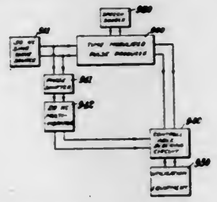
14. In combination, a gun barrel, a hydraulic recoil system for absorbing recoil of said gun barrel, a closure means for said gun barrel bore, operating means connected to said recoil system to open and close said closure means, means connected with said operating means to cause the same to hold said closure means in an open position, means associated with said holding means to render the same ineffective and means after



said last mentioned means has become ineffective for returning said operating means to a position to cause said closure means to close.

2,438,925
MAGNETOSTRICTIVE SUBMARINE SIGNAL TRANSMITTER OR RECEIVER
Hubert K. Krantz, Rockville Centre, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 18, 1944, Serial No. 549,972
7 Claims. (Cl. 177—386)

2. A signaling device comprising a pliable compressional wave energy transmitting body, an annular, radially vibratile magnetostrictive core encompassing said body and in intimate energy transferring relation therewith, and a signal coil in electromagnetic coupling relation with said core.

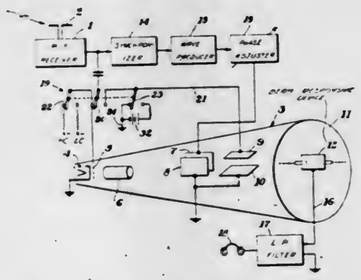


2,438,926
MAGNETOSTRICTIVE SUPERSONIC TRANSDUCER
Edward E. Mott, Upper Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 18, 1944, Serial No. 549,970
8 Claims. (Cl. 177—386)

1. A submarine signaling device comprising a plurality of substantially identical, circular, radially vibratile magnetostrictive elements arranged in rows to define a substantially diamond-shaped blanket, the longitudinal axes of said elements being substantially parallel and the inner annular faces of said elements being exposed in energy transferring relation to a compressional wave transmitting medium, the elements in adjacent rows being in staggered relation, and compressional wave energy insulating means between

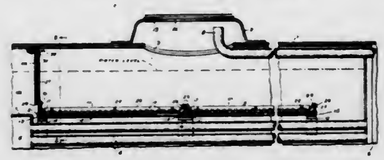
the outer annular faces of contiguous elements, each of said elements being of a diameter substantially equal to one wavelength of a preassigned frequency and the distance between center lines of said rows being substantially equal to one half said wavelength.

2,438,927
MODULATION MEANS AND METHOD
Emile Labin, New York, and Donald D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, a corporation of Delaware
Application August 24, 1942, Serial No. 455,899
16 Claims. (Cl. 179—171.5)



1. A time modulation system comprising a source of foundation waves having a frequency

$$\frac{M}{2}$$

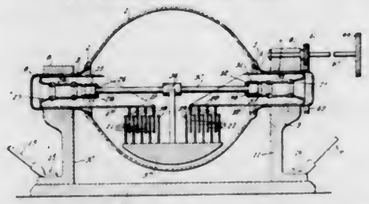


times the desired pulse recurrence frequency—where M is an integer greater than 2, means for producing a pulse in response to each passage of said foundation wave through a predetermined amplitude level, a blocking circuit, means for deriving from said source a control wave, means for applying said produced pulses to said blocking circuit, and means for applying said control wave to said circuit for passing only every Mth one of said produced pulses.

2,438,928
CATHODE-RAY TUBE PULSE DEMODULATOR SYSTEM
Emile Labin, New York, and Donald D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application November 13, 1944, Serial No. 563,152
15 Claims. (Cl. 250—27)

1. A demodulator for time modulated pulses comprising means for producing a beam of energy, means for causing said beam to sweep through a cyclic movement in synchronism with the timing of said pulses in the absence of modulation, whereby coincidence of said pulses and a given part of said beam movement is varied in proportion to the amount of time modulation of said pulses, and means for causing a flow of electrical energy proportional in amplitude to the degree of coincidence of said pulses and said given part of the cyclic movement of said beam.

2,438,929
FOAM SUPPRESSING APPARATUS
Walter B. Leaf, Denver, Colo.
Application April 15, 1946, Serial No. 662,166
10 Claims. (Cl. 252—361)



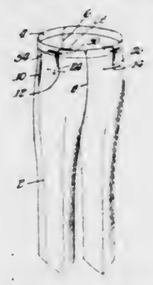
1. In apparatus for retarding foam and froth formation in boilers and pressure vessels inclusive of a container for a body of liquid subject to evaporating influences and having foam producing bubbles rising therethrough, the improvement which comprises means within the body of liquid under treatment in the boiler providing a plurality of elongated horizontal recesses of upwardly decreasing width providing narrow slits along the top thereof for the escape of fluid moving upwardly therethrough whereby bubbles rising concurrently through said body of liquid enter said recesses and are brought into coalescing engagement as they approach said slits.

2,438,930
SHOULDER PAD
Louis G. Lenske, Los Angeles, Calif., now by change of name Gene Shelly
Application April 11, 1945, Serial No. 587,751
1 Claim. (Cl. 2—268)

A shoulder pad for garments comprising a flexible member adapted for attaching to the inside of a shoulder of a garment and including back and chest portions extending downwardly at the upper portions of the back and chest of a person wearing the garment, padding material secured in layers to the member under the shoulder portion thereof and at its outer edge with the layers gradually reduced in length and width relatively to provide feathered edges for said layers, and a padding material secured to the outer edge of the shoulder portion and extending downwardly outside of the member and adapted for positioning in the upper portion of a sleeve of the garment, the second-mentioned padding material extending downwardly along the back and chest portions of said member and gradually increasing in thickness toward the outer edge of said member.

2,438,931
VARIABLE CONDENSER
Charles V. Litton, Redwood City, Calif., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 15, 1944, Serial No. 526,526
6 Claims. (Cl. 175—41.5)

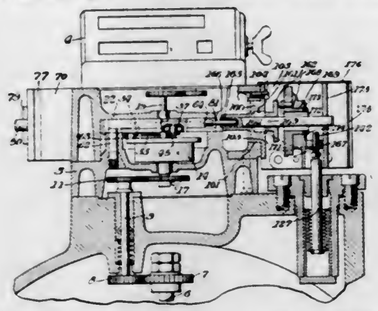
1. A variable condenser comprising a first fixed bearing, a second fixed bearing in alignment with said first bearing, a first metallic sleeve rotatably mounted in said first fixed bearing, said sleeve being closed at the end away from said second bearing, a second metallic sleeve rotatably mounted in said second bearing, said second sleeve being closed at the end away from said first bearing, an envelope of insulating material mounted between said sleeves and forming with said sleeves a unitary structure which is rotatable in said bearings, a first group of rotor plates attached to said first sleeve within said envelope, a second group of rotor plates attached to said second sleeve within said envelope, a group of stator plates adapted for capacitive cooperation with said groups of rotor plates, means to mount said stator plates rotatably within said first and second metallic sleeves, means to insulate said stator plates from said sleeves, and a weighted member attached to said stator plates and adapted to maintain said stator plates in substantially fixed position by gravity when said sleeves are rotated.



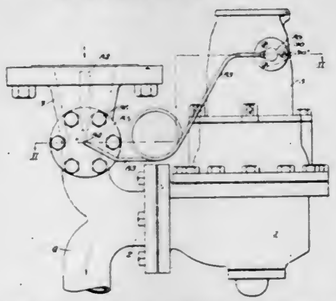
2,438,932
METHOD AND MEANS FOR TESTING CABLES
Arthur Mahren, Long Island City, N. Y., assignor to Federal Telephone and Radio Corporation, East Newark, N. J., a corporation of Delaware
Application September 23, 1943, Serial No. 503,508
8 Claims. (Cl. 175—183)

1. Braided cable line testing apparatus including, in combination, a base, a pair of uprights on opposite ends of said base, metallic means on one of said uprights for clamping a pair of braided cables in spaced relationship, a pair of spaced metal rods attached to the other upright and extending longitudinally toward the first upright, means for attaching the braid on the other ends of the cables to said rods to hold the cables in parallel relationship between said rods and said clamping means, a short-circuiting bar longitudinally slidable on said metal rods, and means supported from said other upright controlling the position of said short-circuiting bar.

8. The method of determining the characteristics of a braided cable line at high frequencies which comprises the steps of providing a pair of spaced-apart metal rods having a surface of relatively low resistance material, the diameters of said rods corresponding to that of the braided cable to be measured, applying high frequency energy to said metal rods, the wave length of said high frequency energy being selected to be substantially twice the physical length of said rods, measuring the effective resistance of said rods, applying the same high frequency energy to a pair of similarly spaced-apart braided cables each having a physical length substantially equal to that of said metal rods and to one-half the wave length of the high frequency energy, and measuring the effective resistance of said braided cables, whereby the conductor resistance of said braided cable line will be substantially equal to the measured resistance thereof less the measured resistance of the two metal rods.



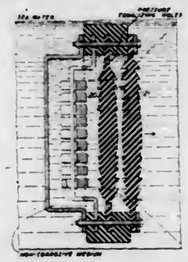
2,438,933
TROUSERS
Louis Markin, Chicago, Ill., assignor to Society Brand Clothes, Inc., a corporation of Illinois
Application April 8, 1944, Serial No. 530,169
5 Claims. (Cl. 2—235)



1. A pair of trousers having the usual rear seam, front opening, side pockets and rear pockets, and having the usual waistband, said trousers being provided with a pair of vertical openings each extending from the top edges of the waistband and severing the waistband, said openings extending downwardly through the cloth attached to but located below the waistband to a point over each rear pocket to provide an opening thereat and forming adjustable flaps adapted to pivot about the base of the opening, said base being reinforced to resist tearing of the fabric at said pivotal point, each of said flap portions carrying cooperative parts of an adjustable fastener, which parts are adapted to shift relatively and substantially transversely of the vertical axis of the opening and to be adjustably fastened in substantially any shifted position within the limits of said fastener whereby adjustably to increase or decrease the size of the waistband of said trousers.

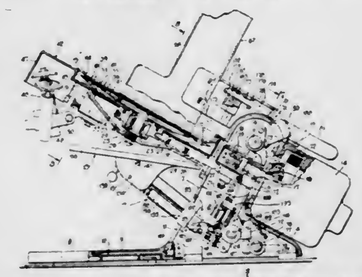
2,438,934
TEMPERATURE COMPENSATED METER
Walter H. Marsh, Crafton, Pa., assignor to Rockwell Manufacturing Company, a corporation of Pennsylvania
Application January 17, 1941, Serial No. 374,859
9 Claims. (Cl. 73—233)

8. In a fluid metering apparatus of the type that includes a variable ratio drive means; the combination with said variable ratio drive means of movable means having a substantially plane surface to vary the driving ratio thereof; a pivoted bracket; a member rotatably carried by said bracket and having an extension located eccentrically and adapted to engage said surface; temperature responsive means connected to move said bracket about its pivot; and means for manually adjusting said variable ratio drive means independent of the temperature responsive means.



2,438,935
TEMPERATURE COMPENSATED METER
Walter H. Marsh, Crafton, Pa., assignor to Rockwell Manufacturing Company, a corporation of Pennsylvania
Continuation of application Serial No. 244,596, December 8, 1938. This application June 28, 1943, Serial No. 492,541
26 Claims. (Cl. 73—233)

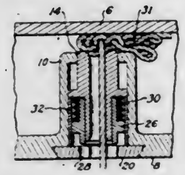
1. The combination comprising a register, a fluid flow responsive mechanism for measuring the flow of fluid therethrough, a plurality of one way drive means between said register and fluid flow responsive mechanism, a track providing an orbit to govern the movement of the one way drive means, and temperature responsive means for varying said track to correct for changes in temperature of the fluid being measured.



2,438,936
ELECTROMECHANICAL TRANSDUCER
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 6, 1943, Serial No. 505,159
1 Claim. (Cl. 177—386)

In ultrasonic compressional wave transmitting means the combination of a plurality of transducers mounted in closely adjacent relationship and having an aggregate comparatively great area of transmitting surface, the individual surfaces of said transducers being substantially in a common surface whereby a wave conforming in shape to said surface is transmitted therefrom, a housing for said transducers, a plurality of lens shaped diaphragms for closing the open end of said housing and directly in the path of a beam transmitted from the surfaces of said transducers for retaining within said housing a liquid transmission medium and for excluding therefrom the sea water in which said device will be immersed, said diaphragms being formed of elastic material having a high index of refraction to ultrasonic compressional waves whereby the waves transmitted therethrough are dispersed in a beam widened successively by each said lens shaped diaphragm, said elastic material having transmission characteristics closely

approaching the transmission characteristics of sea water, a liquid transmission medium filling said housing and the space between said diaphragms for transmitting waves from the faces of said transducers to and through said diaphragms, said liquid medium having transmission characteristics closely approaching the transmission characteristics of sea water and apertures in a diaphragm both of whose faces are in contact with said liquid medium for equalizing the pressure in said different bodies of said liquid medium.

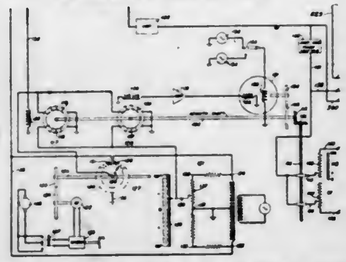


2,438,937
SLICE RECEIVING MECHANISM FOR RECIPROCATING CARRIAGE SLICING MACHINES
Charles L. Metzler, Palisades Park, N. J., assignor to Globe Slicing Machine Co. Inc., Stamford, Conn., a corporation of New York
Application April 4, 1944, Serial No. 529,505
10 Claims. (Cl. 146—94)

2. The combination of a frame, a knife operatively mounted on said frame, a hanger movably mounted on said frame, an object holder on said hanger to be actuated with said hanger into and out of cutting relation with said knife, a bracket pivotally connected to said hanger, a step by step control mechanism mounted on said hanger, means for anchoring said bracket to said control mechanism effective to lower said bracket a predetermined slice thickness distance with each reciprocation of said hanger, and a slice receiving tray having an arm operatively connected to said

bracket, said anchoring means including a pawl and ratchet mechanism and being releasable when said tray and arm are manually lifted to return said tray and arm to its initial raised position and turned about the axis of the ratchet.

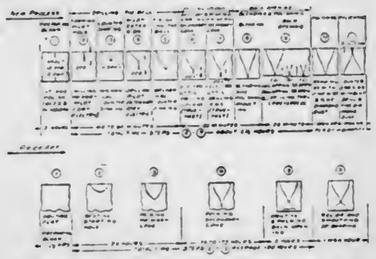
2,438,938
SEWING MACHINE SHUTTLE
Carl A. Newhall, Peabody, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application December 5, 1946, Serial No. 714,197
2 Claims. (Cl. 112—233)



1. A shuttle for shoe sewing machines, comprising a hollow casing, a thread supply holder forming a closure for the shuttle casing provided with a hollow stud projecting into the casing through which the thread passes to the outer side of the holder, and means for removably locking the thread holder to the shuttle casing comprising a locking slide in the end of the thread holder arranged to move across the end of the thread holder and to engage a groove in the shuttle casing and pair of plungers in the hollow stud, one of which plungers is pressed against the thread engaging the inner surface of the shuttle casing to provide a tension on the thread and the other of which plungers is pressed against the slide to lock it in position, in combination with a sleeve inside the stud for stopping movement of the tension plunger when an enlargement in the thread passess between said tension plunger and the shuttle casing before the tension plunger reaches a position where slide releasing movement of the locking plunger is blocked by the tension plunger.

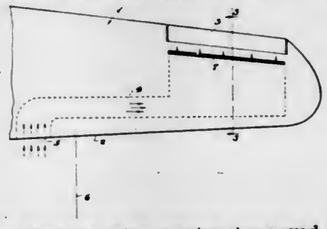
2,438,939
QUICK-COOKING RICE AND PROCESS FOR MAKING SAME
Ataullah K. Ozai-Durrani, Stuttgart, Ark., assignor to General Foods Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application March 23, 1942, Serial No. 435,902
22 Claims. (Cl. 99—80)

1. A quick-cooking rice product comprising dried, separate, substantially gelatinized rice grains having of the order of twice their original volume and a porous structure capable of ready hydration to individual grains having the soft, palatable character of ordinary cooked rice.



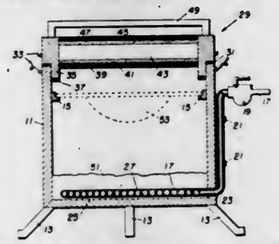
5. A process of preparing a quick-cooking rice product which comprises cooking rice in water to gelatinize the starch and cause swelling of the grains for a period sufficient to increase the moisture content of the grains to at least about 65–70% but not great enough to cause substantial damage thereto, then cooling the grains to prevent further gelatinization of the starch, and thereafter drying the swollen grains by removing moisture from their surfaces at a rate sufficiently faster than it can diffuse thereto from their interiors as to set them in their enlarged condition and produce a porous structure therein.

2,438,940
RANGE AND AZIMUTH SIMULATING SYSTEM FOR RADAR INSTRUCTION
Douglas H. Pennoyer, Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 6, 1943, Serial No. 513,076
8 Claims. (Cl. 35—10)



1. In a mechanism for simulating courses of movement of an object in space, said object being related to a reference point by a dimension which varies in magnitude, the combination of a driven member, the instant position of which represents the magnitude of said dimension, means for preselecting a desired one of said courses, automatic means for operating said driven member to simulate the selected course, means controlled by said driven member for varying an electrical quantity to represent the variation in said dimension caused by the movement of the object along said course, and means for utilizing said varying electrical quantity.

2,438,941
DIAMOND DIE PRODUCTION AND THE LIKE
Chauncey G. Peters, Calvert County, Md., Forest K. Harris, Washington, D. C., Walter B. Emerson, York County, Maine, Irvin L. Cooter, Arlington, Va., and Karl F. Neffien, Elkins, W. Va., assignors to the United States of America as represented by the Secretary of Commerce
Application December 23, 1946, Serial No. 718,094
6 Claims. (Cl. 125—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. The method of producing from a diamond blank of approximately 1.5 mm. thickness a diamond die for the drawing of fine wire which consists in electronically dry-drilling a pilot hole in the diamond to a depth of about 2 to 3 times its entrance diameter; mechanically countersinking said hole to a generally conical shape having an entrance diameter greater than its depth; electronically dry-drilling a further pilot hole from the apex of said countersunk hole again of relatively narrow entrance diameter compared to its depth; again mechanically countersinking said hole to a generally conical shape conforming to the entrance diameter of said first countersinking operation; electrolytically drilling a reduction and bearing portion extending from the apex of said countersunk hole; effecting a junction of said extension with a smoothly lapped back-opening surface; and relieving said bearing portion at its junction with said smoothly lapped surface.

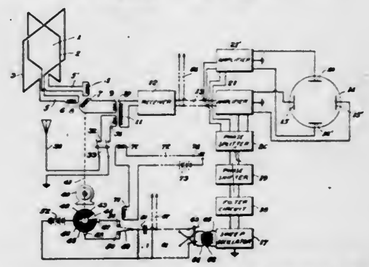
2,438,942
WING AIR SLOT
Edwin H. Polk, United States Navy
Application June 11, 1943, Serial No. 490,437
2 Claims. (Cl. 244—40)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An airplane wing having improved aileron response at low airspeeds, with fore and aft longitudinal beam members tapering toward the outer end of the wing, an aileron hinged to the trailing edge of said wing at its outer end, a slot in the upper surface of the wing ahead of the aft beam member opposite said aileron, a rearwardly directed passage in said wing connected to said slot, an air passage in the propeller slip stream extending from the leading edge of the wing through the thick portion of the fore beam member, and an air conduit from said last named passage to said rearwardly directed passage, whereby the thinner portion of the aft beam member is not weakened by any passages for the air directed toward the aileron.

2,438,943
SANDBLASTING MACHINE
Albert J. Porcelli, New York, N. Y.
Application December 23, 1946, Serial No. 718,097
5 Claims. (Cl. 51—8)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A sandblasting machine comprising a tank adapted to contain a quantity of sand, a conduit adapted to conduct compressed air to the interior of said tank, the portion of the conduit within said tank being convoluted over the floor of said tank and having a plurality of perforations adapted to facilitate upward flow of air, means for controlling the flow of compressed air and means for suspending an object in said tank.

2,438,944
CRYSTAL CONTACTS OF WHICH ONE ELEMENT IS SILICON
Charles Eric Ransley, Sudbury, England, assignor to The General Electric Company Limited, London, England
No Drawing. Application February 24, 1944, Serial No. 523,748. In Great Britain March 22, 1943
16 Claims. (Cl. 250—31)



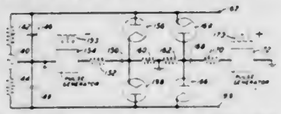
1. In the manufacture of an electrical crystal contact device of the kind in which the semi-conducting crystal contact element is mainly silicon, the production of said silicon contact element by a process which includes the step of introducing into the silicon a determinate quantity of at least one of the two metals chromium and molybdenum, the quantity of such additive being at least of the order of 10% of the silicon.

2,438,945
COMB
Harry E. Rhodes, Kent, Ohio, assignor to Pareo Manufacturing Company, Cuyahoga Falls, Ohio, a partnership
Application March 6, 1946, Serial No. 652,288
2 Claims. (Cl. 132—11)

2. A comb comprising a back and teeth extending therefrom in the plane thereof, said back having longitudinally extending, transversely concave recesses at opposite sides thereof extending the full length of said back for receiving adjacent fingers of a person's hand, said recesses being curved outwardly of said teeth from opposite ends of the back to accommodate correspondingly curvate condition of said fingers longitudinally thereof, the portion of said back between said recesses being thickest intermediate said ends of the back and tapering outwardly.

2,438,946
RADIO DIRECTION FINDING SYSTEM
Avery G. Richardson, Boonton, N. J., and Frank O. Chesus and Frank G. Thomas, Islip, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application February 20, 1943, Serial No. 476,596
5 Claims. (Cl. 250—11)

1. In a radio direction finding system having a directional receiving antenna and a translator having a continuously rotating means for deriving from the received energy a voltage which



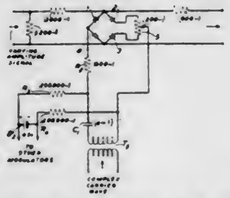
varies with the angular position of said rotating means and with the direction of said received energy, the combination of means for producing sweep voltages, an oscillograph controlled by said sweep voltages and said derived voltage, a sweep oscillator, having an output voltage for controlling said sweep voltages producing means, a pulsing circuit for producing pulses at a predetermined angular position of said rotating means, and means for applying said pulses to said oscillator for synchronizing said output voltage with said derived voltage, whereby said oscillograph indicates the direction line of said received energy.

2,438,947

ELECTRONIC MODULATION AND MODULATION CORRECTION CIRCUITS

John W. Ricke and Robert J. Shank, New York, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application July 28, 1943, Serial No. 496,410
9 Claims. (Cl. 179—171.5)



8. The combination which comprises a balanced electrical wave generator, a balanced two-way conducting electronic valve switching circuit adapted to operate only in response to recurrent control pulses, a pair of output terminals and a pair of balanced coupling circuits comprising resistive and capacitative elements electrically coupling said generator to said switching circuit and to said output terminals, said switching circuit being connected electrically in shunt relation across said output terminals.

2,438,948

MODULATING SYSTEM

Robert R. Riesz, Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application January 21, 1944, Serial No. 519,109
3 Claims. (Cl. 179—171.5)

1. The method of operation of a modulator of the type consisting of a plurality of non-linear impedance elements connected in a balanced bridge arrangement across the two diagonals of which sources of signal and carrier waves to be combined are respectively connected, which consists in reducing the input level of the carrier wave applied to the bridge arrangement to a sufficiently low value so that the impedance variation of said non-linear impedance elements is low throughout the carrier cycle, and applying a direct current bias to the bridge arrangement in the conducting direction such as to minimize the effect of capacity on carrier balance and to provide the optimum amount of bias current to give the maximum modulator operating range.

2,438,949

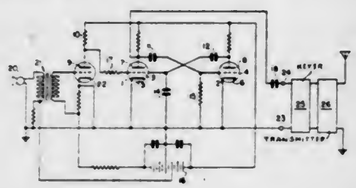
ELECTRIC INSULATION COMPOSITION OF POLYVINYL CHLORIDE AND POLYALKYLENE POLYSULFIDE

Thomas Robertson Scott and Archibald Alan New, London, England, assignors to Standard Telephones and Cables Limited, London, England, a British company

No Drawing. Application July 2, 1943, Serial No. 493,290. In Great Britain July 3, 1942
4 Claims. (Cl. 260—33)

1. A solid rubber-like electrical insulating composition, sufficiently hard and tough for use as the external covering of field wire and substantially free from plastic flow at ordinary atmospheric temperatures, that comprises a mixture containing the following components in the proportions, based on total weight of the mixture, as follows:

Plasticized polyvinyl chloride comprising equal parts of polyvinyl chloride and plasticizer	Two-thirds
A rubbery solid organic polysulfide consisting of the reaction product of an aliphatic alkylene dihalide with a water-soluble alkaline polysulfide	20%–30%



the remainder of the mixture comprising a rubber vulcanization accelerator to serve as a plasticizer for the rubbery solid organic polysulfide component.

2,438,950

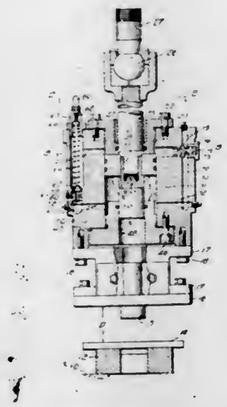
PULSE FREQUENCY MODULATION

Carl Harrison Smith, Jr., Washington, D. C.

Application April 18, 1944, Serial No. 531,593
3 Claims. (Cl. 179—171.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. The method of generating, at variably spaced intervals, uniform impulses of current in a vacuum tube having a grid and capable of being cyclicly blocked and unblocked comprising applying a variable positive voltage to a grid of a blocked vacuum tube to raise the grid potential and unblock the tube, applying an abrupt positive impulse to the grid when the tube unblocks to drive the tube to saturation, and applying a negative voltage to the grid a fixed time thereafter while the tube is substantially in saturation to drive the tube from saturation to below cutoff, thereby blocking the tube.

2,438,951



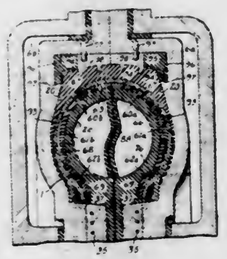
HYDRAULIC OVERLOAD-RELEASE DEVICE OR CUSHION FOR PRESSES

William T. Stephens, Cleveland, Ohio, assignor to Hydraulic Control Engineering Company, Cleveland, Ohio, a corporation of Ohio

Application October 3, 1944, Serial No. 557,045
13 Claims. (Cl. 164—86)

1. A hydraulic cushion for use with a press having a fixed bed and a movable ram, comprising in

combination, a punch holder, a slide adapted to carry said holder, a uniform sectioned space in said slide, a piston operable in said space, means securing said piston for movement with said ram, a passage connecting the chambers on opposite



sides of said piston, and a relief valve biased to close said passage to resist movement of the piston in relation to the slide, said valve being set to open at a pressure in said space between that necessary for the operation of the press and that which might damage the same.

2,438,952

METHOD FOR CURING PNEUMATIC TIRES

Theodore A. Te Grotenhuis, Olmsted Falls, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

Application April 20, 1944, Serial No. 531,920
19 Claims. (Cl. 18—53)

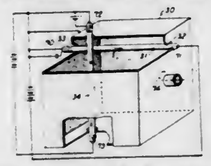
6. In a method of making a pneumatic tire, the steps which comprise pressing the material of the tire to be cured between the inner rigid surface of a mold and a soft, vulcanized rubberlike composition, passing a high frequency electric field through selected portions of said material to form heat in situ therein, regulating the intensity and duration of such high frequency field through selected portions of said tire to initially heat said selected portions to a higher temperature than the temperature of other portions, and by conduction from said selected portions and from a source external of the tire heating the remainder of the tire to a vulcanizing range.

2,438,953

THERMOPLASTIC LENS CEMENT

Horace C. Thuline, William F. Parsons, and George P. Waugh, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application June 8, 1943, Serial No. 490,082
6 Claims. (Cl. 260—27)



1. A lens cement consisting of a poly-α-methacrylate selected from the group consisting of poly-n-butyl-α-methacrylate and copolymers of n-butyl-α-methacrylate with an α-methacrylate selected from the group consisting of methyl α-methacrylate, ethyl α-methacrylate and n-propyl α-methacrylate, together with an ester of a polyhydric alcohol and hydrogenated abietic acid, the ester of the hydrogenated abietic acid constituting from 32.5 to 72.2 per cent of the combined weight of the poly-α-methacrylate and the ester of the hydrogenated abietic acid.

2,438,954

ELECTRONIC OSCILLATOR OF THE CAVITY RESONATOR TYPE

Charles H. Townes, Mendham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application November 12, 1941, Serial No. 418,697
6 Claims. (Cl. 250—36)

6. An electronic oscillator comprising a hollow resonating chamber and a pair of electron tubes disposed within said resonating chamber with the axes of the tubes mutually perpendicular.

2,438,955

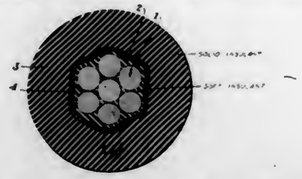
INSECTICIDE COMPRISING MONO-ALKYLATED DIPHENYLENE SULFIDES AND METHOD OF USING SAME

Sager Tryon, Long Island City, and Peter La Roche de Benneville, New York, N. Y., assignors to Allied Chemical & Dye Corporation, a corporation of New York

No Drawing. Application October 2, 1944, Serial No. 556,890
12 Claims. (Cl. 167—33)

1. An insecticide adapted for combating larvae of chewing insects comprising a monoalkylated diphenylene monosulfide, the alkyl group of which contains from 3 to 6 carbon atoms, admixed with a carrier therefor.

2,438,956



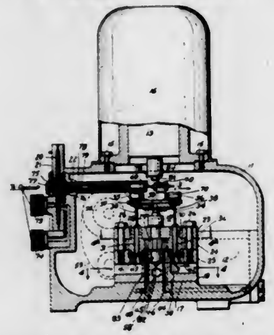
HIGH-FREQUENCY CABLE

Arthur J. Warner, South Orange, N. J., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware

Application December 24, 1942, Serial No. 470,069
1 Claim. (Cl. 174—114)

A high frequency cable comprising a stranded core, the conductors of which are thinly coated and the interstices of which are filled with a soft flexible but solid low molecular weight polystyrene containing a low-loss plasticizer whereby no air spaces are permitted between and about the con-

ductors and corona discharge is prevented, and a relatively high molecular weight hydrocarbon di-



electric which is predominantly relatively high molecular weight polystyrene surrounding the coated core and bonded to the coating.

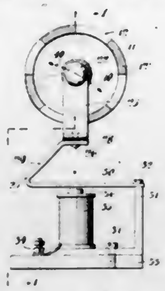
2,438,957

RUDDER MACHINE FOR AUTOMATIC PILOTS

Guido Wünsch, Bruno Weinkauff, Walter Sadowski, and Herbert Kobischke, Berlin, Germany; vested in the Attorney General of the United States

Application November 20, 1940, Serial No. 366,364
In Germany December 22, 1937
4 Claims. (Cl. 103—41)

1. In apparatus of the character described, a double-acting gear pump comprising a driving gear and two driven gears and having two output passages, a hollow sleeve integral with and concentrically formed on each said driven gears, a valve plunger slidably engaged in the bore of each of said sleeves, an intermediate control member for oppositely operating said plungers, elastic wire links connecting the end portions of said control member with said plungers for actuating the latter, the ends of said elastic wire links being rigidly connected to said control member and said valves respectively, a leaf spring for suspending said control member intermediate its length, a pneumatic impulse receiver, and means for operating said member from said receiver.



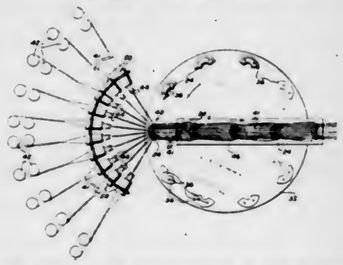
2,438,958

VIBRATION ACTUATED INDICATOR

Edmund Abrahamson, Baldwin, N. Y.

Application August 31, 1945, Serial No. 613,778
10 Claims. (Cl. 177—329)

1. A movable indicator comprising, in combination, an electromagnet; an armature associated with said electromagnet, said armature being resiliently biased towards, and capable of vibrating about, a central portion; a first bearing member carried by said armature to be vibrated thereby; and an indicator having a second bearing member, said indicator being mounted for free rotation on said first bearing member, the frictional engagement between said bearing members being the means for converting vibra-



tory motion of the armature into rotary motion of the indicator.

2,438,959

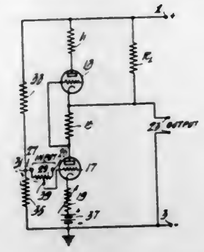
METHOD OF ASSEMBLING ARCUATE TERMINAL BANKS

Leland A. Bartelheim, Berwyn, and Maurice W. Lane, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application December 12, 1942, Serial No. 468,808
17 Claims. (Cl. 29—155.55)

5. The method of assembling arcuate terminal banks, which comprises, longitudinally advancing pairs of insulation covered wires, twisting each pair between successive local zones, electrically connecting corresponding terminals of successive individual arcuate groups to the same pairs of wires at the successive zones, and thereafter assembling the groups in banks.

2,438,960



BALANCED AMPLIFIER

Daniel Blitz, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application March 30, 1945, Serial No. 585,603
6 Claims. (Cl. 179—171)

1. In a balanced amplifier including terminals for a source of unidirectional voltage, input and output electron discharge devices provided with cathode-anode circuits including three anode circuit resistors, said resistors and said anode-cathode circuits of said devices being connected in series across said source terminals and said discharge device being coupled in cascade, and output means connected between the cathode of said output device and the negative terminal of said voltage source, the improvement comprising a feedback circuit including impedance means having end terminals connected to said source ter-

minals and an intermediate terminal, and signal supply means connected between said intermedi-

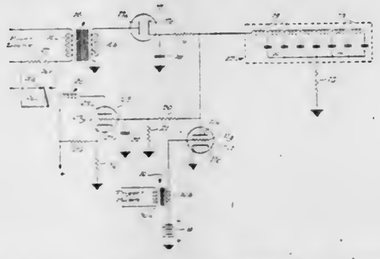
ate terminal and the input circuit of said input device.

2,438,961

GAMMA-ACETYL PIMELIC ACID AND DIESTERS THEREOF

Albert B. Boese, Jr., Pittsburgh, Pa., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York

No Drawing. Application May 29, 1945, Serial No. 596,587
7 Claims. (Cl. 260—483)



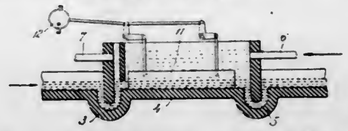
1. Process which comprises the step of hydrolyzing a γ-diacyl pimelonitrile wherein at least one acyl group is the acetyl group by heating such diacyl pimelonitrile in the presence of moisture and an hydrolysis catalyst, thereby splitting off one acyl group from said pimelonitrile and forming γ-acetyl pimelic acid.

2,438,962

PROTECTION OF THYRATRON IN IMPULSE GENERATING CIRCUITS

Ernest D. Burlingame, Eggertsville, Robert W. Carlson, Depew, Madison G. Nicholson, Jr., Snyder, and Maxwell C. Scott, Lancaster, N. Y., assignors to Colonial Radio Corporation, Buffalo, N. Y.

Application August 7, 1944, Serial No. 548,460
11 Claims. (Cl. 250—27)



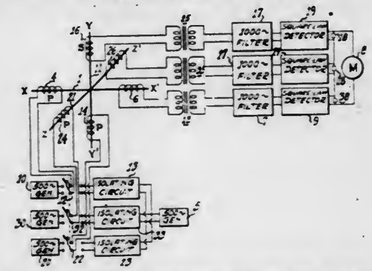
1. In a pulse generating circuit, in combination, a storage element, means for charging said element, a thyratron, having a cathode, a control electrode, and an anode, connected to said element for discharging the same, means for applying triggering impulses to a control electrode of said thyratron, and means operated by the potential difference between the cathode and anode of said thyratron and responsive to failure of said thyratron to de-ionize after said storage element is discharged, for limiting the current through said thyratron to a value less than that required to maintain ionization therein.

2,438,963

MANUFACTURE OF ALKALI METAL ALCOHOLATES

George Lewis Cunningham and Richard Sewall Robinson, Niagara Falls, N. Y., assignors to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia

Application October 17, 1942, Serial No. 462,404
5 Claims. (Cl. 204—72)



1. In the manufacture of alkali metal alcoholates involving the reaction of an anhydrous alcohol having from one to four carbon atoms and an alkali metal amalgam in the presence of an electrically conducting non-amalgamating electrode in contact with the alcohol and amalgam, the improvement which comprises cyclically causing relative movement between the electrode and the interface between the alcohol and the subjacent amalgam, said relative movement being transversely through the interface and without substantial agitation or circulation of the amalgam, any particular point on the working surface of said electrode being successively in contact with the amalgam and the alcohol, with its contact with the alcohol being from 20 per cent to 50 per cent of the cycle time.

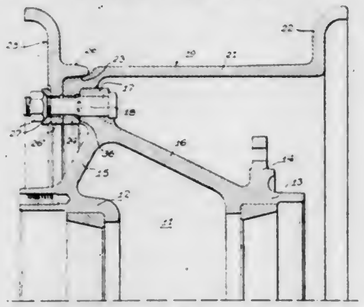
2,438,964

MAGNETIC FIELD DETECTOR

David H. Cunningham, Haddonfield, and Herbert Belar, Palmyra, N. J., assignors to Radio Corporation of America, a corporation of Delaware

Application November 2, 1942, Serial No. 464,296
1 Claim. (Cl. 175—183)

A magnetic field detector including three similar cores of high permeability magnetic material fixedly disposed normal to each other in said field, a first winding on each of said cores, three separate similar sources of alternating current of substantially sine wave form, means for applying said current to each of said first windings from a different one of said sources, a second winding on each of said cores, a plurality of filter networks for deriving currents of a selected even harmonic of said applied currents, means connecting a separate one of said filter networks to each of said second windings, the amplitude of said selected even harmonic currents being a function of the strength of said field on the axes of each of said cores, three separate square-law detectors, means for applying the output currents from each of said filters to a different one of said detectors, means for indicating separately the output currents of each of said detectors,



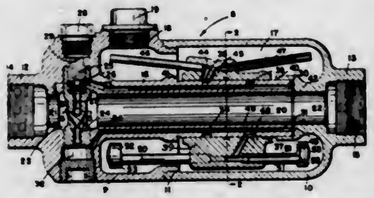
each of said output currents being proportional respectively to the square of the field intensity on the axis of different ones of said cores, means serially connecting said detectors for combining algebraically said detector output currents, and means for indicating said combined currents in terms of the algebraic sum of the squares of the field intensities on the axes of said cores.

2,438,965
SELF-SEALING FUEL TANK
Paul J. Dasher, Stow, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application November 4, 1941, Serial No. 417,787
4 Claims. (Cl. 154—43.5)

4. In a self-sealing fuel tank comprising a gasoline-impervious lining, a textile reinforcement, a sealing member, and a tear-resistant outer cover, a sealing member comprising a plurality of layers of a self-adherent composition comprising a rubbery material which swells in gasoline and a rubbery material which is insoluble in gasoline, and intervening layers of a tough resilient rubber-like material which will not swell substantially in gasoline between the self-adherent layers, and a layer of gas-expanded closed-cell sponge rubber, all adhered together.

2,438,966
WHEEL
Carolus L. Eksergian, Detroit, Robert B. Temple, Grosse Pointe Park, and Eugene P. Hawthorne, Detroit, Mich., assignors to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application December 31, 1943, Serial No. 516,376
1 Claim. (Cl. 301—35)

A wheel comprising a bolting-on flange, a tire supporting rim including separable parts each having radial securing flanges provided with aligned openings, an annular recess being formed in the face of one of said flanges, means securing said flanges together including bolts extending through said openings and having flat-sided heads non-rotatably engaging the walls of said recess, and means securing said rim to said bolting-on flange including studs mounted in said bolting-on flange and extending through said securing flanges.

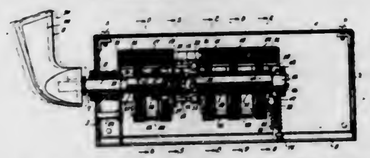


2,438,967
INDIUM-GOLD ARTICLE AND METHOD
Harold D. Ellsworth, Clinton, N. J., assignor to The Indium Corporation of America, New York, N. Y., a corporation of New York
No Drawing. Application May 21, 1943, Serial No. 487,931
4 Claims. (Cl. 29—183.5)

1. An indium-gold surfaced article which comprises a surface film composed of an indium-gold alloy the indium being present in proportion not less than 10% and the gold in proportion not less than 50% at the surface, an under layer of gold containing not over 8% of indium and an intermediate layer in which the proportion of indium increases gradually toward the surface.

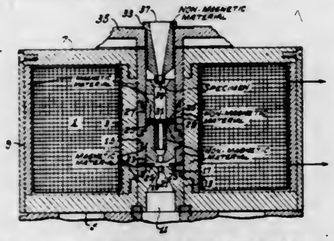
2,438,968
PRODUCTION OF TEXTILE FILAMENTS, FIBERS, AND YARNS
Theophilus A. Feild, Jr., Edward W. Rugeley, and John L. Petrokubi, Charleston, W. Va., assignors to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application March 4, 1943, Serial No. 478,010
5 Claims. (Cl. 57—157)

1. Process for producing from filaments of a vinyl resin formed by polymerizing a mixture of vinyl compounds including a vinyl halide, stretched yarns of excellent softness and high "loop-break" strength, which comprises surface coating each of at least two associated freshly spun continuous filaments of such a vinyl resin with finely-divided particles of a solid substantially water-insoluble inorganic compound which is not compatible with said vinyl resin, while said filaments contain residual volatile spinning solvent, forming the thus coated filaments into yarn, drying the yarn at a temperature below the softening point of the resin and removing residual solvent from the filaments, and subsequently stretching such coated filaments at least 100% while subjecting such filaments to steam at a temperature within the range between about 100° C. and about 160° C.



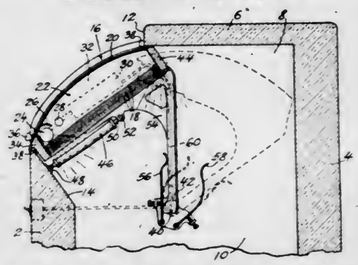
2,438,969
LUBRICATOR
Albert Feucht, Garfield Heights, Ohio, assignor, by mesne assignments, to Le Roi Company, Milwaukee, Wis., a corporation of Wisconsin
Application January 31, 1944, Serial No. 520,461
7 Claims. (Cl. 184—55)

1. In a device of the character described, a double-walled casing having a central opening



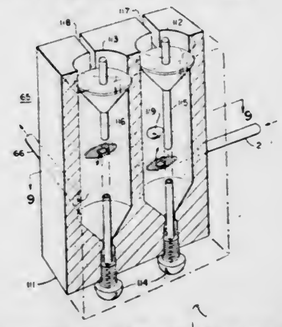
therethrough and a liquid reservoir therein, a member supported for rotation about an axis extending longitudinally of said central opening through said casing, said member having its center of gravity located to one side of its axis of rotation, conduit means in the inner wall of said casing and said member communicating with said central opening in said casing and with said liquid reservoir above the level of the liquid therein regardless of the position of said casing, and separate conduit means in the inner wall of said casing and said member communicating with the central opening of said casing and with said liquid reservoir below the level of the liquid therein regardless of the position of said casing.

2,438,970
PRESET SWITCH
Manfred L. Glogau, Shorewood, Wis., assignor to Allen-Bradley Company, Milwaukee, Wis., a corporation of Wisconsin
Application April 3, 1944, Serial No. 529,356
7 Claims. (Cl. 200—5)



1. In a switch adapted to select a plurality of circuits the combination comprising, a shaft mounted for axial and rotative movement, means adapted to prevent rotative movement of said shaft except in a selected axial position, a plurality of circuit selecting contacts, means adapted to cause and maintain engagement of alternative groups of said circuit selecting contacts when said shaft is in selected rotative positions, a pair of control circuit contacts, and means adapted to cause engagement of the same when said shaft is in an axial position other than one in which it is capable of rotation.

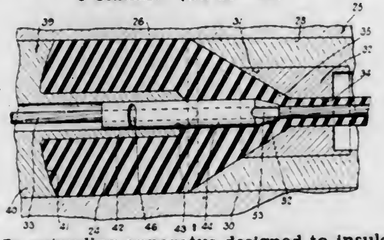
2,438,971
COMPOUND ELECTRON OBJECTIVE LENS
James Hillier, Cranbury, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 31, 1946, Serial No. 706,901
17 Claims. (Cl. 250—49.5)



1. The method of providing a highly magnified image of a microspecimen comprising imaging said specimen at substantially unity magnification, providing an enlarged image of said unity magnification image of said specimen, effectively equally aperturing both of said images and controlling the magnification of both of said images to provide a focused highly magnified image of said specimen.

2,438,972
REFRIGERATED DISPLAY CASE
Cyrus F. Hoffman, Trenton, N. J., assignor to C. V. Hill & Company, Inc., Trenton, N. J., a corporation of New Jersey
Application June 9, 1944, Serial No. 539,581
3 Claims. (Cl. 20—40.5)

1. A refrigerated display case having an opening in the front thereof to provide access to the interior of the case, a door movable into and out of position to close said opening, a window in said door through which articles in the interior of said case may be viewed, said window embodying multiple glass panes carried by the door and located adjacent the interior of the case, a pane of glass spaced from said multiple glass panes and cooperating therewith to form a dead air space and illuminating means carried by the door and located in said dead air space adjacent an edge of the door to illuminate the interior of the case and heat said edge of the door and the air in said dead air space whereby freezing and sticking of the door and fogging of said window are prevented.

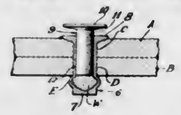


2,438,973
FLUID FLOW REGULATOR
Clarence Johnson, South Euclid, Ohio, assignor to Bailey Meter Company, a corporation of Delaware
Original application May 26, 1943, Serial No. 488,600, now Patent No. 2,420,430, dated May 13, 1947. Divided and this application December 18, 1943, Serial No. 514,785
7 Claims. (Cl. 277—60)

6. A pressure and flow regulator for low pressure gaseous fluids comprising a body having a chamber with vertical side walls, said chamber being closed at the bottom and open to the atmosphere at the top, a plug and stem assembly in said chamber and vertically movable therein, means guiding the stem and supporting the same with the plug near the top of the chamber, said plug having a close working fit with said vertical walls,

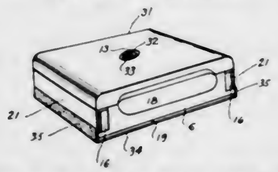
a slot through the body extending into the chamber and downwardly to near the plug top when supported, an inlet passage for delivering gas to said chamber near the lower end thereof, an exit passage through the wall of said chamber below said plug in its supported position, the weight per unit of exposed area of said plug being such that the gaseous fluid entering the chamber lifts the plug and causes the escape of sufficient fluid to atmosphere through the slot to reduce the exit pressure to that predetermined by the said weight, and means to prevent undesired movement of said plug resulting from a swirl or impact of said entering fluid.

2,438,974
EXTRUDING APPARATUS
David D. Jones, Towson, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application May 11, 1944, Serial No. 535,104
6 Claims. (Cl. 18—13)



1. In extruding apparatus designed to insulate cores, such as conductors and the like, and including a body member having an elongated extrusion passage therethrough, a forming die having a circular extrusion opening therein positioned at one end of the passage, impelling means for forcing material into the extrusion passage at a point removed from the die and substantially at right angles to the longitudinal axis of the passage, and a core guide provided with a deflecting surface for causing insulating material entering the passage to flow towards the die, a core tube secured at one end thereof to the core guide and having the other end thereof adjacent to the die opening, thereby forming an extrusion orifice between the end of the core tube and the die opening, which core tube consists of a centrally-apertured, cylindrical body member having a generally frusto-conical tip on the end thereof adjacent to the die and having only on that side of the tip which is farthest away from the impelling means a flat surface lying in a plane which is parallel to and below a line tangent to the frusto-conical surface of the tip, whereby the cross sectional area of that portion of the extrusion orifice which is nearest to the flat surface is greater than the cross sectional areas of like portions of the remainder of the extrusion orifice.

2,438,975
AN ALKYL CELLULOSE STABILIZED WITH AN N,N,DIALKYLATED DIAMINE
John Edward Jones, Spondon, near Derby, England, assignor, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application November 30, 1944, Serial No. 566,019. In Great Britain February 25, 1944
6 Claims. (Cl. 106—186)



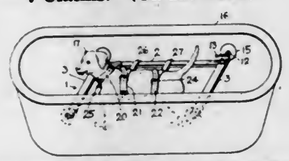
1. A composition of matter comprising an alkyl cellulose soluble in hydrophobe organic solvents and 0.05 to 1% of the weight of the alkyl cellulose of an N-alkylated diamine selected from the group which consists of N,N,dialkylated alkylene and phenylene diamines in which the N-alkyl substituent groups each contains less than 7 carbon atoms.

2,438,976
RIVET
Alfred J. Lautmann, Detroit, Mich.
Application December 4, 1943, Serial No. 512,880
8 Claims. (Cl. 85—40)

7. A rivet assembly comprising a relatively elongated female member having a smooth cylindrical bore of uniform cross sectional form extending thereinto from the outer end and terminating in spaced relation with respect to the inner end thereby forming elongated wall sections, the diameter of the bore being such that the elongated wall sections are relatively thin as compared with the closed inner end of the member, a male member of smooth cylindrical external form complemental to the cylindrical bore and of a length less than the bore of the female member, said male member being inserted into said female member as a slidable piston in tight frictional engagement therewith so as to prevent inadvertent separation of the members, and a quantity of solid, non-deteriorating, deformable material confined in the bore between the closed inner end thereof and the inner end of the male member, the quanttiy of material being of an amount that when the male member is driven toward the closed end of the female member the material is compressed and expands to exert force on the thin wall sections of the female member to bulge the same and thereby clinch the rivet into position without destroying the clinching and securing effect thereof while substantially all of the material remains confined between the inner end of the male member and the expanded and clinched end of the female member to impart additional strength thereto and form a substantially solid unitary rivet with the walls of the female member in close association with the body of the male member and the compressed solid in intimate association with the expanded end of the female member.

2,438,977
SANDING DEVICE
Charles Earl Rosemeyer, Seattle, Wash.
Application May 16, 1947, Serial No. 748,509
1 Claim. (Cl. 51—187)

In a holder of the character described, a pair of members in movable superposed relation, one of said members having its inner face provided with a pair of recesses, one of which being below and within the other, raised portions on said



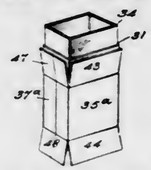
member on either side of said larger, upper recess, a pair of levers within said recess, screws upon which said levers are rotatably mounted, upwardly projecting pins disposed at the outer ends of said levers, means for moving said levers in opposite directions, metal plates at either end of said lower member and movably positioned thereon, cushions provided at either end of said lower member, a bottom plate with its sides bent at right angles and adapted to fit snugly over said lower plate, an abrasive sheet to fit over said bottom plate and bent in conformity therewith so as to engage the said metal and plates when same are opened by the action of said levers in their outward thrust and closed by the turning of the upper member in their inward thrust.

2,438,978
CHILD'S BOOT
Henri E. Rosen, Brookline, Mass.
Application April 10, 1947, Serial No. 740,661
3 Claims. (Cl. 36—1)

1. A child's boot having an upper comprising a top and a back stay, a strap comprising a portion which is interposed between the top and the back stay, the top and back stay being united by a sewed seam whose stitches penetrate the material of the strap, the strap comprising substantially parallel spaced rearwardly directed arms united by a rivet, and a spur rowel mounted upon the rivet between the legs of the strap, said rowel being of an organic material and having soft, pliable teeth.

2,438,979
FRAME AND HARNESS FOR DOG BATHS
Frank Lea Short, New York, N. Y.
Application January 23, 1946, Serial No. 642,800
7 Claims. (Cl. 119—101)

1. A harness for bathing an animal comprising a frame; means to removably support the frame in a bath tub; a plurality of straps adapted to be placed around the animal's body; and means to support the straps on the frame.

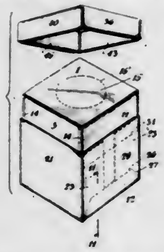


2,438,980
LAWN MOWER GEAR AND LOCKING DEVICE
Francis Edward Thompson, deceased, late of Lawrence, Mass., by Albert E. Thompson, administrator, Methuen, Mass.
Application July 31, 1946, Serial No. 687,383
1 Claim. (Cl. 192—46)

A device for a gear and a shaft rotatably supporting the same, comprising a roller-like locking pin interposed between the gear and shaft, and having a half circular shaped area and an arched opposite area, respectively, a loop-like spring about the shaft, an ear projecting from the pin between the areas, a fastener connecting the spring to the ear for the detachable carrying of the said spring by the latter, and effecting tensioning action of the said spring on the pin,

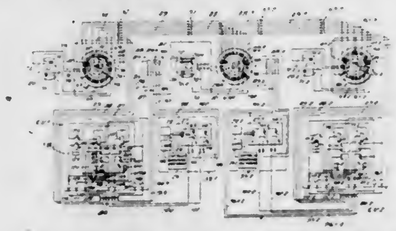
the gear being formed with a channel receiving the spring, the shaft being formed with pin seats concentrically thereof, and a cam surface on the gear for urging the pin into locking engagement in one of the seats and also for permitting escapement of such pin from the same on determined directions of rotation of either the gear or shaft.

2,438,981
PACKAGING METHOD
Harry F. Waters, New York, N. Y.
Application August 16, 1941, Serial No. 406,496, which is a division of application Serial No. 359,823, October 5, 1940. Divided and this application October 6, 1945, Serial No. 620,773
4 Claims. (Cl. 93—36.01)



1. The method of producing fluid-tight containers which comprises providing a collapsed envelope fluid-tight and fusible on at least the inner surface thereof and including the same number of layers throughout, erecting said envelope on a mandrel, combining said erected envelope with a carton having two pairs of opposed panels and medial score lines in one pair of said panels, withdrawing the resulting lined container structure from said mandrel, and then collapsing said structure on said medial score lines of said carton whereby a fluid-tight container in knocked-down form is obtained adapted to be erected to form a lined packaging medium.

2,438,982
CONTAINER
Marshall I. Williamson, New Haven, Conn., assignor, by mesne assignments, to National Folding Box Company, Incorporated, a corporation of Connecticut
Application July 29, 1943, Serial No. 496,537
7 Claims. (Cl. 229—23)

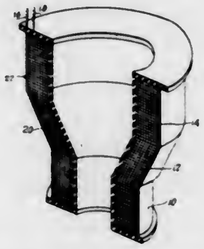


1. An improved paperboard container comprising an outer shell and an inner shell, the outer shell consisting of a body member and a cover member, both members being telescopically slidable over said inner shell into edge to edge abutment with each other so as to enclose said inner shell completely; said inner shell being formed from one single blank of paperboard material having a bottom wall panel, enclosing side wall panels, top wall panel, and a pair of locking flaps hingedly extending from the lower edges of

opposite side wall panels, said locking flaps being foldable back upon the respective side wall panels from which they extend; said body member being formed from one single sheet of paperboard material and having a bottom wall, enclosing side walls, inturned reenforcing flaps extending from the upper ends of said side walls and means forming an abutment edge along the

inside faces of opposite side walls adjoining the lower edges of said side walls for engaging said locking flaps to retain said inner shell in locked telescoped position within said body member; the cover member being formed from a single blank of paperboard material and comprising a top wall panel, enclosing side wall flanges and inturned reenforcing flaps lining the inside faces of said flanges.

2,438,983
SPEED CONTROL APPARATUS
Rosser L. Wilson, Mahwah, N. J., assignor to American Brake Shoe Company, New York, N. Y., a corporation of Delaware
Application February 21, 1945, Serial No. 579,016
15 Claims. (Cl. 318—74)

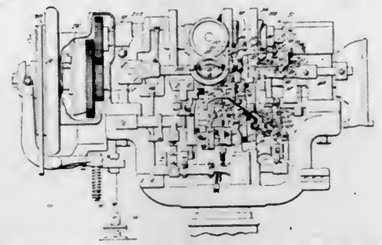


1. In a control apparatus for correlating the speeds of a master shaft and an independently driven secondary shaft to attain substantially a predetermined speed relationship therebetween, detecting means associated with said shafts to compare the speeds of said master and secondary shafts and including a master device effective when operated to retain its operated condition for a normal predetermined time and two secondary devices, said devices being arranged for sequential operation at a frequency determined by the magnitude of the variance from said predetermined speed relationship and in different sequence according to the sense of such variance, adjusting means operable in opposite directions to variably adjust the operating speed of said secondary shaft, means controlled by said detecting means and effective to operate said adjusting means in one direction for increasing the speed of said secondary shaft when one of said secondary devices is operated while said master device is in its operated condition, other means controlled by said detecting means and effective to operate said adjusting means in the opposite direction for decreasing the speed of said secondary shaft when the second of said secondary devices is operated while said master device is in its operated condition, and means responsive to the speed of said secondary shaft and controlling said adjusting means to prevent operation of said adjusting means under control of said master device and a selected one of said secondary devices when the speed of said secondary shaft is outside of a predetermined normal range of speeds.

2,438,984
WIRE-END LOOP FORMING AND TWISTING MEANS
Emilio M. Adams, Miami, Fla.
Application February 14, 1945, Serial No. 577,771
2 Claims. (Cl. 140—104)

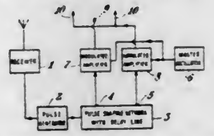
1. A loop forming wire twister of the class described comprising a flat plate having an elongated rectangular portion struck out from its central area, said portion being offset and constituting an adapter for the body portion of the wire to be twisted, and having a finger also struck out from the body portion and coacting with said adapter, and further having a slot formed at one edge in close proximity to the finger to accommodate the coils as they are wound.

2,438,985
ELECTROMAGNET
Anthony A. Ambrose, Dayton, Ohio
Application February 26, 1945, Serial No. 579,735
9 Claims. (Cl. 175—341)



1. As a new article of manufacture, a tubular electromagnetic coil comprising straight end portions of different diameters and a conical central portion interconnecting said end portions, the thickness of the coil being substantially uniform.

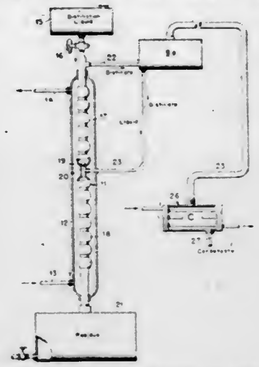
2,438,986
SHOE MACHINE
Fred Ashworth, Wenham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application February 28, 1945, Serial No. 580,163
20 Claims. (Cl. 112—46)



1. A machine for use in the manufacture of shoes, having attaching devices, a welt guide for directing a welt into a position on the shoe in advance of the operating point, and a knife constructed and mounted for operation on that portion of the welt in actual contact with the shoe, in combination with automatic sensing means

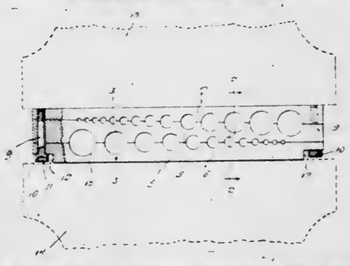
located and arranged for actuation during operations on the shoe by an element on the shoe dis-

posed out of the line of operation of said attaching devices to cause the knife to cut the welt.



2,438,987
RADIO NAVIGATIONAL AID
Christopher Edmund Gervase Bailey, Bournemouth, Hants, England, assignor to Radio Transmission Equipment Limited, London, England, a company of Great Britain
Application September 13, 1945, Serial No. 615,945
In Great Britain May 23, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires May 23, 1964
8 Claims. (Cl. 343—107)

2. In a system for radio-navigation, a receiver for a wave modulated by a first set of pulses, means coupled to said receiver to generate a second set of pulses and a third set of pulses, the pulses of said third set occurring during the duration of the pulses of said second set and having a duration less than the duration of the pulses of said second set, means to generate a radio frequency wave modulated proportional to the amplitude variations of the pulses of said second set, means to generate a radio frequency wave modulated proportional to the amplitude variations of the pulses of said third set, and means to radiate said modulated radio frequency waves in different azimuthal directions with overlapping radiation patterns.



2,438,988
PLURAL SECTION DISTILLATION COLUMN WITH TOP FEED
William F. Barthel, College Park, Md., assignor to the United States of America as represented by the Secretary of Agriculture
Application January 12, 1945, Serial No. 572,503
5 Claims. (Cl. 202—154)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. Distillation apparatus comprising an upwardly extending tubular column, means for introducing distillation liquid into the upper end of the column, said column being so constructed that a film of the liquid is spread over its internal surface as it descends the column and being divided into an upper section and a lower section with a valve between the sections which traps liquid in the upper section and intermittently opens to allow the liquid to flow into the lower section, and means for heating the column independently of the temperature and flow over the

internal surface of the column of the liquid being distilled.

2,438,989
CLAMPING HOLDER FOR SCREWS, BOLTS, AND THE LIKE
Walter E. Billman, Philadelphia, Pa.
Application May 29, 1944, Serial No. 537,888
2 Claims. (Cl. 29—284)

1. A clamping holder of the class described comprising a plurality of truncated triangular plates positioned in aligned relationship, the larger bases of the first and second and the smaller base of a third plate being aligned at one end and the larger base of the third and smaller bases of the first and second plates being aligned at the other end, a plurality of screw-threaded holes of uniformly diminishing diameter along the line of separation of the first and second plates, each hole being formed half in one plate and half in the other, and a plurality of screw-threaded holes of uniformly increasing diameter along the separation line between the second and third plates, each hole being likewise half in one plate and half in the other, and a securing device holding said plates in aligned relationship.

2,438,990
WELDING ROD HOLDER
Preston Brown, Selma, Ala.
Application October 29, 1945, Serial No. 625,292
2 Claims. (Cl. 219—8)

1. A welding rod holder comprising an elongated hollow handle having an axially disposed bearing opening in its front end and being internally threaded at its open rear end, a forwardly extending fixed shank secured to the front end of said handle, an externally threaded bearing plug adjustably secured in the threaded

rear end of said handle being formed with an axial bearing bore in its front end and an annular bearing shoulder on the front end thereof, a longitudinally adjustable shank having its rear end in the bore in said plug and extending through said bearing opening in the front end of said handle to lie adjacent to and parallel with said fixed shank, jaws on the ends of said shanks, a fixed collar secured about said adjust-

able shank adjacent its rear end, a coil spring about said adjustable shank between said collar and said annular bearing shoulder on said plug, said handle being slotted adjacent its forward end, a trigger secured to said adjustable shank extending through said slot for moving said adjustable shank inwardly to open said jaws against the tension of said coil spring, and means for variably tensioning said spring to effect different degrees of clamping action between said jaws.

2,438,991

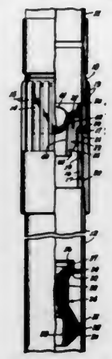
HIGHWAY TRAFFIC GUARD

Eugene V. Camp, Atlanta, Ga.

Application January 2, 1942, Serial No. 425,445
15 Claims. (Cl. 256—13.1)

1. In a traffic guard of the character described, a series of supports, curved spring brackets mounted on said supports, a clip pivotally united with the front portions of said brackets, and an impact member carried by said clip in sliding relationship therewith.

13. A highway guard rail fitting comprising a curved spring bracket having a rear or support engaging surface and oppositely disposed wing-like front portions, said front portions being formed to provide a series of staggered pintle bearings at the ends thereof, a clip associated with said front portions, curved indentations in said clip positioned in registering relationship with the openings of said pintle bearings, and pintle members passed through said openings and indentations, thereby pivotally mounting the clip with the spring bracket.



2,438,992

WELL CEMENTING APPARATUS

Roscoe O. Childers, Olney, Ill., assignor to Baker Oil Tools, Inc., Vernon, Calif., a corporation of California

Application April 3, 1942, Serial No. 437,545
12 Claims. (Cl. 166—1)

1. Apparatus of the character described, including a tubular member adapted to form part of a well casing and having a lateral outlet, valve means initially closing said outlet, an upper member having a passage therethrough and adapted to operate said valve means to open said outlet, a lower member, means releasably securing said upper and lower members together for joint movement downwardly through said casing until said upper member engages said valve means to arrest downward movement of said upper member, said releasable means being releasable to disconnect said lower member from said upper member after the latter engages said valve means to allow continued downward movement of said lower member below said sleeve valve in slidable sealing engagement with said

casing, and means for closing said upper member passage to allow hydraulic pressure to be exerted on said upper member to move said valve means to outlet opening position.

2,438,993

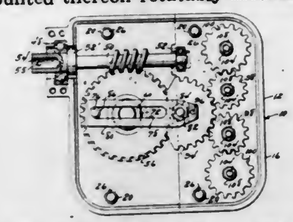
FLASHLIGHT LAMP

Jan Hendrik de Boer, London, England, assignor to The Hartford National Bank and Trust Company, Hartford, Conn., as trustee

Application March 20, 1944, Serial No. 527,284
In Great Britain January 8, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires January 8, 1963
6 Claims. (Cl. 67—31)

2. A flash lamp comprising a container having an envelope portion of transparent organic material, a combustible material and a combustion-supporting gas within the container, means for igniting the combustible material, a lead-in conductor of electrically conducting organic material constituting part of another portion of the container, and a sealing layer of regenerated cellulose interposed between said container portions.

2,438,994



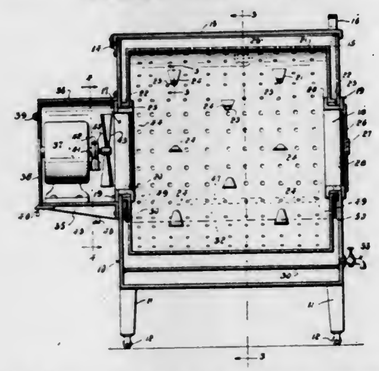
VALVE GRINDING MACHINE

Hector Durat, Corona, Long Island, N. Y.

Application January 2, 1946, Serial No. 638,656
3 Claims. (Cl. 51—29)

1. A portable valve grinding machine comprising a gear housing, a plurality of studs by which the housing is mounted on an engine block, means clamping the housing in position through the studs, a plurality of pairs of spaced parallel spindles carrying valve attaching tool holding chucks rotatably mounted in said housing, gears fixedly mounted on said spindles with the gears of each pair of spindles in meshing relation, a gear segment in the housing meshing with one of

the gears of each of the pairs of spindles, a shaft pivotally mounting the gear segment in the housing, an arm with an elongated slot therein fixedly attached to the gear segment and extending therefrom, a worm gear having a pin eccentrically mounted thereon rotatably mounted in the



housing with the pin positioned in the slot of the arm of the gear segment, a worm positioned in the housing meshing with the said worm gear, and a shaft having an actuating connection at the outer end rotatably mounting the said worm in the housing.

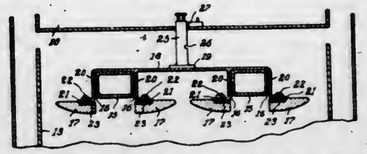
2,438,995

DRYING MACHINE OF THE AIR CIRCULATING, ROTARY DRUM, AND ENCLOSING CASING TYPE

Elbridge W. Forney, Canton, Ohio

Application September 2, 1943, Serial No. 500,981
2 Claims. (Cl. 34—139)

1. A machine of the class described comprising a casing having opposite walls each provided with an opening, a cylinder disposed within the casing and having side walls provided with central flanged openings, annular frame members fixed in the casing wall openings and having outwardly opening annular channels for receiving and journaling the flanges of the cylinder openings for rotatably mounting the cylinder in the casing, the opening of one of the flange members providing means for applying clothes and removing clothes from the cylinder, and a closure for said opening.



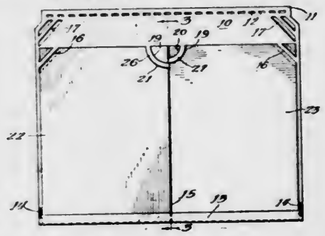
2,438,996

RADIANT OVEN AND BROILER BURNER

Raymond J. Greene, Sebring, Ohio

Application December 4, 1943, Serial No. 512,902
2 Claims. (Cl. 158—99)

1. An oven and broiler burner including a plurality of parallel fuel pipes each having flame jets along opposite sides thereof, a vertically adjustable frame including end frame members located above opposite end portions of the fuel pipes and disposed transversely thereof, a longitudinally disposed central bar connecting the end frame members, each end frame member having inverted, U-shape portions straddling the end portions of the pipes, horizontal imperforate radiants carried by the U-shape portions and disposed on opposite sides of the pipe, and means



for vertically moving the frame relative to the fuel pipes to position said horizontal radiants just above the flame jets so as to heat the radiants by the flame from the flame jets whereby the radiants will radiate the heat downward, and to position the horizontal radiants below the flame jets so as to permit the heat from the flame jets to circulate upward therefrom.

2,438,997

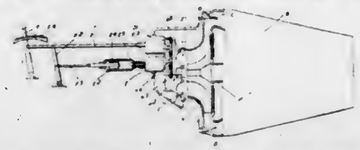
HOLDER FOR CARDS AND PHOTOGRAPHS

Marchand B. Hall, Chicago, Ill., assignor to Acme Visible Records, Inc., Chicago, Ill., a corporation of Delaware

Application April 13, 1945, Serial No. 588,156
6 Claims. (Cl. 129—16.7)

3. A holder for inserts such as cards, photographs and the like of the class described comprising a body and a plurality of insert engaging means provided thereon including a pair of strips defined by slits formed in said body for receiving in close proximity the adjacent corners of a pair of inserts mounted upon one side of said holder, each of said strips extending from a line parallel to one edge of said holder and inwardly therefrom to a line normal thereto and separately terminating thereon in spaced substantially contiguous relationship to each other.

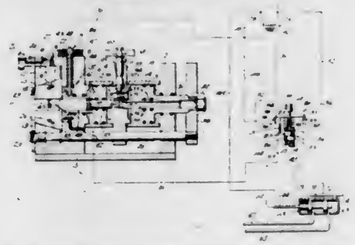
2,438,998



MEANS FOR CONTROLLING THE TEMPERATURE OF GASES

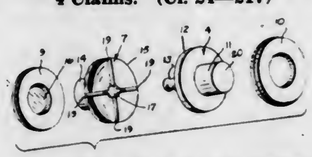
Frank Bernard Halford, Edgware, England, assignor to The De Havilland Aircraft Company Limited, Edgware, England, a company of Great Britain

Application November 1, 1943, Serial No. 508,629
In Great Britain September 15, 1942
10 Claims. (Cl. 60—42)



1. In a turbo-compressor power unit the combination of a casing enclosing the turbo-compressor, a plurality of jet nozzles situated in this casing where a cooling medium issuing as a spray from these nozzles will be delivered into the air stream passing through the turbo-com-

pressor, a pump driven by the turbo-compressor and supplying cooling medium to these nozzles, means for delivering fuel into the air stream



passing through the turbo-compressor, and valve means actuated by the fuel pressure for controlling the delivery of the cooling medium.

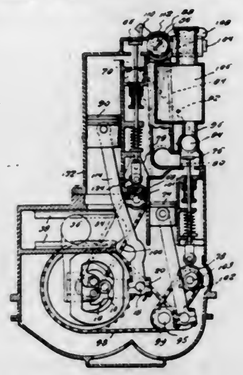
2,438,999
AUTOMATIC MEANS FOR CLAMPING AND DEFORMING THE ENDS OF TUBES
Emmett C. Hartley and Henry E. Hull, Cleveland, Ohio, assignors to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application February 20, 1945, Serial No. 578,898
7 Claims. (Cl. 153—79)

6. In a tube deforming machine, the combination of a tube clamping means, a tube end deforming device, means for supporting and operating said device, said device being initially yieldingly projected away from said operating means to a limited extent, and means actuated by said deforming device when pressed upon by the tube and moved toward said operating means for initiating the clamping means, said clamping means operating to initiate the deforming means when the tube has been clamped therein.

2,439,000
SNAP FASTENER
Herbert E. Hasenzahl, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application August 5, 1944, Serial No. 548,165
4 Claims. (Cl. 24—217)

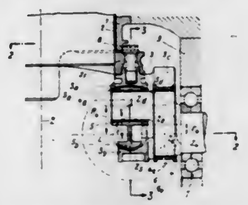
1. A device of the character described comprising a male fastener element and a female fastener element, said female element being formed of flexible, non-metallic material and comprising a tubular body portion adapted to extend through a perforation formed in the wall of an article with which said device is to be used, said tubular body portion having continuous solid sidewalls and an integral flanged portion of said non-metallic material on one end thereof with a central opening communicating with the bore of the tubular body portion and having portions adapted to overlie a side surface of the wall of the article when the tubular body portion is positioned within said perforation, the opening in said flanged portion being of a diameter less than that of the bore of the tubular body portion and less than the diameter of the male fastener element to be used therewith, said flanged portion having a plurality of spaced radially disposed slots extending from said opening outwardly through said flanged portion to the peripheral edge thereof and with the depth of said slots being confined to the thickness of said flanged portion whereby the flexibility of the material of the flanged portion intermediate said radially disposed slots will permit the diameter of the central opening of said flanged portion to be expanded sufficiently to receive the male fastener element and to firmly clasp and maintain the male fastener element therein, the sidewalls of said body portion being uninterrupted by said slots.

2,439,001
SHUTTLE CAR
Ralph M. Hippard, Middlesboro, Ky.
Application December 3, 1945, Serial No. 632,318
7 Claims. (Cl. 214—82)



1. In a self-propelled manually steered shuttle car, a wheeled horizontal elongated body, said body being of channel shape and open at the top and ends and embodying side and bottom walls, said side walls having internal longitudinal ways therein at the juncture of the same with the bottom wall and being provided with internal sector-shaped recesses at one end of the body communicating at corresponding bounding radii thereof with said ways, a transverse horizontal shaft journaled adjacent the bottom wall of said end of the body and having longitudinally bifurcated arms fixed thereon and movable within said recesses, a scoop having slides fixed on the sides thereof at the rear of the same for movement into and out of the spaces between the furcations of said arms from and into said ways, means to selectively rotate said shaft in opposite directions to tilt the scoop downwardly to scooping position in front of the body or upwardly to dumping position within the adjacent end of the body, and means to selectively slide the scoop longitudinally of the body in opposite directions to move the material dumped therein toward or out of the other end of the body or to return the scoop to the position with its guides engaged in the bifurcated arms preparatory to returning the scoop to scooping position.

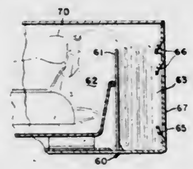
2,439,002
POWER LEVER AND ENGINE USING THE SAME
Rufus C. Hof, La Bolt, S. Dak.
Application February 18, 1947, Serial No. 729,381
6 Claims. (Cl. 74—44)



2. An engine comprising a housing having a cylinder formed therein, a piston slidable in said cylinder, a rotatable crank-shaft in said housing, a connecting rod having one end engaging said piston, a fulcrum member movably engaging said engine housing, and having a pair of fulcrum

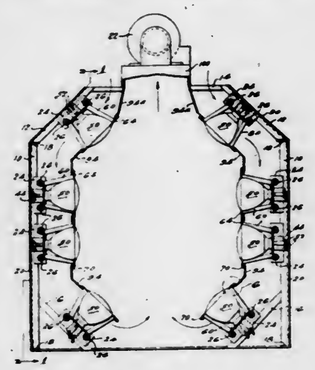
notches formed therein, and a power lever having a crank-shaft bearing formed intermediate its ends and dividing the lever body into a long end portion and a short end portion, said long end portion being adapted for pivotal engagement

with the lower end of the engine connecting rod, said short end portion having a pair of laterally spaced and projecting stub shafts for pivotal engagement at least one at a time with said fulcrum notches formed in said fulcrum as said parts undergo an engine cycle.



2,439,003
TRANSMISSION MECHANISM
Werner Howald, Zurich, Switzerland
Application September 11, 1944, Serial No. 553,583
In Germany September 14, 1943
6 Claims. (Cl. 74—50)

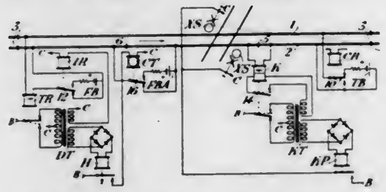
1. In a driving mechanism, the combination comprising a crank shaft provided with an eccentric disc and a crank pin on said eccentric disc, a follower fixedly attached to a driven member and provided with two pairs of axially spaced bearing surfaces, a slide rotatably mounted on said eccentric disc and slidably engaging one pair of said bearing surfaces on said follower, and a connecting member rotatably mounted on said crank pin and slidably engaging the other pair of said bearing surfaces on said follower.



2,439,004
STORAGE CONTAINER FOR ELECTRIC IRONS
Ralph L. Hurley, Xenia, Ohio
Application June 3, 1946, Serial No. 673,906
2 Claims. (Cl. 206—16)

1. A storage container for an electric iron and accessories therefor which comprises, a storage container having a bottom and side walls for receiving an electric iron therein, a cover for said container, said side walls having openings therein to provide for circulation of air through the storage container, means for supporting an electric iron within said container and heat insulating the same from the container, said supporting means comprising a support member upon which the flat bottom portion of the iron rests, said support member having leg means for spacing said support member from the bottom of the container, and a solid partition wall within said storage container cooperating with other walls

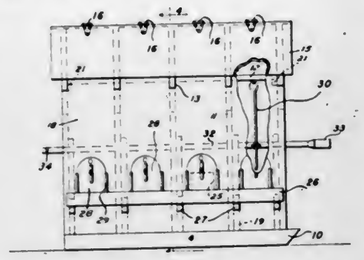
thereof to form a first storage compartment for the iron and a second storage compartment for storage of the electric cord for the iron, said supporting member extending from one end of said container substantially to said partition wall within said first storage compartment, said solid partition wall being spaced from the top of the receptacle and extending a major portion of the height of the container to prevent direct radiation of heat from the electric iron onto the electric cord stored in said second storage compartment.



2,439,005
OVEN WITH INFRARED LAMP
Frants V. Jensen, Detroit, Mich., assignor to Jensen Specialties, Inc., Detroit, Mich., a corporation of Michigan
Application February 24, 1944, Serial No. 523,659
18 Claims. (Cl. 219—35)

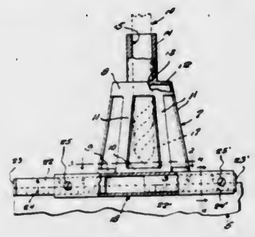
1. In an infra-red ray oven, in combination, a housing, a plurality of supporting devices extending longitudinally of said housing and carried thereby, each of said supporting devices comprising a pair of spaced parallel rods and adjustable means connecting said rods to said housing in any one of a plurality of vertically shiftable positions, and a lamp support mounted upon the pair of rods of each of said devices for shiftable movement longitudinally thereof, an infra-red ray lamp carried by each lamp support, and plates carried by said lamp supports filling the

space between the heads of said lamps forming together with said lamp heads a drying compartment within said oven.



2,439,006
CODED TRACK CIRCUITS FOR HIGHWAY CROSSING SIGNALS
Arthur L. Jerome, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application November 18, 1944, Serial No. 564,144
7 Claims. (Cl. 246—130)

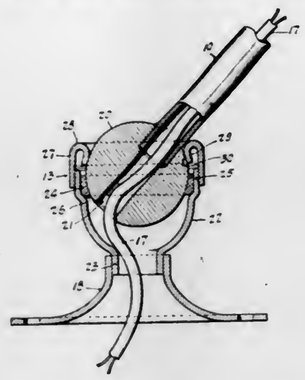
1. In a coded railway signaling system, in combination, a section of railway track having a first and a second track rail, a coding device at one end of the track section having a contact continuously actuated between a first position in which it effectively establishes connection between the section rails and a second position in which it effectively connects a first source of energy across the section rails with the positive terminal of the source connected to the first track rail, a code following track relay at the other end of said track section operated by energy supplied over the section rails from said first source, means associated with said track relay and operative during the intervals between the impulses of energy supplied from said first source to effectively connect a second source of energy across the section rails with the positive terminal of the source connected to the first track rail, an auxiliary relay, means for energizing said auxiliary relay when and only when the track relay is following code, coding means for at times supplying to the section rails at a point in the section removed from the track relay impulses of energy of the same polarity as that supplied from said second source, an operating circuit for said coding means established only when said auxiliary relay is released, a detector relay having a winding connected with said track circuit at a point in the track section in advance of the point in the section at which energy is supplied to the section rails by said coding means, said detector relay having a normally released contact which is picked up when and only when there is supplied to the relay winding energy of the polarity of the energy which is supplied thereto from said second source or by operation of said coding means, and a control relay governed by said detector relay.



2,439,007
TWO-WAY CATTLE AND HOG FEEDER
Tim P. Keithley and Leslie O. Chandler, Middletown, Mo.; said Keithley assignor to said Chandler
Application November 15, 1945, Serial No. 628,760
2 Claims. (Cl. 119—53)

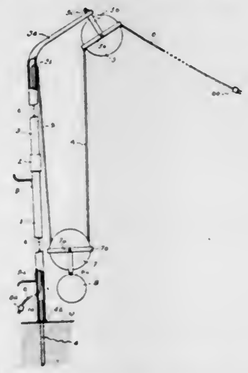
1. A feeder of the kind described, comprising a receptacle having longitudinally extending rafter sills, an inverted substantially V-shaped flooring within the receptacle and effecting a feed compartment to the receptacle above such flooring, feed troughs exteriorly of the receptacle at opposite sides thereof and having communication with the compartment, closure slides controlling the communications to the troughs,

loosely hung agitator rods depending from said sills within the compartment and confronting the communications, and manually operated bars having connection with the rods for agitating the same.



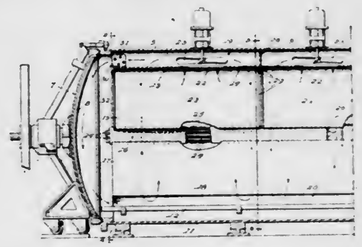
2,439,008
DRILL STAND AND GAUGE
James F. Kellem, Vancouver, Wash., assignor of one-half to Thomas E. Meade, Vancouver, Wash.
Application June 5, 1945, Serial No. 597,629
3 Claims. (Cl. 77—62)

1. In a guiding and holding device for drills and the like, a cage-like stand for guiding the drill toward the work, a gauge attachment telescopically related to the stand for movement at right angles to the axis of the drill and including a body member extending at right angles to the direction of movement and having means for engaging the edge of the work, and a pair of gauge plates each telescopically related to the body member and movable toward or from one another.



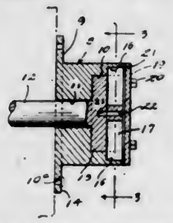
2,439,009
FLEXIBLE JOINT
Barney Kujawski, Milwaukee, Wis., assignor to Thurner Engineering Company, Milwaukee, Wis., a corporation of Wisconsin
Application October 29, 1943, Serial No. 508,154
7 Claims. (Cl. 287—87)

1. In a flexible joint the combination of a ball, an element carried thereby, a housing, a fixed brake ring seated in and radially braced by said housing and having an internal surface forming a seat for said ball, a clamp ring on said housing adjustable axially thereof, and a band suspended within said clamp ring and having an internal surface for contact with said ball, said band and first named ring being arranged to grip said ball in zones at opposite sides of but adjacent the center of said ball to effectively retain the



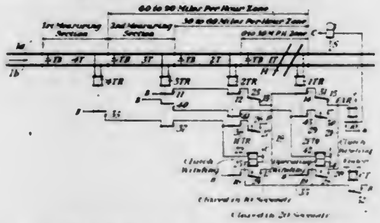
latter in any position of adjustment therebetween.

2,439,010
PORTABLE COLLAPSIBLE POWER-DISTRIBUTION TOWER FOR ELECTRIC LAWN MOWERS
Edward H. Lange, Baltimore. Md.
Application July 2, 1947, Serial No. 758,588
2 Claims. (Cl. 242—47.5)



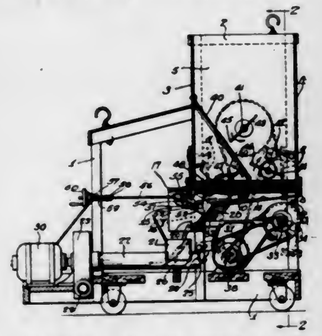
2. In a supply-line distribution tower for an electrically operable lawn mowing machine, in combination, a portable ground-pin means for supporting said tower, a collapsible pole including an upper tubular-member and a lower tubular-member, said lower tubular-member being adapted to rotatably fit upon an above-ground portion of said ground-pin means, said upper tubular-member being adapted to be supported on said lower tubular-member by a sleeve means attached to one of said tubular-members, and having an angular off-set at its upper extremity supporting an upper pulley suspended from said angular off-set; a lower pulley means including a weight means attached to said lower pulley means, an electric supply-line means for extending from said lawn mowing machine to a source of electric power, including a portion of supply-line from said lawn mowing machine extending over the top of said upper pulley, under the bottom of said lower pulley means, through a hole in said upper tubular-member and through the inside of each of said tubular-members to the outside of said lower tubular-member, through a hole in said lower tubular-member, and means for holding a winding of said supply-line including a projection at each end upon one of said tubular-members.

2,439,011
VULCANIZER
Leo J. Larkin, John J. Regan, and Gerald A. Larkin, La Crosse, Wis., assignors to La Crosse Rubber Mills Company, La Crosse, Wis., a corporation of Wisconsin
Application April 19, 1946, Serial No. 663,394
5 Claims. (Cl. 18—6)



5. A vulcanizer comprising a horizontally elongated closed casing having a door at one end; a transversely arched inner wall extending substantially throughout the length of said casing, said transversely arched inner wall having a top portion spaced downwardly from the top of said casing, and substantially vertical side portions extending downwardly from said top portion and spaced inwardly from opposed side walls of said casing, said transversely arched inner wall coacting with said casing top and side walls in forming a transversely arched air chamber, said side portions of said transversely arched inner wall having lower edges spaced upwardly from the casing bottom to place the lower portions of said transversely arched chamber in communication with the space within the confines of said transversely arched inner wall, said top portion of said transversely arched inner wall having longitudinally spaced openings placing the upper portion of said transversely arched chamber in communication with said space; air blowing means adjacent each of said openings for causing flow of air therethrough in one direction to transversely circulate the air in said casing and said transversely arched chamber, horizontally elongated air-heating coils disposed longitudinally in said transversely arched chamber between said side portions of said transversely arched inner wall and said opposed side walls of said casing; transverse partitions in said transversely arched chamber between said longitudinally spaced openings and segregating the air blowing means of these openings from each other, said transversely arched partitions extending downwardly to said air-heating coils; additional horizontally elongated air-heating coils disposed transversely in the ends of said upper portion of said transversely arched chamber, said ends being in communication with the end portions of said casing; and plates extending from the ends of said additional coils to the first mentioned coils and partially closing the front and rear ends of said transversely arched chamber.

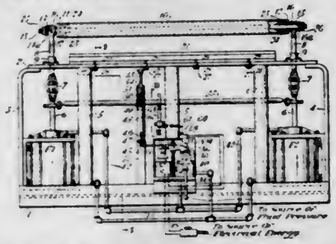
2,439,012
WHEEL AND AXLE CONSTRUCTION
Hershel B. Ledford, Dahlonega, Ga.
Application March 14, 1947, Serial No. 734,802
3 Claims. (Cl. 301—1)



1. A wheel and axle construction comprising an axle having an enlarged diameter axle flange on its outboard end, said axle flange being formed in its outboard face with a key seat opening through the periphery of said flange, a hub formed with a relatively large diameter cylindrical bore opening through its outboard face accommodating said axle flange, said hub further being formed with a reduced diameter bore coaxial with and communicating with the inboard end of the first mentioned bore and accommodating said axle, the side of said large bore being formed with at least one notch opening through the said outboard face of the hub and with which the peripheral opening of said key seat can register, a key loosely fitting said key seat and having a portion to reach into each notch whereby relative rotation of the axle and hub are precluded, and retaining means secured on said hub for holding said key in place.

2,439,013
APPARATUS FOR THE CONTROL OF HIGHWAY CROSSING SIGNALS
Carl F. Lower, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Original application December 15, 1944, Serial No. 568,288, now Patent No. 2,406,955, dated September 3, 1946. Divided and this application March 12, 1946, Serial No. 653,728
3 Claims. (Cl. 246—130)

1. In combination, a stretch of railway track intersected by a highway at which a highway crossing signal is located; a first, a second and a third track section formed in the order named to one side of the intersection, each said section having a normally energized track relay; a time element relay including a clutch winding, an operating winding and a contact actuating member; said time element relay operable to move said member from an initial to an extreme position in a predetermined time interval when said clutch winding is energized and said operating winding is supplied with time spaced current impulses, means including a coder to supply such current impulses to said operating winding, means including a back contact of the track relay of said third section and a front contact of the track relay of said second section to energize said clutch winding, other means including a contact of said time element relay closed at said extreme position and a front contact of the track relay of said first section to energize said clutch winding, and a control circuit having two alternative paths for governing said signal, a first one of said paths including a front contact of the track relay of each of said first and second track sections and the second of which paths includes a front contact of the track relay of said first section and a contact of said time element relay closed only at said extreme position.

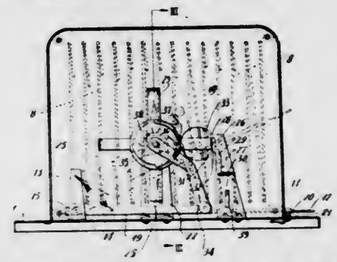


2,439,014
APPARATUS FOR PREPARING FINELY DIVIDED FIBRE STOCK FOR FLUID CONVEYANCE
George W. Luhrmann, Cedar Brook, N. J.
Application December 23, 1944, Serial No. 569,515
8 Claims. (Cl. 241—98)

4. An apparatus for preparing fibre stock for conveyance in and by a flowing stream of gaseous fluid, comprising a hopper for receiving the fibre stock for preparation, a horizontally reciprocable shaker pan underlying said hopper to receive fibre therefrom, a series of relatively staggered rotary beaters in said hopper for disintegrating clods of said stock into free fibre particles for reception by said shaker pan, means at one end of said shaker pan for discharging the disintegrated fibre into said stream, one of said rotary beaters being located in the lower portion of said hopper adjacent the discharge end of said shaker pan and operable partly within said pan for working fibres therein, and a second of said beaters being located in the lower portion of said hopper and operable directly above the opposite end of said pan, and an inclined partition in said hopper disposed with its lower end adjacent said pan intermediate the beaters respectively operating adjacent the opposite ends of said pan, and a third of said beaters being operable in an upper portion of said hopper adjacent said partition above and in intermediate vertical relation to the first two said beaters.

2,439,015
METALWORKING MACHINE
James B. McClelland, Wilkinsburg, Pa.
Application May 15, 1945, Serial No. 593,839
5 Claims. (Cl. 153—48)

1. In a machine of the class described including a pair of movable operating rods each provided with an eye and a forming roll supported at its ends by said operating rods, the means for securing the forming roll to said operating rods comprising a squeeze shaft extending with clearance through said roll and through the eye provided on each of said operating rods, two self-centering cones slidably mounted on said shaft with their smaller ends extending into the ends of said forming roll, each said cone being provided at its outer end with a counterbore the inner end of which forms a shoulder, two sleeves slidably mounted on said shaft within said eyes and extending into said counterbore into engagement with said shoulders, and two nuts screwed onto the outer ends of said shaft into engagement with said sleeves.



2. A metal working machine comprising a supporting framework including a bed plate and a base plate, two fluid pressure motors secured to said framework with their axes vertical at the opposite ends of said bed plate, each said fluid pressure motor being provided at its upper end with a piston rod, two operating rods slidably supported in said bed plate in axial alignment with the piston rods of said motors and adjustably connected with said piston rods, cooperating metal working members secured respectively to said bed plate and to the upper ends of said operating rods, an electrically operated valve effective when energized to admit fluid to one end of said motors to move said operating rods downwardly and when deenergized to admit fluid to the other ends of said motors to move said operating rods upwardly, a limit switch connected in series in the energizing circuit for said valve, and adjustable means for actuating said switch in response to a predetermined amount of downward movement of said operating rods.

2,439,016
BREATHING APPARATUS
Phillip E. Meidenbauer, Jr., Lancaster, N. Y., assignor to Scott Aviation Corporation, Lancaster, N. Y., a corporation of New York
Application October 19, 1943, Serial No. 506,844
14 Claims. (Cl. 128—142)

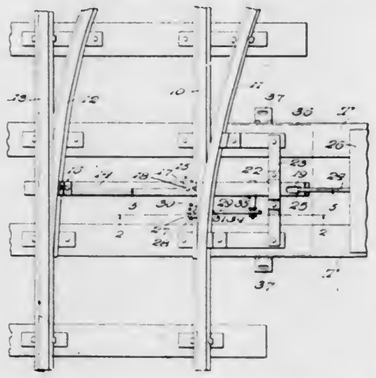
11. A breathing apparatus comprising a chamber having an intake for gas under pressure, a service opening adapted to be connected with a person to be served, and a vent leading from said chamber to the outer atmosphere, actuating means which are responsive to variations of pressure in said chamber, and a valve device for controlling said vent including a positively operated bleed valve which is shifted by said actuating means, and a non-positively operated valve which is actuated by the exhalation of the person being served.

2,439,017
THERMAL TIMER FOR HEATING APPARATUS
Eugene J. Meyers, Los Angeles, Calif., assignor to Hayes, Meyers and Hoagland, Los Angeles, Calif., a copartnership
Application November 19, 1945, Serial No. 629,360
11 Claims. (Cl. 219—20)

9. In a time controlled device including a heat producing member, the combination of: starting means movable from a normal position to an operating position for initiating operation of said device; trip means for terminating said operation; a plurality of bimetallic control elements each including a portion movable from a normal position in response to a rise in temperature of said element; a rotatable element carrier; means mounting said elements in uniform angular spaced relation from each other upon said carrier for movement successively to a position normally engaging said portion with said trip means; heat shield means disposed between said heat producing member and all of said control elements, said heat shield means having an aperture therein disposed in a position to direct heat from said member upon the one element engaging said trip means; and means responsive to movement in one direction of said starting means for rotating said element carrier to shift said one element away from said trip means and move another element into engagement therewith.

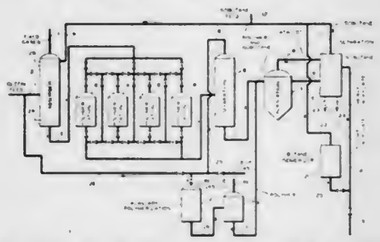
2,439,018
SAFETY CLIP
Homer D. Miller, Canton, Ohio
Application March 18, 1946, Serial No. 655,210
8 Claims. (Cl. 24—11)

1. In combination with a fountain pen and the like, a clip fixed at one end to the pen and having its other end located adjacent to the side of the pen, a reversely disposed, angular pin connected to the last named end of the clip and normally disposed toward the pen, a tubular member slidably mounted upon the pin and means for sliding the tubular member upon the pin to enclose the end of the pin therein.



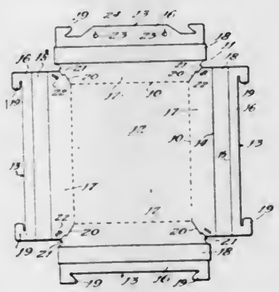
2,439,019
KEY MEANS FOR SHAFTS AND ROTORS AND METHOD OF PRODUCING SAME
Normand W. Morse, Chicago, Ill., assignor, by mesne assignments, to Gray-Mills Corporation, Evanston, Ill., a corporation of Illinois
Application October 9, 1943, Serial No. 505,650
11 Claims. (Cl. 287—53)

1. A key means for a shaft and a rotor having a bore for receiving the shaft comprising the provision in the rotor of a keyway having a border disposed transversely to the axis of the rotor and shaft, a laterally extending key element rigid with said shaft and extending transversely of the keyway with a segment thereof extending beyond the border of the keyway and overlapping the rotor adjacent said border, and tightening means connected to said shaft and bearing against said rotor to force the rotor against said segment to displace it and force the remainder of the key element into said keyway in locked position therein and with said border.



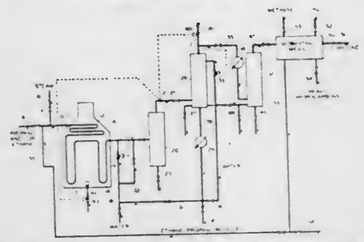
8. The method of keying a rotor to a shaft which comprises the steps of forming an annular wale integrally on the shaft, of cutting a slot transversely of the rotor hub having a width less than the outside diameter and equal to or greater than the inside diameter of the annular wale, and of forcing the annular wale into the slot so that walls of the slot cut off portions of the annular wale.

2,439,020
RAILWAY SWITCH OPERATING AND LOCKING MEANS
Orville Nell, Bridgeport, Ill., assignor of one-fourth to Johnnie E. Nell, Bridgeport, and one-fourth to Burnice W. Nell, Mount Carmel, Ill.
Application July 15, 1947, Serial No. 760,979
2 Claims. (Cl. 246—401)



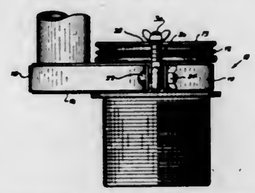
2. An operating and locking means for a switch tongue which normally occupies a switch-closed position against the inner side of a rail, said operating and locking means comprising a horizontally elongated locking member extending transversely under said tongue and rail and projecting outwardly beyond the latter, a bracket secured to and carried by said tongue, means pivotally connecting the inner end of said locking member to said tongue-carried bracket and mounting said locking member for movement with said tongue and for swinging movement from a normally raised tongue-locking position to a lowered tongue-releasing position, the outer end of said locking member having a cam slot said locking member having an upstanding inwardly facing shoulder which abuts the outer edge of the base of said rail when said said locking member occupies said raised tongue-locking position, a bridle bar connected with said tongue and having an end portion extending outwardly beyond said rail in parallel relation with said locking member, an operating bar for said bridle bar and locking member, means connecting said operating bar with said bridle bar and mounting said operating bar for sliding movement longitudinally of said bridle bar from an outer switch locked-position to an inner switch-unlocked position, an actuating rod connected with said operating bar for longitudinally shifting the same, means for limiting the sliding movements of said operating bar with respect to said bridle bar, a lateral arm secured to said operating bar and received in said cam slot of said locking member for swinging said locking member to said lowered tongue-releasing position when said operating bar is slid inwardly with respect to said bridle bar prior to switch-opening movement of said bridle bar, and for restoring said locking member to said raised tongue-locking position when said operating bar is slid outwardly with respect to said bridle bar after switch-closing movement of said bridle bar, and a flat casing at the outer side of said rail and enclosing the outer end portions of said bars, said arm and the major portion of said locking member, said casing having an opening through which said actuating rod extends.

2,439,021
PREPARATION OF SATURATED HYDROCARBONS
Harold T. Quigg, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application July 24, 1945, Serial No. 606,868
11 Claims. (Cl. 260—683.4)



1. A process of converting normally gaseous olefin comprising mainly ethylene contained in a gaseous mixture containing other normally gaseous components into heavier hydrocarbons having molecular weight and boiling point in the motor and aviation fuel range which comprises absorbing said olefin comprising mainly ethylene from said normally gaseous mixture in liquid isoparaffin in an absorption zone while allowing other normally gaseous components to pass through undissolved, withdrawing the resulting solution of olefin in liquid isoparaffin from the absorption zone and feeding it directly to a polymerization zone, effecting catalytic liquid phase polymerization of said olefin comprising mainly ethylene to higher-boiling olefin principally in the C_4 to C_6 range and mainly butylene in said polymerization zone, said isoparaffin serving as a diluent and enabling maintenance of liquid phase in said polymerization step, withdrawing the resulting mixture of said isoparaffin and said higher-boiling olefin and feeding it to an alkylation zone, and there alkylating said isoparaffin with said higher-boiling olefin to give heavier hydrocarbons having molecular weight and boiling point in the motor and aviation fuel range.

2,439,022
COLLAPSIBLE DISPLAY FRAME
Earl M. Roach, Chicago, Ill., assignor to Arvey Corporation, Chicago, Ill., a corporation of Illinois
Application February 26, 1944, Serial No. 524,128
10 Claims. (Cl. 40—154)



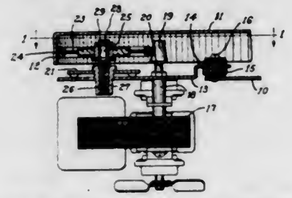
1. In a collapsible display constructed of foldable material comprising a polygonal-shaped central panel, side pieces severed from each other and secured to the side edges of said central panel and foldable from the plane thereof to form a hollow angular forwardly projecting frame for said central panel, each of said side pieces being provided with spaced lines of fold dividing each side piece into a plurality of elongated side panels disposed lengthwise with respect to the side edges of said central panel comprising an outermost side panel adapted to be rearwardly folded and to extend parallel to said central panel, at least one intermediate side panel, and an innermost side panel adapted to be folded forwardly of the face of and to extend angularly to said central panel, complementary inter-lockable hook-tab means adjacent the ends of said outermost side panels, said hook-tabs at the opposite ends of each outer panel extending parallel therewith and towards each other, so that when said display is assembled, the complementary hook-tabs will be in superimposed engagement and frictionally maintain said outermost side panels in rearwardly folded and interlocked relationship with each other, and supplemental means for fixedly maintaining said innermost side panels in forwardly extending symmetrical angular relationship to said central panel and the component side panels in angular relationship to each other.

2,439,023
HYDROCARBON CONVERSION PROCESS
Sam P. Robinson, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application July 16, 1946, Serial No. 683,889
4 Claims. (Cl. 260—683)

1. An improved process for the production of ethylene, which comprises passing a reactant stream comprising primarily ethane, propylene and propane together with steam through a long, narrow, externally heated conversion zone, subjecting said stream in said conversion zone to a temperature between about 1350 and about 1650° F. under a pressure between about 15 and about 40 pounds per square inch absolute for a time sufficient to produce an optimum yield of ethylene and a minimum yield of heavier hydrocarbons, continuously introducing water into the stream of reaction products immediately after their passage from said conversion zone in an amount such as to cool said effluents to a temperature below about 1000° F., subsequently introducing additional water into said partially cooled reaction products in an amount sufficient to cool said reaction products to about 300° F., introducing the resulting cooled gaseous mixture into a scrubbing zone and countercurrently contacting same with a stream of water, passing gaseous hydrocarbon effluents of said scrubbing zone to separating means and recovering from said separating means a hydrocarbon fraction comprising ethylene so produced as a product of the process, and simultaneously discharging from the process said gaseous hydrocarbon effluents of said scrubbing zone and cutting off the supply of heat to said conversion zone whenever the temperature of the stream of said gaseous mixture entering said scrubbing zone reaches about 1000° F.

2,439,024
RENEWABLE VALVE SEAT
Harry N. Ruebel, Berlin, Md.
Application December 26, 1944, Serial No. 569,839
2 Claims. (Cl. 251—167)

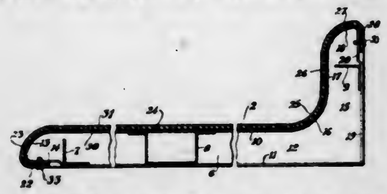
1. In a renewable valve seat assembly a two-piece clamp member, a tapered washer, a ball valve seat and means for clamping said members to an old valve fixture, screws and wing nuts thereon whereby said clamp members are connected, said members having opposing wings to receive said screws and eye bolts pivoted on the



screws for engagement with said valve seat, and said last member having bifurcated arms to receive said eye bolts.

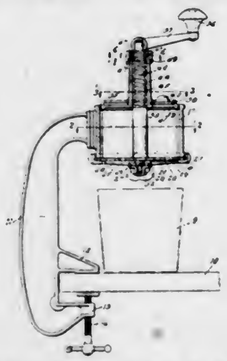
2,439,025
SLIDE RULE
Gordon W. Sammons, Hagerstown, Md.
Application March 28, 1944, Serial No. 528,450
6 Claims. (Cl. 235—71)

1. In combination with a slide rule having the usual slider and indicator with registering graduations providing scales on the slider and face of the rule; a tape longitudinally slidable on the face of the rule, said tape having graduations thereon corresponding with divisions of the slide rule, and means associated with the indicator for moving said tape wherein a plurality of divisions on the tape pass a line on the indicator as the line passes one division on the rule.



2,439,026
ADJUSTABLE COMPENSATING TURNTABLE DRIVE
Emmor V. Schneider, Alliance, Ohio, assignor to The Alliance Manufacturing Company, Alliance, Ohio, a corporation of Ohio
Application August 3, 1945, Serial No. 608,788
3 Claims. (Cl. 74—193)

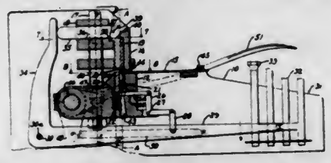
1. A transmission including a support, a driving means rotatably mounted upon the support, a peripherally flanged driven means rotatably mounted upon the support, one of said means being tapered, a friction wheel mounting plate laterally movable upon the support, an adjusting screw threaded in the mounting plate, a friction wheel journalled upon the adjusting screw, means holding the friction wheel in contact with the driving means and with the peripheral flange of the driven means, and means for adjusting said screw to change the position of the friction wheel relative to the driving means and the driven means to adjust the speed of the driven means by changing the transmission ratio.



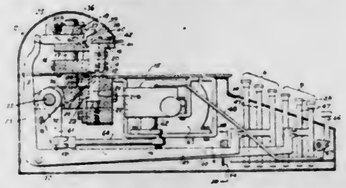
2,439,027
TABLE TOP CONSTRUCTION
Jacques Stanitz, Warren, Ohio, assignor to Mullins Manufacturing Corporation, Salem, Ohio, a corporation of New York
Application March 20, 1945, Serial No. 583,771
6 Claims. (Cl. 311—106)

1. In a table top construction, L-shaped end members and transverse members joined to the end members forming a structural frame; a facing member having a flat top, a curved front nosing portion, and a coved splashback; said L-shaped end members each having an upstanding leg; and means securing the facing member to

the structural frame with the facing member splashback adjoining and supported by said upstanding legs.



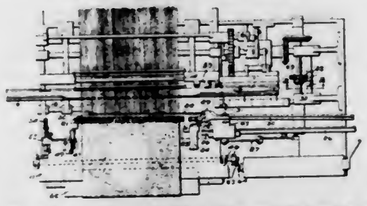
2,439,028
FOOD GRINDER HAVING A PERFORATED DISC, A PRESSER PLATE, AND A ROTARY KNIFE
Eugene V. Taylor, Chicago, Ill.
Application March 22, 1946, Serial No. 656,322
5 Claims. (Cl. 146—192)



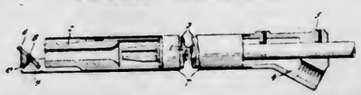
1. Apparatus for processing food stuff, such as meat, comprising, in combination, a hopper for receiving the food stuff, a die at one end of the hopper through which the food stuff is pressed, a shaft rotatably mounted in said hopper and exposed to the interior thereof and extending through and beyond the other end thereof, the portion of said shaft extending from said hopper being threaded for a distance about equal to the length of said hopper with the portion of said shaft within said hopper being completely smooth, means for rotating said shaft, a knife carried by said shaft and rotatable therewith adjacent said die for cutting said food stuff as it emerges therefrom, a pusher plate movable through said hopper for pushing said food stuff through said die, and an extension from said pusher plate having a threaded outer end for cooperating with said threaded portion of said shaft to move said pusher plate through said hopper on rotation of said shaft.

2,439,029
COMBINED CARD PUNCHING AND SLOTTING MACHINE
Nelson S. Welk, Athens, Ohio, assignor to The McBee Company, Athens, Ohio, a corporation
Application May 14, 1945, Serial No. 593,735
12 Claims. (Cl. 164—112)

1. In a machine of the character described, a plurality of integrally combined perforating and slotting punches, each of said punches having different perforating and slotting portions, a die operatively associated with each of said punches, operating means normally conditioned to be constantly effective to simultaneously operate said punches to effect perforation but to be normally ineffective to effect slotting, selective means for conditioning said operating means to operate selected punches to effect slotting while operating the remainder of the punches to effect perforation only.



2,439,030
KEY-PUNCH SLOTTING MACHINE
Nelson S. Welk, Athens, Ohio, assignor to The McBee Company, Athens, Ohio, a corporation
Application June 14, 1945, Serial No. 599,404
8 Claims. (Cl. 164—112)



1. In a machine of the character described, a plurality of functionally integral slotting punches having two relatively offset slot punching portions, normally ineffective operating means for said punches, and selective means for conditioning said operating means to operate selected punches.

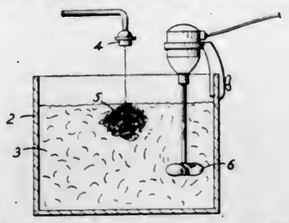
2,439,031
STOP MOTION FOR PILE WIRE LOOMS
Sydney S. Wilson, Sanford, Maine, assignor to Goodall-Sanford, Inc., Sanford, Maine, a corporation of Maine
Application May 15, 1947, Serial No. 748,182
11 Claims. (Cl. 139—336)

1. In a loom the combination of pile wire withdrawing and inserting means at one side of the loom, a feeler support pivotally mounted on the breast beam at the opposite side of the loom, a feeler movably mounted on the support and extending adjacent the path of the selvage rearward of the fell, means acting to stop the loom, unless, after an inserting movement of the pile wire withdrawing and inserting means, a pile wire is in the shed projecting from the selvage and is carried forward by the lay on the beat-up to engage and move the feeler, and means acting after each wire inserting movement and subsequent beat-up of the lay to raise the feeler support on its pivot and allow the feeler to drop into normal position rearward of the fell.

2,439,032
SHOT BLASTING NOZZLE
John O. Almen, Royal Oak, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application November 1, 1945, Serial No. 626,065
5 Claims. (Cl. 51—11)

5. Shot blast means for compressively stressing the interior surface of an opening, comprising a conductor member for flow therethrough of shot blasting material, said member terminating in a discharge end insertable within the opening whose internal surface is to be compressively stressed, a deflector cooperating with said discharge end to direct the discharge of said shot blasting material laterally from said discharge end for impingement on said internal surface and means mounting the deflector for relative rotation circularly of the member.

2,439,033
VANED TIRE
John O. Antonson, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application March 1, 1947, Serial No. 731,789
7 Claims. (Cl. 244—103)

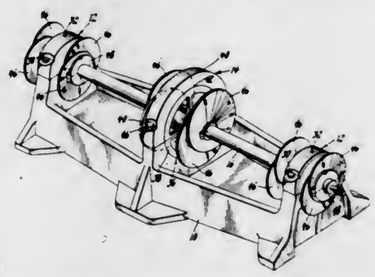


1. A tire comprising an annular body having a side wall comprising rubber-like material, vanes comprising rubber-like material integral with said side wall at spaced-apart positions thereabout providing resilient hinged connections with said side wall, each vane having at least one layer of parallel cords extending across its hinge line and continuing into said vane and said side wall adjacent thereto, and a layer of extensible fabric extending about the hinge line and therefrom along the inner face of the vane and the surface of the side wall beneath the vane, said fabric being stretchable in a direction normal to the hinge line.

2,439,034
PROCESS OF FORMING POROUS ARTIFICIAL MASSES
Orlando A. Battista, Claymont, Del., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application March 16, 1944, Serial No. 526,799
8 Claims. (Cl. 18—54)

6. A method of forming an artificial mass comprising a bunched up monofil comprising regenerated cellulose having intermeshing crimps forming interstitial pores permanently impressed thereon which comprises the steps of continuously extruding viscose through a jet having a single orifice into an agitated liquid incapable

of regenerating viscose to cellulose in the cold, the liquid being heated to a temperature of about 80° C. to 100° C., whereby the cellulose is regenerated, and the specific gravity of the liquid being greater than the specific gravity of the viscose



so that the extruded material is buoyed up or supported at the surface of the liquid, the viscose being coagulated and the cellulose being regenerated by the heated liquid simultaneously with crimping of the continuous monofil.

2,439,035

BEARING TESTING MACHINE

Joseph B. Bidwell, Philadelphia, Pa., and Arthur F. Underwood, Grosse Pointe, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application March 8, 1945, Serial No. 581,652
7 Claims. (Cl. 73—7)

6. In a bearing test machine, the combination of a support provided with bearing means, a long uniformly flexible shaft rotatably mounted in said bearing means, a bearing holder on the support adapted to receive a test bearing in which the shaft is journaled, a pair of weights of equal mass on said shaft adjacent said bearing holder and on the side thereof opposite said bearing means, said weights having their centers of mass eccentric to the shaft axis and independently pivoted on the shaft for circumferential adjustment about the shaft axis and means for locking the weights to the shaft in any desired position of adjustment so as to give any desired camber to adjacent portions of the shaft including the portion journaled in said test bearing.

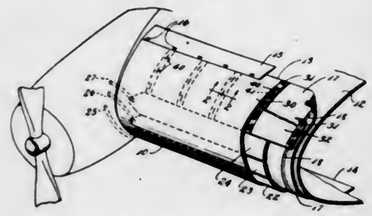
2,439,036

ADJUSTABLE LOCK KEEPER

John A. Bohnsack, Waynesboro, Va., assignor to Hopeman Bros., Inc., New York, N. Y., a corporation of Delaware

Application January 25, 1946, Serial No. 643,274
8 Claims. (Cl. 292—340)

1. An adjustable lock keeper comprising an attaching member formed with a bolt receiving opening, a strike member adjustably mounted on said attaching member, one of said members having an abutment and the other of said members being formed with a slot receiving said abutment with said slot extending in a direction transverse to said opening to provide for adjustment of said strike member relative to said bolt, and a locking



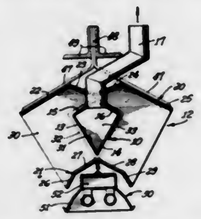
part engaging said other member and formed with a slot receiving said abutment, said locking part slot being inclined to said direction and said part being movable to adjust said strike member in said direction and normally securing said strike member against movement by said bolt.

2,439,037

ICE REMOVING COVERING FOR AIRCRAFT

Robert G. Campbell, Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

Application March 17, 1944, Serial No. 526,867
2 Claims. (Cl. 244—134)



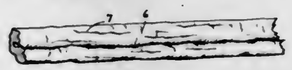
1. A protective covering for a surface, said covering comprising an elastic sheet body adapted to be mounted in stretched condition over said surface, said sheet body including a layer having a perforation, a reinforcement of textile material about said perforation, and a layer over said perforation and said reinforcement, said last-named layer having a slit extending across said perforation in the direction of stretch and being adhered to said reinforcement about the slitted area, said slit being effective to control flow of air through said covering.

2,439,038

OVERHEAD GAS-FIRED RADIATOR AND REFLECTOR

William G. Cartter, Monrovia, Calif.

Application November 21, 1942, Serial No. 466,409
12 Claims. (Cl. 126—91)



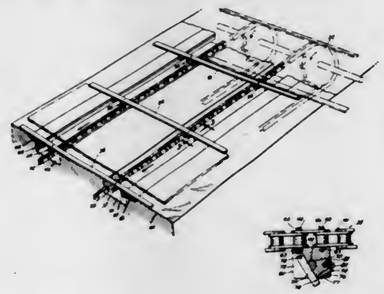
3. An overhead gas heater comprising the combination of: a horizontally elongated combustion chamber formed of plane walls having a cross section in the form of a quadrilateral of which two pairs of adjacent sides are equal, burner means adapted to direct a flame into said chamber for heating the same, and a plane faced reflector co-extensive in length with the combustion chamber and spaced above the latter to reflect approximately all of the heat rays downwardly and outwardly which are initially projected from said combustion chamber at an angle substantially above horizontal.

2,439,039

PROCESS OF PRODUCING MEDULLATED ARTIFICIAL FILAMENTS

Elvin L. Coe, Nitro, W. Va., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware

Application September 26, 1944, Serial No. 555,809
4 Claims. (Cl. 18—54)



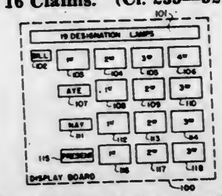
1. A process for the production of artificial fibers having, in cross section, a horseshoe shape comprising the steps of spinning a normal viscose of normal spinning viscosity, having a salt point of from 2.7 to 4.1 and containing sodium sulphate into a coagulating and regenerating bath consisting of an aqueous solution of sulphuric acid in a concentration of from 8 to 12%, 21 to 27% sodium sulphate, and from 0 to not more than 1.25% of zinc sulphate.

2,439,040

CONVEYOR SLAT SECUREMENT

Harry L. Cohen, New York, N. Y., assignor to S & S Corrugated Paper Machinery Co. Inc., Brooklyn, N. Y., a corporation of New York

Application April 2, 1946, Serial No. 659,117
3 Claims. (Cl. 198—175)



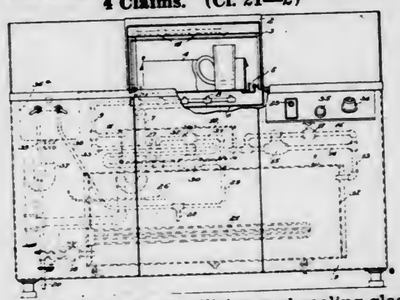
1. Blank moving means comprising a moving chain and a slat removably secured thereto; said slat having an extension depending therefrom; said chain carrying a latch member; said latch member comprising a plate; an opening in said plate to receive said extension; a lock member movable into said opening; and a recess in said extension to receive said lock member; means biasing said lock member into said opening; said lock member being manually removable from said opening; said lock member comprising a lever; a recess in said plate; said lever being pivotally mounted in said recess for movement in a plane normal to the axis of said opening.

2,439,041

VOTE INDICATING SYSTEM

Leonard F. Crabtree, Oak Park, Ill., assignor to Automatic Electric Laboratories, Inc., a corporation of Delaware

Application January 27, 1941, Serial No. 376,183
16 Claims. (Cl. 235—52)



1. A vote indicating system comprising a display unit for displaying a vote total, a plurality of voting stations each including means for casting a vote, means controlled in accordance with the votes cast at said stations for determining the total to be displayed by said unit, manually operable means for selecting a desired total to be displayed by said unit, and transfer means for rendering either of said two last-named means operative to control said unit.

2,439,042

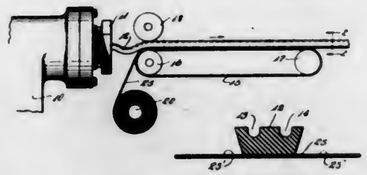
METHOD AND APPARATUS FOR STERILIZING GLASSES, DISHES, OR THE LIKE

Carmelo V. Di Pietro, Birmingham, Mich., assignor to Richardson Corporation, Rochester, N. Y., a corporation of New York

Application January 8, 1945, Serial No. 571,793
4 Claims. (Cl. 21—2)

1. Apparatus for sterilizing and cooling glasses, dishes, or the like including a sterilizing compartment, spray means in the sterilizing compartment, a hot water supply tank, electric heating means in said tank for maintaining the water at a predetermined temperature, a tempering chamber, a pipe connecting said tank and tempering chamber, a pipe connecting the tempering chamber with said spray means, a cold water conductor located in heat-exchange relation to said tempering chamber, and a cold water pipe leading to said cold water conductor, said cold water conductor being connected to said pipe leading to the spray means.

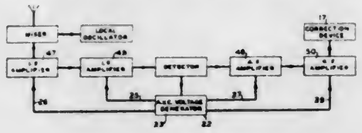
2,439,043



METHOD OF MAKING ENDLESS BELTS

Benjamin A. Evans, Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

Application May 12, 1943, Serial No. 486,663
6 Claims. (Cl. 154—4)



1. The combination of steps in a method of making an endless belt which comprises ar-

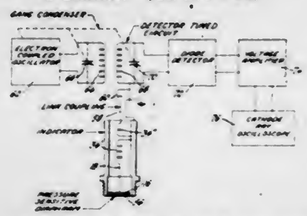
ranging a plurality of endless grommets in spaced-apart parallel relation, forming a strip of unvulcanized rubber-like material with

spaced-apart longitudinal grooves, and applying said strip to the spaced grommets with its grooves each receiving a grommet.

2,439,044
COURSE SOFTENING SYSTEM
Thomas M. Ferrill, Jr., Hempstead, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application March 4, 1943, Serial No. 478,013
20 Claims. (Cl. 343—108)

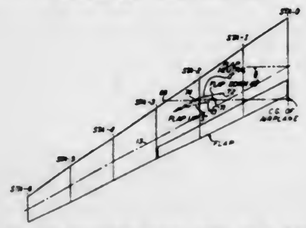
19. A course softener for an aircraft instrument landing receiver adapted to compensate for the increase in the relative variation of the course-determining field strength for a given transverse extent of departure as said aircraft approaches a landing, said softener comprising control means operative on said receiver to progressively lower the output intensity of said receiver as the input signal strength increases.

2,439,045
JEWEL CASE
Philip Fox, Bala, Pa.
Application September 25, 1944, Serial No. 555,666
4 Claims. (Cl. 206—45.17)



3. A jewelry case comprising a hollow base member shaped to rest upon a flat supporting surface, a plurality of petals made in simulation of the petals of a flower hingedly secured to said base member, a cushion member adapted to have articles of jewelry mounted thereon and enclosed within the petals when the same are in their closed position, and means contained within the hollow base member for simultaneously moving the petals from one position to the other, said means comprising a rotatable cam member having grooves therein engaging projecting portions of the petals, and a lever arm extending from said cam member and adapted to be engaged by the user to actuate the cam member and thereby bring the petals to the closed or open positions.

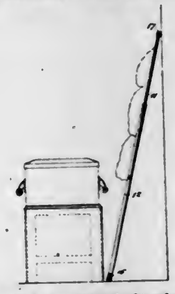
2,439,046
WINDOW SASH CONTROL
Forrest D. Grim, Allentown, Pa.
Application June 4, 1946, Serial No. 674,201
7 Claims. (Cl. 292—74)



1. Control mechanism for an article slidably movable alongside an approximately abutting frame, the control mechanism comprising a member having a face frictionally engaging the frame, a roller disposed against the back of the said member, and means forcing the roller against the said member so that the face of the said member is held against the frame.

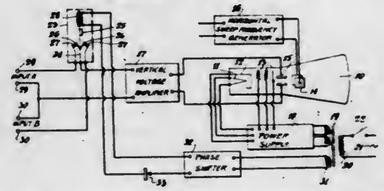
2,439,047
PRESSURE INDICATOR
Carl E. Grinstead and Robert N. Frawley, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 27, 1944, Serial No. 537,609
4 Claims. (Cl. 178—44)

4. In detecting means, a pick-up unit whose electrical characteristics are altered by a variation in ambient conditions that it is desired to indicate, an oscillator for generating high frequency power, a detector, a pair of similar coupled tuned circuits interconnecting the oscillator and detector and a low impedance line coupling the pick-up unit with the tuned circuits so that a variation in the pick-up is introduced into the coupling circuits and an indication obtained at the detector.



2,439,048
TAILLESS AIRPLANE
Walter H. Korff, Burbank, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Application October 5, 1942, Serial No. 460,797
4 Claims. (Cl. 244—13)

1. A tailless aircraft, comprising: a swept-back tapered wing including wing semispans with



washout of incidence and straight leading and trailing edges from root to tip of each wing semispan, the ratio of the amount of taper to the degree of washout being such that the locus of approximate points of resultant centers of pressure on each wing semispan at operating angles of attack is an arcuate line extending generally spanwise of the wing, and the degree of sweepback of the wing semispans being of an amount to locate the center of pressure points corresponding to the angle of trim of each wing semispan on a rectilinear line passing through the center of gravity of said aircraft so that the points on the arcuate line for increasing angles of attack lie rearwardly of said rectilinear line and outwardly toward the tip of each wing semispan and the points on the arcuate line for decreasing angles of attack lie forwardly of said rectilinear line and inwardly toward the root of each wing semispan; trailing edge flap means hinged to each wing semispan inwardly of the tip portion thereof; and means for effecting angular displacement of said flap means, the major portion of said flap means being located to the rear of said rectilinear line, whereby downwardly displaced positions of said flap means cause forward displacement of the locus of said resultant centers of pressure, thereby varying simultaneously and inversely with respect to one another the maximum effective lift and center of pressure coefficients of said wing relative to the center of gravity of said aircraft.

2,439,049
DISPLAY RACK
John S. Lesko, Bridgeport, Conn.
Application August 4, 1944, Serial No. 548,039
19 Claims. (Cl. 211—182)

12. A collapsible vertical display rack having a pair of tubular uprights of square cross-section, each comprising upper and lower telescoping members, the lower members each having a pair of apertures in one wall longitudinally spaced from each other; a crossbar having hooks at its ends extending into the lower apertures of each lower member and hooking on the said wall of the latter; and a second crossbar having hooked ends extending into the upper apertures of the lower members, said upper members resting at their lower ends on the hooks of the first-mentioned crossbar to maintain same in position against accidental dislodgement, and said upper members having apertures in one wall aligned with the upper apertures of the lower members so that the ends of the second-mentioned crossbar may hook onto the said walls of the upper and lower members simultaneously, the square cross-section of the uprights providing for convenient registration of the said aligned apertures if the members are caused to telescope initially in correct rotative relation.

2,439,050
VIBRATORY SWITCHING DEVICE FOR OSCILLOGRAPHS
Henry Rogers Mallory, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application September 2, 1944, Serial No. 552,425
9 Claims. (Cl. 315—26)

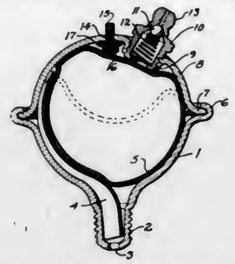
1. In a device for simultaneously exhibiting traces corresponding to a pair of variable voltages by means of an oscillograph, the combination which comprises a vibratory electromagnetic interrupter having a vibratory reed adapted to alternately actuate a pair of contacts and a driver coil therefor, an input circuit for each of said voltages respectively connected to said contacts, and a common output circuit connected to said reed and electrically associated with said oscillograph, said driver coil being energized at a constant low frequency rate from an external current source thereby to cause vibration of said reed and alternate connection of said input circuits to the common output circuit, the resonant frequency of said reed being substantially an integral multiple of the frequency of driver coil energization whereby the frequency of the vibratory interrupter is locked in with the frequency of said external current source.

2,439,051
FLEXIBLE SHEET MATERIAL COMPRISING A SURFACE COATING CONTAINING POLYVINYL CHLORIDES
John Heron McGill, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application October 28, 1942, Serial No. 463,692. In Great Britain October 8, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires October 8, 1961
4 Claims. (Cl. 117—72)

3. A process of preparing coated fabrics which comprises calendering onto a fabric base a plastic composition, the film-forming agent of which consists of polyvinyl chloride, and applying thereto a composition containing a solution of material selected from the group consisting of polymeric esters of methacrylic acid and a lower saturated aliphatic alcohol containing 1 to 3 carbon atoms, polyvinyl esters of lower fatty acids, polyvinyl acetals, polymeric esters of acrylic acid, and polymeric methacrylic nitrile, said solution having dispersed therein finely divided solid polyvinyl chloride powder.

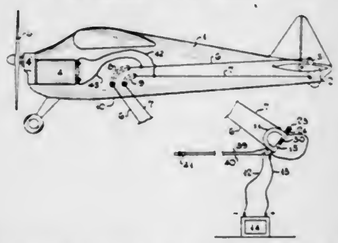
2,439,052
SHUTOFF VALVE MECHANISM
Robert D. McIntosh, River Forest, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application August 26, 1943, Serial No. 500,052
2 Claims. (Cl. 251—31)

2. In a valve mechanism, a packless valve assembly comprising a body having a valve cham-



ber, inlet and outlet ports communicating therewith and an aperture also communicating with the valve chamber, a valve seat formed in the valve body intermediate the inlet and outlet ports and opposite and concentric with the aperture in the valve body, a pull operated valve element adapted for cooperation with said valve seat having a composite stem comprising a first section integral with the valve element and extending through the aperture coaxially therewith, and a second section forming an extension of the first section rigidly and threadedly secured thereto, said second section being cylindrical and substantially greater in axial dimension than in diametrical dimension, the stem having an element thereon adapted to engage a stationary part of the valve body in valve-open position to limit endwise movement of the valve element, a partition across the aperture centrally apertured for the projection therethrough

of the first section of the stem and providing a guide therefor, a bonnet threadedly secured to the valve body having an elongated cylindrical bore for the reception and extension therethrough of the second section of said valve stem, said second section and the bore in said bonnet having a close sliding fit to provide an elongated bearing surface for retaining the valve element properly positioned, a flexible sealing member within the body having the edges thereof sealed at the walls of the chamber, thereby closing one side of the chamber, the mid-portion of said sealing member being sealed around the valve element, and a relatively stiff helical compression spring surrounding the first section of the stem and bearing at one end against the valve element and at the other end against said partition for normally holding the valve element against the seat, said spring having an internal diameter only slightly larger than the external diameter of the first section of said valve stem.

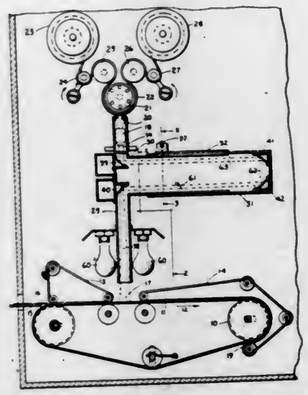


2,439,053
LUBRICATING DEVICE
George L. Moore, Detroit, Mich.
Application May 24, 1943, Serial No. 488,287
4 Claims. (Cl. 184—39)

1. A lubricant cup comprising a pair of substantially semispherical sheet metal members connected together to form a receptacle for lubricant, a gas filled flexible ball arranged within and being shaped to closely conform to the interior contour of said receptacle, and a trough member extending into the outlet of said recep-

tacle and acting as a channel for transmission of lubricant to said outlet.

2,439,054
MODEL AEROPLANE
Edwin Mosthof, Orange, N. J.
Application March 27, 1946, Serial No. 657,445
6 Claims. (Cl. 46—78)



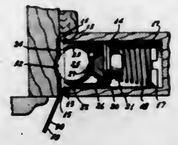
1. A model plane adapted to fly, having a small electric motor mounted therein and connected to the propeller, two electrically conducting wires, insulated from each other, leading into the plane, electrical connecting means between said wires and said motor to allow operation of the motor by means of current passing through said wires, two cables, each attached in controlling relation to the elevators of the plane on one end and to each of the wires leading into the plane on the other, in such manner as to allow moving of the elevators by moving of said wires to effect any desired change of altitude of the plane while the motor is operating, a hand grip connected to the terminals of the wires outside of the plane, and a source of electric power to be fed to said wires.

2,439,055
OPTICAL SYSTEM FOR MICROFILM APPARATUS
Verneur E. Pratt and George F. Gray, Norwalk, Conn.
Application May 15, 1945, Serial No. 593,891
5 Claims. (Cl. 88—24)

1. In a photographic apparatus, the combination with a lens and a copy support mounted in said apparatus in the front focal plane of said lens, of a fixed beam-deflecting member lying across the optical path between said lens and copy support and adapted to angularly deflect the optical beam entering said lens, a second beam-deflecting member adapted to receive and angularly deflect the optical beam received from said first member, a third beam-deflecting member adapted to receive and angularly deflect the

optical beam received from said second member, a fourth beam-deflecting member adapted to receive and angularly deflect the optical beam received from said third beam-deflecting member, all said members being located between said lens

and copy support, and means for varying the length of the optical path between some of said members to vary the length of the optical path between said lens and copy support while said lens and support remain relatively fixed in said apparatus in relation to each other.

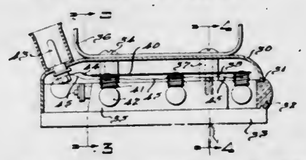


2,439,056
TOOTH CLEANING APPLICATOR
Harry R. Rathbun, Glen Ellyn, Ill.
Application December 13, 1941, Serial No. 423,418
4 Claims. (Cl. 15—227)
Section 3, Public Law 690, August 8, 1946
Patent expires December 13, 1961

2. A dental massage and polishing utensil comprising a linear strip of flexible material, having a cleansing and polishing surface thereon, said linear strip of flexible material having a plain margin beyond said cleansing and polishing surface, there being cross-slits in the plain margin of said linear strip of flexible material beyond said cleansing and polishing surface for enabling the attachment of said flexible strip of material to and around the forefinger for rubbing application to the teeth.

2,439,057
DOOR OR DRAWER LATCH
Fred J. Russell, Beverly Hills, Calif., assignor to Weiser Company, South Gate, Calif., a corporation of California
Application January 21, 1947, Serial No. 723,314
10 Claims. (Cl. 292—75)

1. A latch comprising a projectable retaining member adapted when installed in a structural body to advance beyond the surface thereof, said retaining member being formed with a shouldered portion, a floating contact element within said retaining member, said retaining member embodying a stop to limit the inward travel of said floating contact element within said retaining member and embodying an opening through which the contact element may project and embodying limit means to fix the maximum projection of said contact element, and a housing for said retaining member embodying means to limit the advance of the retaining member, said last

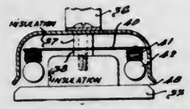


means including a plate portion of said housing having an opening for the retaining member and having an abutment portion extending into said opening engageable with the shouldered portion of the retaining member.

2,439,058
METHOD OF MAKING HAND TOOLS
Lester Raymond Ryan, Plymouth, Conn.
Application December 6, 1945, Serial No. 633,124
1 Claim. (Cl. 76—106)

The method of making an article of the character described comprising providing a blank including an elongated shank portion having an extension at one end and a pair of wing-like portions one integral with each longitudinal edge of said shank, providing each wing-like portion with ears spaced along its free longitudinal edge forming said wing-like portions into open-ended trough-like members having their open sides facing oppositely, then folding said trough-like members into positions over opposite sides of said shank portion with the open sides of said members facing the shank portion, and clinching the ears of the respective members over portions of said shank to fasten the free longitudinal edge portions of the members in place.

2,439,059
ELECTRIC IRON
Thomas F. Saffady, Detroit, Mich., assignor to Sav-Way Industries, Inc., Warren Township, Macomb County, Mich., a corporation of Michigan
Original application December 6, 1943, Serial No. 513,050. Divided and this application August 17, 1944, Serial No. 549,898
2 Claims. (Cl. 240—2)



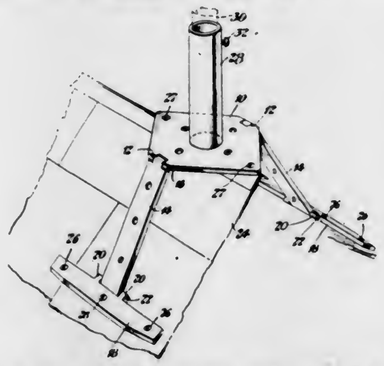
1. An electric iron comprising a base member including a sole plate and a heating element, a concave cover member and handle mount secured at its marginal edge to the edges of said base member and comprising an upper portion of sheet metal and a complemental lower portion of translucent material forming three lower sides thereof, means securing said cover

member upon said base member, and light sources mounted within said cover and disposed in the lateral plane of said translucent portion of said cover.

2,439,060
ELECTRIC IRON

Thomas F. Saffady, Detroit, Mich., assignor to Sav-Way Industries, Inc., Warren Township, Macomb County, Mich., a corporation of Michigan

Original application December 6, 1943, Serial No. 513,050. Divided and this application August 17, 1944, Serial No. 549,899
1 Claim. (Cl. 240—2)

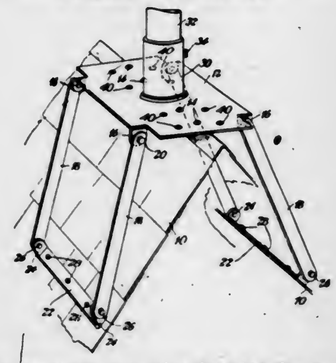


An electric iron comprising a sole plate, a heating plate on said sole plate, a set of insulating washers on said heating plate, a light supporting plate supported by said washers, a second set of insulating washers on said light supporting plate, a cover having a depending flange supported by said second set of washers, means for fastening said cover to said heating plate and extending through said washers and said light supporting plate and securing the depending flange of said cover parallel and in spaced relation to said sole plate around its sides and nose, and lights carried by said light supporting plate and disposed adjacent the space between said cover and said sole plate.

2,439,061
ANTENNA MOUNTING

John Wilson Shur, Sea Cliff, N. Y., assignor to Shur-Antenna-Mount Inc., Sea Cliff, N. Y., a corporation of New York

Application December 15, 1944, Serial No. 568,319
7 Claims. (Cl. 248—43)

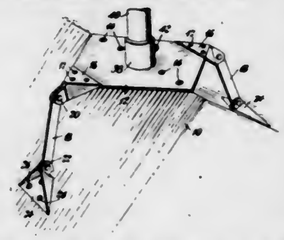


1. A mounting for an antenna, comprising a rigid flat metal platform member adapted to rest upon a supporting structure, an upright mast holding member attached to a surface of the platform member at about its center, said platform member having a link member hinged to its edge on opposite sides of said mast holding member, said links being adapted to pivot through a wide arc but substantially only in a plane which includes the axis of said mast holding member, holes through said platform for attaching the mounting to a supporting structure, and means by which the links may be attached to the supporting structure.

2,439,062
ANTENNA MOUNTING BRACKET

John Wilson Shur, Sea Cliff, N. Y., assignor to Shur-Antenna-Mount Inc., Sea Cliff, N. Y., a corporation of New York

Application April 4, 1945, Serial No. 586,547
8 Claims. (Cl. 248—43)

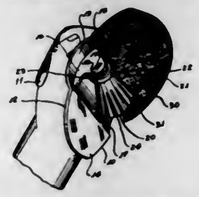


1. An antenna mounting bracket for supporting an antenna mast on the roofs of buildings and other structures, comprising a substantially rectangular-shaped horizontal heavy metal platform of substantial area, an upright member attached to the central portion of the upper surface of the platform for holding an antenna mast, a brace arm hinged to each of the four corners of the platform, a pair of said arms being adapted to extend as an anchoring means for each of two sides of said platform, and a plate pivoted to the extending ends of each pair of arms for attaching the bracket to the sloping surface of a roof or other structure.

2,439,063
BRACKET FOR MOUNTING ANTENNA MASTS

John Wilson Shur, Sea Cliff, N. Y., assignor to Shur-Antenna-Mount Inc., Sea Cliff, N. Y., a corporation of New York

Application April 21, 1945, Serial No. 589,608
15 Claims. (Cl. 248—43)



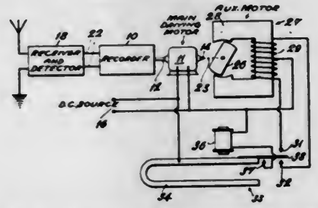
1. An antenna mounting device adapted to support an antenna on the ridge of a building roof, comprising a rigid substantially square-shaped platform member adapted to rest horizontally on said ridge with a diagonal thereof in line with the ridge, an upright mast holding member attached to and extending from the upper surface of said platform member adapted to

hold an antenna mast, an anchor member attached to each of the two corners of said platform at the sides of said ridge, said anchor member including a pair of projecting lugs, a metal link pivoted to the lugs of each anchor member and extending down to the sloping sides of the roof, and a second anchor member connected to the lower end of each link for attaching the device to the roof, said second anchor member having a flat side facing the roof and adapted to be attached in a flat position onto the sloping roof surfaces.

2,439,064
TOOL FOR MANIPULATING RUBBER

Frank S. Sternad, Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

Application January 10, 1945, Serial No. 572,161
7 Claims. (Cl. 154—9)

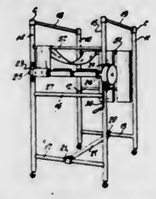


1. A tool for manipulating sheet material comprising a rubber composition, said tool comprising a support formed to fit the hand of the operator by contact of its back with the open palm of the hand, and a free-running roller mounted on the opposite face of said support, said roller having a conical rolling portion and a flange radial thereto at the smaller end thereof, and having its axis disposed oblique to the longitudinal axis of said support.

2,439,065
SPEED CONTROL BY MEANS OF TUNING FORKS

Welby E. Stewart, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware

Application December 5, 1944, Serial No. 566,762
1 Claim. (Cl. 318—47)



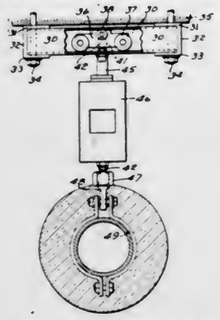
In a facsimile system, a scanner, a power drive for said scanner including a direct current motor, an auxiliary motor for controlling the speed of said motor comprising a polarized rotor and a stator, a field winding on said stator having a center tap, a direct current supply source for said synchronous motor, means for connecting said synchronous motor to said direct current source comprising a tuning fork interrupter, said interrupter having a pair of stationary contacts connected respectively to each end of said field winding, a vibrating contact vibrating with said fork and connected to the lead of said D. C. source the other lead of said source being connected to said center tap, an electromagnet disposed adjacent one of the tines of said fork, a connection from one terminal of said electromagnet to said center tap, a connection from other terminal of said electromagnet to a stationary contact which cooperates with said vibrating contact, said fork being designed to inherently vibrate at a single frequency proportional to the desired speed of operation of said scanner.

2,439,066
INVALID LIFT

Daniel F. Vanderlyn, Ellenville, and Jay N. Vanderlyn, Kingston, N. Y.; Tracey S. Vanderlyn executor of the estate of Daniel F. Vanderlyn, deceased

Application June 16, 1944, Serial No. 540,624
6 Claims. (Cl. 5—88)

1. A portable invalid lift comprising a plurality of end support members, side bars joining said end support means spaced apart a distance permitting said support means to be positioned on opposite sides of a bed or the like, each of said support means comprising a fixed transversely extending bar, and one of said support means comprising a rotatable transverse bar positioned below the said fixed transverse bar, said rotatable bar having thereon a number of sleeves rotatable around said bar as an axis, manually disengageable clutch means individual to each of said sleeves for connecting said sleeves respectively with said rotatable bar for rotation therewith, and supporting bands fixed at one end to the transverse bar of one of said end supports and extending over the fixed transverse bar of the other of said end supports and having their free ends respectively wound around said sleeves, whereby said bands may be elevated or lowered in unison when all the sleeves are clutched to said rotatable bar and said bar is rotated or selectively when one or more of said collars is disconnected from said rotatable bar, each of said sleeves having a U-shaped arm secured to the sleeve at its respective ends but spaced from the sleeve in a radial direction intermediate its ends providing an elongated space adapted to receive the free end of one of said supporting bands and to prevent slipping of the band on the sleeve as the band is wound up on said sleeve.



2,439,067
SUPPORT DEVICE

Joseph Kaye Wood, New York, N. Y., assignor to General Spring Corporation, New York, N. Y., a corporation of New York

Application March 27, 1943, Serial No. 480,746
11 Claims. (Cl. 248—54)

1. In a piping system having lengths of connected piping extending along different horizontal directions, whereby longitudinal thermal expansion of one of said lengths causes lateral movement of an adjacent portion of a connected length extending in a different direction, the combination therewith of a pair of spaced channel members substantially rigidly positioned edge-

wise and facing one another and parallel to a vertical plane approximating the path of free thermal movement of a point on said laterally moving piping, a truck movably mounted in said channels having rollers adapted to roll on each of the flanges respectively of said channels, the

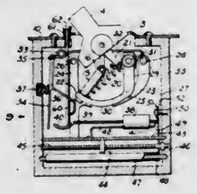
floors of said channels sloping outwardly toward said vertical plane, whereby said truck tends to hold a central position, a spring hanger carried by said truck, a ball and socket connection between said truck and said hanger, and a ball and socket connection between said spring hanger and said pipe.

2,439,068

SOFT LEAD SOLDER

George H. Worrall, Kirkwood, Mo., assignor to National Lead Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application January 15, 1944, Serial No. 518,405
3 Claims. (Cl. 75—166)



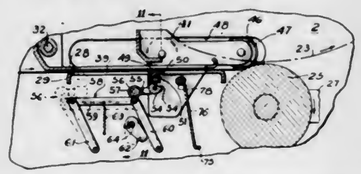
1. A solder composition useful with acid fluxes comprising by weight about 20% tin, from above 0.005% to about 0.5% of zinc and the balance substantially all lead.

2,439,069

DELAYED-ACTION SWITCH

George W. Anderson, Santa Monica, Calif.

Application April 2, 1945, Serial No. 586,166
6 Claims. (Cl. 200—122)



1. A delayed-action switch comprising a housing having spaced dielectric walls, two spaced fixed contacts carried by one of said walls, a connection terminal for one of said contacts, a fixed contact on the other wall, a connection terminal for the latter contact, a toggle-operated bridging contact for bridging between the last mentioned contact and either of the two spaced contacts, a plate conductor connected to one of said contacts, a thermal-controlled element electrically connected to the plate conductor, a spring urged lever electrically connected to another of said contacts and adapted for mechanical engagement by the bridging contact and electrical engagement with the third fixed contact and an end formed on the thermal-controlled element for abutting engagement with said lever when the mentioned element is relatively unheated to carry electric current from one terminal to the other in a path which includes the three contacts, the bridging contact, the plate conductor, the thermal-controlled element, and said lever, said end, upon heating of said element, being adapted to disengage itself from the lever to break the mentioned circuit path.

2,439,070

DUPLICATING MACHINE

Richard W. Bailey and Milo M. Harding, Los Angeles, Calif., assignors to Milo Harding Co., Los Angeles, Calif., a partnership

Application February 6, 1945, Serial No. 576,455
13 Claims. (Cl. 101—232)

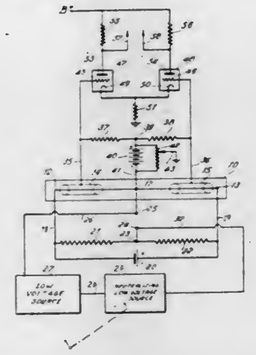
1. In a duplicating machine having a printing element, a fixed paper guide, a movable stop means for the end of a sheet of paper associated with said guide, an initial moving means to move the end of the paper in contact with said stop means, a carriage operable relative to said guide means, a thrust member on said carriage and above the paper in said guide, means to press the paper rearwardly of the end thereof in engagement with said thrust member to connect the paper with said carriage, means separate from and beneath said carriage to operate said pressing means, means to move said carriage relative to said guide, means operable during said movement to move said stop means out of the path of said paper and to deliver the end of the same to the printing element, cam means to control all of said means in the order named and including cam means for moving the carriage at an accelerated speed until the same equals the peripheral speed of the printing element, whereby the paper simultaneously is connected to the carriage and in operative engagement with the printing element.

2,439,071

DETACHABLE HANDLE FOR KNIVES, HATCHETS, ETC.

Lawrence H. Basham, Alderson, W. Va.

Application April 11, 1946, Serial No. 661,309
2 Claims. (Cl. 279—77)



1. In a removable handle for blades, a pivotally mounted spring, a fixed bar, means at the ends of the spring and bar adapted to engage an end of a blade, a pivotally mounted lever adapted to engage one portion of the spring to move the spring to a position to tightly grip a blade, and a lip on the spring engageable by the lever to move the spring to a position to release a blade.

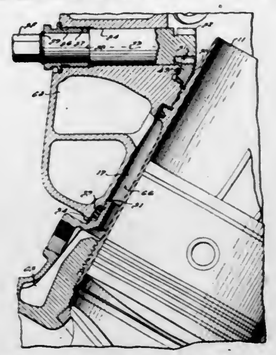
2,439,072

AMPLIFYING COUPLING BETWEEN A LOW RESISTANCE SOURCE AND A HIGH RESISTANCE CIRCUIT

William H. Bussey, Chicago, Ill., assignor, by mesne assignments, to Robert L. Kahn, trustee

Application May 29, 1945, Serial No. 596,503
7 Claims. (Cl. 179—171)

1. In a system of the character described, a vacuum tube diode system having two cathodes and two anodes, a heater circuit for energizing each cathode to electron emission, electric connections disposing said heater circuits in series to provide a common heater terminal and two end heater terminals, a steady source of potential connected to said end terminals, said steady potential source having a neutral point normally at the same potential as the common terminal of said heater circuits, said system being adapted to have a low resistance low voltage source of power connected between said neutral point and common terminal, a cathode anode circuit for each diode including a resistive load and source of steady potential, said two cathode-anode circuits being similar, said system having an output terminal at the end of each resistive load adjacent a diode electrode, said last-named steady potential being high enough to maintain saturation conditions.



2,439,073

SEAL CONSTRUCTION

John P. Butterfield, Highland Park, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware

Application June 26, 1944, Serial No. 542,035
4 Claims. (Cl. 123—195)

1. In combination, a first member provided with an opening having a portion of a certain diameter at one region and an inwardly extending shoulder at one end of the portion, a second member positioned in the opening and having a part in close proximity to the said portion of the opening and a flange spaced from the part so as to form therewith an external annular groove and extending outwardly in somewhat spaced relation to the shoulder and into spaced adjacency with the said portion of the opening, a deformable seal positioned in the space between the flange and the part of the second member and within the said portion of the opening in the first member, and a ring having a radial flange extending inwardly between the shoulder and the flange on the second member and a cylindrical flange extending from the radial flange between the said portion of the opening in the first member and the flange of the second member and beyond the last mentioned flange into the seal so as to deform the seal into

good sealing relation with the first and second members.

2,439,074

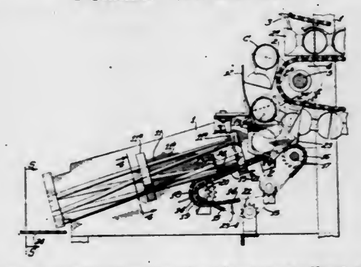
CELLULOSE ACETATE FIBERS HAVING WOOL DYEING PROPERTIES AND A SPINNING SOLUTION THEREFOR

John R. Caldwell, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application June 14, 1945, Serial No. 599,522
7 Claims. (Cl. 106—186)

1. Cellulose ester fibers having wool dyeing properties essentially consisting of a lower fatty acid ester of cellulose and approximately 10–30%, of a polymeric amine which is a viscous oil having the formula:

$$\left(-R'-\underset{\underset{R}{|}}{N}-R'-OCO-R''-CO-O-\right)_m$$



in which R is an alkyl radical having 1–4 carbon atoms, R′ is a saturated hydrocarbon radical having 2–4 carbon atoms, and of a structure such that at least 2 carbon atoms separate the N and O, R″ is a saturated hydrocarbon radical containing 1–8 carbon atoms, and m is a whole number greater than 6 the equivalent weight of the polymeric amine being no more than 14,000.

2,439,075

CAN TRANSFER AND ORIENTING MECHANISM

Andrew L. Christiansen, Willowbrook, Calif.

Application July 4, 1944, Serial No. 543,448
4 Claims. (Cl. 198—33)

1. In a mechanism of the class described, a pair of horizontal conveyors, the first having means for holding cans transversely with respect to the

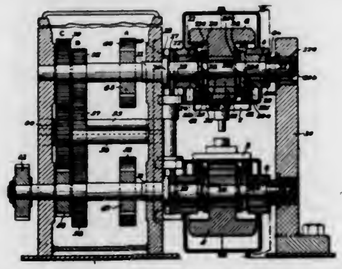
longitudinal extent of the latter conveyor and for conveying the same, means for transferring said cans from the latter conveyor to a substantially upright position on the other conveyor, said means comprising a downwardly inclined helical passageway of substantially rectangular cross-section for receiving at one end the cans transversely therein from the first conveyor and in substantially the positions of the cans on said first conveyor, said passageway directing said cans toward the opposite end thereof and simultaneously turning the same so that they may be deposited in said substantially upright position on the other conveyor, and a third conveyor positioned at the bottom of the receiving end of the helical passage means, the upper stretch of the third conveyor being inclined to conform to the downward inclination of the helical passage means, one end of the third conveyor being positioned below the discharge end of the first conveyor for receiving cans in substantially horizontal positions from the first conveyor, the upper portion of the opposite end of the third conveyor being inclined transversely at substantially the transverse angle of the helical passage means into which said end of the third conveyor extends, the third conveyor having longitudinally spaced partitions for receiving singly the cans from the first conveyor.

2,439,076

COPOLYMER OF DICHLOROSTYRENE, BUTADIENE-1,3 AND PIPERYLENE

Charles C. Clark, Kenmore, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia

No Drawing. Application November 19, 1943, Serial No. 510,922
2 Claims. (Cl. 260—74)



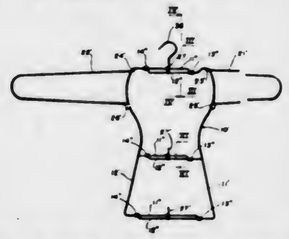
1. A synthetic rubber-like material consisting essentially of the reaction product of the interpolymerization of a mixture of monomeric materials, the reacting components of said mixture consisting of nuclear dichlorostyrene, butadiene-1,3 and piperylene, the proportion of nuclear dichlorostyrene in said mixture being 20%–46% by weight on the combined weights of said monomeric materials and the proportion of butadiene-1,3 constituting 65%–85% on a molar basis of the butadiene-piperylene component of said mixture.

2,439,077

FORMING MACHINE

Guy O. Conner, Cleveland Heights, Ohio

Application May 29, 1946, Serial No. 672,957
6 Claims. (Cl. 164—86)



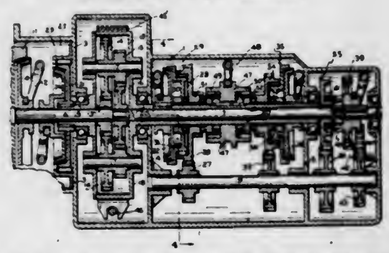
1. A forming machine comprising opposed parallel shafts, gears on said shafts, the pitch diameters of said gears being materially less than the distance beteen the axes of said shafts, other gears meshing with said first mentioned gears whereby said shafts rotate in opposite directions at the same speed, eccentric means on said shafts, cooperating forming heads operable by said eccentric means so that upon rotation of said shafts said heads partake of motion toward and away from each other and when closest together move also laterally generally in the same direction and counterweight means counterbalancing said heads.

2,439,078

ADJUSTABLE CONNECTOR FOR SLIDING MEMBERS AND THE LIKE

James D. Coney, Chicago, Ill., assignor to Carl B. Albert, Sullivan, Ill.

Application January 5, 1946, Serial No. 639,251
8 Claims. (Cl. 223—69)



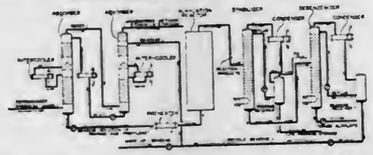
8. In an adjustable garment frame including relatively slidable adjacent parallel wire members, each of said slidable adjacent wire members having integral eyelets at their free extremities for receiving the other adjacent wire member for slidably guiding said adjacent wire members, a wire lever having an integral eyelet at one end for pivotal mounting on one of said adjacent wires between said guiding end eyelets thereon, and an angular extension in said lever for transverse sliding contact with the other of said adjacent wires to flex said adjacent wires pivotally mounted for movement transversely of said adjacent wire members between said eyelets to distort the parallelism of said adjacent wire members for frictionally holding said adjacent wire members against relative slidable displacement.

2,439,079

TRANSMISSION

Isaac F. Davidson, Portland, Oreg.

Continuation of application Serial No. 535,665, May 15, 1944. This application May 7, 1946, Serial No. 667,884
13 Claims. (Cl. 74—328)



1. In a transmission, a driven shaft, said shaft including a pair of sections mounted in axial alinement, means for connecting one section of said driven shaft with the vehicle motor, a gear chain connecting said first mentioned section and the second section of said driven shaft, said gear chain including planetary pinions, a rotatable casing, said planetary pinions mounted in said casing, means for connecting said casing with said first mentioned shaft section to cause said casing to be rotated in unison with said first mentioned shaft section, means holding said casing from rotating in an opposite direction from that of said first mentioned shaft section but permitting said casing to be rotated in the same direction as said first mentioned shaft section, a countershaft, means connecting said countershaft to said driven shaft to cause rotation of said countershaft, a gear secured to said countershaft, a gear rotatably carried by said casing and meshing with said countershaft gear, clutch elements connected with said casing and the gear on said casing and so arranged as to cause said casing to be rotated with said latter mentioned gear when the clutch elements are moved into engagement, locking engaging means included in said clutch elements causing said casing to be rotated with a speed not less than that of said gear on said casing when said clutch elements are moved into engaging position but permitting said casing to rotate faster than the gear on said casing when said clutch elements are in engagement, manual means for moving said clutch elements into and out of engaging position, whereby the speed of rotation of said second section of said driven shaft can be changed by varying the rotation imparted to said casing, and whereby such changes of speed can be effected without disconnecting said motor from said driven shaft.

2,439,080

PROCESS FOR UTILIZING GAS MIXTURES IN THE ALKYLATION OF AROMATIC HYDROCARBONS

James A. Davies, Scarsdale, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware

Application May 11, 1943, Serial No. 486,534
12 Claims. (Cl. 260—671)

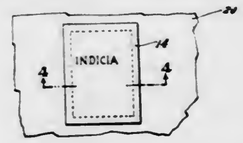
10. In a process of producing cumene by reacting benzene with propylene, the improvement which comprises contacting a gaseous fraction containing propylene and a substantial amount of a lower boiling hydrocarbon with an amount of benzene in the liquid phase in substantial molecular excess of the propylene present under conditions at which propylene is absorbed by the benzene without substantial absorption of lower boiling hydrocarbons, and reacting the resulting absorption product under alkylation conditions.

2,439,081

POLYMERS OF CYANOACRYLIC ACID DERIVATIVES

Joseph B. Dickey and Fred C. Duennebier, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application May 5, 1944, Serial No. 534,337
1 Claim. (Cl. 260—80)



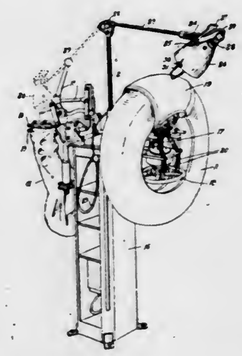
A polymer prepared by polymerizing a β-cyanoacrylic acid amide, trans form.

2,439,082

METHOD OF IDENTIFYING GOODS AND IDENTIFYING LABELS USED THEREWITH

Charles Emmey and Max Katzenstein, New York, N. Y., assignors to Press-On Inc., New York, N. Y., a corporation of New York

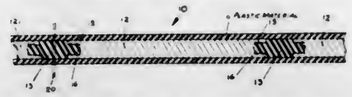
Application February 19, 1942, Serial No. 431,508
15 Claims. (Cl. 40—2)



15. The combination with an article of manufacture to be identified, said article having interstices, of an identifying label comprising a film of thermoplastic synthetic resin, normally non-adhesive in characteristic, affixed at one surface of the label under heat and pressure to the said article, said surface of the label having indicia marked thereon the resin comprising the label at the said surface impregnated in the interstices of the article to integrate it therewith.

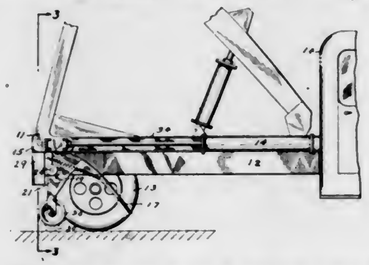
2,439,083

TIRE REPAIR DEVICE



Elby Edward French, Denver, Colo., assignor to O. K. Ko-Op Rubber Welding System, Denver, Colo.

Application March 5, 1946, Serial No. 652,098
2 Claims. (Cl. 18—18)



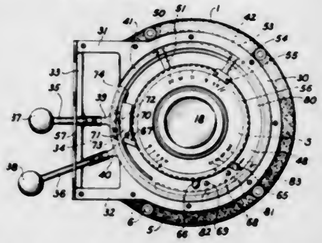
1. A tire repair device comprising in combination: a pedestal; means for supporting a tire casing at one side of said pedestal; a metal shell adapted to surround the tire casing when the latter is supported by said means; a supporting standard arising from said pedestal; an adjustable arm hinged to and extending from said standard over said casing supporting means; a lamp bracket hinged on the extremity of said arm; a lamp reflector carried by said bracket; an infra-red lamp in said reflector; and a V-shaped spacing rod adjustably secured to said reflector at its extremities and extending downwardly therefrom to contact said metal shell to support said reflector at any desired position and height over said casing.

2,439,084
INSULATED REINFORCED CIRCUIT BREAKER CONTACT BAR
Herbert C. Graves, Jr., West Chester, Pa., assignor to I-T-E Circuit Breaker Company, Philadelphia, Pa., a corporation of Pennsylvania
Application December 28, 1944, Serial No. 570,095
3 Claims. (Cl. 200—166)

3. A contact bar for a circuit interrupter consisting of an elongated metallic reinforcing member attached to an aligned insulating member at each end, said reinforcing member having a socket at each end internally threaded, each of said insulating members having threaded extensions engaging the associated internal threads of said reinforcing members and having a portion having substantially the same diameter as said reinforcing member and an insulating molding material secured thereto to completely enclose the reinforcing member.

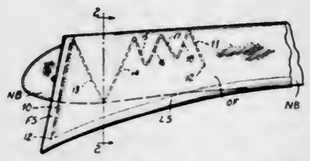
2,439,085
AUTOMATIC ANTITIP DEVICE
Albert Samuel Grzech and James G. Debelius, Baltimore, Md.
Application April 9, 1947, Serial No. 740,453
6 Claims. (Cl. 298—17)

1. In combination with a vehicle having a dumping mechanism, an anti-tilt assembly comprising in combination, a rim member normally arranged at an angle to the travel of said mechanism but in contact with same, an arm supporting said rim and guiding it through a predetermined line of travel, and means on said arm for engagement with the roadway on which the vehicle is positioned actuated by said arm to take up weight on the vehicle tending to tilt same, said rim member being actuated by the mechanism sliding on same during its operation, the weight thereon forcing the assembly to operate the means as the mechanism slides on the rim member during its travel.



2,439,086
FULL VIEW PEEP SIGHT
William W. Hanley, Wetumka, Okla.
Application September 29, 1945, Serial No. 619,327
1 Claim. (Cl. 33—47)

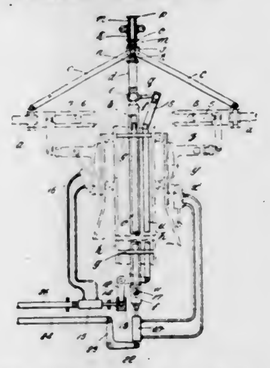
A device as described comprising a transparent peep sight plate having a flaring peep opening with a dark wall, normally disposed horizontal and vertical darkened groove hair lines extending from the edges of said plate to said opening, dark edges on said plate, plate retainer sockets in the edges, a channelled holder for the plate, and spring actuated pins for engaging said



sockets for releasably securing said plate to said holder.

2,439,087
PROTECTIVE CASING FOR ENCLOSING PHOTOGRAPHIC SHUTTERS TO EXCLUDE MOISTURE AND DIRT THEREFROM
Douglass C. Harvey, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application June 14, 1945, Serial No. 599,339
6 Claims. (Cl. 95—53)

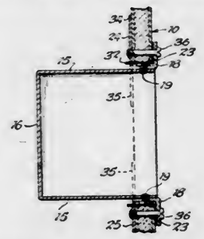
1. A protective casing for the reception of a complete shutter including a speed-setting member, a diaphragm-setting member and carrying lens elements; the protective casing comprising a housing, front and back plates in the housing, axially-aligned openings for the reception of said lens elements in the front and back plates of the protective casing, an annular guideway in the housing, rings extending about the axially-aligned openings and mounted to turn in the annular guideway, operable connections, one between one ring and said shutter speed-setting member, and one between the other ring and said shutter diaphragm-setting member, interengaging flanges on the rings and guideway, generally radially-extending arms, one carried by each ring and extending from the protective casing for moving the rings, said housing enclosing the greater part of said rings.



2,439,088
COLLAR SHAPING DEVICE
Vincent A. Herr, Collinsville, Ill.
Application January 12, 1946, Serial No. 640,879
2 Claims. (Cl. 2—132)

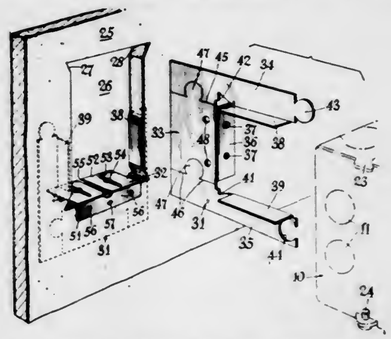
1. A collar stay adapted for use in pairs, one near each end or point of the collar, each such stay being formed of a length of spring stock including a pair of terminal anchoring pins one of which is of a length to extend downwardly into the outer band of the collar substantially fully through the front seam as a stiffener therefor, the second anchoring pin being of a length to extend

downwardly into the inner band of the collar, the stay further including a bridge structure connecting the upper ends of and forming a compressively yieldable connection between the pins, said bridge structure including downwardly extended and upwardly extended portions forming a tab adapted to lie flat against the neck band of the collar and between the neck band and outer band thereof, the construction of the tab being such as yieldably to resist relative displacement of the two pins from a normal relation, both in directions lengthwise of the collar and in directions depthwise thereof, and acting, when the first said anchoring pin is placed in the front seam of the collar, to keep the outer fold of the collar tensioned fully up to the front seam.



2,439,089
CONTROL OF ROTATING WING AIRCRAFT
Charles Francis Hodson, Burnham, England, assignor to The Fairey Aviation Company, Limited, Hayes, Middlesex, England
Application March 8, 1946, Serial No. 653,113
In Great Britain May 22, 1944
1 Claim. (Cl. 244—17)

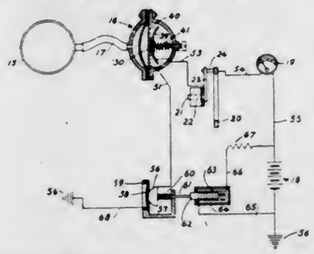
Controlling means for the pitch changing mechanism of a rotating wing aircraft wherein the rotor blades are connected by supporting links with a bar which is mounted for vertical movement and also for universal movement about a point, vertical movement of said bar being arranged to bring about variation of the pitch of the rotor blades collectively and movement of said bar about said point being arranged to bring about cyclic pitch control of the rotor blades, wherein the bar is universally jointed to a vertically movable rod and is also connected, by arms extending integrally therefrom in planes substantially at right angles to one another, with two further vertically movable rods, the first movable rod being operatively connected with the inching valve of an hydraulic jack for varying the pitch of the rotor blades collectively and each of the two other vertically movable rods being connected with an appropriate inching valve of an hydraulic jack for effecting cyclic pitch control of the rotor blades.



2,439,090
ELECTRICAL OUTLET BOX
Harry C. Keating, Buffalo, N. Y.
Application April 10, 1945, Serial No. 587,452
2 Claims. (Cl. 220—3.6)

1. In an outlet box assembly including an outlet box having a substantially rectangular outline and an open front and adapted to receive a cover plate overlying said open front, said box being adapted to be let into a recess formed in a wall with said open front disposed substantially flush with said wall, a front template formed with an opening and a marginal portion adapted to abut the outer face of the wall within the confines of said cover plate, said template being formed around said opening with inwardly extended flanges, the flanges on at least two sides of said opening terminating short of the corners of the opening, whereby said opening may be brought

into close proximity to the walls of the box despite projections therefrom adjacent said corners, a pair of back templates adapted to be inserted through said recess and positioned in parallelism with the front template, said back templates being adapted to abut the inner surface of said wall and to lie in close proximity to the margin of said recess and the walls of said box, said back templates so engaging at least two sides of said recess, screws extending between the front template and both of said back templates, and additional screws for securing said box to the front template.

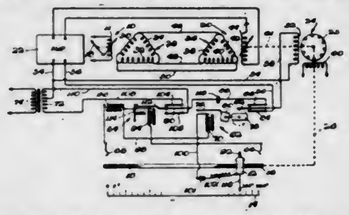


2,439,091
ELECTRICAL OUTLET BOX MOUNTING
Harry C. Keating, Buffalo, N. Y.
Application December 18, 1946, Serial No. 716,903
7 Claims. (Cl. 248—27)

2. A mounting member for an electrical outlet box comprising a back plate having a web and parallel side legs extending from said web, a rearwardly extending apertured flange formed on said web between the legs, forwardly extending flanges formed on said side legs, said rearwardly and said forwardly extending flanges being at substantially right angles to each other and to said web and legs, a clamping plate comprising a pair of right angled flanges one of which is adapted to rest on said rearwardly extending flange, complementary means on said last named flanges for adjustably interconnect-

ing and securing the same in an in-and-out direction, aligned openings on the web and other flange of the clamping plate adapted to receive box supporting screws, and notches formed at the corners between said web and side legs whereby said member may be so proportioned as to embrace closely an outlet box and said side leg forwardly extending flanges may simultaneously closely embrace a wall aperture for said box.

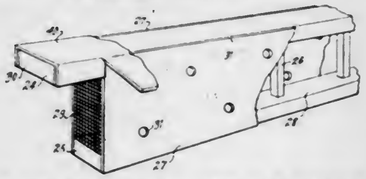
2,439,092
APPARATUS FOR INDICATING PRESSURE AT A DISTANCE
Floyd T. Linstrom, Denver, Colo., assignor of one-third to Gerald B. Waldron and one-third to Charles H. Callison, both of Denver, Colo.
Application September 26, 1946, Serial No. 699,541
3 Claims. (Cl. 201—48)



1. A pressure responsive variable resistance device, comprising a cup-like housing, a flexible diaphragm closing the open end thereof, means comprising a spring for urging the diaphragm towards the closed end of the housing, one side of the diaphragm having a resistance wire wound spirally thereon, an electric conductor connected with the outer end of the spiral, a slightly convex spherical conductor electrically connected with the innermost end of the spiral, means comprising a spring for urging the spherical contact against the resistor element whereby when the diaphragm is flexed in response to a fluid pressure, the length of resistance wire between the two contact points will be a measure of the pressure.

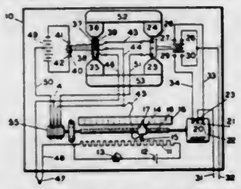
2,439,093
THERMOPLASTIC COMPOSITIONS CONTAINING CELLULOSE ACETATE BUTYRATE
Lester W. A. Meyer, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application January 9, 1946, Serial No. 640,147
10 Claims. (Cl. 106—173)

2. A composition of matter essentially consisting of 100 parts of a lower fatty acid ester of cellulose having a content of saturated fatty acid groups of 3–4 carbon atoms of at least 30% and 5–200 parts of a plasticzer at least 40% of which is from the group consisting of the alkyl abietates and the hydrogenated alkyl abietates.



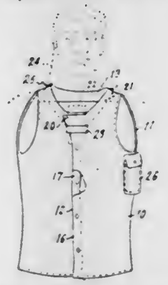
2,439,094
LINEAR FOLLOW-UP SYSTEM
George S. Miles, New York, N. Y., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application August 7, 1945, Serial No. 609,379
6 Claims. (Cl. 177—351)

1. A linear follow-up system comprising a rotatable element movable through one or more revolutions, means for deriving a signal proportional to the spatial position of said element, means for amplifying said signal, an indicating member constrained for linear movement, a linear scale for said member, a two-phase induction motor having a field winding normally energized by said amplified signal, means connecting said motor and linearly movable member to position the latter in accordance with the spatial



position of said rotatable element, and circuit connections for said motor controlled by the linearly movable member as it reaches the end of said scale for controlling said field winding to reverse the operation of said motor to cause said member to move in an opposite direction the full length of said scale where the motion is again reversed to permit said member to be moved into spatial agreement with said rotatable element.

2,439,095
ROOF
Bert J. Mitchell, Dallas, Tex.
Application August 3, 1946, Serial No. 688,308
9 Claims. (Cl. 108—1)

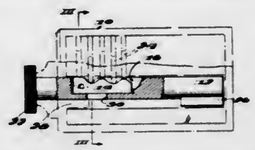


3. A box beam for the ridge of a building including, an upper stringer, a lower stringer spaced below the upper stringer, upright side plates connecting the stringers, and a member connecting the stringers spaced from the plates, there being a longitudinal air duct between the stringers open at the ends of the beam, said side plates having openings exposed in said air passage.

2,439,096
ELECTRIC MOTOR CONTROL SYSTEM
John Robert Pattee, Waterbury, Conn., assignor to The Bristol Company, Waterbury, Conn., a corporation of Connecticut
Application September 29, 1943, Serial No. 504,219
9 Claims. (Cl. 318—28)

1. In a self-balancing control system, the combination of a motor for effecting a condition of balance in said system, means for producing an electrical effect representative of a condition of unbalance, a circuit-controlling instrument responsive to said electrical effect, a relay subject to said instrument and adapted to affect the performance of said motor, means subject to said instrument when responding to said electrical effect and adapted to intensify the response of the same, and a velocity-responsive device operable at a speed representative of that of said motor and adapted at a predetermined velocity to remove both said relay and said intensifying means from the control of said instrument.

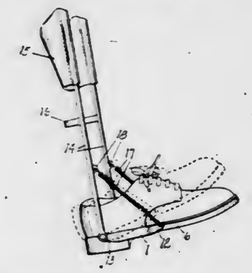
2,439,097
UNDERGARMENT
Irving Pierce, Dallas, Tex.
Application June 27, 1946, Serial No. 679,669
5 Claims. (Cl. 2—113)



1. An acoustical-appliance undergarment including, an undershirt having an overlapping open front, overlapping laterally-extending flaps at the top of the open front of the shirt, fastening means for each of said flaps, and means for supporting an acoustical appliance at the flaps, the underlying flap extending above the overlying flap for receiving an acoustical-appliance support therebetween.

2,439,098
ALKOXY PYRAZOLONE COUPLERS
Henry D. Porter and Arnold Weissberger, Rochester, N. Y., and Walter A. Gregory, Oak Ridge, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Original application December 22, 1944, Serial No. 569,428. Divided and this application June 15, 1945, Serial No. 599,742
5 Claims. (Cl. 260—310)

1. The method of producing a 3-alkoxy-5-pyrazolone, which comprises heating a monosubstituted hydrazine in which the substituent is selected from the class consisting of hydrogen, alkyl, aryl, benzothiazolyl, benzoxazolyl and thiocarbamyl groups, and an ethyl β,β-dialkoxyacrylate in which the alkoxy is a lower alkoxy group on a steam bath until reaction is complete adding sodium ethylate and heating for a further period, precipitating the resulting product from solution and removing it from the solution.

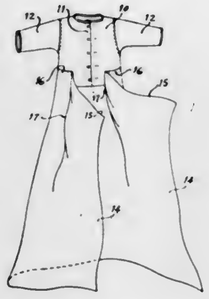


2,439,099
GUARD DEVICE FOR LOCK MECHANISM
Nicholas J. Ressetar, Oneida. N. Y.
Application November 16, 1945. Serial No. 629,101
4 Claims. (Cl. 70—364)

1. In combination with a tumbler lock having a keyway formed therein, a cylindrical bolt magazine slidable and rotatable in the keyway of the lock, said magazine being provided with a stop formation arranged adjacent its inner end to engage a portion of the lock and prevent removal of the magazine from said keyway, and said mag-

azine being longitudinally slotted intermediate its outer end and said stop formation to receive and retain the cam portion of a key for said lock in a position to cooperate with a locking mechanism of said lock when the magazine is home.

2,439,100
ORTHOPEDIC DEVICE
Arthur R. Richards, Kalamazoo, Mich.
Application December 23, 1946, Serial No. 718,046
1 Claim. (Cl. 128—80)

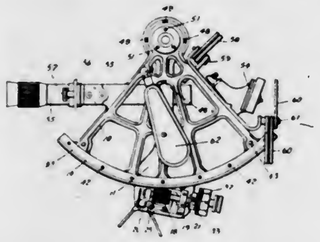


Clamp structure for attaching an orthopedic device to the shoe of the wearer comprising, a first plate having a hook flange on one edge thereof and having an ear struck downwardly from the body of said plate, longitudinally spaced headed studs on said first plate positioned on opposite sides of said ear, a second plate having an upwardly turned hooked flange on one edge thereof and having an ear struck downwardly from the body of said plate, said second plate defining a transverse slot arranged to receive said ear on said first plate and further defining parallel guide slots slidably receiving the shanks of the studs on said first plate, a screw member rotatably engageable with said ears to draw said hook flanges on said plates into clamping engagement with the edges of the sole of the shoe of the wearer, and brace attaching portions extending forwardly and rearwardly from the edges of said plates and generally in the plane of said plate whereby said attaching portions lie along the plane of the sole of the shoe of the wearer.

2,439,101
SAFETY GOWN
Elizabeth H. H. Rogers, Toronto, Ontario, Canada
Application June 1, 1946, Serial No. 673,798
In Canada March 29, 1946
1 Claim. (Cl. 2—114)

A safety gown comprising a body portion designed to cover the upper portion of the wearer,

an apron portion on said gown forming a continuation of the front portion of the body and extending laterally outward on each side thereof, the upper laterally extended portions of said apron being partially folded around the back portion of the body and sewn thereto in effect to form, in the apron portion between the front and back portions of the body, a large pleat on



each side, said laterally extending portions of the apron being designed to be secured adjacent to the edges of the mattress of a bed, carriage and the like to retain the wearer within a predetermined area of the latter, said pleated portions of the apron permitting free movement of the lower limbs of the body and partial turning of the body onto one side or the other.

2,439,102

INDICATOR ADJUSTMENT FOR SEXTANTS

Charles O. Rothweiler, Milwaukee, Wis.

Application June 12, 1944, Serial No. 539,843
3 Claims. (Cl. 116—124)

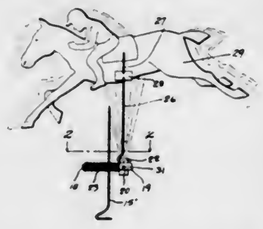
3. A device of the character described mounted for engagement with the periphery of a worm gear, said device comprising a shaft provided with a worm for engagement with the periphery of said worm gear, bearings supporting said shaft, said bearings mounted on a plate, said plate mounted adjacent to said mounting and pivotally supported at one of its ends by said mounting, thereby permitting engagement or disengagement of said worm with said worm gear, one of said bearings provided with outwardly extending sleeve, a micrometer drum attached to one end of said shaft, an adjustably mounted yoke attached to the outwardly extending end of said sleeve at a point between said drum and bearing, said micrometer drum provided with graduations on its outer periphery, said adjustable yoke provided with an indicating point for registering with the graduations on said yoke.

2,439,103

CELLULOSE ESTER MELT-COATING COMPOSITION

Martin Salo and Harold F. Vivian, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application March 8, 1946, Serial No. 653,171
9 Claims. (Cl. 106—181)



1. A cellulose web having on at least one of its surfaces a melt coating essentially consisting of a cellulose acetate butyrate having a butyryl content of at least 40%, a melting point of less than 200° C., a char point of at least 260° C., a cuprammonium viscosity of not more than 10 centipoises, and an acetone viscosity of 5–200 centipoises and 15–50% of di-2-ethyl hexyl sebacate.

2,439,104

AMUSEMENT DEVICE

Henry K. Sandell, Chicago, Ill., assignor to Clarence E. Threedy, Chicago, Ill., as trustee

Application January 25, 1945, Serial No. 574,486
3 Claims. (Cl. 46—122)

1. A device for animating an object during travel thereof comprising a movable supporting arm, a staff, a resilient structure providing connection between the staff and the arm whereby to permit vibration to be transmitted from the arm to the staff, an object to be animated carried by said staff, said structure comprising a bracket carried by the arm, a balance block carried by the bracket and supporting the staff, and a balance spring having one end portion connected to the bracket and its opposite end portion connected to the balance block.

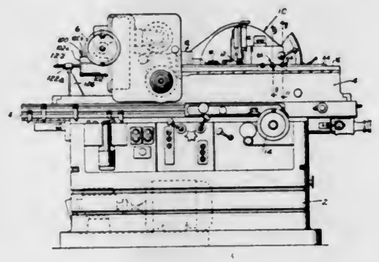
2,439,105

RECOIL ABSORBER

Roy S. Sanford and Alexander Kurti, Woodbury, Conn., assignors to The Autoyre Company, Incorporated, Oakville, Conn., a corporation of Connecticut

Application January 11, 1945, Serial No. 572,266
7 Claims. (Cl. 89—44)

5. A device for absorbing recoil adapted to be interposed between a recoiling body and its fixed support comprising an elongated base portion including upturned flanges along two opposed edges of said base portion and substantially co-



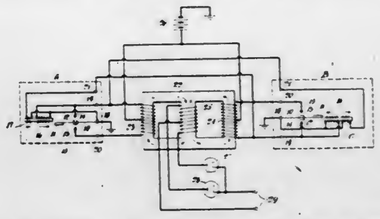
extensive with the major axis of said base portion and a neck positioned substantially at the minor axis of said base portion, oppositely extending resilient arms attached to said neck and substantially parallel to said edges and deformed upwardly at a point substantially in alignment with the associated ends of said flanges, each arm being provided at its upper extremity with a transverse member deformed at its ends to form links substantially in alignment with the planes of said flanges and continuing downwardly to overlap said flanges, the said links being freely movable with respect to said flanges upon distortion of said resilient arms, each said link having an aperture formed therein and adjacent the upper end thereof and another aperture formed therein adjacent the lower end thereof, each said flange having an aperture formed in each end thereof, the lower apertures of said links being in register with the associated apertures in said flanges, all said apertures being adapted to receive means for engaging the device with the body and the support.

2,439,106

GRINDING MACHINE FOR OPERATING UPON WORKPIECES

Harold N. Seyferth, East Detroit, Mich., assignor to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan

Application October 2, 1943, Serial No. 504,689
6 Claims. (Cl. 51—95)



5. In means for rotatively cutting parallel circumferential convolutions on the periphery of a thread milling hob having spiral tooth face gashes, rotary convolution cutting means, means for supporting and rotating the hob, means automatically and cyclically operable in timed relation to the rotation of said hob supporting and rotating means to effect relative movement between said cutting means and said hob supporting and rotating means transversely of the hob axis so as to alter the distance of lateral separation of the hob and the convolution cutting means in a succession of tooth relieving movements during a convolution cutting period, manually actuated means for axially moving the hob supporting and rotating means relative to the cutting means in a succession of step by step indexing movements intermediate successive convolution cutting periods, and slide cam and cam follower means adjustable in accordance with the helix angle of said spiral gashes and automatically operable in response and in timed relation to said axial movements of the hob supporting and rotating means relative to the cutting means to alter the angular relation between the rotative relation of the hob supporting and rotating means and the means for effecting said cyclical relieving movements.

2,439,107

VIBRATOR CIRCUIT

Ira M. Slater, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware

Application September 1, 1944, Serial No. 552,228
5 Claims. (Cl. 175—373)

1. A vibrator system comprising, in combination, a pair of vibratory interrupters having substantially the same operating frequencies, each of said interrupters including a vibratory reed, a driver coil, and a synchronizing coil, a driver circuit for said interrupters including a source of current and said driver coils thereby to effect vibratory motion of said reeds, and a synchronizer circuit including leads connecting the synchronizing coil of each interrupter in parallel with the driver coil of the other thereby maintaining said reeds in exact synchronism.

2,439,108

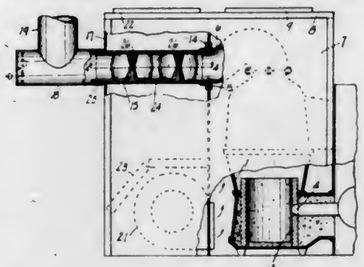
COATING WITH POLYVINYL ALCOHOL

Henry C. Staehle, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application September 11, 1943, Serial No. 502,044
6 Claims. (Cl. 117—62)

2. A method of applying coatings which comprises dissolving in an aqueous solution of a polyvinyl compound selected from the group consisting of the partially hydrolyzed polyvinyl esters, the major portion of which is polyvinyl alcohol, and polyvinyl alcohol, approximately 1–6%, based on the weight of the polyvinyl compound, of a water-soluble boron compound selected from the group consisting of the alkali metal borates and boric acid, coating out the composition thus formed at a pH of not more than 6 in a layer having a thickness of less than .005 inch, fuming the coating with a nitrogen base selected from the group consisting of ammonia, methylamine and ethylamine gas, and drying the coating thus obtained.

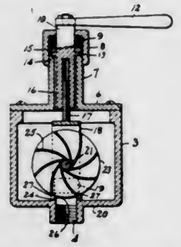
2,439,109



AIR-HEATING FURNACE WITH SELECTIVELY CONTROLLED RADIATOR STRUCTURE

Claude S. Stout, Marshall, Mich., assignor to Marshall Furnace Co., Marshall, Mich., a corporation of Michigan

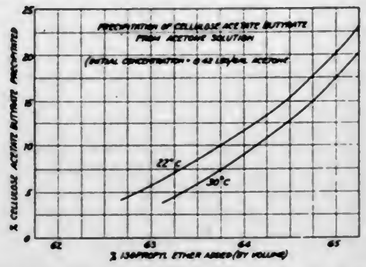
Application November 18, 1944, Serial No. 564,093
8 Claims. (Cl. 126—99)



6. The combination with a combustion unit provided with a discharge for the products of combustion, of a radiator unit comprising a straight main conduit connected at one end to the discharge of said combustion unit and adapted for connection at the other end to a smoke flue, said main conduit having a plurality of U-shaped auxiliary conduits having both the inlet and discharge openings thereof connected to the sides of the main conduit between the inlet and discharge openings thereof, and baffles so dis-

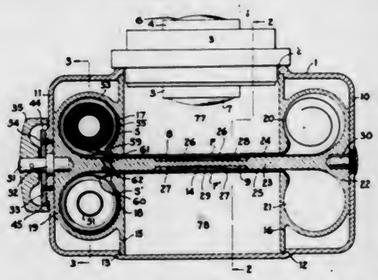
posed that a baffle is located in the main conduit between said inlet and discharge openings of each auxiliary conduit to direct products of combustion therethrough, said baffles being adjust-

able relative to said last named inlet and discharge openings to permit passage of products of combustion through that portion of the main conduit disposed between the inlet and discharge openings of each auxiliary conduit.



2,439,110
VALVE
George N. Strike, Los Angeles, Calif.
Application September 14, 1944, Serial No. 553,982
4 Claims. (Cl. 251—27)

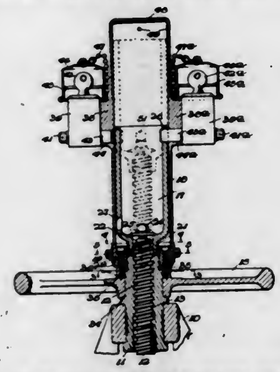
3. In a valve, a housing having an outlet and an inlet, a valve seat defining the inlet within said housing, a closure member having vanes and mounted to turn by fluid flowing past the valve seat and said vanes into said housing, a yoke within said housing and rotatably supporting the closure member opposite said valve seat, a rotatably operable means for controlling the movement of said yoke and closure member to valve seating and unseating positions, a threaded connection between the yoke and said operable means, and a guide for said yoke to prevent rotation thereof during the operation of said operable means.



2,439,111
FRACTIONAL PRECIPITATION OF CELLULOSE BUTYRATES
John W. Tamblyn and Donald R. Morey, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application September 19, 1945, Serial No. 617,248
4 Claims. (Cl. 260—230)

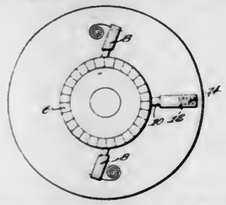
1. A method of removing the lower molecular weight components of a cellulose ester which comprises dissolving a butyric acid ester of cellulose having a butyryl content of at least 16% in an organic solvent and then mixing therewith an amount of an ether having alkyls of 2–6 carbon atoms to precipitate less than 15% of the cellulose ester from the solution whereby lower

molecular weight components of the cellulose ester are precipitated.



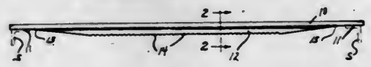
2,439,112
TWO-FILM CAMERA
Walter D. Teague, New York, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application December 30, 1944, Serial No. 570,545
4 Claims. (Cl. 95—31)

1. A roll holding camera including, in combination, a camera body, a lens and shutter carried by the camera body, a roll holder oscillatably mounted in the camera body on an axis at right angles to the lens axis, said roll holder including a pair of exposure frames mounted back to back and equally spaced from the axis of said roll holder, film chambers at each end of each exposure frame, and means on the outside of the camera body and operably engaging the roll holder for moving the latter in the former to present either exposure frame behind the objective and shutter, said roll holder including two adjacent film spool chambers positioned back to back and each adapted to receive a film spool having a winding key opening at one end and a bearing at the other end two winding shafts for engaging the winding key openings carried by the roll holder and extending in opposite directions.



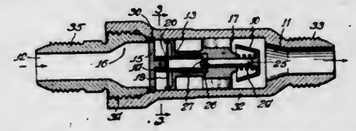
2,439,113
VALVE CONTROLLING MECHANISM
George B. Thieme, Jamaica, N. Y., assignor to Bendix Aviation Corporation, Brooklyn, N. Y., a corporation of Delaware
Application July 15, 1944, Serial No. 545,127
8 Claims. (Cl. 70—176)

1. In a valve mechanism having an actuating member mounted for movement from a valve-closing position to a valve-opening position, an operating member mounted for helical movement relatively to said actuating member; and locking means, carried by one of said members and coacting with the other of said members and operable to exert helically directed forces thereupon and lock said actuating member in at least one of said positions, said actuating member and said operating member comprising an inner sleeve and an



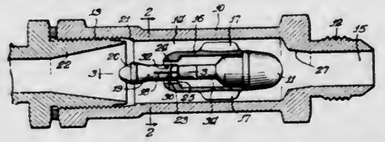
outer sleeve disposed in telescoping relationship, said sleeves being telescoped for a distance at least as great as the range of travel of said actuating member between valve-opening and valve-closing positions, and said locking means being carried by said outer sleeve.

2,439,114
ELECTRICAL APPARATUS COLLECTOR CONDITIONING
Fred P. Vacha, Atlantic, Mass., assignor, by mesne assignments, to First Industrial Corporation, Wilmington, Del., a corporation of Delaware
Application September 16, 1943, Serial No. 502,590
2 Claims. (Cl. 171—325)



1. The combination with a collector and current-carrying brushes therefor, of a solid conditioning member comprising a hard rubber compound containing free sulphur and a non-abrasive inert filler.

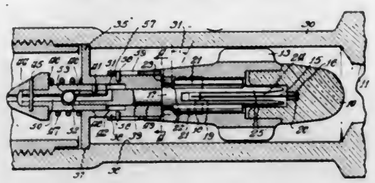
2,439,115
SUPPORT FOR DRYING PASTE PRODUCTS
Salvatore Viviano, Richmond Heights, Mo.
Application September 2, 1944, Serial No. 552,552
3 Claims. (Cl. 34—240)



1. A stick for the drying support of lengths of alimentary paste products and the like, consisting of a primary, partly cylindrical portion, a rib normally below the cylindrical portion and supporting seats near the ends of the stick, so formed as to tend to keep the cylindrical portion uppermost when the stick is loaded for drying, the rib being provided with a longitudinal slot upwardly and depthwise of the rib, and a flat reinforcing strip of non-rusting characteristics occupying the slot, and disposed edgewise to the direction of loading of the stick, and pin elements extended transversely through the rib and strip for assembly thereof.

2,439,116
AUTOMATIC CUTOFF
William Waterman, Chicago, Ill.
Application January 2, 1942, Serial No. 425,427
20 Claims. (Cl. 137—152)

7. A cut-off device for automatically closing a fluid line comprising in combination a valve means rotatable by the flow of fluid in said line for closing said valve, a device for holding said means against operation under the maximum normal fluid flow, and releasable means associated with said device responsive to flow in excess of maximum normal flow to permit rotation of said means to close said valve.

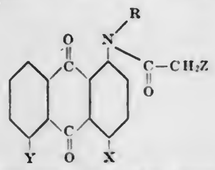


2,439,117
AUTOMATIC CUTOFF
William Waterman, Chicago, Ill.
Application April 11, 1942, Serial No. 438,565
10 Claims. (Cl. 137—152)

1. A cut off device for automatically closing a fluid line upon predetermined excess flow of fluid therein comprising in combination a valve, a housing therefor adapted to be placed in a fluid line, said valve having flutes projecting therefrom and inclined relative to the direction of fluid flow to develop valve rotating forces under the action of flowing fluid, said valve being rotatable under normal fluid flow but being provided with positive means for holding the valve open and releasable upon a predetermined rotation of the valve to permit the latter to close, and a device for preventing such predetermined rotation under forces exerted by normal fluid flow but permitting such predetermined rotation under excess rotational forces.

9. A fluid operated latch for controlling movement of an element in response to the rate of flow of fluid in a line comprising a shoulder fixed relatively to the direction of fluid flow and a shoulder carried by the element and normally engaged with the first shoulder to hold the element positively against movement in the direction of fluid flow and disengageable from the first shoulder to release the element upon the element rotating through a predetermined angle, means causing the element to rotate in response to fluid flow in excess of a predetermined rate, and means adapted to become progressively stressed by rotation of the element.

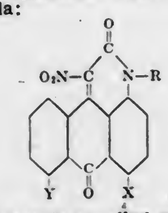
2,439,118
AUTOMATIC CUTOFF DEVICE
William Waterman, Chicago, Ill.
Application July 31, 1942, Serial No. 452,991
12 Claims. (Cl. 137—152)



8. An automatic cut-off device comprising in combination a valve housing forming a passage for fluid, a normally open valve in said passage and movable by the fluid in the direction of the fluid flow to close said passage, said valve provided with surfaces presented to the fluid against which the latter acts to create valve closing forces, means for holding the valve open against the action of the fluid and operated by said force upon a predetermined rate of fluid flow to release said valve, and a device for delaying the operation of said means.

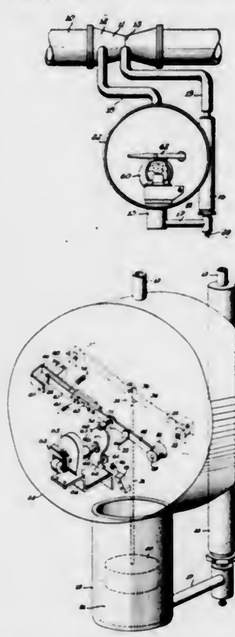
2,439,119
PRODUCTION OF MASHED POTATO POWDER
Arthur Kenneth Willetts and Theodore Rendle, Histon, England, assignors, by mesne assignments, to M. P. P. (Products) Limited, Norwich, England
No Drawing. Application November 15, 1945, Serial No. 628,960. In Great Britain December 1, 1944
12 Claims. (Cl. 99—207)

1. A method of manufacturing cooked and mashed potatoes in powdered and readily reconstitutable form in which cooked and mashed potato is frozen and caused to thaw, moisture is removed from the thawed material by mechanical means and the powder is thereafter converted by drying into a powder suitable for keeping and for ready reconstitution into mashed potato.



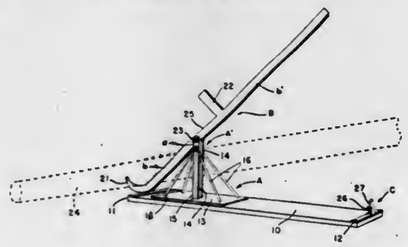
2,439,120
1-NITRO-3-ALKYLANTHRAPYRIDONE COMPOUNDS AND PROCESS FOR THEIR PREPARATION
Charles V. Wilson, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application October 26, 1946, Serial No. 706,069
11 Claims. (Cl. 260—297)

1. A process for the manufacture of new anthrapyridone compounds which comprises reacting an anthraquinone compound having the general formula:



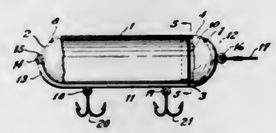
wherein R represents an alkyl group having one to two carbon atoms, X and Y each represents a member selected from the group consisting of a hydrogen atom, a halogen atom and a hydroxy group and Z represents a member selected from the group consisting of a bromine atom, a chlorine atom and an iodine atom with an alkali metal nitrite in the presence of a liquid diluent which exerts a solvent action on the anthraquinone compound and is inert with respect to the reaction mixture and recovering the anthrapyridone compound formed.

6. The anthrapyridone compounds having the general formula:



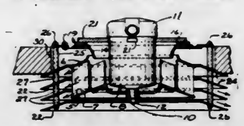
wherein R represents an alkyl group having one to two carbon atoms and X and Y each represents a member selected from the group consisting of a hydrogen atom, a halogen atom and a hydroxy group.

2,439,121
RATE OF FLOW TELEMETERING ACTUATOR
Samuel L. Adelson, Chicago, Ill., assignor to Infilco Incorporated, Chicago, Ill., a corporation of Delaware
Application November 26, 1945, Serial No. 630,896
10 Claims. (Cl. 318—445)



1. Apparatus of the type described comprising a manometer, a magnet positioned by level of a manometric liquid in said manometer, a movable normally open magnet operated switch outside of said manometer, means to cyclically move said magnet operated switch along a path parallel to the potential path of travel of said first magnet, and a switch device operative to close a starting circuit at a predetermined position of said magnet operated switch.

2,439,122
POLE GIN
James A. Baker, Rushford, Minn., assignor of one-half to Earl Kjos, Lanesboro, Minn.
Application October 30, 1946, Serial No. 706,603
5 Claims. (Cl. 214—1)

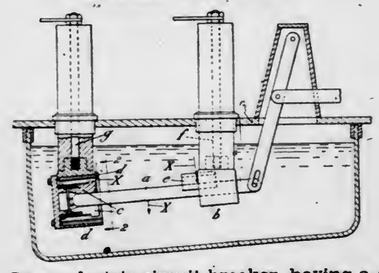


1. A device for lifting one end of a pole from the ground, holding the same elevated and lowering it to the ground, said device comprising a platform, a standard thereon, a lever including a forward work-engaging portion and a rearward handle portion for tilting the lever, said work-engaging portion of said lever having an upstanding pole-abutment at the rear thereof, pivot means fulcruming the lever on said standard at a point intermediately of the work-engaging portion of said lever between its forward tip and said pole-abutment thereon, said work-engaging portion of the lever having an upper surface adapted to support a pole, upon the tilting of the lever, for movement along the lever back and forth above the top of the standard from said tip of said work-engaging portion to position against said pole-abutment rearwardly of the fulcrum of said lever.

2,439,123
FISH LURE
Fannie M. Bell, Bellevue, Ohio
Application October 9, 1946, Serial No. 702,302
3 Claims. (Cl. 43—41)

3. A fish lure comprising a transparent tubular hollow body closed at one end and open at its opposite end, a removable closure member for said open end formed with a seat in its outer end, a removable screen between said lure body and closure member, said body and closure member being formed with vents, removable plugs for closing said vents, a resilient U-shaped clip pivotally attached to the closed end of said lure body adapted to extend parallel with the lure body and to snap over said closure member when disposed upon the lure body seating in the seat formed therein, eyes formed on said clip, fish hooks suspended from said eyes, and a supporting eye on the end of said clip remote from its pivoted end for supporting a fish line.

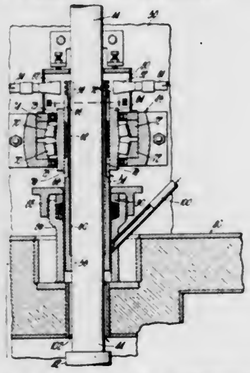
2,439,124
CENTRIFUGAL FAN
Carl O. Bergstrom, Boston, Mass., assignor, by mesne assignments, to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application September 26, 1944, Serial No. 555,780
1 Claim. (Cl. 230—259)



A pressure ventilating fan comprising a motor having a shaft extending vertically downward, a fan wheel on the lower end of said shaft, and a plurality of spaced deflectors formed as frustrums of cones having axes coinciding with the axis of said shaft, supported around said wheel, said wheel having a side plate terminating adjacent the upper end of the uppermost of said deflectors and extending parallel thereto, said wheel having a back plate terminating adjacent the upper end of the lowermost of said deflectors and extending parallel thereto, said back plate being imperforate whereby all of the air from said wheel is directed between said deflectors.

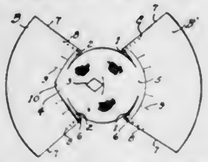
2,439,125
ICE-CREAM SCOOP
George Noel Bolinger, Shelbyville, Ill.
Application May 19, 1944, Serial No. 536,357
12 Claims. (Cl. 107—48)

1. A material scooping device comprising a handle, a stationary scoop carried by one end of said handle and having an open top of circular form, a cutting device extending at least partially around the open top of said scoop concentric therewith and supported solely by the edge portion of such open top for oscillating movement about its axis, and power means for oscillating said cutting device.



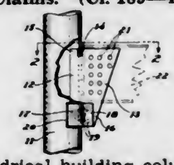
2,439,126
ELECTRIC CIRCUIT BREAKER
Ronald Norton Buttrey, Openshaw, Manchester, England, assignor to Cooke & Ferguson Limited, Openshaw, Manchester, England, a British company
Application July 12, 1945, Serial No. 604,556
In Great Britain July 15, 1944
5 Claims. (Cl. 200—87)

1. In an electric circuit breaker, having a sliding contact rod and contacts coacting therewith,



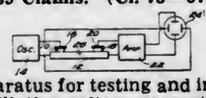
the incorporation of a magnetic screen made of magnetic material in at least one of the contacts for magnetically screening the part of the contact rod coacting therewith.

2,439,127
SHAFT AND BEARING COOLING MEANS
William H. Dailey, Jr., Library, and Edward A. Di Nucci, Pittsburgh, Pa., assignors to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application February 25, 1946, Serial No. 650,082
3 Claims. (Cl. 230—209)



1. In a furnace having a fan therein supported on a shaft a portion of which is subjected to intense furnace heat, a bearing for said shaft and means for cooling it and an adjacent portion of the shaft comprising a sleeve secured to the shaft having respective annular portions firmly contacting the shaft and separated by an inner chambered portion clearing the shaft, an antifriction bearing-race-bushing surrounding a portion of said sleeve and firmly contacting it at spaced portions and clearing it therebetween, the sleeve having a plurality of longitudinal grooves formed on its exterior and extending beyond the ends of said bushing, a casing surrounding one end of said sleeve forming an air chamber, and means effective to deliver cooling air under pressure to said chamber and force it through the grooves in said sleeve.

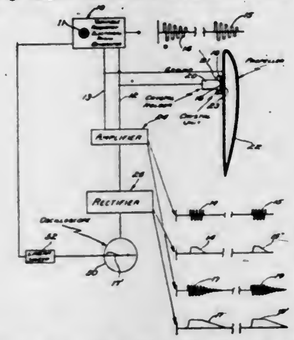
2,439,128
COMBINATION OUTER GARMENT
Gertrude de Oliensis, St. Louis, Mo.
Application October 15, 1945, Serial No. 622,239
3 Claims. (Cl. 2—74)



1. A garment of the kind described adapted to be spread substantially flat in a single plane, and formed of a sheet of material comprising a central section with a head-opening therethrough, and oppositely disposed skirt-forming sections attached to diametrically opposite sides of said central section and having divergent side edges, said central section adjacent said divergent side edges of each skirt-forming section slotted to provide a pair of openings extending inwardly toward each other into the body portion from said side edges, the combined assembled intermediate portions of the garment between the pairs of openings providing substantially the waist-line portion of the garment, and the portions below the slotted portions providing overlapping skirt-forming sections when worn, and means for securing the side edges of each skirt-forming section together so as to provide a pair of encompassing skirt members each meeting along substantially the full length of said side edges, whereby a double thickness skirt is provided for substantially the full distance below the waist of the wearer.

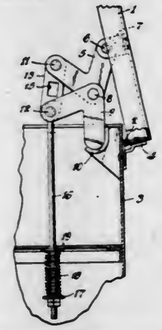
2,439,129
BUILDING COLUMN
John Stanley Donahue, Brookline, Mass., and George E. Strehan, Leonia, N. J.; said Strehan assignor to said Donahue
Application April 18, 1945, Serial No. 588,954
4 Claims. (Cl. 189—42)

1. In a cylindrical building column, a bracket comprising a beam-supporting plate, and a pair of compression plates each having a curved arm fitting the exterior of the column and welded thereto, said compression plates having laterally projecting flanges disposed on opposite sides of said beam-supporting plate and fastened thereto, the column having a metal casing provided with a vertical slot, and the beam-supporting plate having a web inserted into the column through said slot and welded therein.



2,439,130
SURFACE AND SHEAR WAVE METHOD AND APPARATUS
Floyd A. Firestone, Ann Arbor, Mich., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application November 20, 1943, Serial No. 511,089
39 Claims. (Cl. 73—67)

30. In apparatus for testing and inspecting material, an oscillating voltage generator, means energized by said generator for producing surface waves in said material, means responsive to said surface waves for generating a second oscillating voltage, means for relatively moving said surface wave producing means and said surface wave responsive means by measured amounts, and means for indicating confluences of phase between said second oscillating voltage and the voltage energizing said surface wave producing means.

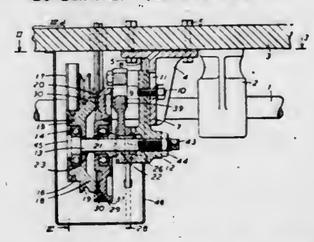


2,439,131
RESONANCE INSPECTION METHOD
Floyd A. Firestone, Ann Arbor, Mich., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application November 20, 1943, Serial No. 511,090
21 Claims. (Cl. 73—67)

19. In a method of inspecting a bounded portion of a material the steps of; placing a transducer in effective mechanical contact with a surface of said bounded portion, electrically energizing said transducer with successive voltage trains to transmit vibration waves into said bounded portion, said voltage trains having individual time durations exceeding the time of round trip flight of said vibration waves through

said bounded portion, varying the frequency of the waves in successive voltage trains, and observing in the periods during or following the diminution of amplitude of said energizing voltage trains changes in the vibration of said bounded portion resulting from said frequency variations.

2,439,132
SAFETY MEANS FOR RECEPTACLES
Raymond Francis Hatala and Arthur Kimber, Streator, Ill., assignors to Anthony Company, Streator, Ill., a corporation of Illinois
Application June 21, 1944, Serial No. 541,452
7 Claims. (Cl. 220—89)

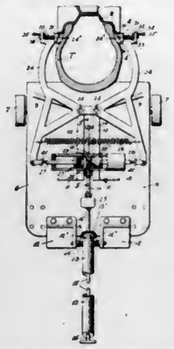


1. In combination, a base member, a closure mounted thereon for relative movement therewith, and means for controlling said movement comprising two members, one of said members hinged to said closure, the said members being hinged together, an abutment fixed on said base member, one of said members being adapted to rest upon said abutment, and a heat responsive link positioned between and engaging each of said members, and when in position holding them against relative movement, the two members and said link, when so assembled, comprising an assembly effective to hold the closure against movement, the said members being freed for relative hinge movement upon the destruction of said heat resposive link, and means biased to move one of said members and thereby to tilt the other and to close the closure.

2,439,133
COMBINED TABLE AND ELECTRICALLY HEATED HOT PLATES
Francis John Jenkins, Hurlstone Park, New South Wales, Australia
Application July 31, 1944, Serial No. 547,399½
In Australia November 11, 1943
3 Claims. (Cl. 219—19)

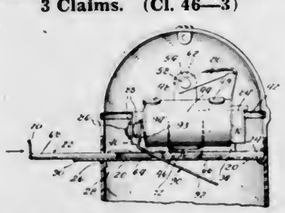
1. Improvements in means for keeping food hot after being served and during consumption of the meal, comprising a table top having openings to receive a plurality of heating units one for each diner, a medially disposed cooking unit also received in an opening in the said table top, pairs of longitudinal bars and pairs of cross bars all secured to the underside of the said table top, said pairs of cross bars having a pair of channel members secured thereto, said channel members carrying the said heating units each of which comprises a hot plate, a clamping plate between which mica sheets and a resistance wire and a sheet of asbestos are secured, the said cooking unit being mounted upon the said longitudinal bars.

2,439,134
CLUTCH AND BRAKE MECHANISM
George Edmund Jones, London, England
Application October 5, 1945, Serial No. 620,573
In Great Britain August 29, 1945
10 Claims. (Cl. 192—17)



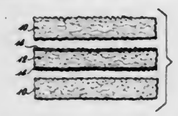
1. A drive transmission unit for the purposes set forth, comprising a driving clutch member rotatably mounted on a spindle and including a pulley whereby such clutch member is driven from a main or line shaft, a sleeve axially movable upon the spindle, a driven clutch member rotatably mounted on the sleeve and spaced from the driving clutch member, an operating lever fast upon such sleeve, a member fixed with respect to said spindle, and cam means between such sleeve and fixed member whereby rotational movement of the sleeve imparted by the operating lever imparts axial movement to the sleeve to bring the clutch members into driving engagement.

2,439,135
MOVABLE BASE MOUNTED AXIALLY COLLAPSING TYPE TIRE REMOVING DEVICE
Theodore M. Johnson, Burbank, and Edgar G. Reed, Los Angeles, Calif.
Application January 25, 1945, Serial No. 574,450
3 Claims. (Cl. 157—6)



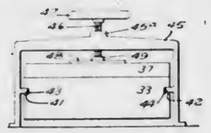
1. A tire removing tool including a carrier therefor, two arms movable toward and from

each other to embrace and compress the opposite sides of a tire while on an upstanding wheel, power means operable on said arms for forcing them toward each other against the opposite sides of said tire adjacent the rim, latch elements



on the ends of said tire-engaging arms to hook over the opposite sides of the rim to hold the tool to the wheel, and manually operable means for moving said carrier and said arms into position to engage said tire and for removing it.

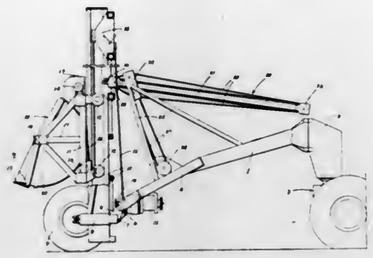
2,439,136
TOY BANK
Earl Kahn, Chicago, Ill.
Application April 19, 1947, Serial No. 742,616
3 Claims. (Cl. 46—3)



1. A toy bank comprising a housing for coins, a horizontally positioned slidable coin control member supported in said housing, a dry cell battery and a light bulb in electrical circuit, means including a spring finger in the path of said slidable control member adapted to normally maintain said circuit open, but adapted when engaged by a coin to close said circuit and light said bulb for the period that said coin is in contact with said spring finger.

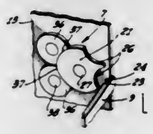
2,439,137
LAMINATED PLASTIC ARTICLE
Auguste V. Keller, Long Island City, N. Y., assignor to Thompson's Ltd., New York, N. Y., a corporation of New York
Application December 20, 1940, Serial No. 371,040
2 Claims. (Cl. 154—129)

1. A molded article comprising, layers of resin impregnated fibrous material, the resin content of each of said layers differing to provide layers of varied density and varied heat conductivity, the said layers being assembled successively in the order of their heat conductivity to provide a layer of relatively low conductivity at one side and a layer of relatively high conductivity at the opposite side of the article, and heat conducting metallic layers interposed between and bonded to selected adjacent layers of said resin impregnated fibrous material.



2,439,138
APPARATUS FOR MAKING ARTIFICIAL TEETH
Hubert Kohrman, Danbury, Conn.
Application February 20, 1943, Serial No. 476,606
1 Claim. (Cl. 18—34.1)

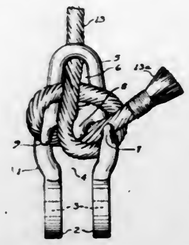
An apparatus for molding artificial teeth comprising two mold parts made of a rigid material and having adjacent contacting faces in which are mold recesses corresponding respectively to the two vertical halves of a tooth pattern, said mold parts having a charging channel leading to the root end of the mold cavity formed by the mating recesses, said two mold parts having companion external portions together forming a taper, a frame for receiving said two mold parts and having portions coacting with said taper to press said two mold parts together when they are forced into said frame, a companion mold part having a pressure element enterable into said charging channel, a mechanism having a supporting structure with a movable pressure-applying element for receiving said frame in either of two positions of the latter relative to the supporting structure, in one of which positions said frame and mold parts are positioned so that said pressure-applying element operates upon said companion mold part to enter said pressure element into said charging channel and in the other of which positions said pressure-applying element operates to effect movement between said frame and said two molding parts to force the latter out of the former, said supporting structure comprising substantially a yoke, the arms of which and said frame have interengageable supports for selectively positioning said frame for coaction of said pressure-applying element either with said companion mold part to enter said pressure element into said charging channel or with said two mold parts to force the latter out of said frame.



2,439,139
POWER SCOOP
Robert G. Le Tourneau, Peoria, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif., a corporation of California
Application September 3, 1946, Serial No. 694,479
11 Claims. (Cl. 214—120)

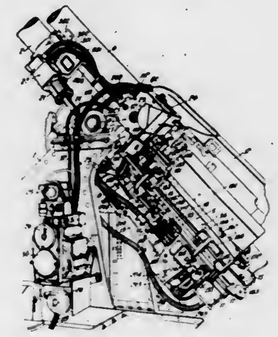
1. A power scoop comprising a wheel supported body, an upstanding elevator frame mounted on the body adjacent one end thereof, an elevator carriage guidably mounted on the elevator frame, power means operative to raise and lower the carriage, an outwardly projecting scoop, means mounting the scoop on the carriage for rotation about a horizontal transverse axis between digging, carrying, and dumping positions, said scoop including a digging blade on its normally lowermost edge, and other power means operative to rotate the scoop between said positions, selectively; the scoop having a back wall concentric to the axis thereof, and said other power means including a reversible winch

unit having a drum, a pair of cable reaches extending in reverse relation from the drum, direction changing sheave means arranged so that said reaches lie circumferentially about said back wall in opposite directions, lapping each other, and being dead ended to the scoop at relatively widely spaced points circumferentially thereof.



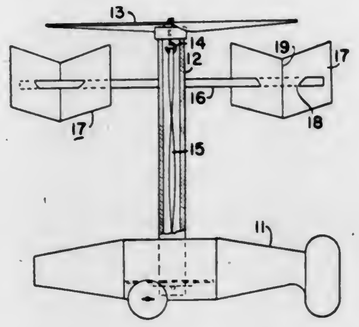
2,439,140
COMBINATION LOCK
George T. Mason, Glendale, Calif., assignor to Alfred A. Nathanson, North Hollywood, Calif.
Application September 4, 1945, Serial No. 614,369
3 Claims. (Cl. 70—293)

1. A combination lock for a closure movable with respect to a keeper comprising a detent disc carried by said closure in position for the edge of said disc to engage behind said keeper, said disk having a notch therein and being revoluble about its own axis to move its notch optionally into or out of registry with said keeper, and a tumbler disk revolubly mounted on said closure and having a notch therein into which the edge of said detent disc extends when said detent disc's notch is turned away from said tumbler disc, said tumbler disc extending into said detent disc's notch when said tumbler disc's notch is turned away from said detent disc to immobilize said detent disc with the notch of said detent disc out of registry with said keeper.



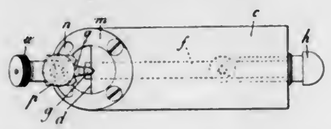
2,439,141
FLAT TERMINAL FITTING
William A. Meighan, Portland, Oreg.
Application November 3, 1944, Serial No. 561,788
6 Claims. (Cl. 24—129)

1. An integral, flat terminal rope fitting having an elongated body, comprising a bifurcated member having securing elements on the free ends thereof, the central portion thereof defining a recess, an apertured member secured to said bifurcated member and projecting longitudinally therefrom, and a series of spaced, opposed claw-like fingers extending laterally from the face of



said bifurcated member and defining an inclosed transverse rope way.

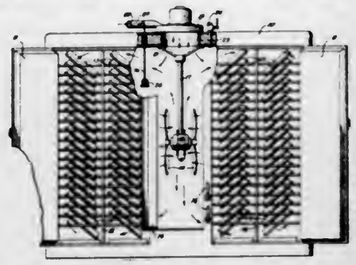
2,439,142
LOADING AND FIRING MECHANISM FOR QUICK-FIRING GUNS
Desmond Walter Molins, Valentine Pearce Harvey, James Arthur Mason, and Gordon Francis Wellington Powell, Deptford, London, England, assignors to Molins Machine Company Limited, Deptford, London, England
Application May 25, 1943, Serial No. 488,453
In Great Britain April 13, 1942
35 Claims. (Cl. 89—1)



1. A gun comprising in combination a breech, a loading tray movable between a loading position and a firing position, in which latter position the tray is bodily offset from the breech so that it is out of the way of the latter during recoil and is properly positioned to receive a round, means for closing said breech automatically on the insertion of a round therein, firing mechanism for the gun, fuze-setting means adapted to set the fuze of a round in the loading tray, means for automatically actuating the fuze-setting means and the loading tray in timed relationship so that the fuze of the round is already set when the tray is in the loading position, a rammer-device, means operably controlled in timed relationship with the movement of the loading tray automatically to actuate the rammer-device and ram the round into the breech, and means associated with the breech to actuate the firing mechanism automatically when the breech is closed, whereby there is provided an automatic setting-loading-firing cycle giving a substantially constant dead-time for each round.

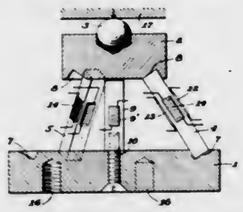
2,439,143
TOY HELICOPTER
Stephan Paul Nemeth, Chicago, Ill.
Application March 7, 1944, Serial No. 525,404
4 Claims. (Cl. 46—75)

1. In a toy helicopter the combination of a sustaining propeller and of at least one counter-rotating vane below the propeller made of two plane surfaces forming a dihedral angle and, the vane being set to positive dihedral and to positive incidence angle.



2,439,144
DEVICE FOR SHARPENING DRILLS
John Perkins, London, England
Application November 30, 1944, Serial No. 565,945
In Great Britain June 15, 1944
3 Claims. (Cl. 51—219)

1. A small drill-sharpening device comprising a drill holder having means for laterally locating a drill in relation thereto and drill-clamping means for holding said drill in fixed position with its ends suitably presented simultaneously to a pair of planes inclined to the axis of the drill, said planes comprising surfaces on the holder for guiding a sharpening stone, said device incorporating an adjustable carriage, a spring-urged plunger mounted thereon, the end of said plunger being adapted to engage a flute in said drill and wherein said drill-locating means comprises a V-groove abutment surface on said device.

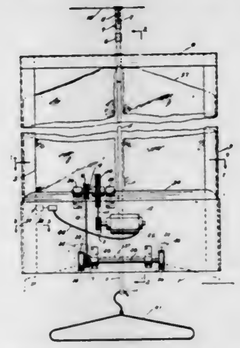


2,439,145
INCUBATOR
Louis M. Porter, Englewood, Colo.
Application May 15, 1944, Serial No. 535,601
2 Claims. (Cl. 119—35)

1. An incubator comprising a cabinet, egg supporting means adjacent the opposite ends of the cabinet spaced apart in the central portion of the cabinet, a pair of axially spaced sets of air circulating blades in said central portion of the cabinet, the blades being so pitched that they will draw air in axially from the ends of the cabinet and discharge it outwardly to circulate over the egg supporting means, and air heating means

between said sets of blades to heat the air circulated by the blades.

2,439,146
LOAD WEIGHING DEVICE
Arthur C. Ruge, Cambridge, Mass., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application March 14, 1946, Serial No. 654,245
8 Claims. (Cl. 201—63)

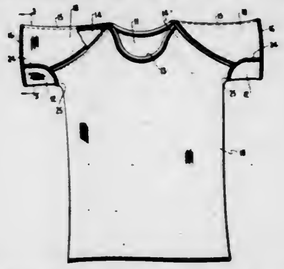


1. A load weighing device comprising a plurality of inclined load sensitive columns at least one of which is inclined relative to another so that the applied load is carried to the base in more than one direction, means for securing said columns together at one end, means for securing the same together at their other end, and electrical impedance means secured to said columns so as to be responsive to strain therein produced by subjecting the device to a load.

2,439,147
PROCESS FOR THE MANUFACTURE OF COLLOIDAL SULPHUR
Fernand Frederic Schwartz, Santiago, Chile
No Drawing. Application October 4, 1944, Serial No. 557,230
3 Claims. (Cl. 252—313)

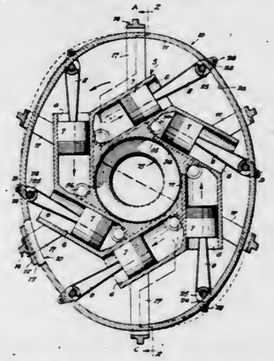
3. A process for the preparation of colloidal sulphur which comprises the decomposition of ammonium polysulphide by reacting the same with an aldehyde in the presence of a protective colloid selected from the group consisting of ammonium caseinate plus ammonium ricinoleate and ammonium alginate plus ammonium oleate.

2,439,148
GARMENT BAG APPLYING AND REMOVING DEVICE
Willie A. Shields, Powderly, Ala.
Application December 22, 1945, Serial No. 636,782
2 Claims. (Cl. 226—18)



1. A garment bag applying and removing device comprising; an adjustable connection for attaching to a ceiling, a frame attached to the lower end of the adjustable connection, the side members of the frame forming channels, a panelled case supported in the lower portion of the frame, an electric motor mounted on one outer face of the case, two driving rollers mounted on and adapted to revolve with a shaft supported in bearings attached to the outer face of the case, pulley and belt means leading from the motor to the shaft with said rollers and adapted to revolve the rollers, slots cut through the outer panel face, the rollers positioned with part of each protruding through a slot; a rocker arm mounted in a supporting bearing attached to the opposite outer face of the case, a spring positioned between one end of the rocker arm and the opposite face of the case and adapted to urge the end of the arm away from the case, a shaft attached to the other end of the rocker arm, a free revolving roller mounted on each end of the

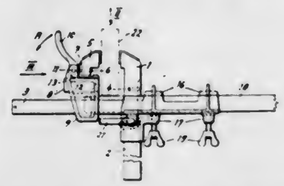
arm shaft, slots cut through this opposite face substantially the same size as the slots in the other panel face, parts of the arm shaft rollers adapted to protrude through the slots and make contact with the driving rollers protruding through the opposite panel, a crank type lever mounted on the opposite face of the panel and adjacent the rocker arm and adapted by manual operation to overcome the spring urge and lift and hold the arm shaft and free revolving rollers away from the opposite driving rollers; a long depending rod with its upper end attached to the top of the frame and extending down through and beyond the panel case bottom edge, a hook integral with the bottom end of the long rod adapted for a garment hanger to hang thereon; weak springs positioned within the panel case and adjacent the sides of the driving rollers and adapted to act as resisting shields to hold a bag when descending off of the face of the driving rollers.



2,439,149
SLIPOVER GARMENT
Emma A. Smicker, Allentown, Pa., assignor to Blossom Products Corporation, Allentown, Pa., a corporation of Pennsylvania
Application March 29, 1947, Serial No. 738,049
5 Claims. (Cl. 2—111)

1. A shirt comprising a front member, a rear member and two sleeve inserts secured together to form a laterally enclosed body with two shoulders and sleeves; the said front member containing a body section, a cut-out neck portion and two extensions on opposite sides of the neck portion merged with the body section and extending upwardly to the shoulder level and then a predetermined distance rearwardly and downwardly, and outwardly to the sleeve edge; the said rear member containing a body section, a neck portion and two extensions on opposite sides of the neck portion merged with the body section and extending upwardly to the shoulder level and then a predetermined distance forwardly and downwardly and outwardly to the sleeve edge; the said extensions constituting combination sleeve and shoulder portions, the combination sleeve and shoulder portions of the rear mem-

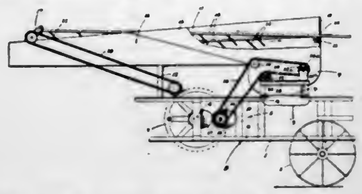
ber overlapping the corresponding portions of the front member, each pair of overlapping portions forming an upper sleeve section of two layers; each of the said sleeve inserts being substantially U-shaped and being attached to the lower edges of one of said pairs of overlapping portions and to the adjacent body portion, the seam of each of said inserts extending inwardly from the outer sleeve edge horizontally and downwardly.



2,439,150
INTERNAL-COMBUSTION ENGINE
Frederick H. Smith, Buffalo, N. Y.
Application March 31, 1943, Serial No. 481,224
2 Claims. (Cl. 123—43)

1. An internal combustion engine, comprising a cylinder block having a large bore extending therethrough and having a plurality of cylinders with their axes tangential to a circle concentric with said bore, an oval cam track surrounding said cylinder block and arranged in the plane of the axes of said cylinders, said cylinder block and oval cam track being rotatable relative to each other about the axis of said bore, a piston in each of said cylinders, a piston rod secured to and maintained in substantially coaxial relation to each piston and having thrust engagement with said track, a ring-shaped stationary intake manifold adjacent to and concentric with one end of said bore and having an inlet opening and an

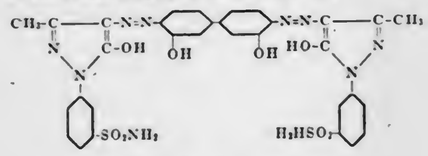
outlet-opening through which a combustible mixture is supplied to said cylinders, a ring-shaped rotatable intake manifold secured within said bore and directly coacting with said annular stationary intake manifold to receive the combustible mixture therefrom, a passage leading from said annular rotatable intake manifold to each of said cylinders, an inlet valve arranged at the side of the corresponding cylinder and controlling the flow of the combustible mixture through each of said passages, means for exhausting each of said cylinders, means for igniting the combustible charge in each of said cylinders, and means for actuating said valves, exhausting means and igniting means in a sequence to effect said relative rotation of said cylinder block and oval cam track through the thrust of said piston rods against said oval cam track, said rotatable intake manifold defining a large, unobstructed tubular coaxial passage extending completely through the engine.



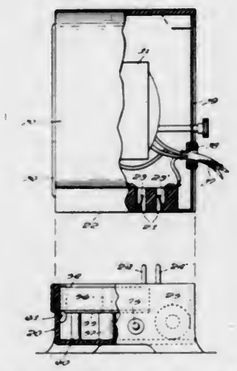
2,439,151
ADJUSTABLE CLAMPING FIXTURE FOR WORKBENCHES
Viktor Spinnler, Zurich, Switzerland
Application September 13, 1944, Serial No. 553,900
1 Claim. (Cl. 144—303)

An attachment of the character described comprising, in combination: a clamp including a stationary jaw having an extension arm, a carrier bar extending laterally from the side of the extension arm adjacent said stationary jaw, an adjustable mount having an aperture to receive said carrier bar therethrough and having tipping edges on opposite walls of said aperture adapted to effect locking engagement of said bar upon canting of said mount, an engaging jaw disposed for limited sliding movement along said mount, an eccentric locking device adapted to urge said slidable jaw against an engaged work piece and thereby cant said mount upon said carrier bar, a clamp holder having means for attachment to a table top and having a guide bed adapted to receive said clamp extension arm therein, said guide bed having an upper edge disposed below said table top so that said jaws may be positioned substantially flush with said table top, and locking means on said guide bed for securing said extension arm at selected positions of vertical adjustment therein.

2,439,152
FEEDER FOR HAY BALERS
William A. Stockton and Mason Stockton, Willows, Calif.
Application November 10, 1945, Serial No. 627,915
8 Claims. (Cl. 100—25)



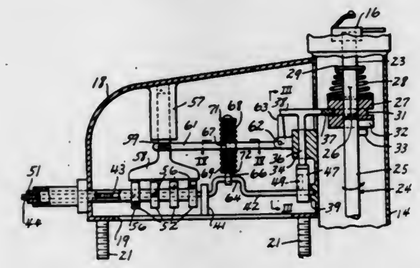
1. In combination with a hay baler which includes a baling chamber, a feeder for delivering material to the baling chamber, such feeder comprising a hopper disposed in communication with the chamber, an elongated trough mounted on the baler with one end portion of said trough above the hopper, said one end portion of the trough having a bottom opening communicating with said hopper, and power driven feeding mechanism in the trough operative to feed hay therealong to said opening; said feeding mechanism including a plurality of transversely



spaced feeder rods disposed lengthwise in the trough above the bottom thereof, said feeder rods converging in the direction of feed and extending over the bottom opening of the trough, hay engaging elements depending from the rods, and means to reciprocate the rods in the trough.

2,439,153
AZO DYES FROM DIHYDROXY BENZIDINE
Fritz Straub, Kaiseraugst, and Jakob Brassel and Peter Pieth, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland, a Swiss firm
No Drawing. Application August 16, 1943, Serial No. 498,885. In Switzerland February 18, 1941
2 Claims. (Cl. 260—161)

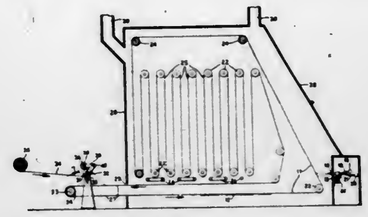
1. The disazo dyestuff of the formula



2,439,154
DETACHABLE CALENDAR MECHANISM FOR CLOCKS
Byron Harry Webb, Chicago, Ill., assignor of one-half to George M. Harper, Jr., Chicago, Ill.
Application February 19, 1945, Serial No. 578,685
3 Claims. (Cl. 58—6)

1. A calendar clock having upper and lower portions, said upper portion comprising a complete electric clock, said lower portion comprising a calendar of the moving tape type and having supply and rewind spool spindles separated by an aperture in the front of said lower portion, said upper and lower portions having cooperative means for ready separation thereof, whereby access may be had to the interior of said lower calendar portion for easy renewal of tape spools.

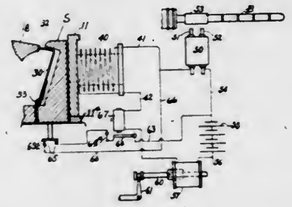
2,439,155
IGNITION LOCK
Claude E. Wilkes, Birmingham, Ala.
Application September 13, 1946, Serial No. 696,744
11 Claims. (Cl. 70—237)



5. In an ignition system embodying a drive shaft and a coupling to disengage the timing mechanism from the shaft, a tumbler lock embodying a fence, a rotatable shaft, means on the shaft for moving the coupling to disengaged position, means to withdraw the fence from the tumblers, a detent movable responsive to withdrawal of the fence to lock the coupling in disengaged position, means to rotate the tumblers, and a tamper-proof casing surrounding the tumbler lock and detent.

2,439,156
METHOD OF TUMBLING BARREL FINISHING AND MATERIAL AND PRODUCTION THEREOF
Carl H. Castle, Sturgis, Mich., assignor to The Sturgis Products Company, Sturgis, Mich., a corporation of Michigan
No Drawing. Application January 12, 1946, Serial No. 640,982
12 Claims. (Cl. 51—282)

6. The method of polishing comprising the steps of tumbling the work with fragments of stone of the limestone group, to remove flash, sharp corners and surface irregularities from the work, introducing a solution which reacts with content of the stone to cover the limestone fragments with a coating filling and covering the abrasive surface irregularities of the limestone, and again tumbling and continuing the tumbling after the limestone fragments have acquired such coating.

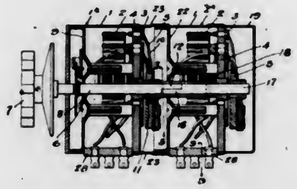


2,439,157
METHOD OF MAKING THIN RUBBER FILMS
Marc Alfred Chavannes, Genthod, Switzerland, assignor to American Ecla Corporation, Dover, Del., a corporation of Delaware
Application October 4, 1941, Serial No. 413,585
9 Claims. (Cl. 18—57)

1. A method of making extremely thin impervious rubber films which comprises spraying a plurality of successive coatings of rubber latex uniformly upon the surface of a smooth belt to which the latex adheres only lightly, the latex so sprayed being of a concentration of less than 25% but not substantially less than 10% solids and being applied in an amount which is not so

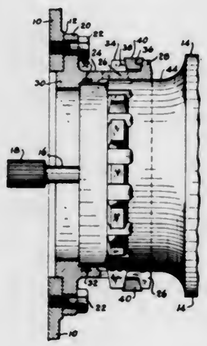
great as to cause the coating to run, substantially drying each coating before the application of the next, continuing said successive coatings until a film of desired thickness between .00025 and .0015 is formed and then stripping said film from the belt.

2,439,158
SELF-THREADING SHUTTLE EYE
Walter F. Daboll, Greensboro, N. C., assignor to Watson-Williams Manufacturing Company, Millbury, Mass., a corporation of Massachusetts
Application April 6, 1946, Serial No. 660,168
6 Claims. (Cl. 139—241)



1. In a weft replenishing loom, a shuttle having a self-threading eye with a thread passage therethrough, a gate normally closing said passage and made at least in part of magnetic material, a shuttle box plate of magnetic material, and means to magnetize said box plate on indication of weft exhaustion and to thereby magnetize and effect withdrawal of said gate to open said passage for weft replenishment.

2,439,159
FLUXING METHOD IN SOLDERING
Joy F. Dillinger, Riverside, and Charles C. Patton, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application April 9, 1943, Serial No. 482,488
3 Claims. (Cl. 148—26)

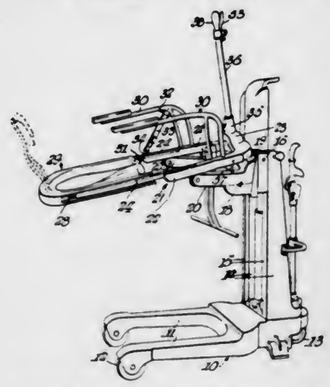


2. A method of supplying flux to a heating flame which comprises passing one of the gases of combustion for the flame through an aqueous solution of hydrochloric acid gas to entrain the hydrochloric acid gas and a small amount of water in the combustion gases to produce a fluxing agent comprising the hydrochloric acid gas and water vapor at the flame.

2,439,160
ATTENUATOR
Edmund Doucette, Newark, N. J., assignor to The Daven Company, Newark, N. J., a corporation of New Jersey
Application February 26, 1945, Serial No. 579,829
3 Claims. (Cl. 201—55)

1. In a multiple unit attenuator, a plurality of single units each having an enclosing housing, an annular ring like connecting member rigidly connected to the housing of one of said single units and removably engaging the housing of the other single unit in overlapping engagement, means to prevent accidental displacement of said coupling member and the housing which it detachably engages, terminal blocks slidably carried by said housing, and means to prevent longitudinal movement of the terminal blocks.

2,439,161
ATTACHING MEANS
George B. Du Bois, Radburn, N. J., assignor to Wright Aeronautical Corporation, a corporation of New York
Application October 9, 1946, Serial No. 702,279
7 Claims. (Cl. 285—129)

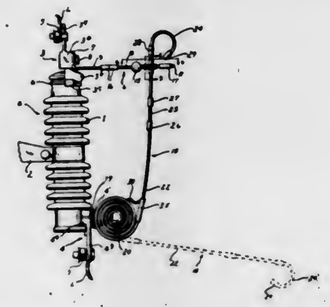


1. A mounting construction for an engine accessory member, said construction comprising a sleeve member adapted to be secured to the engine, one of said members being slotted at its end adjacent the other of said members to provide circumferentially spaced fingers, lugs projecting radially outwardly from said fingers providing a first set of lugs, a second set of circumferentially spaced lugs on the other of said members arranged to be received between and to extend radially outwardly beyond said fingers, said sets of lugs being adapted to be axially spaced with the first set of lugs disposed closer to the free ends of said fingers than the second set of lugs, and a ring adapted to be tightened about said members between said sets of lugs.

2,439,162
ERASER HOLDER
Walter Edwards, Calgary, Alberta, Canada
Application September 3, 1946, Serial No. 694,460
3 Claims. (Cl. 120—36)

1. An eraser holder comprising a hollow member, a transverse pin carried by the member, and an eraser having a slot in one end with the inner end of the slot terminating in an enlarged opening, said end of the eraser being adapted for insertion in the holder with the pin traveling through the slot and seated in said opening.

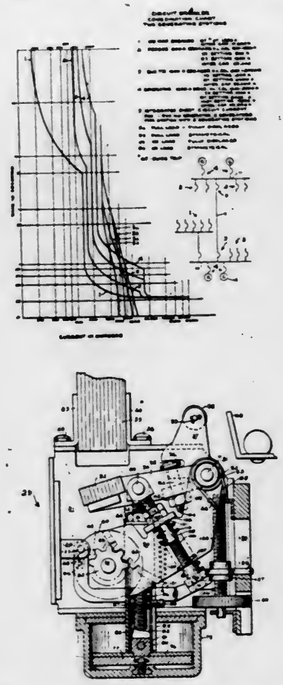
2,439,163
INVALID TRANSFER DEVICE
Melvin M. Farmer, Blue Island, Ill.
Application September 18, 1946, Serial No. 697,656
13 Claims. (Cl. 5—86)



1. An invalid transfer device embodying therein, upright means, a carriage having vertical guided movement on said upright means, rearwardly extending means on said carriage, means pivotally mounted on said last mentioned means for a tilting movement about a transverse horizontal axis from a substantially horizontal position to an inclined position, a seat member formed for detachable engagement with a part of said pivotally mounted means, and means for releasably locking said pivotally mounted means to said rearwardly extending means against tilting movement to said inclined position when said pivotally mounted means is in its substantially horizontal position.

2,439,164
ELECTRICAL SWITCH
Charles . Jin Fox, Oakland Village, Mo., assignor to James R. Kearney Corporation, St. Louis, Mo., a corporation of Missouri
Application November 3, 1944, Serial No. 561,648
5 Claims. (Cl. 200—48)

1. An electrical switch comprising an insulating support, spaced terminals supported by said

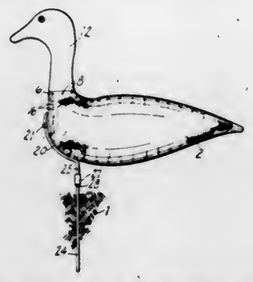


insulating support, a contact electrically associated with one of said spaced terminals, said contact being formed from resilient wire-like material and said material of which said contact is formed being so bent and shaped as to provide the contact with a space between resilient portions of the contact which is closed at its front end by a portion of the contact located at the forward end of the contact and which is provided with an open rear end facing the rear of the contact, and a switch blade elec-

trically associated with the other of said spaced terminals and movable into electrical contact with said contact, said switch blade being formed from resilient wire-like material and a portion of said switch blade being movable into said space of said contact to make contact with the resilient portions of said contact at opposite sides of said space, said portion of said switch blade which is movable into said space of said contact comprising a pair of spaced resilient parts of said switch blade.

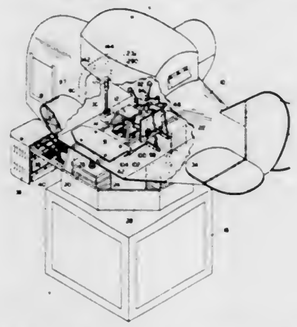
2,439,165
SELECTIVE TRIPPING OF CIRCUIT BREAKERS IN A SYSTEM
Herbert C. Graves, Jr., West Chester, Pa., assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa., a corporation of Pennsylvania
Application February 17, 1944, Serial No. 522,725
16 Claims. (Cl. 175—294)

1. In an electrical system having a plurality of circuit breakers connected in series, each of said circuit breakers having individual cooperable contacts, and an individual electromagnet energizable in accordance with the currents flowing in its associated circuit breaker, each electromagnet having an armature mechanism, a tripping mechanism individual to each circuit breaker engageable by the armature mechanism of its associated electromagnet for effecting a tripping of the contacts of the associated circuit breaker, a time delay mechanism individual to each of said circuit breakers and operable when its electromagnet is energized by overload currents for effecting a long time delay of the order of seconds in the operation of the armature mechanism of its associated electromagnet to engage and operate said tripping mechanism, and a second time delay mechanism individual to each of said circuit breakers and operable when its associated electromagnet is energized by short circuit currents for effecting a short time delay of the order of cycles in the operation of the armature mechanism of its associated electromagnet to engage and operate said tripping mechanism, the long time delay and the short time delay of each of said circuit breakers being different from that of other circuit breakers in



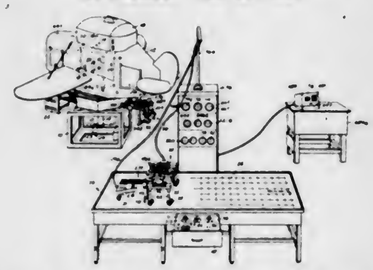
said system for effecting sequential trip in the long and short time delay periods.

2,439,166
DISPENSING TOOTHBRUSH
Widof J. Hoffman and Olaf P. Olson, Chicago, Ill.
Application August 1, 1945, Serial No. 608,120
4 Claims. (Cl. 132—84)



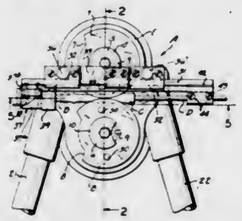
1. A dispensing brush of the type described, comprising a hollow container for material to be dispensed having a discharge spout projecting longitudinally of said container and opening in that direction, said spout communicating with the container interior, material engaging means in said container, means to actuate said means to discharge material in the container through said spout, and a brush having a handle in fixed relation thereto adjustable on said container independently of said actuating means, said handle being positionable on said container to place the bristle ends of the brush adjacent and substantially in the plane of the discharge end of said spout, with a substantial overhang of said end relative to said bristles, and means to slidably support said brush and handle on said container for rectilinear sliding adjustment for removal of the brush relative to said container.

2,439,167
DECOY
Marshal E. Jackson, Kalamazoo, Mich.
Application March 4, 1946, Serial No. 651,811
8 Claims. (Cl. 43—3)



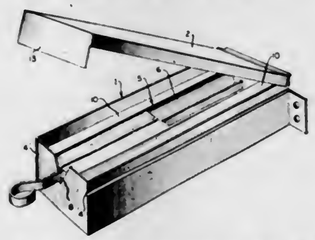
7. A decoy comprising a flexible fabric body wall element, a plurality of internal annular wall element ribs disposed transversely in longitudinally spaced relation within the wall element and secured to the inner side thereof to permit longitudinal collapsing of the wall element, a socket at the rear end of said wall element, a plate secured at the front end of the wall element and having an opening therein, and a supporting rod having an arm disposed through said opening in said plate and engaged in said socket whereby the wall element is supported in erected position.

2,439,168
CONSTANT SPEED PROPELLER SIMULATING MEANS FOR AVIATION TRAINERS
Karl A. Kail, Montrose, Pa., assignor to Link Aviation, Inc., a corporation of New York
Application July 31, 1943, Serial No. 496,898
10 Claims. (Cl. 35—12)



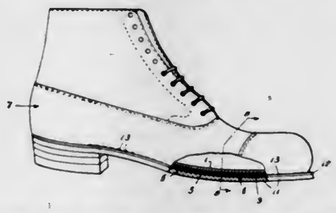
4. In a grounded aviation trainer comprising a fuselage having a place for a student, means for simulating the functioning of the manifold pressure gauge and tachometer in a real plane equipped with a constant speed propeller, said means comprising a simulated throttle control and a simulated propeller governor control, a simulated manifold pressure gauge for indicating the assumed manifold pressure of an engine assumed to be associated with said gauge and a simulated tachometer for indicating the assumed speed of said assumed engine, means for causing said gauge to register an assumed manifold pressure depending upon the setting of said throttle control, and means for causing said tachometer to register an assumed engine speed depending upon the setting of said governor control and the setting of said throttle control only when said throttle control is positioned to the rear of a predetermined position.

2,439,169
TRAINING DEVICE
Raymond E. Kittredge, Binghamton, N. Y., assignor to Link Aviation, Inc., a corporation of New York
Application February 17, 1945, Serial No. 578,369
35 Claims. (Cl. 35—25)



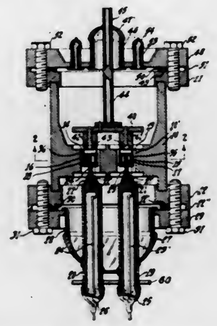
4. In a grounded navigation training system the combination of a support having a seat for a student; means positioned near said seat simulating the banking control means of a real airplane; a movable flight simulating device operatively connected to said support for indicating the assumed course of flight of said support; a movable element; means interconnecting said flight simulating device and said element for positioning said element according to the position of said flight simulating device; and means interconnecting said banking control means and said element for modifying the position of said element according to the movements of said simulated banking control means, and a unit connected to said movable element and responsive to the movements thereof.

2,439,170
ROLLING MACHINE
Frank M. Kratoville, St. Louis, and Firmin M. Cunningham, Maplewood, Mo., assignors to James R. Kearney Corporation, St. Louis, Mo., a corporation of Missouri
Application January 24, 1946, Serial No. 643,177
8 Claims. (Cl. 140—113)



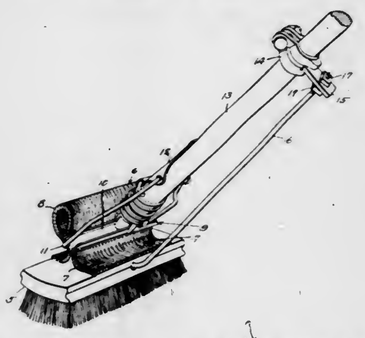
1. A pressure rolling machine comprising supporting frame means, a pair of pressure rollers supported for rotation by said frame means, means for subjecting said pressure rollers to rotary movement, and a carriage for supporting work acted on by said pressure rollers, said carriage comprising an elongated bar supported by said frame means for movement longitudinally of its axis with respect to said frame means, and spaced work-engaging means carried by said bar, said spaced work-engaging means including a socket element disposed adjacent to one end of said bar and having an opening formed therein which receives an end portion of said work, and a work-holding member disposed adjacent to the opposite end of said bar which engages a portion of said work.

2,439,171
WIPING DEVICE FOR OIL GAUGE RODS
Benjamin R. Kreider, Manheim, Pa.
Application March 13, 1947, Serial No. 734,519
4 Claims. (Cl. 15—210)



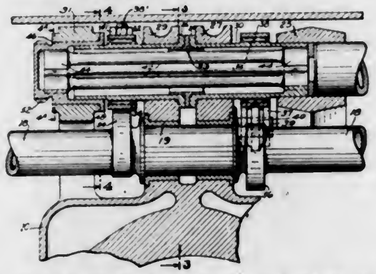
3. Oil gauge wiper comprising an elongated rectangular container having one end notched downwardly from its free edge and a hinged top, a fibrous wiping element bent longitudinally to form a V-groove and means for suspending the wiping element adjacent and with its groove in alignment with the notch in the end wall of the container, above the bottom of the container.

2,439,172
SHOE FOREPART BOTTOM FILLER
Euclid I. La Chapelle, Brockton, Mass., assignor of one-fourth to Albert L. La Chapelle, one-fourth to Beatrice H. La Chapelle, and one-fourth to Rachel E. La Chapelle
Application March 13, 1946, Serial No. 654,130
1 Claim. (Cl. 36—30)



A shoe filler for welt shoes, of a length adapted to fit the cavity between the inner sole and the outer sole from the shank to the toe end of a shoe, said filler being formed of a resilient and a less resilient portion, the less resilient portion extending from the toe to the shank and comprising all of the filler except a circular portion of material of greater resiliency located in the ball area and invariably extending throughout the less resilient portion and said circular portion being, at least in part, approximately of the thickness of the less resilient portion and of such size as to extend approximately the full width of the filler and from the shank to approximately the midline of said filler and providing a resilient area which allows flexing of this portion of the filler without disarrangement of the front portion thereof.

2,439,173
ELECTRON DISCHARGE DEVICE
David B. Langmuir, Englewood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application August 12, 1943, Serial No. 498,271
10 Claims. (Cl. 250—27.5)



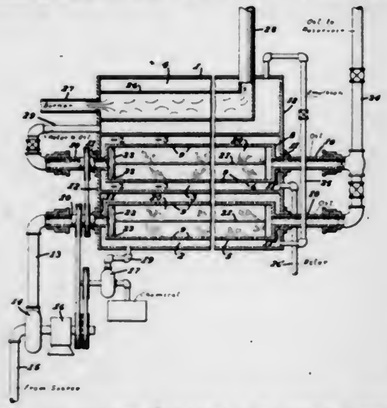
1. An electron discharge device including a solid anode block having only a single pair of adjacent separate tubular cavities extending therethrough, a cathode and grid within each of said cavities, said grids being electrically connected together through a common U-shaped conducting support, opposite legs of which are connected to said grids, parallel lines connected to said cathode and oppositely disposed to the grid support, each line being connected to a different cathode, said grid support providing a Lecher wire system, and said parallel lines being adapted to provide an oppositely disposed Lecher wire system, said cathodes and grids being supported independently of each other.

2,439,174
BRUSH ATTACHMENT FOR MOP HANDLES
Charles J. Larson, Warren, Minn.
Application July 6, 1945, Serial No. 603,482
2 Claims. (Cl. 306—1)

1. In a scrubbing brush, a brush head, a length of fabric material secured to the brush head, a brush handle, a clamp secured to the handle and adapted to clamp the fabric material securing the brush head to the handle, and a rod adjustably connected with the handle, said brush head having an opening formed therein, one end of the rod being disposed within the opening of the head, whereby said brush head is held against tilting.

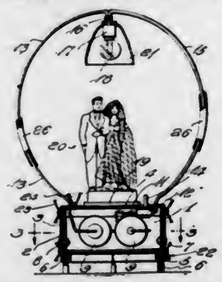
2,439,175
VALVE GEAR
Wilton G. Lundquist, Hohokus, N. J., assignor to Wright Aeronautical Corporation, a corporation of New York
Application November 6, 1943, Serial No. 509,307
6 Claims. (Cl. 123—90)

2. In a valve gear for a pair of valves, a first rocker arm operatively connected to one of said valves, a second rocker arm operatively connected to the other of said valves, said rocker arms having hollow coaxially disposed journal portions for pivotally mounting said rocker arms, and a torsionally stressed rod disposed within said hollow journal portions having its one end operatively connected to one of said rocker arms and having its other end operatively connected to the other of said rocker arms for urging both of said rocker arms in a valve closing direction.



2,439,176
CONNECTOR
Logan L. Mallard, Norfolk, Va., assignor of one-half to Barry M. Wolf, Norfolk County, Va.
Application August 24, 1943, Serial No. 499,832
1 Claim. (Cl. 287—75)

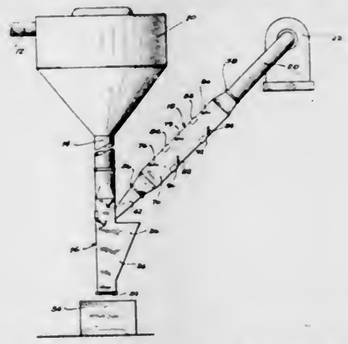
A connector comprising a one piece generally cylindrical sheet metal stamping forming a housing having flattened end portions, flat apertured plunger members slidably received within said flattened end portions of said housing, shoulders on said plungers, interned flanges on the ends of said housing constructed and arranged to abut said shoulders and prevent removal of said plungers from said housing, finger engaging portions on the outer ends of said plungers, axial projections on the inner ends of said plungers, a compression spring received on said projections and tending to urge said plungers outwardly of said housing against said inturned flanges, apertures in said flattened end portions constructed and arranged to register with the apertures in said plungers upon inward movement thereof whereby wires inserted in said apertures will be clamped therein by the action of said compression spring.



2,439,177
APPARATUS FOR DEHYDRATION OF OIL
Lester C. Manning, Oklahoma City, Okla., assignor to Ralph L. Senter, Oklahoma City, Okla.
Application January 25, 1946, Serial No. 643,434
7 Claims. (Cl. 252—347)

1. Apparatus for dehydrating oil in which the water is present in emulsion with a portion of the oil, comprising, a preliminary centrifuge and a final centrifuge, each consisting of a hollow rotatable drum having a perforated periphery and tubular coaxial shafts extending from the ends of said drum communicating with the interior chamber thereof, and fluid-tight casings surrounding said drums in spaced relation thereto defining therewith exterior chambers with which the perforations in the respective drums communicate, said shafts being journaled in bearings in opposite walls of the respective casings, a heater comprising a fire box and a fluid-tight casing surrounding said fire box in spaced relation thereto

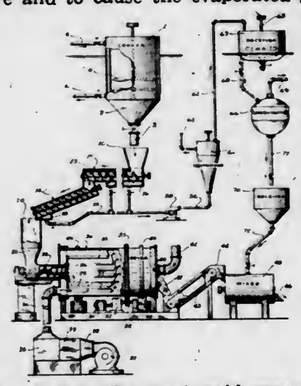
defining therewith a heating chamber, conduits serially connecting one end of the exterior chamber of said preliminary centrifuge with one end of said heating chamber and the opposite end of said heating chamber with one of the shafts of the drum of said final centrifuge, a conduit connected to one of the shafts of the drum of said preliminary centrifuge adapted to communicate with a source of oil, a pump in said last named conduit pumping towards said last named drum, means for driving said pump and drums, the opposite shafts of the respective drums being discharge outlets for oil, and a water discharge outlet from the exterior chamber of said final centrifuge.



2,439,178
ILLUMINATED ORNAMENT
Michelle Marchand, Flushing, N. Y.
Application September 25, 1946, Serial No. 699,312
1 Claim. (Cl. 240—10)

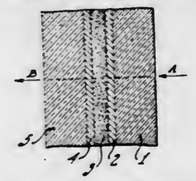
A self-contained and electrically illuminated bridal ornament for wedding cakes comprising a cylindrical base member consisting of a storage section and a cover section formed from sheets of cardboard, a bead formed with the lower edge

of said storage section, relatively thin supporting legs secured to said bead and projecting therefrom, means for detachably connecting the sections of said base member together, batteries arranged within said base member, a switch secured to said base member, lead wires extending from said base member and formed into an arch, means for fastening the opposite ends of said lead wires, a miniature lamp suspended from said fastening means and in series with said batteries and switch, a statuette comprising a nuptial couple positioned upon said base member directly below said lamp, a bell reflector for said lamp reflecting the rays of light therefrom upon said statuette, bridal ornaments surrounding said cover section of said base member and bridal ornaments projecting inwardly from the arch towards said statuette.



2,439,179
LINT CLEANING APPARATUS
Albert S. McGinnis and Harry Berry, Cairo, Ill., assignors to Industrial Patents Corporation, Chicago, Ill., a corporation of Delaware
Application July 20, 1945, Serial No. 606,141
4 Claims. (Cl. 19—72)

1. A cottonseed lint cleaning apparatus including baffle means in a suction line through which the lint is moved by suitable suction means, said suction line being formed in part of an elongated tubular member having an upper and lower side when in operative position, oppositely disposed sets of baffles in said tubular member, one set of baffles being disposed along said upper side, the other set of baffles being disposed along said lower side, the upper side of said member being provided with slots between adjacent baffles, and the lower side of said member being provided with slots adjacent to the front edges of the corresponding baffles.

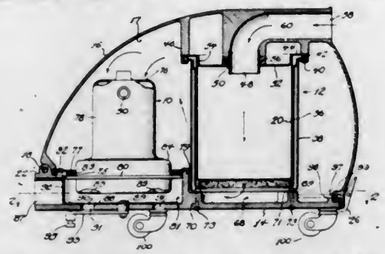


2,439,180
METHOD OF PRODUCING DRIED MEAT
Harry H. McKee, Herbert W. Keefer, and William J. McCue, Chicago, Ill., assignors to Industrial Patents Corporation, Chicago, Ill., a corporation of Delaware
Application September 26, 1942, Serial No. 459,807
1 Claim. (Cl. 99—208)

The process for the manufacture of dehydrated partially cooked meat which comprises subjecting raw meat to a partial cooking operation at a temperature of from approximately 160° F. to 180° F. for about 20 to 30 minutes, cooking the meat at said temperature and for said time period to release the natural juices from the meat and substantially coagulate the proteins, continuing said cooking of the meat in the released juices at a reduced temperature below approximately 160° F. for a period of one to three hours while allowing free evaporation of moisture and to cause the evaporated juices to

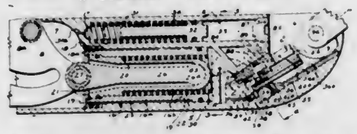
be reabsorbed in the meat, said evaporation of moisture continuing until the meat has a moisture content of from about 40 to 50 percent, then hashing the product, and then dehydrating said product to have a moisture content not in excess of 10 percent.

2,439,181
LUMINESCENT SCREEN
Frederick H. Nicoll, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 17, 1946, Serial No. 670,427
9 Claims. (Cl. 250—80)



1. A luminescent screen comprising two dichroic reflectors, one of which transmits a maximum amount of energy of a first wavelength and reflecting a maximum amount of energy of a second wavelength, the second dichroic reflector reflecting a maximum amount of energy of said first wavelength and transmitting a maximum amount of energy of said second wavelength and between said dichroic reflectors a layer of a phosphor which emits light of one of said wavelengths and can be excited by energy of the other of said wavelengths.

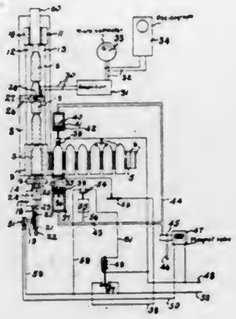
2,439,182
BLOWER CONTROL DEVICE FOR SUCTION CLEANERS
Joseph H. Nuffer, Toledo, Ohio, and Lynn H. Latta, Deerfield, Ill., assignors to Air-Way Electric Appliance Corporation, Toledo, Ohio, a corporation of Delaware
Application September 27, 1943, Serial No. 503,918
1 Claim. (Cl. 230—47)



In a suction cleaner, a base, a suction unit on said base having an air inlet and an air outlet,

an arch shaped upward extension on said base at one end thereof, said extension providing a blower outlet open at the outer end and communicating with the suction unit outlet at its inner end, a cover on said base enclosing said suction unit, said base being apertured in the region of said upward extension and at a point communicating with the suction unit outlet to

enable normal discharge of air from the suction unit, a pivotally mounted valve disc on said base having apertures adapted to register with the apertures in the base, an upwardly extending valve flange on the periphery of the disc adapted when the disc and base apertures are in registry to close the blower outlet, and means for turning the valve disc, said last means being accessible from the underside of the base.

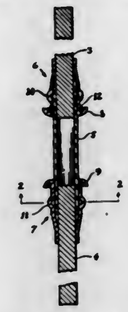


2,439,183
HYDRAULIC JACK
Herbert E. Page, Pasadena, Calif.
Application March 20, 1944, Serial No. 527,199
5 Claims. (Cl. 60—52)

5. Hydraulic apparatus comprising a body, a ram cylinder in said body, a ram reciprocable in said body for protractive and retractive movements, a spring arranged to cause limited protractive movement of said ram, said body further comprising hydraulic pressure generating means, a reservoir of hydraulic fluid and hydraulic pressure accumulating means, a plurality of conduits interconnecting said cylinder, said pressure generating means, said reservoir and said accumulating means, and hydraulic control means settable to a plurality of positions selectively to interconnect said conduits, said control means acting in a first position to enforce idling of said pressure generating means, in a second position to permit protractive movement of said ram by said spring and by said pressure generating means and simultaneously a charging of said accumulating means, and acting in a third position to permit retractive movement of said ram by said pressure generating means and by said accumulating means.

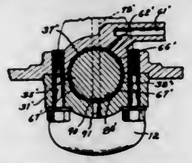
2,439,184
MAGNETIC FLAW DETECTOR
Edward G. Parvin, Roselle, N. J., assignor to National Pneumatic Company, New York, N. Y., a corporation of West Virginia
Application January 23, 1943, Serial No. 473,285
3 Claims. (Cl. 175—183)

1. Apparatus for testing for flaws substantially cylindrical metallic pieces capable of retaining a degree of magnetization after being magnetized, including a plurality of bars for providing a carrier for the pieces, means to compel the pieces to rotate on the bars, means for imparting longitudinal movement to the pieces as they rotate,



a magnetizable member forming part of a detecting circuit, and means for supporting the member to effect positive engagement between the member and a piece as the pieces rotate and move past the member.

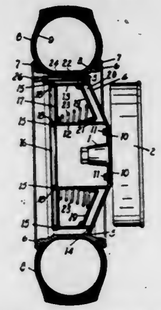
2,439,185
LADDER ATTACHMENT STEP
Conrad J. Patt, Chicago, Ill.
Application December 7, 1945, Serial No. 633,278
4 Claims. (Cl. 304—31.5)



1. An attachment for ladders, embodying a bracket comprising an upright member, the upper end of which is shaped to form a downwardly opening rung-engaging hook, a substantially L-shaped member, one portion of which engages the top of the hook intermediate the ends of the former, the other end of the L-shaped member engaging and secured to said upright member, the free end of the said portion being bent back upon itself and secured to said hook, means securing the upright member to another ladder rung, and a step secured to the bracket to project between the side members of the ladder and for a substantial distance on each side of the first said ladder run, said bracket being disposed in close proximity to the ladder.

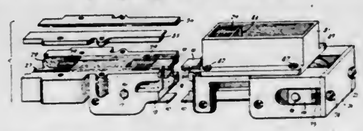
2,439,186
MECHANICAL SUPPORT FOR INSULATORS
Eric Pohle, Clifton, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application September 26, 1945, Serial No. 618,654
1 Claim. (Cl. 174—158)

A device for supporting a hollow cylindrical insulator, which comprises a cylindrical metal rod having its end fitting in the end of said hollow insulator and terminating in said insulator and a short hollow metal fastener on said rod having a crimp tightly fitting around the same end of said hollow insulator.



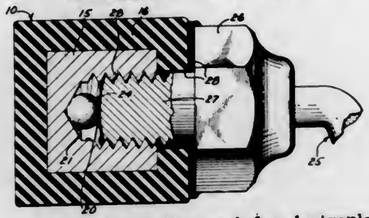
2,439,187
APPARATUS FOR FLUSHING FOREIGN MATTER FROM BEARINGS
Delmar G. Roos, Toledo, Ohio, assignor to Willys-Overland Motors, Inc., Toledo, Ohio, a corporation of Delaware
Application June 17, 1943, Serial No. 491,242
8 Claims. (Cl. 184—6)

1. In combination; a crankshaft having a journal, a bearing; a connecting rod connected to said crankshaft; a bearing for connecting said connecting rod to the crankshaft; a groove in said crankshaft journal bearing extending throughout a portion of the circumference of said bearing; means connecting said groove with a supply of lubricant; a duct in said crankshaft having one end in normal communication with the groove in said journal bearing, said duct arranged to convey lubricant to the connecting rod bearing; a vent opening arranged in the non-grooved portion of said journal bearing in circumferential alignment with the groove therein, said duct being arranged to register with said vent opening during each revolution of the crankshaft.



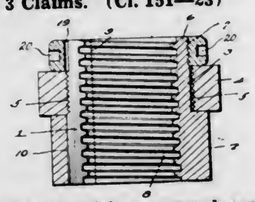
2,439,188
TIRE PRESSURE STABILIZER
Edwin R. Sage, Los Angeles, Calif.
Application March 14, 1946, Serial No. 654,257
6 Claims. (Cl. 152—418)

1. A wheel comprising a pneumatic tire rim and an inwardly dished supporting web attached thereto and having means for attachment to a wheel hub, a pneumatic tire on said rim, concentrically disposed radially spaced annular expansion chamber side wall members welded at their inner ends to the outer side of the web and having facing annular channels at their outer ends, the inner side wall member being of such diameter as to afford access to the wheel attaching means, the outer side wall member being adjacent to but spaced from the rim, the outer edge of the rim projecting substantially beyond the outer ends of the wall members to constitute a guard therefor, an annular closure plate disposed between said wall members, snap rings coacting with said channels for retaining said closure plate, an annular plunger-like movable expansion chamber end wall member dis-



posed between said side wall members and provided with packings coacting therewith, said web, side wall members and movable end wall member coacting to provide an expansion chamber, a helically coiled spring arranged between said movable end wall member and said closure member to impart yielding thrust to said end wall member, and a conduit connecting the expansion chamber to the tire, said conduit being mainly disposed between the outer wall member and the rim and being provided with a filling valve, the spring being of such tension as to permit the expansion of the expansion chamber when the pressure within the tire exceeds a predetermined amount and to maintain substantially uniform predetermined pressure within the tire.

2,439,189
STAPLE FEEDER
Werner Schafroth, Brookline, Pa., assignor to International Staple and Machine Company, Clifton Heights, Pa., a corporation of Pennsylvania
Application November 19, 1945, Serial No. 629,355
9 Claims. (Cl. 1—3.1)



1. A staple feeding device comprising rails positioned to contact the intermediate portions of the staples, with open passages at the sides of the rails for free passage of the ends of the staples, a moving belt positioned between the rails adapted to contact the intermediate portions of the staples, means resiliently holding the belt against the staples, guard rails positioned above the belt and staples against which the said resilient means holds the staples, and means feeding said staples to the said belt.

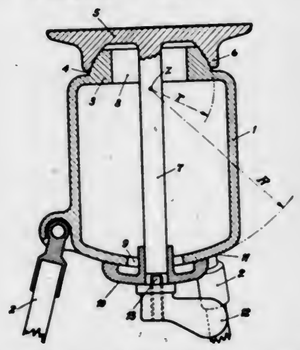
2,439,190
ELECTROPLATING RACK
Leroy E. Schroeder, Elmwood Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application July 13, 1944, Serial No. 544,771
2 Claims. (Cl. 204—297)

1. An article supporting rack for electroplating comprising an insulation coated frame of electrical conducting material, an insulation coated cross bar thereof having a screw-threaded cavity terminating in a cone-shaped inner end wall, a deformable contact pellet of conducting material engaging in the cone-shaped inner end wall, and an article supporting and electrical conducting hook having a screw-threaded portion fixedly threaded into the cavity under compression against and deforming said contact pellet to insure a positive electrical contact between said bar and hook.

2,439,191
LOCK NUT
Robert W. Smith, Brunswick, Maine
Application February 26, 1946, Serial No. 650,269
3 Claims. (Cl. 151—23)

3. A lock nut comprising a wrench section having internal threads and provided with a longitudinal internal arcuate cut-away, a locking section provided with internal thread sections matching the internal threads of said wrench section, and slidably engaging said cut-away, said locking section being provided with external threads, an external unthreaded reduced extension for said wrench section substantially aligning with said external threads, a locking nut engaging said external threads and slidable about said reduced extension, a retaining nut and retaining screw threads formed on a still further reduced extension of said wrench section, said retaining nut being provided with an internal arcuate slot at least co-extensive with said locking section.

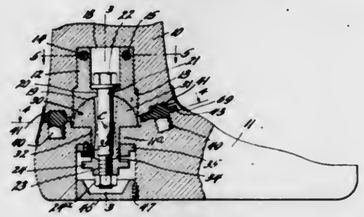
2,439,192
SILICOBORATE GLASS
Kuan-Han Sun and Thomas E. Callear, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application August 9, 1946, Serial No. 689,531
1 Claim. (Cl. 106—54)



A glass resulting from a batch containing: lithium oxide, 8 to 18 percent or 27 to 38 cationic percent; beryllium oxide, 3 to 16 weight percent or 3 to 18 cationic percent; aluminum oxide, 2.5 to 23 weight percent or 2 to 10 cationic percent; silicon oxide, 10 to 34 weight percent or 10 to 18 cationic percent; boron oxide, 21 to 45 weight percent or 30 to 40 cationic percent.

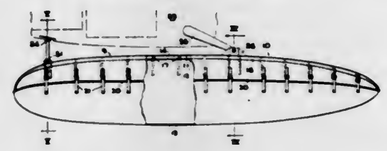
2,439,193
SMALL MOTOR, PARTICULARLY SYNCHRONOUS FRACTIONAL HORSEPOWER MOTOR
Ernst Weber, Uster, Richard Pudelko, Zug, Carl Bollmann, Zurich-Albisrieden, and Henri Wermeille, Zug, Switzerland, assignors to Landis & Gyr, A. G., Zug, Switzerland, a corporation of Switzerland
Application July 4, 1942, Serial No. 449,794
In Switzerland July 14, 1941
5 Claims. (Cl. 172—36)

1. A fractional horsepower induction motor having a stator producing a rotating field, a rotor to be driven by said field, and bearing means for the rotor in contact therewith below the horizontal plane through the axis thereof, said axis being spaced a small distance from and directly below the axis of the stator field whereby the field acts more strongly on the rotor in the direction of gravity to draw it down and hold it normally in engagement with said bearing means.



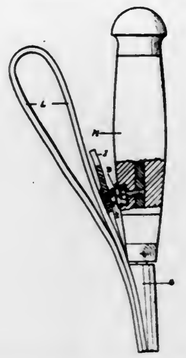
2,439,194
STAND WITH AN ADJUSTABLE RECEPTION-PLATE CAPABLE OF BEING TIPPED OVER IN EVERY DIRECTION
Heinrich Wild, Kuttigen, Switzerland, assignor to the firm Kern & Co. A. G., Aarau, Switzerland
Application January 18, 1945, Serial No. 573,419
In Switzerland September 27, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires September 27, 1963
4 Claims. (Cl. 248—181)

1. In a tripod head, the combination of a member comprising a first convexly shaped portion at one end and a second convexly shaped portion at the opposite end, said portions having a common spherical center, positioned at a point



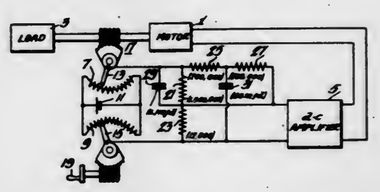
intermediate to both said portions, said member having a hole extending from one convex portion to the other, a reception member capable of supporting an apparatus of the type described and comprising a concave lower portion fitted on said first convex portion, an elongated rod rigidly fastened to the reception member, said rod having a diameter smaller than said hole, a plate member supported on said rod and comprising a concave portion fitted on said second convex portion, and clamping means for securing said plate member on the second convex portion in selected variable positions, thereby causing the reception member to be secured in a selected angular position relative to the first convex portion.

2,439,195
ARTIFICIAL LIMB
Harry M. Witmyer and William R. Simpson, Jr., Manheim, Pa.
Application May 23, 1945, Serial No. 595,338
12 Claims. (Cl. 287—88)



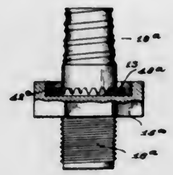
10. An artificial limb comprising two parts and a device for connecting the same for universal movement about a central point, resilient means interposed between said parts and normally maintaining them in a predetermined angular relatownship, and second means offset laterally from said device for limiting relative rotation of said parts about an axis extending longitudinally of one of them.

2,439,196
PNEUMATIC AIRCRAFT FLOAT
Robert A. Wolf, Eggertsville, and Luell M. Graham, Williamsville, N. Y., assignors to Bell Aircraft Corporation, Wheatfield, N. Y.
Application August 27, 1945, Serial No. 612,746
5 Claims. (Cl. 114—66.5)



1. A float for an aircraft comprising in combination a rigid buoyant cell and a pneumatic cell, said rigid cell having an upper wall, a spaced lower wall, fastening means carried by said upper wall for securing said rigid cell to the aircraft structure, said lower wall being concave so as to give shape-sustaining support to said pneumatic cell, a corner piece at the joining edges of said upper and lower walls, a buffer member secured at its edges to said corner piece, and a fastening strip carried by said member and secured along one edge to said pneumatic cell.

2,439,197
SHEATHED KNIFE FASTENING
Garrett J. Wykoff, Yorktown, Va.
Application November 5, 1945, Serial No. 626,621
2 Claims. (Cl. 224—2)

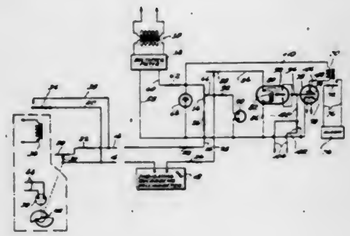


2. The combination with a knife including a blade and hilt and a sheath for the knife blade, of a relatively long flexible element connected with and extending from the blade receiving end of the sheath, said flexible element being adapted for connection with a belt, a tongue cut from the flexible element, and separable snap fastener elements carried by the tongue and by the hilt of the knife for releasably securing the blade against withdrawal from the sheath.

2,439,198
SERVOMOTOR CONTROL CIRCUIT
Alda V. Bedford, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 29, 1943, Serial No. 485,037
6 Claims. (Cl. 318—29)

1. An electrical follow-up system including an input shaft, an output shaft which is to be driven to an angular position corresponding to that of said input shaft, a D.-C. source, means for deriving from said source a control voltage having a magnitude which is a predetermined function of the angular difference between the positions of said input and output shafts, an electric motor coupled to said output shaft, amplifier means connected to said motor for controlling the energization thereof, and a transmission network for applying said control voltage to the input circuit of said amplifier, said transmission network including attenuator means, and a plurality of filter means having different time constants connected in parallel with said attenuator means for integrating said control voltage with respect to time.

2,439,199
COUPLING DEVICE
Gustave A. Borg, Naugatuck, Conn.
Application July 7, 1944, Serial No. 543,913
3 Claims. (Cl. 285—84)



1. In a hose coupling comprising a coupling connection including a tubular boss adapted to extend into an end of a hose, means for securing said boss in said hose comprising a gradually, continuously and progressively expanding, external compound screw thread on said boss, said thread consisting of helical convolutions of alternately relatively narrow, shallow grooves and relatively wider, deeper grooves together forming helically-extending ridges located in intercoiled relation alternately in closer and wider spacing for helically gripping said hose interiorly, and a locking sleeve located exteriorly on said hose in registry with said boss and cooperating with said compound thread to fix said coupling connection against unintentional withdrawal from said hose under developed pulling forces.

2,439,200
FLOTATION OF IRON WITH ORGANIC ACID AND PETROLEUM SULFONATE
Robert B. Booth, Springdale, and Earl C. Herkenhoff, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application January 5, 1946, Serial No. 639,434
10 Claims. (Cl. 209—166)

1. A method of beneficiating oxidized iron ores by froth flotation of the ore in the form of an aqueous pulp, which comprises conditioning the ore with an organic acid, having a disassociation constant of at least 10 to the minus 7, said acid being selected from the group consisting of water soluble lower aliphatic monobasic carboxylic acids and aromatic sulfonic acids, the amount of said acid being such that on dilution to froth flotation density and floating, the rougher tailing in the absence of added alkali shows a pH in the range of 2 to 6, and subjecting the aqueous pulp of said treated ore to froth flotation in the presence of a collector for oxidized iron minerals, the major constituent of which is an oil soluble petroleum sulfonate obtained in the refining of petroleum lubricating oils, and removing a concentrate relatively rich in iron and a tailing relatively poor in iron.

2,439,201
REMOTE RADIO RECEIVER TUNING INDICATING APPARATUS
Robert A. Clark, Jr., Chicago, Ill., assignor to A. C. Nielsen Company, Chicago, Ill., a corporation of Illinois
Application October 29, 1945, Serial No. 625,150
4 Claims. (Cl. 234—1.5)

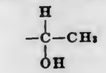
2. Apparatus for indicating at a remote point the transmitting station to which a radio receiver is tuned for reception when in use, comprising means associated with said receiver and responsive to tuning of said receiver for developing a signal having a characteristic variable with tuning of said receiver to represent the station to which the receiver is tuned for reception when in use, means responsive to the turning of said receiver on and off for correspondingly modifying

said signal, a signal transmission link for transmitting said signal from said receiver to said remote point, and means at said remote point controlled over said link by said signal and responsive to said modification of said signal and said variations in the variable characteristic thereof for indicating when said receiver is in use and the station to which the receiver is tuned for reception.

2,439,202
COMPOSITION OF BUTADIENE-ACRYLONITRILE COPOLYMER AND STYRENE-ACRYLONITRILE COPOLYMER
Lawrence E. Daly, Mishawaka, Ind., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application October 19, 1946, Serial No. 704,541
4 Claims. (Cl. 260—45.5)

1. A composite thermoplastic homogeneous mixture of a normally elastic rubbery copolymer of butadiene-1,3 and acrylonitrile and a hard normally inelastic resinous thermoplastic copolymer of monomers consisting essentially of from 50 to 85% by weight of styrene and correspondingly from 50 to 15% by weight of acrylonitrile, said copolymers being present in proportions of from 25 to 90% by weight of said resinous copolymer and correspondingly from 75 to 10% by weight of said rubbery copolymer, said last-named percentages being by weight based on the sum of the weights of said resinous and rubbery copolymers.

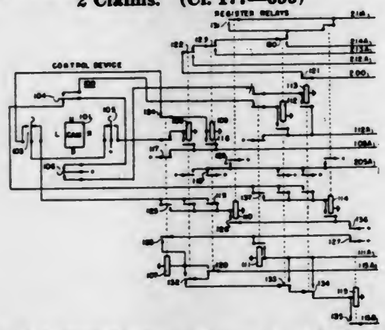
2,439,203
PROCESS FOR PRODUCING BETA-FLUOROETHYL THIOLACETATE
Ellsworth Knowlton Ellingboe, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 8, 1944, Serial No. 544,140
1 Claim. (Cl. 204—158)



A process which comprises irradiating, with light of wave length in the range 0.015 to 0.4 micron, a liquid reaction mixture of vinyl fluoride, thiolacetic acid and from 0.5 to 5%, based on the thiolacetic acid of butyl disulfide, and isolating beta-fluoroethyl thiolacetate.

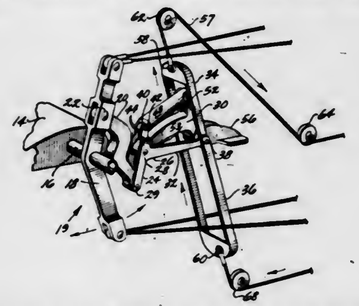
2,439,204
PARA-ACETYLBENZYL COMPOUNDS
William S. Emerson, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application June 22, 1946, Serial No. 678,672
9 Claims. (Cl. 260—483)

1. The compounds having the formula:



where X is selected from the class consisting of

and



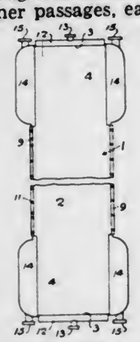
2,439,205
REMOTE CONTROL SYSTEM
Harry G. Evers, Chicago, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application August 3, 1944, Serial No. 547,955
2 Claims. (Cl. 177—353)

2. In a remote control system, a control station having a plurality of control switches and a code sender, a remote station having a plurality of apparatus units each corresponding to one of said control switches, a signal channel between said stations, means at said control station operated in response to the momentary operation of one of said control switches causing said code sender to transmit two coded signals over said signalling channel with a predetermined time interval between them, means at said remote station operated in response to the reception of said coded signals causing the operation of the corresponding apparatus unit for said predetermined time interval, and cross-connecting means for varying the operation of said first means for changing the duration of said time interval.

2,439,206
CONTROL SURFACE LOCK FOR AIRCRAFT
Alton Edwin Farr, Los Angeles, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application November 16, 1942, Serial No. 465,771
9 Claims. (Cl. 244—1)

1. In a control device for a movable flight control surface of an airplane the combination of: a control surface; a rigid member connected to said surface to be moved therewith; a stationary support; and a linkage means consisting of a plurality of pivotally connected links, the end links being pivotally connected to a movable portion of said rigid member and to said stationary support respectively; and means for selectively moving at least one of said links either to one position and holding it therein for arranging said pivotal connections on a dead center line thereby

positioning said links to act as a rigid strut immovably relating said rigid member to said support or to another position for arranging said pivotal connections away from a dead center line thereby positioning said links to permit free movement of said rigid member relative to said support.

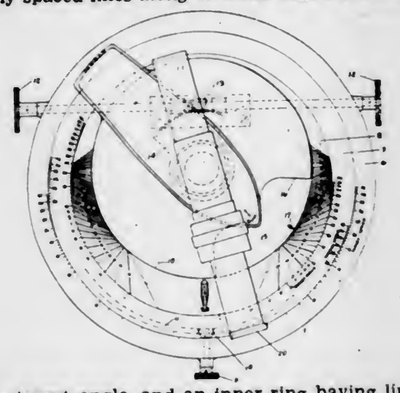


2,439,207
THERMOPLASTIC COMPOSITION
Roy Chester Feagin, New York, N. Y., assignor to Austenal Laboratories, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application May 20, 1944, Serial No. 536,641
8 Claims. (Cl. 106—245)

1. A casting pattern formed of a thermoplastic moldable form-retaining composition consisting essentially of wax and polymerized oil and being devoid of any non-meltable ingredient leaving any substantial ash residue upon combustion thereof, the wax constituting at least 50% of the composition, whereby said pattern after investment in refractory mold material may be completely eliminated therefrom by the application of heat.

2,439,208
HEAT EXCHANGER
Walter Gloyer, Port Washington, N. Y., assignor to American Locomotive Company, New York, N. Y., a corporation of New York
Application September 25, 1945, Serial No. 618,556
2 Claims. (Cl. 257—245)

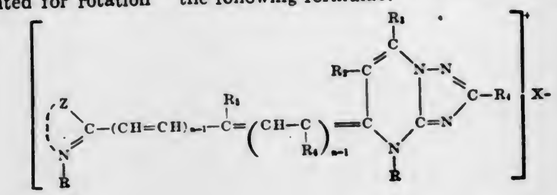
1. A three-fluid heat exchanger comprising a rectangular shell having front and rear walls, side walls connecting said front and rear walls, and end walls connected to said front, rear and side walls; a plurality of separate spaced parallel plates disposed in said shell extending from one of said end walls to the other of said end walls and from one of said side walls to the other of said side walls, dividing said shell into a central passage and other passages on each side of said central passage, each of said passages being entirely separated from the remaining passages, said central passage being open at its opposite ends through said end walls for flow of one fluid through said exchanger, and said other passages being open at their opposite end portions laterally and alternately through said side walls, said other passages being for flow of two other fluids through said exchanger whereby said oth-



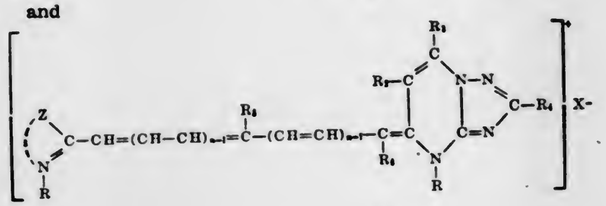
er two fluids are in heat exchange relation with each other; a header secured to each of said end walls for heading said central passage; a header at each end portion of each of said side walls, the headers of one side wall heading some of said other passages and the headers of the other side wall heading the remaining of said other passages, no two adjacent of said other passages opening into the same headers; a straight corrugated fin in said central passage for guiding said fluid flowing therethrough from one of said end wall headers to the other of said end wall headers; and a corrugated fin element disposed in each of said other passages, each of said corru-

gated fin elements including a portion having corrugations running lengthwise of said shell, the opposite ends of said portion each being mitered with another corrugated fin portion having its corrugations normal to the corrugations of said first mentioned portion and extending to the adjacent side wall header whereby each of said elements guides fluid from one of said side wall headers laterally into said shell, then longitudinally through said shell, and then laterally from said shell into the other correlated side wall header, said corrugated fin elements thereby assuring fluid flow through every part of each of said other passages.

2,439,209
TORPEDO DIRECTOR
Arthur Sherman Halsey, Washington, D. C., assignor to the United States of America as represented by the Secretary of the Navy.
Application June 15, 1925, Serial No. 37,401
3 Claims. (Cl. 235—61.5)

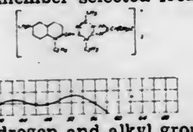


1. In a torpedo director having a pedestal, a telescope supporting body mounted for rotation upon the pedestal, and a telescope mounted on said body, a computing mechanism comprising three concentric indicia bearing rings, the outer ring being normally stationary and having logarithmically spaced indications representing target speed, the middle ring being rotatable within the outer ring and having lines representing torpedo speed on its outer edge for registry with the indications on the outer ring and having logarithmically spaced lines along its inner edge represent-



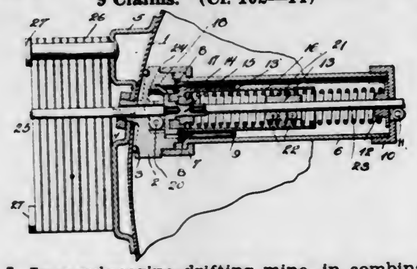
ing target angle, and an inner ring having lines extending thereacross at various angles interconnecting logarithmically spaced indicia on its outer edge with arithmetically spaced indicia on its inner edge to convert the logarithmical values of the target angle to arithmetic values of telescope rotation, and a pointer positioned by the telescope supporting body to sweep along the arithmetic portion of said lines.

2,439,210
PHOTOGRAPHIC SILVER-HALIDE EMULSIONS CONTAINING 1,3,4-TRIAZAINDOLIZINE CYANINE DYES
Newton Heimbach, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Original application April 11, 1946, Serial No. 661,353. Divided and this application June 7, 1946, Serial No. 675,289
4 Claims. (Cl. 95—7)



1. A photographic gelatino silver-halide emulsion which contains a dyestuff characterized by a formula selected from the class consisting of the following formulae:

and



wherein R represents a member selected from the class consisting of alkyl and aralkyl groups, R_2 is a member selected from the class consisting of hydrogen, alkyl, carbalkoxy, and aryl groups, R_3 and R_4 represent the members selected from the class consisting of hydrogen, alkyl, aryl, aralkyl, alkoxyphenyl, and dialkoxyphenyl groups, R_5 is a member selected from the class

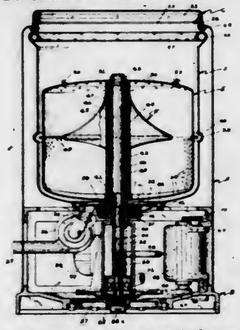
consisting of hydrogen and alkyl groups, R_6 is a member selected from the class consisting of hydrogen and methyl groups, n represents a positive integer ranging from 1 to 2, X represents an anionic radical, and Z represents the atoms necessary to complete a heterocyclic nitrogenous system.

2,439,211
SUBMARINE MINE
Clarence N. Hickman, Washington, D. C., assignor to the United States of America as represented by the Secretary of the Navy
Application November 13, 1924, Serial No. 749,644
9 Claims. (Cl. 102—14)

5. In a submarine drifting mine, in combination, a casing, a reducible weight composed of a plurality of individual units each pivotally supported exteriorly of the casing, and hydrostatically controlled means for progressively releasing said units in accordance with the depth of the mine.

2,439,212
DITHIADECANE DIESTER
Henning Waldemar Jacobson, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 10, 1946, Serial No. 702,364
1 Claim. (Cl. 260—488)

4,7-Dithiadecane-1,10-diol bis(2,2,3-trimethylbutanoate).



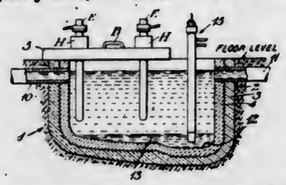
2,439,213
HEAT-RESISTANT COPOLYMER OF STYRENE AND PARA-CHLORO-ALPHA METHYLSTYRENE
John Paul Kispersky, West Lafayette, Ind., and Raymond B. Seymour, Chattanooga, Tenn., assignors to Monsanto Chemical Company, a corporation of Delaware
No Drawing. Application March 20, 1946, Serial No. 655,892
2 Claims. (Cl. 260—74)

1. A resinous material consisting of the interpolymer of 58% para-chloro-alpha-methylstyrene and 42% styrene.

2,439,214
COPOLYMERS OF ALPHA, BETA-ETHYLENICALLY UNSATURATED PHOSPHONIC ACID DERIVATIVES
Richard Vernon Lindsey, Jr., Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 11, 1944, Serial No. 535,197
8 Claims. (Cl. 260—84)

3. An interpolymer of 5–95% of a phosphonic compound of the class consisting of dialkyl esters, diaryl esters and tetraalkyldiamides of alkene phophonic acids in which acids the phosphorus is bonded to carbon of an alkenyl radical, said carbon being ethylenically doubly bonded to a second carbon of said radical, and 95–5% of a comonomer of the class consisting of alkyl methacrylates, methyl acrylate, styrene, ethylene, acrylonitrile, vinyl chloride, vinyl acetate, and vinylidene chloride.

2,439,215
CLOTHES-WASHING MACHINE HAVING RECIPROCATING CLOTHES RECEPTACLE WITH RESTRICTED PASSAGEWAY
Arthur D. Lund, Minneapolis, Minn., assignor to Solar Corporation, Milwaukee, Wis., a corporation of Delaware
Application March 17, 1944, Serial No. 526,859
12 Claims. (Cl. 68—23)



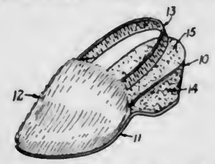
7. In a washing machine, a tub, a perforated receptacle mounted for axial reciprocation in the tub and normally having substantial peripheral sealing engagement with the tub whereby the receptacle will have a piston action therein to force fluid through the perforated receptacle when the latter is reciprocated, means for reciprocating the receptacle to produce the washing action, means for spinning the tub when in a predetermined axially stationary position to extract fluid from the receptacle and articles having been washed therein, and means operative upon positioning the receptacle in said axially stationary position for interrupting said substantial sealing engagement and providing full clearance between the receptacle and tub.

2,439,216
METHOD FOR REMOVING METALLIC IRON FROM A FUSED ALUMINA-CRYOLITE COMPOSITION
David S. McLellan, Longview, Wash., assignor to Reynolds Metals Company, Richmond, Va., a corporation of Delaware
Application July 23, 1946, Serial No. 685,649
3 Claims. (Cl. 75—29)

2. In the treatment of aluminiferous cryolite fusions with a reducing agent to reduce iron ox-

ide to iron in which the iron settles to the bottom of the confining vessel, the improvement which comprises carrying out the reduction at a temperature in the range of 1050° C. to 1200° C. to form a semi-pasty body or iron in the confining ves-

sel, inserting into the body of iron a lifting device, cooling that portion of the lifting device inserted into the body of iron to freeze a mass of iron thereon, and raising the lifting device to remove the mass of frozen iron out of the fusion.



2,439,217

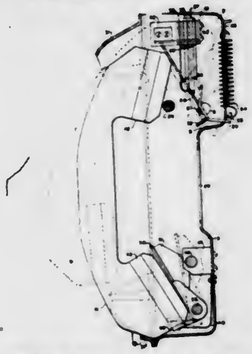
OPEN HEEL SHOE HAVING A HEEL COVERING AND METHOD OF MAKING SAME

George Naidor, Gouldsboro, Pa.

Application June 28, 1947, Serial No. 757,850

6 Claims. (Cl. 36—19.5)

1. In a shoe, an insole, a heel attached to its rear end, and a pre-formed enclosure enveloping said heel and rear end, said enclosure comprising a sheet defining a heel-seat cover and having front, side, and rear edges, and a second sheet defining a heel cover and stitched along its upper edge to the side and rear edges of said first-named sheet.



2,439,218

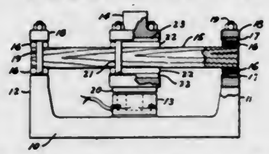
TELEPHONE SUBSTATION SET

Herbert F. Obergfell, deceased, late of River Forest, Ill., by Amanda Obergfell, executrix, River Forest, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware

Application May 13, 1944, Serial No. 535,403

9 Claims. (Cl. 179—100)

3. A locking mounting for a telephone handset including a base, recessed portions extending within said base for receiving the receiver and transmitter portions of the handset, a lock plate pivotally mounted in one of said recessed portions of said base, a lock latch associated with said plate, a lock member located partly within said one recessed portion, a spring for actuating said member, a lock lever, means including said member under tension of said spring necessitating movement of said lock lever before said handset can be removed from said portions.



2,439,219

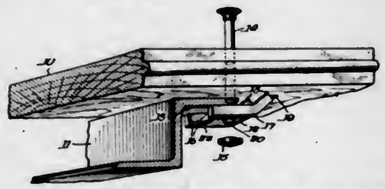
APPARATUS FOR TRANSMITTING INTENSE VIBRATIONS FOR PERFORMING WORK

John C. O'Connor, Dayton, Ohio

Application June 9, 1944, Serial No. 539,585

6 Claims. (Cl. 172—126)

1. In apparatus for performing work by vibration employing a tuned vibratory system, a resilient subassembly for the vibratory system consisting of a beam adapted to vibrate transversely to its length, and pads of universally flexible material bonded to the beam and interposed between the beam and its support.



2,439,220

FLOOR CLIP

Oscar E. Rothfuchs, Michigan City, Ind., assignor to Pullman-Standard Car Manufacturing Company, Chicago, Ill., a corporation of Delaware

Application February 8, 1946, Serial No. 646,319

9 Claims. (Cl. 189—35)

1. A floor clip comprising a channel shaped member having a web and upwardly directed flanges, said clip having an upwardly inclined portion having upwardly directed flanges with the end edges of said flanges perpendicular to the inclined web portion to form upwardly directed corner portions providing prongs, and a horizontally projecting flange member integral with the clip at the base of said prongs.

2,439,221

SILK TREATMENT

Ben W. Rowland and Douglas Fronmuller, Appleton, Wis., assignors to The Institute of Paper Chemistry, Appleton, Wis., a corporation of Wisconsin

No Drawing. Application June 14, 1940, Serial No. 340,573

1 Claim. (Cl. 117—139.5)

In the art of processing silk, the improvement which comprises subjecting silk to a treatment in an aqueous bath consisting of a mineral oil emulsion, a small amount of the sodium salt of monoglyceryl-lauryl sulphate, a small amount of sulphonated castor oil and sufficient acetic acid to adjust the pH value of said bath to about 3.45.

2,439,222

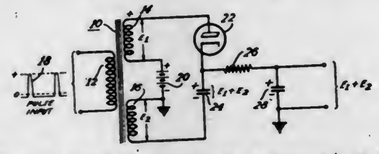
PIGMENT COMPOSITIONS

Mario Scalera and Robert E. Brouillard, Somerville, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application January 25, 1946, Serial No. 643,462

12 Claims. (Cl. 106—288)

7. A process of preparing a composite pigment which comprises dissolving from 5 to 75% of pigments of the halogenated isodibenzanthrone class and 95 to 25% of blue tetrabenzotetrazaporphine pigments in concentrated sulfuric acid and coprecipitating a composite pigment by diluting the mixture with water.



2,439,223

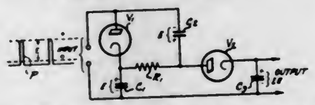
RECTIFIER SYSTEM

Otto H. Schade, West Caldwell, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application February 19, 1945, Serial No. 578,678

19 Claims. (Cl. 171—97)

12. In a voltage step-up arrangement, a first rectifying unit including an energy-storage device, means for applying a varying potential to said rectifier unit so as to develop a substantially constant D.-C. voltage on said energy-storage device, a second rectifier unit including a further energy-storage device, means for coupling together said rectifier units so as to develop on said further energy-storage device a substantially constant D.-C. voltage approximately equal to the D.-C. voltage developed on the energy-storage device of said first rectifier unit, and means for effectively connecting said two energy-storage devices in series electrically.



2,439,224

RECTIFIER

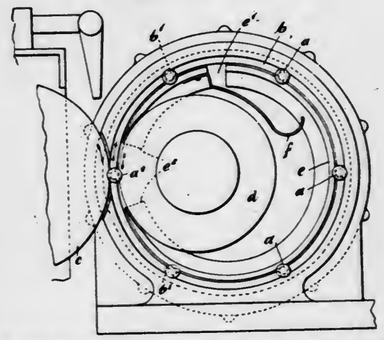
Winfield R. Koch, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application November 6, 1945, Serial No. 627,056

3 Claims. (Cl. 171—97)

1. A rectifier system adapted to receive a series of voltage pulses across the input terminals thereof, said system including a first series combination of an electron discharge tube and an energy-storage device connected across the said input terminals, one terminal of said energy-storage device being connected to the anode of said electron discharge tube, a second series combination including an electron discharge tube and two energy-storage devices also connected across the said input terminals, the said electron discharge tube of the second series combination being connected intermediate the said two energy-storage devices thereof, said first and second series combinations effectively being in parallel relation, an impedance element, and means for connecting the anode of the electron discharge tube of said first series combination through said impedance element to the cathode of the electron discharge tube of said second series combination.

2,439,225



WORKPIECE FEEDING DEVICE FOR CENTERLESS GRINDING AND LIKE MACHINES

Arthur Scrivener, Birmingham, England

Application February 15, 1945, Serial No. 578,049

In Great Britain February 24, 1944

1 Claim. (Cl. 51—103)

A feeding device for centreless grinding and like machines which have a grinding roll and an opposed control roll, comprising a carrier ring which passes between the rolls and has a thickness less than the normal distance between the rolls, means for rotating the carrier ring upward between the rolls, retaining rings on both sides of and concentric with the carrier ring which have gaps to leave clearance for the rolls and which are spaced apart slightly more than the normal distance between the rolls, and notches in the carrier ring each of which holds a workpiece to be passed between the rolls, has its trailing side inclined toward the control roll and is substantially wider than the workpiece, whereby during rotation of the carrier ring the workpiece rests against a retaining ring until it reaches the gap therein and then falls against the control roll.

2,439,226

COPOLYMERS OF FUMARODINITRILE AND ALPHA-SUBSTITUTED STYRENES

Raymond B. Seymour, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application February 3, 1944, Serial No. 520,920

8 Claims. (Cl. 260—78.5)

1. A solid resinous material consisting of the interpolymer of a mixture of 5% to 40% by weight of fumarodinitrile and the remainder consisting of a compound of the group of alpha-substituted styrenes consisting of alpha-methylstyrene, alpha-para-dimethylstyrene and alpha-phenylstyrene.

2,439,227

TERNARY INTERPOLYMERS OF STYRENE, MALEIC ANHYDRIDE, AND ACRYLONITRILE

Raymond B. Seymour and John P. Kispersky, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application December 26, 1944, Serial No. 569,908
11 Claims. (Cl. 260—78.5)

1. A resinous product consisting of interpolymerized styrene, maleic anhydride and acrylonitrile in substantially the proportions: styrene, 45% to 85% by weight; maleic anhydride, 7.5% to 27.5% by weight; and acrylonitrile 7.5% to 27.5% by weight.

2,439,228

DIARYL PARAFFINS AND THEIR PRODUCTION

Murray Gray Sturrock, Thomas Lawe, and Woodrow Ernest Kemp, Montreal, Quebec, Canada, assignors to Dominion Tar & Chemical Company, Limited, Montreal, Quebec, Canada

No Drawing. Application November 14, 1944, Serial No. 563,454
7 Claims. (Cl. 260—668)

4. A process which comprises condensing a hydrocarbon of the benzene series containing at least one hydrocarbon substituent and having at least one hydrogen attached to the benzene nucleus with a saturated aliphatic aldehyde having at least 2 carbon atoms in the presence of hydrogen fluoride, the weight ratio of hydrogen fluoride to the aldehyde being between about 1.4:1 and 5:1.

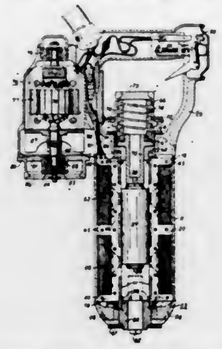
2,439,229

ROCKY MOUNTAIN SPOTTED FEVER DIAGNOSTIC ANTIGEN AND PREPARATION OF THE SAME

James Vanderscheer, Ridgewood, and Elizabeth H. Hull, Allendale, N. J., assignors, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application April 15, 1944, Serial No. 531,288
8 Claims. (Cl. 167—78)

1. An antigen extract capable of differentiating between Rocky Mountain spotted fever and typhus fever which comprises a saline solution of the water-soluble antigen prepared from the yolk sacs of fertile eggs previously infected with Rocky Mountain spotted fever virus by extracting an aqueous suspension of said yolk sacs with ether, removing tissue particles from the aqueous extract, adding sodium sulfate, dissolving the resulting precipitated antigen in formalin-saline solution, and removing the sodium sulfate to produce an antigen diagnostic agent.



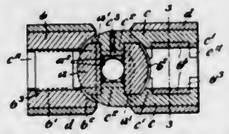
2,439,230

INTERMITTENT CURRENT OPERATED MOTOR

Carl S. Weyandt, Homer City, and Edward J. Missien, Indiana, Pa., assignors to Syntron Company, Homer City, Pa., a corporation of Delaware

Application March 5, 1946, Serial No. 652,074
6 Claims. (Cl. 172—126)

1. An electromagnetic reciprocating motor field comprising a tubular barrel of nonmagnetic material, a plurality of spaced circumferential groups of radially disposed laminated core members secured to the barrel, the core members of the groups being aligned and having pole faces exposed to the interior of the barrel, a pair of parallel bridge members connecting the adjacent ends of the core members to provide a con-



tinuous support therebetween to form a coil base on the core members, a series of annularly disposed grooves formed in the perimetral surface on the core members, insulation material wound around the core members and in the grooves, and a wire coil wound on the insulating material and interlocking with the insulation in the grooves to firmly lock the coil against movement relative to the core members.

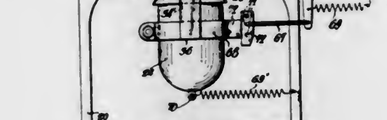
2,439,231

UNIVERSAL JOINT COUPLING

Herbert Gurmin Whitehouse, Tipton, England

Application November 4, 1944, Serial No. 561,865
In Great Britain February 18, 1944
1 Claim. (Cl. 64—17)

A universal joint coupling for shafts and the like, comprising a pair of coupling members each having two longitudinal slots on opposite sides thereof and having a central bridge portion, a pair of brackets fitting in the slots of each coupling member to maintain them in longitudinal alignment with the coupling member, a pair of depending flanges integral with each bracket and spanning the bridge portion of each coupling member to prevent longitudinal movement of the brackets relative to the coupling member, a retaining collar holding the brackets in engagement with each coupling member, a longitudinal extension integral with each bracket, and a central member to which the extensions of the two pairs of brackets are trunnioned on two transverse axes.



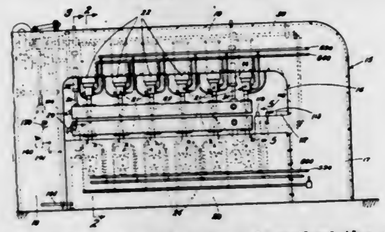
2,439,232

INDUSTRIAL TRUCK AND TRAILER

Thomas P. Wyman, Suffern, and Peter B. Ruppe, Bronxville, N. Y.

Application May 5, 1944, Serial No. 534,198
5 Claims. (Cl. 280—33.1)

1. In a truck and trailer unit, a truck having a platform which can be raised or lowered and a coupling member on the nose of said platform, a trailer having a fifth wheel mechanism inseparably secured thereto and comprising a fixed and a rotatable member, said rotatable member having parallel guides spaced from one another by a distance somewhat greater than the width of the truck platform and a stop member at right angles to said guides, said guides being



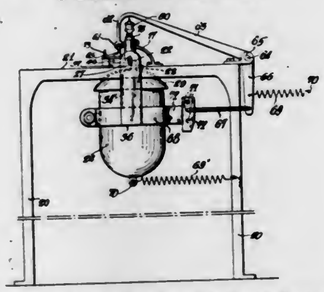
adapted to coact with the sides of the truck platform when the nose of the platform is moved under the fifth wheel mechanism and the rear edge of the platform coacting with said stop thereby automatically orienting said rotatable member to place said stop member and said coupling member in position to engage one another when the truck platform is raised.

2,439,233

SPOT WELDING APPARATUS

Frank B. Yingling, Hamilton, Ohio

Application April 14, 1944, Serial No. 530,991
13 Claims. (Cl. 219—4)



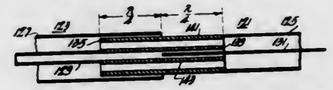
1. In a device of the class described the combination of a spot welding unit comprising opposed electrodes, work cooling clamp plates, means yieldingly mounting said plates for floatingly supporting sheets to be welded within the field of operation of the electrodes, said plates having coinciding apertures for the passage of said electrodes to the work, and means for actuating the electrodes.

2,439,234

APPARATUS FOR CONTOURING METAL

Newby O. Brantly, Mount Holly, N. J., assignor to Kite Aircraft Corporation, Philadelphia, Pa., a corporation of Pennsylvania

Application February 27, 1943, Serial No. 477,401
5 Claims. (Cl. 90—13)



1. In a machine for cutting surfaces to variant contours and at variant angles with adjoining surfaces, a flat table, a tiltable rotary cutting tool having an axis, adapted to cut a profile above the surface of the table, a fixed guide, a profile guide movable with the work over the table surface and engaging the fixed guide to determine the profile and depth of cut in the work, a track carried by the work having variant contour, varying with the intended angle of tilt of the cutting tool and a tilting follower cooperating with the track to tilt the cutting tool axis.

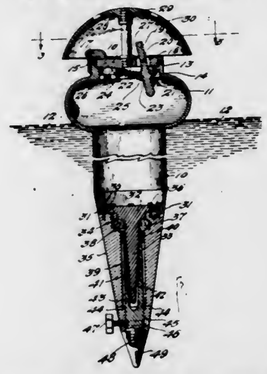
2,439,235

REACTANCE COMPENSATION SYSTEM

George H. Brown, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application February 14, 1945, Serial No. 577,912
8 Claims. (Cl. 178—44)

1. In a radio frequency network including a load of impedance Z_0, in series with an element which exhibits series resonant characteristics to energy of wavelength λ, and has a surge impedance Z_s, a system for compensating the reactance of said element throughout a band of frequencies, comprising a transmission line of length $\lambda/2$ and surge impedance Z_c, connected at one of its ends to said load, and a second element exhibiting series resonant characteristics identical with those of said first-mentioned element, connected in series with the other end of said line, the surge impedance Z_c of said line being such as to satisfy the relation:



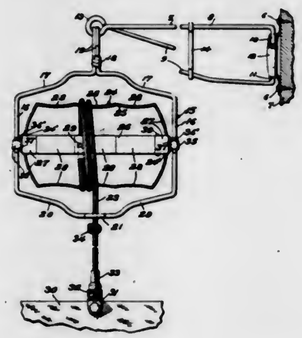
$$\frac{Z_0}{Z_c}=\frac{1+\sqrt{1+4\left(\frac{Z_0}{Z_s}\right)^2}}{2\frac{Z_0}{Z_s}}$$

2,439,236

CARRIER FOR AIRCRAFT DELIVERY

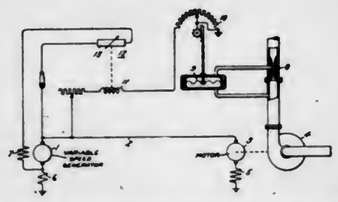
Louis Brown and Leo Lacey, Camp Wood, Tex.

Application January 17, 1946, Serial No. 641,724
13 Claims. (Cl. 244—138)



1. A carrier for aircraft delivery including a chamber having an upper buoy portion, a closure for the top of said portion and a canopy mounted on said closure, said closure having releasable means for holding the same closed, and hydraulic cushioning means at the lower end of the body.

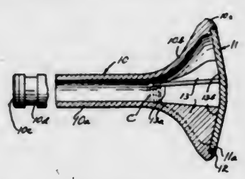
2,439,237
PREPARATION OF TETRAHALOGENATED BENZENES AND BENZOIC ACIDS
William E. Cass, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application January 15, 1946, Serial No. 641,408
3 Claims. (Cl. 260—650)



1. A method of preparing 1,2,3,4-tetrachlorobenzene which comprises heating, under superatmospheric pressure at a temperature of from 220° to 280° C., a mixture comprising (1) water, (2) a compound selected from the class consisting of tetrachlorophthalic acid and tetrachlorophthalic anhydride, said anhydride forming the corresponding tetrachlorophthalic acid in the presence of the water, and (3) an inorganic basic material, and thereafter isolating 1,2,3,4-tetrachlorobenzene from the reaction mass.

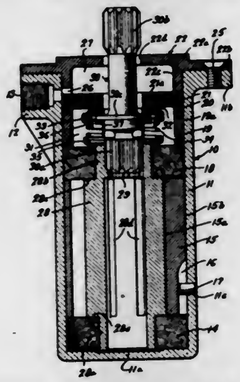
2,439,238
SAFETY SOAP AND WASHCLOTH HANGER
Leon L. Collins, Savannah, Ga.
Application May 21, 1946, Serial No. 671,365
1 Claim. (Cl. 248—330)

As an article of manufacture, a safety device for supporting soap and bathing articles conveniently located for use in bathing which device comprises, in combination, an open frame of stiff, form-retentive, inherently resilient wire formed to provide a parallel pair of opposite vertical side bars, corresponding intermediate portions of said side bars being flattened, the ends of said wire being joined to form a hook to provide a central balancing means of supporting attachment at its top, said wire being formed to provide a guide eye at its bottom, a horizontal shaft having open-ended longitudinal slots in its opposite end portions, said slotted end portions of the shaft being slidably fitted tightly on said flattened frame side bar portions to be retained from rotation, a reel element comprising a crossed pair of elongated substantially oblong open frames, the crossed opposite transverse end members of said reel frames being apertured in longitudinal alignment and axially of the reel, bearing bushings fitted in said axial end apertures of the reel element and freely rotatable on said shaft, an elongated helical spring surrounding said shaft and with its ends secured to said shaft and said reel respectively, an elongated cord element attached to and wound on said reel element and threaded through said guide eye, a swivel attached to the free end of said cord element, a mesh container attached to said swivel, means for limiting the retraction of said cord by said reel, and a bracket formed by wire bent to provide angularly disposed arms having inturned ends, a support for removably receiving said ends, and a link between said arms and slidable thereon to space them in selected angular relationship to be retained on said support or removed therefrom.



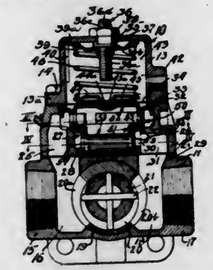
2,439,239
CABIN SUPERCHARGER REGULATOR SYSTEM
Frederick E. Crever, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application April 12, 1945, Serial No. 588,007
6 Claims. (Cl. 230—12)

1. In combination, a variable speed electric generator, a motor connected to be energized by said generator, a mechanical load driven by said motor, an automatic rheostatic voltage regulator for maintaining constant output voltage of said generator, and means responsive to a function of the operation of said load for modifying the voltage setting of said generator voltage regulator.



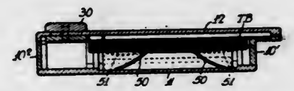
6. In combination, an air craft engine driven generator, a cabin supercharger, a motor energized by said generator and driving said supercharger, an automatic generator voltage regulator having a voltage sensitive operating element, and automatic means responsive to the air flow output of said supercharger for varying the voltage applied to the voltage sensitive element of said regulator so as to maintain substantially constant said air flow output.

2,439,240
BRACED HEAD DOME VALVE
Robert E. Cummings, University Heights, Ohio, assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application January 18, 1945, Serial No. 573,445
12 Claims. (Cl. 123—188)



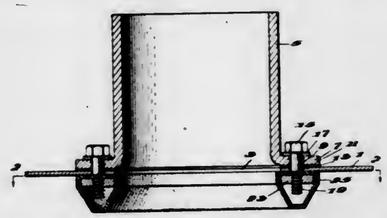
1. A hollow poppet valve which comprises a main body portion having a hollow neck, a plurality of inwardly projecting ribs integral with said neck, and a head dome for said valve bottomed on said ribs and integrally bonded to said neck for closing the open end of the neck portion.

2,439,241
PUMP ASSEMBLY
Russell R. Curtis and Richard L. Gates, Dayton, Ohio, assignors to Curtis Pump Company, Dayton, Ohio, a corporation of Ohio
Application February 6, 1943, Serial No. 474,969
4 Claims. (Cl. 103—136)



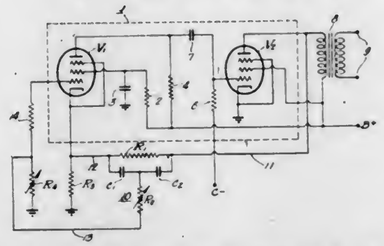
4. A pump comprising a casing, spaced bearings in said casing, pumping means in said casing rotatably supported by said bearings, a drive shaft rockably splined to said pumping means and having a projecting portion, a rotatable sealing ring supported by said projecting portion, a flexible diaphragm extending from said projecting portion to said sealing ring, stationary sealing ring means in sliding sealing engagement with said rotatable sealing ring and slidably fitting on the interior wall of said casing, a spacer ring bottomed on one of said bearings and disposed in said casing between said bearing and said stationary sealing ring means, and a cover removably secured to said casing and having a depending skirt portion extending into the casing in thrusting relation to said stationary sealing ring means to secure said stationary sealing ring means in the casing.

2,439,242
PUMP VALVE CONSTRUCTION
Russell R. Curtis, Dayton, Ohio, assignor to Curtis Pump Company, Dayton, Ohio, a corporation of Ohio
Application March 26, 1943, Serial No. 480,646
9 Claims. (Cl. 137—53)



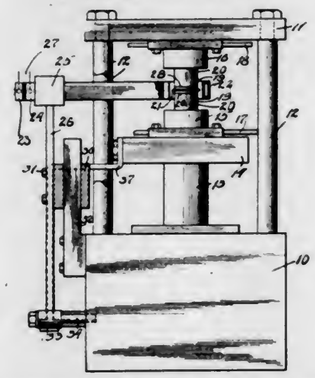
4. A relief and by-pass valve assembly comprising relatively inverted nested cups, the outer of said cups having an internal abutment between the ends thereof, a valve seat bottomed on said abutment, means acting on the inner of said cups to hold the valve seat bottomed on the abutment, a by-pass valve in said outer cup urged against said valve seat, and said outer cup having an external valve face therearound.

2,439,243
BLADE CONTAINER
Godfrey Dalkowitz, Washington, D. C., assignor to American Safety Razor Corporation, Brooklyn, N. Y., a corporation of Virginia
Application March 4, 1943, Serial No. 477,945
11 Claims. (Cl. 206—16)



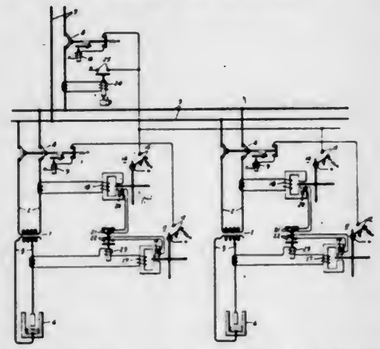
7. A dispensing magazine for longitudinally slotted blades whose slots terminate short of at least one end of the blade to leave that end unslotted, said magazine comprising a blade containing compartment and a passageway opening laterally into said compartment through the front wall thereof to the exterior and through which a blade may be discharged from the compartment with said unslotted end in advance, and means extending into said passageway to engage the unslotted end of the blade when it is moved into the passageway to flex that end until it has passed beyond said means, said means being so dimensioned and located as to engage in the slot of the blade on continued movement thereof and thus guide the blade in its continued movement out of the magazine.

2,439,244
FLUID SEAL FOR FITTINGS
Joseph C. De Weese, Essex, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application June 22, 1944, Serial No. 541,567
1 Claim. (Cl. 285—34)



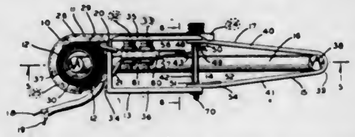
In a fluidtight connection between a bolted pipe fitting and a fluid storage tank, including a plurality of bolts passing through an integral flange on the fitting and apertures in the tank and engaging a cooperating threaded ring member within the tank for drawing the fitting against the outside wall, and the ring member against the inside wall of the tank, the combination therewith of an endless, annular sealing member of rubber-like material surrounding and covering said threaded ring member and the ends of the bolts threaded therethrough, the free edges of said sealing member being clamped between the inner face of said ring member and the inner wall of the fuel tank to shield said ring member and bolt ends from contact with the liquid.

2,439,245
RESISTANCE-CAPACITANCE TYPE OSCILLATOR
James C. Dunn, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application June 2, 1945, Serial No. 597,226
11 Claims. (Cl. 250—36)



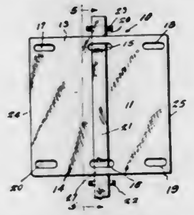
11. An oscillator circuit, comprising a vacuum tube amplifier having at least grid and cathode input electrodes and an output anode, a bridged T network, means including said network for coupling said anode and said cathode in degenerative phase relation, means including said network for coupling said anode and said grid in regenerative phase relation, and means for adjusting a circuit element of said network.

2,439,246
PRESSURE WELDING MACHINE
Emil F. Gibian, Cleveland Heights, Ohio, assignor to Thompson Products, Inc., a corporation of Ohio
Application March 11, 1944, Serial No. 526,076
2 Claims. (Cl. 219-4)



1. A pressure welding machine comprising a base, a top structure supported from said base, a fixed anvil suspended from said top structure above said base, a ram piston slidable in said base toward and away from said fixed anvil, an anvil carried by said piston in axially aligned relation beneath said fixed anvil, said anvils adapted to receive therebetween a stack of metal parts to be welded together, a welding head having an aperture therethrough adapted to receive the stack of parts to be welded, means carrying said head between said anvils, a support on said base slidably mounting said means, a lever pivoted on said base, an arm movable with said piston and movable anvil engaging one portion of said lever to raise and lower the lever in accordance with raising and lowering of the movable anvil, and said means carrying said head engaging another portion of said lever closer to the lever pivot than said one portion to raise and lower the head as the movable anvil is raised and lowered but at a lesser rate than the rate of movement of the movable anvil to maintain said head at constant levels relative to the varying levels of the weld line of said stack of parts.

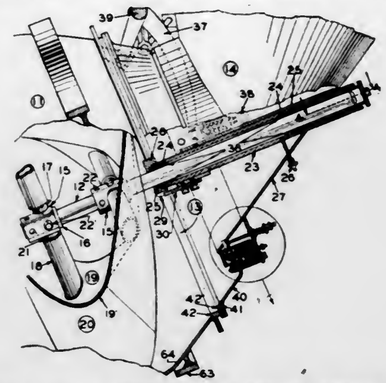
2,439,247
PROTECTIVE ARRANGEMENT FOR TRANSLATING DEVICES
William N. Gittings, Oakmont, Pa., assignor to General Electric Company, a corporation of New York
Application May 1, 1945, Serial No. 591,275
7 Claims. (Cl. 175—294)



7. In a protective arrangement for a translating device having an input circuit and an output circuit, the combination of means for effecting a predetermined control operation in response to the current in the input circuit exceeding a predetermined value including an overcurrent relay of the shaded pole induction type having an operating winding connected to the input circuit and a normally closed shaded pole winding, and means responsive to the current in the output circuit exceeding a predetermined value for interrupting said normally closed shaded pole winding.

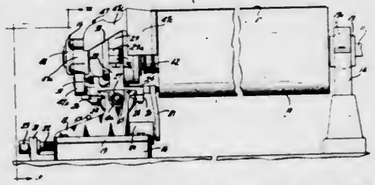
2,439,248
ELECTROMOTOR
Eli E. Gregory, Millington, N. J., assignor, by mesne assignments, to Gregory Motors, Inc., Brooklyn, N. Y., a corporation of New York
Application October 4, 1943, Serial No. 504,846
3 Claims. (Cl. 172—126)

1. A self-starting electro-motor of the reciprocating type having means for connection to a current supply source comprising an electromagnet, an oscillator adapted to be actuated by the electro-magnet when the electro-magnet is energized, an electrical switch including a movable member having a closed position and a normally open position, and a switch actuating member connected to said oscillator and adapted to move the movable switch member to closed position upon movement of said oscillator in one direction and to maintain said movable switch member in the open position upon movement of said oscillator in the opposite direction, said actuator being formed to arrest said oscillator in a position corresponding to the closed switch position when current supply to said electro-magnet is separately interrupted.



2,439,249
BATH CLOTH
Elle Hickman, Detroit, Mich.
Application January 12, 1946, Serial No. 640,881
1 Claim. (Cl. 15—222)

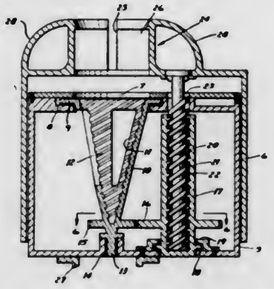
The combination of a wash cloth and a supporting and operating strap therefor including a substantially rectangular cloth body having oppositely disposed elongated eyes or slots formed through the central portion of said cloth extending in spaced relation and parallel with the ends thereof, said body also having similarly formed oppositely disposed elongated eyes or slots through the ends of its side portions, said cloth body being adapted to be folded inwardly from each side upon said central portion with the eyes or slots in each end of the cloth being aligned with the eyes or slots in said central portion, a supporting and operating strap for said cloth body having loops secured in spaced relation to one surface thereof, said strap being adapted to extend over the top surface of the central portion of the cloth body when folded and adapted to pass through the elongated eyes or slots in the opposite ends thereof, said strap then being bent inwardly over the ends of said central portion of the cloth body to extend inwardly through the overlying aligned elongated eyes or slots in the inwardly folded end portions of said cloth body, and the terminal ends of said strap being directed outwardly to extend through the loops on said strap which will then be disposed at the opposite ends of said folded cloth body.



2,439,250
TRANSIT CONCRETE MIXER
Louis G. Hilkemeier, West Allis, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application December 27, 1943, Serial No. 515,834
7 Claims. (Cl. 259—161)

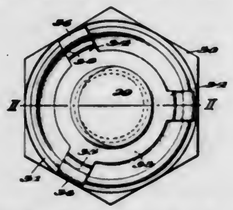
1. In a concrete mixer having a rotatable mixing drum provided with an axial opening at one end and a non-rotatable charging hopper arranged to feed material through said opening, a rotary seal disposed between the hopper and the drum comprising a flexible band medially supported so that its edges may flex and a retaining channel rotatable with respect to said band, the web of said channel being concentric with said band and said channel being of width less than the width of said band whereby the edges of the band are flexed into arcuate shape while retained by the flanges of the channel, the tendency of the band to straighten while so

flexed causing pressure to be exerted against the channel by said edges and opposing the passage of material through the seal.



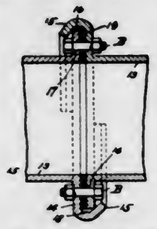
2,439,251
BAND GUIDE
Lloyd Hornbostel, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a corporation of Wisconsin
Application March 2, 1946, Serial No. 651,578
11 Claims. (Cl. 74—241)

1. A centering device for bands and the like comprising a roll having axles projecting from the ends thereof, a rockably mounted bearing rotatably supporting one axle, a bearing housing receiving the other axle therein, bearings in said housing rotatably mounting said other axle, a convex band area around said housing, a strap embracing said band area in rockable bearing engagement therewith, a slidable carriage carrying said strap, said bearing housing having an axle portion projecting therefrom in axial alignment with the roll axle, a control head having a hub freely rockable on said bearing housing axle and having a tapered collar segment overlying said bearing housing and roll axle adjacent the end of the roll, said control head having a counterweight portion depending from said hub thereof, a tensioned spring connecting the counterweight portion with said carriage to rock the collar segment of the control head in a direction opposite to the direction of rotation of the roll, a fluid pressure cylinder fixedly mounted adjacent said carriage, a piston in said cylinder, a piston rod affixed to said piston and extending from said cylinder to said carriage, means fixedly connecting the piston rod and carriage, a slide valve controlling flow of fluid into opposite ends of said cylinder for simultaneously introducing fluid under pressure into one end of the cylinder while exhausting fluid from the other end of the



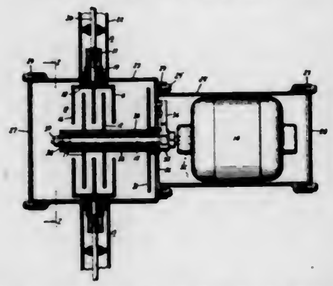
cylinder, and means directly connecting said slide valve with the counterweight portion of said control head whereby rocking of the control head will shift the valve to actuate the piston for shifting the carriage to carry the bearing housing for tilting the roll.

2,439,252
PENCIL SHARPENER
Clayton E. Jordan, Prescott, Ariz.
Application April 18, 1945, Serial No. 588,907
2 Claims. (Cl. 120—85)



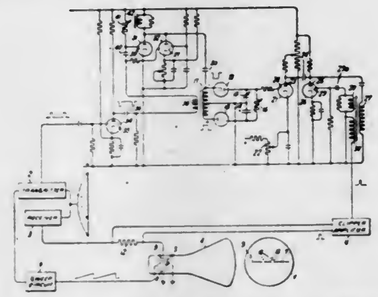
1. A pencil sharpener comprising a pair of telescopically engaged relatively movable members, one of said members embodying means for holding a pencil therein, a cutter rotatably mounted in the other member, and means connected to the cutter and operable by a movement of said members relative to each other to actuate the cutter, the first mentioned member during movement thereof feeding the pencil into the cutter and withdrawing the same therefrom alternately.

2,439,253
SELF-LOCKING NUT
John F. Kendrick, Elizabeth, N. J.
Application October 2, 1943, Serial No. 504,736
15 Claims. (Cl. 151—30)



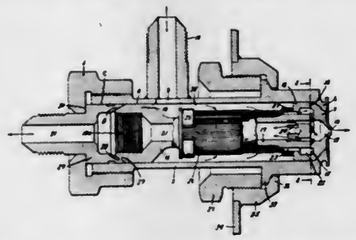
1. A combination for precluding relative rotation between cooperating internally and externally screw-threaded members, comprising said internally and externally threaded members and a thin unthreaded centrally apertured plate, the aperture of which defines a thread-engaging edge possessing a smooth uninterrupted, continuous and relatively inflexible planar form with the diameter of said aperture greater than the minor diameter and less than the major diameter of the threads of the externally threaded member, said plate being nonrotatively attached at its outer perimeter to the internally threaded member, so as to position said aperture in longitudinal registration with and at right angles to the axis of the bore of the internally threaded member, the thickness of the thread-engaging edge being such as will permit it to enter the thread-groove of the externally threaded member, deflecting the thread-engaging edge of said plate, and wedging said plate between the cooperating screw-threaded members, restraining them against relative movement.

2,439,254
JOINT FOR AIR DUCTS AND THE LIKE
Joseph H. Levin, Brooklyn, N. Y.
Application June 19, 1944, Serial No. 540,902
1 Claim. (Cl. 285—143)



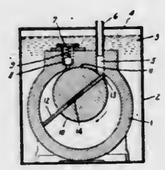
A pipe joint including opposed pipe sections to be joined, a flange on one end of each section, said flange being extended continuously around said section, a lip extending from and lapping each of the flanges, each lip being extended along its flange for a distance less than one half of the circumference of the flange, each lip being inclined relative to its flange and cooperating therewith to provide a channel tapered in depth and extending throughout the length of the lip, the channel on each flange being proportioned to receive a portion of the opposed flange and said lip and the flange therein cooperating to draw the flanges together under the weight of the connected pipe sections, a packing material interposed between the flanges and extending through the channels, and means for holding the flanges and the packing material together.

2,439,255
CAPACITOR SWITCH
Richard C. Longfellow, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application September 9, 1942, Serial No. 457,776
8 Claims. (Cl. 178—44)



1. In combination, a capacitance device having a conducting shaft, a rotating electrode supported by said shaft and separated therefrom by insulating means, said electrode being subjected to electromotive force relative to said shaft of short wave length, and a conductor extending along said shaft conductively connected to said electrode but insulated along its length from said shaft to form a transmission line, said line having a length equal to a quarter of a wave length, or multiple thereof, of said electromotive force, and the impedance across one end of said line being such relative to the length of the line as to reduce the flow of current in said shaft produced by reason of said electromotive force.

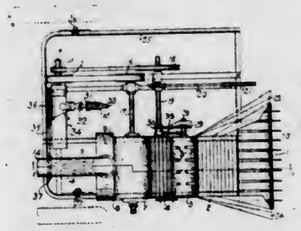
2,439,256
TIMING CIRCUIT
Harold W. Lord, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application February 21, 1944, Serial No. 523,282
9 Claims. (Cl. 343—5)



2. In radio locating equipment, means for transmitting pulses at the desired repetition rate, a pair of condensers, one of which is large compared to the other, a discharge circuit connecting the condensers in series, a transformer connected across the condensers to charge the same with like polarities about said discharge circuit, means responsive to pulse transmission for interrupting the charging of said condensers, means responsive to the voltage on the smaller condenser and operative when said voltage changes sign to initiate a timing impulse, a timing circuit triggered by said transmitted pulse for re-establishing the charging of said condensers after a delay greater than the timing impulse but less than the succeeding transmitted pulse.

2,439,257
FUEL ATOMIZING NOZZLE
Walter O. Lum, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application March 15, 1944, Serial No. 526,583
2 Claims. (Cl. 285—96.3)

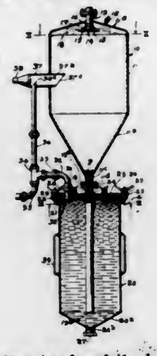
1. In a casing arrangement for a device of the type described, the combination of an outer casing member with a cylindrical bore opening through one end thereof and having a portion defining a surface projecting inwardly into the bore at a location remote from said end, an inner cylindrical casing member disposed within the bore and spaced therefrom to define therewith a first fluid flow passage, fluid conduit means connected to said passage, the inner casing member having associated therewith an end member engaging said inwardly projecting surface, a longitudinal bore opening through the end of the inner casing member adjacent the open end of said first bore and forming part of a second fluid flow path, and a portion adjacent said open bore end with a cylindrical outer surface slidably engaging the inner surface of the first-mentioned bore, said portion having also a conical end surface with its smallest portion nearer the end of the inner casing member, said conical portion being within the bore and axially spaced from the open end of said first bore, a cylindrical sealing member disposed within the open end of the first bore and having an outer surface slidably engaging the inner surface of the bore and an annular end portion with a conical end surface adapted to surround and sealingly engage the conical end surface of the inner casing member, and clamping means associated with the outer casing for forcing the sealing cylinder member axially against the end of the inner casing member, whereby said conical surfaces are forced into tight sealing engagement to prevent fluid leakage between said first and second flow paths and the annular end portion of the sealing cylinder is caused to expand into tight sealing engagement with the inner surface of the first bore to prevent fluid leakage from both fluid paths to the exterior of the outer casing.



2,439,258
VACUUM PUMP
Marcel Matricon, Paris, France, assignor to General Electric Company, a corporation of New York
Application December 19, 1946, Serial No. 717,274
In France December 5, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires December 5, 1962
4 Claims. (Cl. 230—205)

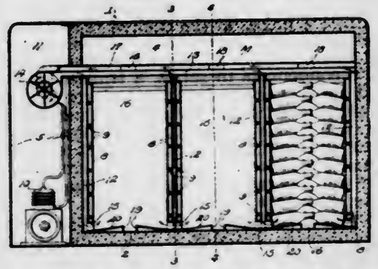
1. A pump for gaseous fluids comprising a closed cylindrical pump chamber including a cylindrical wall and end plates constituting end walls, inlet and outlet ports positioned at different points on the periphery of said cylindrical wall, a cylindrical rotor of diameter less than that of said cylindrical wall tangentially engaging the said cylindrical wall between said ports and having a journal in one of said end plates, resilient blades on said rotor for pumping gaseous fluid from said inlet to said outlet port, and means within said journal and said one of said end plates for cyclicly injecting a quantity of oil into said chamber, said last mentioned means comprising a first duct within said one of said end plates having an externally accessible opening and terminating in an opening juxtaposed to said journal, a second duct having an opening

into said chamber and terminating in an opening juxtaposed to said journal, and a duct within said journal alignable with said first and second ducts at predetermined angular positions of said rotor.



2,439,259
FIELD PICKUP HAY CHOPPER
Arden J. McCormack, Portland, Mich.
Application January 17, 1944, Serial No. 518,628
1 Claim. (Cl. 55—118)

In a field pick up and hay chopper adapted to be carried below a tractor, in combination, a power take off arranged to be connected with and to receive power from said tractor, a main shaft driven by said power take off, a blower provided with an upstanding discharge pipe, said blower having driving devices and pulley and belt connections arranged to be driven by said main shaft to operate the said blower, a hay chopper arranged next to the blower and opening into the blower, a chopper shaft, said chopper shaft and main shaft having pulley and belt devices whereby the said chopper shaft is driven, an upper compression roll constructed with a plurality of longitudinally extending channel irons as described, a lower compression roll, a compression roll shaft, said upper and lower compression rolls being constructed and arranged to direct hay into the said chopper, a feeder roll having retractile pins constructed to engage the hay and move same to said compression rolls, a feeder roll shaft, gearing whereby the feeder roll shaft is revolved by said compression roll shaft, rotary pick up devices, a conveyor arranged to receive hay from said pick up devices and move the hay to said feeder roll, pulley and belt connections with said feeder roll shaft constructed to operate said pick up and conveyor, and a frame constructed to support said blower, chopper, compression rolls, pick up devices and conveyor in position.

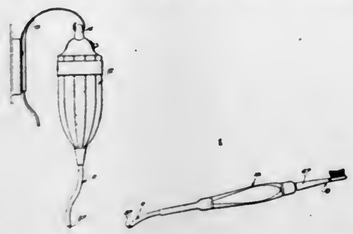


2,439,260
APPARATUS FOR HEATING SENSITIVE MATERIALS
Reginald E. Meade and John F. Crews, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif., a corporation of California
Application July 26, 1944, Serial No. 546,706
4 Claims. (Cl. 261—8)

1. A contact heater comprising a container having a top wall, a depending side wall, a converging bottom, a liquids inlet and a steam inlet, a drain pipe associated with the convergent end of the bottom of the container, a holding tank enveloping said drain pipe receiving heated liquid collected therein from the container, said drain pipe terminating adjacent the bottom of the holding tank, an outlet associated with the top of the holding tank for removing liquid therefrom, and means venting said outlet to the interior of the container to prevent siphoning of liquid out of the holding tank and formation of a vapor trap

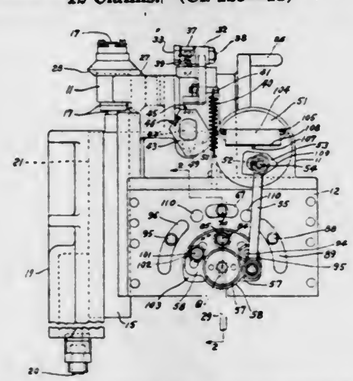
at the top of the tank while holding pressure in the tank.

2,439,261
FORCED AIR CIRCULATION COOLER FOR BOTTLED BEVERAGES
Clarence F. Munshower, Columbus, Ohio, assignor to Colbar, Inc., Columbus, Ohio, a corporation of Ohio
Application May 18, 1946, Serial No. 670,746
5 Claims. (Cl. 62—102)



1. A cooler for bottled beverages comprising a cabinet, a plurality of vertically arranged relatively spaced refrigerating panels stationarily mounted in said cabinet, said panels being relatively spaced to form air passages, a duct for delivering air to each of said passages for downward circulation therethrough and upward circulation across bottles arranged in contact with said panels, a return duct for air travel, and motor actuated means for effecting forced travel of air through said ducts and passages.

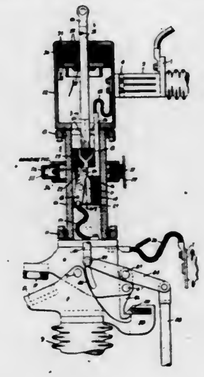
2,439,262
POWER-OPERATED MECHANISM
John R. Nalbach, Oak Park, and William F. Gresham, Chicago, Ill.
Application October 26, 1944, Serial No. 560,466
7 Claims. (Cl. 74—48)



1. A hand manipulable device comprising a tubular casing, a bushing within said casing having an axial passage for a rotatable shaft and having a pair of end members provided with parallel spaced-apart guiding walls, a rotatable shaft in said passage provided with an eccentric rotatable in the space between said guiding walls, an oscillatable bearing in said casing, and a rockable arm in said bearing and having a working end extending to the exterior of said casing

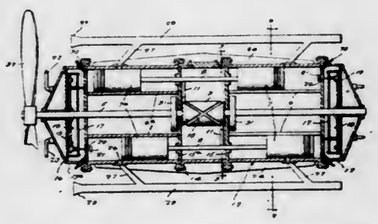
at one end of the latter and having a head at the other end disposed in the space between said guiding walls, said head having parallel walls arranged for sliding contact with said guiding walls

of said bushing and having a transverse slot normal to the planes of said guiding walls and receiving said eccentric whereby rotation of the latter effects guided rocking movement of said arm about the axis of said oscillatable bearing.



2,439,263
GRINDING WHEEL DRESSER
Ernest A. Overstedt, Detroit, Mich., assignor to Loucila May Dalzen, William Russel Dalzen, and Frederick Roy Dalzen, trustees, Dalzen Trust, Detroit, Mich.
Application August 9, 1944, Serial No. 548,701
12 Claims. (Cl. 125—11)

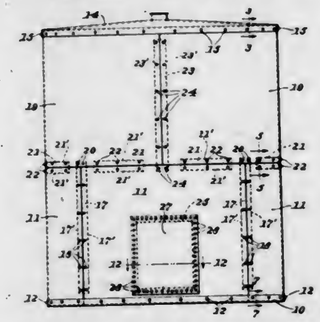
1. A grinding wheel dresser comprising a housing, a plurality of separately mounted diamond supporting means pivoted thereon, each adapted to sweeping dressing movements relative to one of the peripheral edges of said grinding wheel, a reciprocable disc on said housing universally joined to each of said supporting means for effecting alternate clockwise pivotal movements thereof and reversed alternate counter-clockwise pivotal movements thereof, and reciprocal means pivotally joined to said disc.



2,439,264
ELECTRIC SWITCH
William E. Paul, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application June 7, 1945, Serial No. 598,041
9 Claims. (Cl. 200—146)

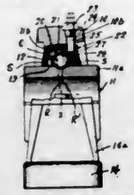
1. An electric switch comprising a pair of relatively fixed terminals, a current-carrying contact structure arranged electrically to bridge said terminals, an arc extinguishing unit disposed in said current-carrying contact structure comprising a piston and a pair of relatively movable contacts mounted within and supported by said piston, means for causing movement of said piston, a fluid arranged so as to be forced between said

contacts to cause relative separation thereof and interrupt the current flowing therethrough in response to movement of said piston, and means for moving said current-carrying contact structure from between said terminals while said contacts are in the open position and said fluid is flowing therebetween.



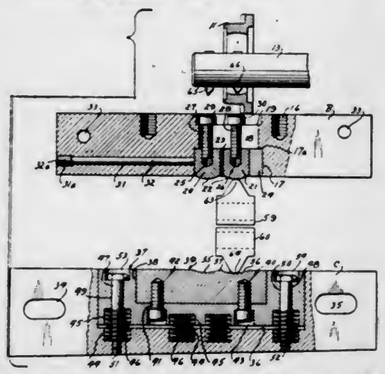
2,439,265
INTERNAL-COMBUSTION ENGINE
William M. Schroeder, Waukegan, Ill.
Application May 22, 1944, Serial No. 536,770
1 Claim. (Cl. 123—58)

In an internal combustion engine having a rotatable shaft, a plurality of cylinders arranged with their axes parallel to said shaft and grouped around said shaft, pistons reciprocable in said cylinders, and means interconnecting said pistons and said shafts for effecting rotation of said shaft upon reciprocation of said pistons in said cylinders, the combination of a hollow cylinder head for said cylinders forming a fuel and air mixing chamber therefor, a group of poppet valves cooperating with said head for controlling the flow of combustible mixture to said cylinders from said chamber, said valves having stems arranged with their axes parallel with and about the axis of said shaft, and a cam fixed for rotation with said shaft and having a cam face thereof disposed normal to the axes of said stems and operatively engaging the same, a hollow casing rigidly mounted in and spaced from the



walls of said head, said cam being arranged within said casing, and the stems of said poppet valves projecting into the casing.

2,439,266
METHOD OF FABRICATING TANKS
Samuel B. Settle, Parkersburg, W. Va., assignor to Casper A. Ruf, Parkersburg, W. Va.
Application December 16, 1943, Serial No. 514,550
3 Claims. (Cl. 29—148.2)

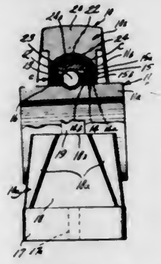


1. The method of fabricating and erecting cylindrical tanks of metal which are large enough to require multiple tiers of side plates separated by a horizontal tank seam, which comprises shop forming a circular base with an upstanding perimeter flange with spaced bolt holes therein, shop forming a plurality of metal side plates for the tank of rectangular outline with bolt openings similarly spaced along the edges thereof, each of said plates consisting of a single sheet of metal, shop bending said plates along one dimension to the curvature of the perimeter flange of said base, shop forming vertical and horizontal sets of temporary edge connecting templets with bolt holes therein equally spaced with the holes in said plates, the templets of the vertical set being longitudinally straight and those of the horizontal set being longitudinally conformed to the bend of said plates, and field erecting the parts previously mentioned by temporarily bolting said plates of a lower tier to said perimeter flange with their adjacent vertical vertical edges in abutting relation, temporarily bolting the longitudinally straight templets to each abutting edge in seam-lapping relation along and within the vertical butt joints thus formed, with the upper ends of these templets protruding above the horizontal tank seam, positioning an upper tier of plates with bottom edges abutting the upper edges of those of the lower tier and with their adjacent vertical edges in staggered relation with respect to the vertical seams of the lower tier, positioning the horizontal templets in inside seam lapping relation along the horizontal seam and disposed in spaced relation between adjacent vertical seams of the lower and upper tiers, temporarily bolting together the horizontal edges of adjacent plates of the upper and lower tiers with said horizontal templets, similarly bolting the abutting vertical edges of the upper tier plates to one another with the vertical templets whose lower ends extend below the horizontal tank seam, aligning the abutting edges of said plates in proper welding relation by adjustment of said bolts, and then welding all adjacent plates to one another and to the base from outside the tank thus formed, and removing the templets and bolts and welding closed the remaining bolt holes.

2,439,267
RESILIENTLY MOUNTED BEARING
Julius E. Shafer, Chicago, Ill.
Application February 23, 1945, Serial No. 579,349
7 Claims. (Cl. 308—184)

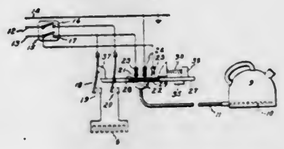
1. The combination with a bearing unit having a convex transversely arcuate outer wall and a housing having a concave transversely arcuate inner wall surrounding the outer wall of the bearing unit and struck from a radius having the same center as said outer wall of the bearing unit, of a resilient bushing between said walls, said bushing, in its free state being narrower than said walls and having a crowned outer wall of shorter radius than the radius of said inner wall of the housing, and said bushing being preloaded into conformity with said outer wall of the bearing and said inner wall of the housing to mount the bearing unit for tilting movement about said center.

2,439,268
FLOATING PRESSURE CAM
Julius E. Shafer, Chicago, Ill.
Application August 6, 1945, Serial No. 609,140
4 Claims. (Cl. 77—3)



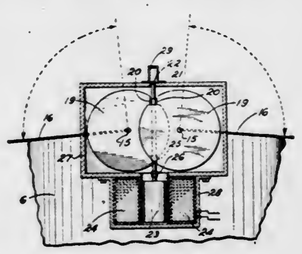
1. In combination with a profile turning lathe having a rocking carriage, a first cam mounted on the lathe alongside the path of movement of the carriage for controlling rocking of the carriage, a first cam follower carried by the carriage and riding on said first cam, a second cam follower carried by the carriage, and a resiliently mounted follower cam having a shape complementing the shape of the first cam and coacting with said second cam follower to maintain accurate riding contact between the first follower and first cam.

2,439,269
BEARING MOUNTING
Julius E. Shafer, Chicago, Ill.
Application December 29, 1945, Serial No. 638,119
6 Claims. (Cl. 308—184)



1. A tiltable bearing mounting for resiliently carrying a bearing unit in locked position while

providing for quiet operation of the bearing which comprises a housing having opposed apertured end faces and a concave transversely arcuate wall providing a relatively deep pocket between the apertured end faces, a bearing unit having an outer race ring with a convex transversely arcuate outer wall of flatter contour than said pocket, the major diameter of said outer wall of the bearing being greater than the diameter of the apertures in the end faces of the housing but materially less than the diameter of the housing wall between said apertures, a bushing ring of non-compressible resilient flowable material disposed

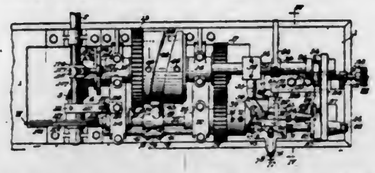


between said concave wall of the housing and said convex wall of the bearing in full seating conformity therewith, said bushing ring in its unloaded condition having relatively thick end faces inwardly of said apertures in the housing, said concave wall of the housing and said convex wall of the bearing converging toward said apertures of the housing to provide spaces adjacent said thick end faces of the bushing ring, and means on said housing for compressively loading said bushing ring to laterally expand the ring by bowing said thick end faces of the bushing ring into said spaces to thereby lock the bearing in adjusted position in the housing.

2,439,270
HEATING SYSTEM
John C. Sharp, Glen Ellyn, Ill., assignor to Hotpoint Inc., a corporation of New York
Application February 28, 1946, Serial No. 650,823
4 Claims. (Cl. 219—20)

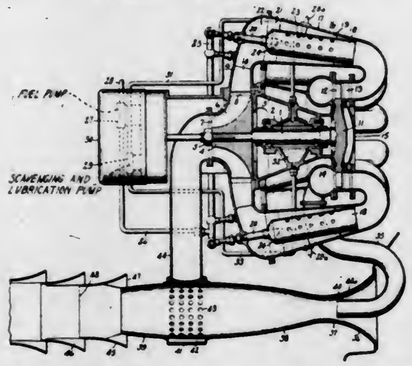
2. An electric range comprising an oven, an oven heating circuit therefor, an electrical supply circuit, a time element switch connected between said supply and oven heating circuits for controlling and timing the periods of energization of said oven, said range having an additional heating element separate from said oven heating element and an additional heating circuit therefor, and means controlling the energization of said additional and said oven heating circuits comprising a twin plug connected to said additional heating circuit and a socket element therefor having three terminal elements constructed and arranged so that said plug may be placed in contact with the first and second and the second and third of said elements respectively, and said three terminal elements being connected to said supply circuit and time element switch so that when said plug is connected to said first and second elements said additional circuit is connected to said supply circuit through said time element switch and may be controlled thereby in accordance with a time interval, and when connected to said second and third terminal elements said additional circuit is connected to said supply circuit independently of said time element switch, a movable panel positioned over and slidable with reference to said socket elements and provided with aperture means positioned so that when said panel is in one position said plug can be inserted only in said first and second terminal elements and when in a second position can be inserted only in said second and third terminal elements, and auxiliary switch means controlling said oven heating circuit operated by said panel so that said switch means closes the oven heating circuit to said time element switch only when said panel is in said second position.

2,439,271
VENTILATOR
James B. Shaver, University Heights, Ohio
Application May 14, 1942, Serial No. 442,879
2 Claims. (Cl. 98—43)



1. A ventilator comprising a tubular casing extending substantially vertically, a motor driven blower therein arranged to discharge upwardly, a closure pivoted to said casing and overlying the upper end thereof, a stop limiting the upward motion of the closure so that its center of gravity cannot reach a position above the axis of the pivot, locking means associated with the closure and arranged to lock the closure in its lowermost position, said locking means comprising a disc fixed with relation to the closure and having a notch, a locking bolt movable into and out of the notch, and electro-magnetic means associated with the bolt and energizing concurrently with the motor of said blower.

2,439,272
MACHINE FOR MAKING WIRE STRAPS
John Sholtis, Jr., Farrell, Pa., and Harold K. Embree, Hamilton, Ontario, Canada, assignors to Griplock, Inc., Hoboken, N. J., a corporation of Delaware
Application March 8, 1945, Serial No. 581,688
22 Claims. (Cl. 140—71)

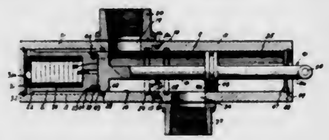


1. In a machine of the character described, a source of wire supply, means for feeding wire therefrom, means for bending the end of the wire at an angle to the remainder thereof, rotary means for coiling the end of the wire backwardly around the wire as the latter is fed forwardly, and means for varying the relative forward speed of the feeding means and rotary speed of

the coiling means in order to vary the spacing of the coils with respect to each other and their

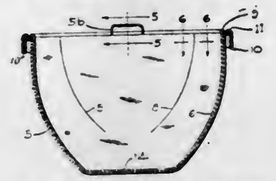
angularity with respect to the wire around which they are coiled.

2,439,273
TURBO-JET ENGINE FOR AIRCRAFT PROPULSION
Austin G. Silvester, Danvers, Mass., assignor to General Electric Company, a corporation of New York
Application March 20, 1944, Serial No. 527,159
1 Claim. (Cl. 60—35.6)



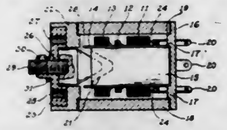
In a gas turbine powerplant for the jet propulsion of aircraft, the combination of a turbo-compressor including a compressor impeller and a turbine rotor mounted on a common shaft arranged substantially parallel to the direction of flight with the turbine rotor at the forward end thereof, a combustion chamber arranged substantially axially of the turbo-compressor and adapted at its rearward portion to receive fluid from the compressor and to deliver hot gases to the turbine rotor from the forward end thereof, and a thermal jet pump actuated by the hot gases discharged from the turbine, said jet pump including an elongated housing of circular cross-section having a flared air inlet portion open to the atmosphere and facing forward in the direction of flight, said housing also defining a constricted throat portion, an expanding diffusing portion and a rearwardly directed propulsion nozzle in series flow relation with the air inlet portion, nozzle means supported in said constricted throat portion and directed rearwardly, conduit means for conducting gases discharged from the turbine to said nozzle means, said jet pump housing having a perforated portion in the high pressure region intermediate the diffusing portion and the propulsion nozzle, and conduit means surrounding said perforated portion and adapted to conduct fluid from said high pressure region to the inlet of said compressor impeller, whereby the jet pump provides a first stage of compression in series with the compressor and also forms a main propulsion nozzle.

2,439,274
WRIST BAND OR STRAP FOR WATCHES
Theodore Spector, New York, N. Y.
Application September 13, 1947, Serial No. 773,867
4 Claims. (Cl. 224—4)



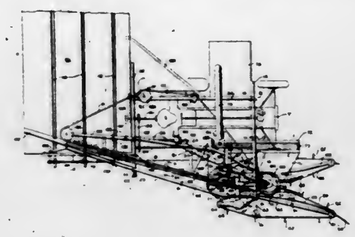
1. A wrist watch strap comprising an elongated strap member having a buckle at one end, and a tongue formed with apertures in its opposite end, said strap member being formed between the buckle and tongue with a pair of parallel spaced transverse slits defining slitted portions and with a pair of holes more remote from each other than said slits, each of said holes being adjacent a slit, studs having shanks passing through said holes, each stud having a head at each of its opposite ends, a combination with a pair of strips having openings in their opposite ends, each strip passing through one slit and having one of its ends anchored to one of said studs, each strip being folded upon itself to define a loop and having its opposite end removably engaging said stud, said strip ends engaging opposite sides of a slitted portion of said strap, in further combination with a second strap stitched to said first named strap and over-lying the stud heads adjacent the wearer's wrist.

2,439,275
PISTON TYPE QUICK DISCONNECT COUPLING
Donald R. Spotz, Cleveland, Ohio, assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application March 9, 1946, Serial No. 653,312
11 Claims. (Cl. 284—17)



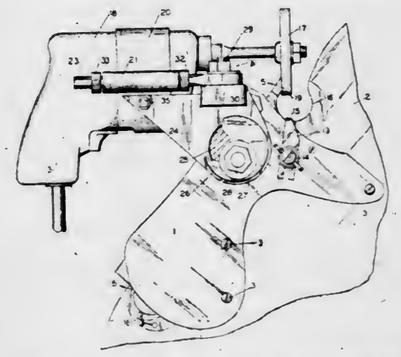
1. A self-sealing quick disconnect coupling comprising a pair of casings having mating faces and aligned bores, said casings having ports communicating with said bores, a spring-pressed piston slidably mounted in one casing and adapted to cover the port of said one casing, an actuator piston slidably mounted for movement in the bores of both casings, said actuator piston having opposed piston heads defining a flow chamber therebetween in said bores, means for sliding said actuator piston to move the flow chamber from a position completely within one casing for closing the port of said casing to a position partly in both casings for joining the ports of both casings in fluid flow communication through said chamber, said actuator piston having means engaging said spring-pressed piston to move the spring-pressed piston out of sealing relation with the port of said one casing whenever the flow chamber provided by said actuator piston is moved into said one casing, and means actuated by shifting movement of the actuator piston for securing the casings together in coupled relation whenever the flow chamber is partially disposed in both casings and for permitting separation of the casings whenever the flow chamber is disposed completely in one casing.

2,439,276
BASKET LINER
Hazel L. Thiele, St. Louis, Mo.
Application April 27, 1944, Serial No. 532,926
2 Claims. (Cl. 217—3)



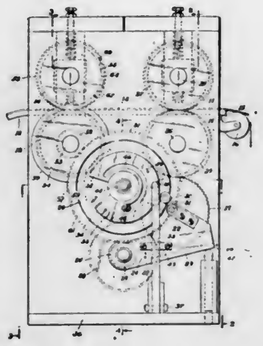
1. A liner for the inside of baskets, said liner comprising a blank of flexible material having generally acute-angular cut-outs located at spaced intervals about its perimeter with the apices of the cut-outs directed centrally of the blank but being substantially spaced from the center of the blank and with the margins of the cut-outs stitched together to close said cut-outs, said liner having its perimeteral margins turned outwardly and downwardly to form a peripheral hem therearound and a reinforcing strip of flexible material having its upper margin turned inwardly and downwardly to form a hem exteriorly encircling the out-turned hem of the liner, said hems being stitched to each other and to said liner but the stitching between the hems being left unstitched at perimeterally-spaced intervals to provide openings for the passage of the handles of a basket.

2,439,277
HIGH-FREQUENCY COIL
Howard Walker, Baltimore County, Md., assignor to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware
Application January 15, 1944, Serial No. 518,438
5 Claims. (Cl. 171—119)



5. In induction apparatus, a tubular shell of magnetic material, a cylindrical coil of wire coaxially located within said shell, a substantially non-conductive disc including magnetic material abutting one end of said shell and having embedded therein in radially disposed fashion about the center thereof a plurality of conductive terminals extending completely through and in electrical contact with said disc, lead wires connecting said coils with said terminals, a cylindrical core of magnetic material coaxially disposed within said coil abutting said disc at one and terminating in the form of a figure of revolution at the other end thereof, the axis of symmetry of said figure coinciding with the axis of symmetry of said core, a second disc of magnetic material engaging the other end of said shell, a mounting member having three linearly spaced threaded apertures embedded in said second disc, one of said apertures lying on the axis of said shell, and a magnetic member in the form of a figure of revolution complementary to said first mentioned figure of revolution supported on a screw engaging said one of said threaded apertures, the axis of the figure of revolution of said magnetic member coinciding with the axis of said screw.

2,439,278
HARVESTER-LOADER
Allan R. Wurtele, Mix, La.
Application February 25, 1942, Serial No. 432,203
16 Claims. (Cl. 56—17)

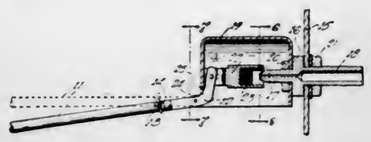


1. A harvester for cane plants or the like having means for propelling the same through a field, power driven cutting means mounted on the forward part of the harvester for cutting the tops off said plants while the latter are standing in the field, said cutting means comprising a disc-cutter rotatable about a substantially vertical axis, and means for adjusting the vertical position of said cutter above the ground independently of the remainder of the harvester.

2,439,279
SAW-TOOTH SHARPENER
Bert R. Andrus, Eugene, Oreg.
Application February 11, 1946, Serial No. 646,776
3 Claims. (Cl. 76—37)

1. A saw sharpener, including a frame to overlie one side of the saw, a guide to overlie the edge of the saw to position the frame, means for clamping the frame and guide to the saw, a tooth engaging element to overlie the edge of a tooth of the saw to position the frame relative to the saw teeth, a saw tooth grinding element to operate on a saw tooth, means on the frame for positioning the grinding element relative to the saw tooth to be operated on in the plane of the saw, and means carried by said frame for adjusting the grinding element to any angle relative to the plane of the saw, said means including a plate member secured to the frame and extending beyond the saw, a clamp for the grinding element, a sleeve carried by the clamp, and a rod rotatably connected to the plate member and rotatably mounted in the sleeve.

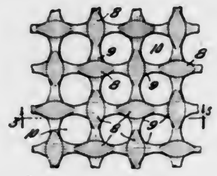
2,439,280
MACHINE FOR MAKING BELTS AND STRAPS
Maurice M. Balsam and Henry M. Balsam, New York, N. Y., assignors to M. M. Balsam, Inc., New York, N. Y.
Application October 19, 1946, Serial No. 704,332
17 Claims. (Cl. 164—16)



1. A machine for making belts from a strip of flexible material comprising in combination rotatable cutting means adapted to cut said strip of flexible material; rotatable transporting means adapted to transport said strip of flexible material to said rotatable cutting means; continuously rotating driving means for driving said rotatable cutting means and said rotatable transporting means; first motion transmitting means driven by said continuously rotating driving means and driving said rotatable transporting means during consecutive transportation periods interrupted by periods of stand-still of said rotatable transporting means; and second motion transmitting means driven by said continuously rotating driving means and intermittently driving said rotatable cutting means during consecutive cutting periods interrupted by periods of stand-still of said rotatable cutting means.

2,439,281
FLASHLESS PROPELLANT POWDER COMPOSITION
George Barsky, New York, N. Y., assignor to E. F. Drew & Co., Inc., a corporation of Delaware
No Drawing. Application March 7, 1942, Serial No. 433,717
7 Claims. (Cl. 52—5)

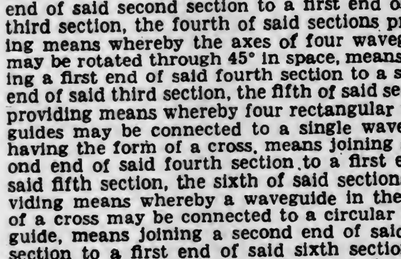
1. A propellant powder comprising an explosive consisting essentially of nitrocellulose having incorporated therein a minor amount of a composition which is the substantially neutral ester of a glycol taken from the class consisting of ethylene and propylene glycols with an acid taken from the class consisting of caprylic, capric and lauric acids.



2,439,282
FLOAT VALVE
Thomas G. Beckett, Dallas, Tex.
Application April 10, 1944, Serial No. 530,265
1 Claim. (Cl. 137—104)

In a float valve, the combination comprising a body composed of a single piece of stock having an axial passage therethrough and shaped to define a threaded shank at one end and a partially threaded nipple at the other end with a boss intermediate the ends of said body, a hollow plunger bifurcated at one end and telescopically supported by said nipple for longitudinal displacement, a valve seat in said plunger engageable with said nipple to close the passage, a hood closed except at its bottom and supported on the threaded portion of said nipple to overlie said partially threaded nipple and plunger and

forming a movement limiting means for said plunger, said hood having a slot in one end, a substantially L-shaped member pivoted in the slot of said hood and at one end to the bifurcated end of said plunger and operative to move said plunger, a float carrying arm connected to the opposite end of said L-shaped member, and means for adjusting said arm at its connection with said L-shaped member.

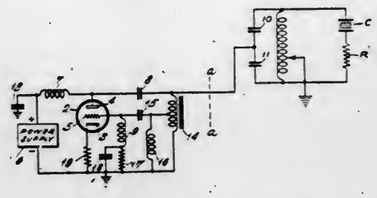


2,439,283
BROILER GRILL
Irving K. Bennett, Baldwin, N. Y.
Application April 9, 1945, Serial No. 587,348
1 Claim. (Cl. 99—450)

A broiler grill comprising a heavily calendered, fine mesh, woven wire screen of substantially the same thickness throughout, that is, approximately equal to the diameter of the wire and substantially flat and smooth on both sides and composed of wires crossed at right angles and laterally spread at the points of crossing at both faces of the grill in flat ovoidal pads disposed at right angles to each other at the opposite faces of the grill at such points of crossing and forming smooth, flat, extended food supporting surfaces of materially greater extent than the diameter of the wire to support soft food and form smooth, sliding surfaces for any sharp edged implement used in lifting the food from the grill.

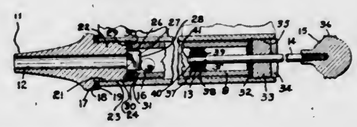
2,439,284
LOCOMOTIVE ECCENTRIC CRANKPIN BEARING
Tracy V. Buckwalter, Massillon, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application August 24, 1944, Serial No. 550,963
9 Claims. (Cl. 308—207)

1. A locomotive eccentric crank pin bearing comprising an eccentric crank having an eccentric cylindrical crank pin rigid therewith, an eccentric rod having an eye surrounding said pin, an internally cylindrical sleeve press-fitted on said pin, and a rotary anti-friction bearing interposed between said eye and sleeve, the cooperating cylindrical surfaces of said pin and sleeve



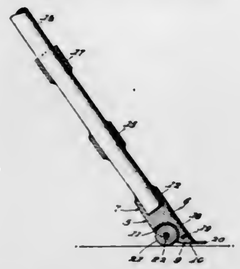
having outermost portions of smaller diameter than their innermost portions.

2,439,285
WAVE GUIDE MODE TRANSFORMER
Roger E. Clapp, East Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application August 1, 1945, Serial No. 608,316
5 Claims. (Cl. 178—44)



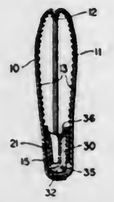
4. In a waveguide transmission system including a rectangular waveguide and a circular wave guide, a mode transformer comprising at least six transition sections, the first of said sections providing means whereby one rectangular waveguide may be connected to two similar waveguides, means joining a first end of said first section to said rectangular waveguide, the second of said sections providing means whereby the axis of two rectangular waveguides may be rotated 90° in space, means joining a first end of said second section to the second end of said first section, the third of said sections providing means whereby two rectangular waveguides may be connected to four similar wave guides, means joining a second end of said second section to a first end of said third section, the fourth of said sections providing means whereby the axes of four waveguides may be rotated through 45° in space, means joining a first end of said fourth section to a second end of said third section, the fifth of said sections providing means whereby four rectangular waveguides may be connected to a single waveguide having the form of a cross, means joining a second end of said fourth section to a first end of said fifth section, the sixth of said sections providing means whereby a waveguide in the form of a cross may be connected to a circular waveguide, means joining a second end of said fifth section to a first end of said sixth section and means joining a second end of said sixth section to said circular waveguide whereby eletromagnetic energy may be transformed from the $TE_{0,1}$ mode in the rectangular guide to the $TE_{0,1}$ mode in the circular guide without exciting the dominant mode in said circular guide.

2,439,286
OSCILLATION GENERATOR
David Rogers Crosby, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 16, 1944, Serial No. 522,589
9 Claims. (Cl. 250—36)



1. An oscillation generator comprising a discharge tube having a cathode, an anode and a control grid, a power supply source of polarizing voltage connected in series with a choke between the cathode and the anode, a resonant circuit having one terminal coupled to the junction between said anode and said choke, the other terminal of said resonant circuit being connected to the cathode, an input circuit connected between the cathode and control grid, means including an iron core transformer and a grid phasing coil in circuit therewith for applying suitably phased feedback potentials to said input circuit from said resonant circuit, and means for avoiding the flow of direct current to said anode through said resonant circuit, to thereby cause oscillation over a wide range of loading conditions.

2,439,287
VISCOSITY INSTRUMENT
Louis C. Eitzen, New York, N. Y.
Application March 8, 1944, Serial No. 525,493
8 Claims. (Cl. 73—57)

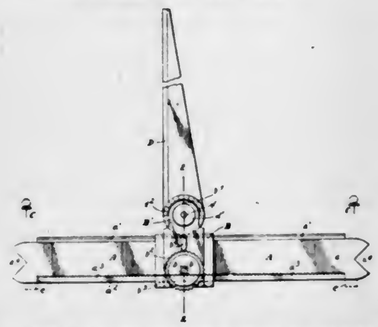


1. A viscosimeter comprising a tubular housing having a longitudinal sight opening therein; means forming an internal annular ledge in one end of the housing, and a nozzle plug in the other end; a transparent tube in the housing extending substantially from said plug to said ledge; a piston slidable in the tube; means for reciprocating the piston the nozzle plug having threaded engagement with the inner face of the housing and having an inner reduced diameter extension surrounded by an annular shoulder and having an opening passing through the end of said extension and the outer end of the plug; a washer compressed between said shoulder, the end of the tube, said housing and said extension; and a ball in the tube between the extension and piston and having a diameter greater than the distance between said tube and extension, the outer peripheral face of the washer engaging the inner face of the housing, the inner peripheral face of the washer engaging the peripheral face of the extension, the outer lateral face of the washer engaging the shoulder and the inner lateral face of the washer engaging the end face of the tube.

2,439,288
OBJECT LIFTING AND MOVING JACK
Walter E. Evans, Warsaw, Ind.
Application September 18, 1945, Serial No. 616,974
2 Claims. (Cl. 280—58)

1. An object lifting and moving jack comprising an elongated body having a front side and a lower end which extends to the lower extremity of said front side, said lower end being disposed at an acute angle to said front side to provide said body with an acute-angular lower corner, said body having a roller-receiving recess which opens through said lower end of said body and which terminates short of the front side of said body to afford a continuous forward wall in said body, the upper end of said body being provided with an integral tubular handle socket of much greater length than said body and elongated in the same direction as said body, a toe removably fixed in position over said forward wall of said body and projecting forwardly from said acute angular corner of said body, a floor-engaging fulcrum roller in said recess of said body, a bearing pin extending transversely through said body and through said roller to rotatably mount the latter, and an elongated handle bar having its lower end received in said socket.

2,439,289
EAR PROTECTOR
Benjamin O. Fanslow, Rockville Centre, N. Y.
Application March 25, 1947, Serial No. 736,931
6 Claims. (Cl. 2—209)

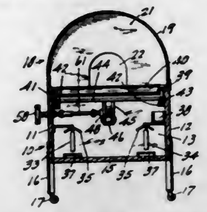


2. An ear protector comprising a muff structure fitting over the external parts of the ear and between the ear and head, said muff structure having a downwardly open pocket at its lower end, and a clamp structure comprising a body part located and held in said pocket, and a movable part pivoted to said body part and located within the muff structure and outside the pocket, said body part having an integral leaf spring, said movable part having a finger engageable by said spring whereby the movable part is held by said spring against ear-disengaging swinging movement away from the body part.

2,439,290
COMPOSITION FOR IGNITER FOR RECTIFIERS
Guy H. Fetterley, Chippawa, Ontario, Canada, assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
No Drawing. Application January 17, 1946, Serial No. 641,872
7 Claims. (Cl. 250—27.5)

1. An igniter in which the semi-conductive element is titanium nitride of a purity of about 85% and upwards and in an amount in the range from about 25% to 35% bonded with a refractory bond into a dense strong article with resistivity of the order of .5 to 5. ohms-inches at 20° C., the titanium nitride being well dispersed throughout the bond.

2,439,291
SET SHIFT PARALLEL RULE
David Thomas Edward Fielding, Middleton Junction, England
Application July 10, 1945, Serial No. 604,112
In Great Britain July 17, 1944
1 Claim. (Cl. 33—110)

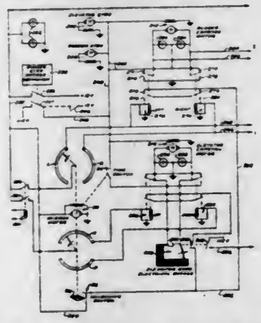


A drafting instrument comprising an elongated base strip having upper and lower lateral flanges along its longitudinal edges extending in the same general direction, the lower flange having rack teeth at its free edge, a cursor disposed against said flanges and slidable longitudinally of said base strip, said cursor having an upper flange hooked over the first-mentioned flange, said cursor having a flange at its lower edge extending under and in spaced relation to the lower flange of the base strip, a spring means carried by the lower flange of the cursor and interposed between the latter and the adjacent flange of the base strip urging the upper flanges of the base strip and cursor into contact, a straight edge extending from the cursor, a spindle journalled transversely in the cursor, a pinion on the spindle and disposed between the base strip and the cursor and enmeshed with the said rack teeth, an operating knob on said spindle exteriorly of the cursor provided with peripheral notches, and a yieldable pawl extending from the cursor and coacting with said notches.

2,439,292
MASSAGE TABLE
Roann Golden, Oakland, Calif.
Application November 22, 1946, Serial No. 711,602
8 Claims. (Cl. 128—24.3)

1. A massage cabinet, in combination; a cabinet having a bed portion consisting of spaced fixed supports and intervening roller sections and driving means for reciprocating said roller sections

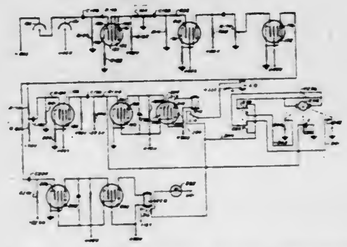
in a direction lengthwise of the bed portion and means manually controllable for freeing any of



said roller sections from said driving means at will, and a hood for enclosing said bed portion.

2,439,293
SPEECH TRANSMISSION SYSTEM
Gustav Guanella, Zurich, Switzerland, assignor to Radio Patents Corporation, New York, N. Y., a corporation of New York
Application May 30, 1945, Serial No. 596,704
In Switzerland June 1, 1944
20 Claims. (Cl. 179—1)

1. A method of transmitting a complex signal wave comprising fundamental and harmonic frequency components, which consists in subdividing a signal wave to be transmitted into a plurality of frequency sub-bands each having a narrow width of an order so as to substantially include not more than one of said frequency components, equally dividing the frequency of each of said sub-bands, recombining and transmitting the divided-frequency sub-bands as a signal wave of reduced band width, again subdividing the received signal wave into its corresponding sub-bands, and equally multiplying the frequencies of said last-mentioned sub-bands and recombining the frequency-multiplied sub-bands to restore the original signal wave.

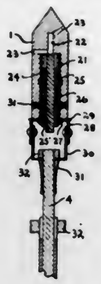


2,439,294
STEERING CONTROL APPARATUS
Laurens Hammond, Chicago, Ill., assignor to Hammond Instrument Company, Chicago, Ill., a corporation of Delaware
Application November 27, 1943, Serial No. 511,917
22 Claims. (Cl. 244—77)

1. In a lookout device, the combination of a radiation responsive element, a rotating shaft having its axis at an angle of approximately 45° with respect to the axis of radiation effective upon said element, a radiation reflector secured to said shaft with its reflecting surface at an angle in the order of 85° relative to the axis of said shaft, and motor means for rotating said shaft to cause nutatory movement of said reflector.

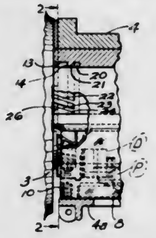
6. In a pilotless glider having direction of flight controlling means incuding a rudder and an elevator, servo-motors for operating said elevator and rudder respectively, a lookout apparatus responsive to radiation from a distant source and having means to scan cyclically a field including said source, said apparatus having a field of view forwardly in substantial line with the longitudinal axis of the glider, means responsive to signals from said apparatus to control the operation of said servo-motors, and means operated by the elevator servo-motor to direct the field of view of said apparatus downwardly as said servo-motor operates in a direction to raise the elevator.

2,439,295
SPEED RESPONSIVE APPARATUS
Laurens Hammond, Chicago, and John M. Hanert, Park Ridge, Ill., assignors to Hammond Instrument Company, Chicago, Ill., a corporation of Delaware
Original application June 14, 1943, Serial No. 490,746. Divided and this application March 10, 1945, Serial No. 582,135
4 Claims. (Cl. 177—311)



1. In an angular ground speed responsive apparatus for aircraft, the combination of a pair of phototubes, a pair of spaced gratings in front of each of said phototubes, said gratings being formed to cause parallel rays of light shifting angularly with respect to said phototubes to energize said phototubes alternately, a non-linear amplifier coupled to said phototubes capable of amplifying and distorting the signal produced by said phototubes into a signal of substantially rectangular wave shape and of constant amplitude, and a frequency responsive means coupled to said amplifier.

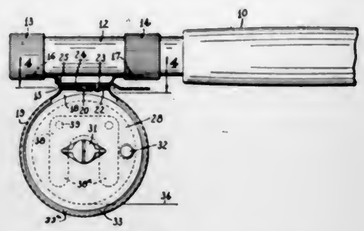
2,439,296
ELECTRIC SOLDERING IRON
General Arthur Hawkins, Dallas, Tex.
Application October 1, 1945, Serial No. 619,476
1 Claim. (Cl. 219—26)



In combination, a soldering tool including a copper soldering head having a pointed tip and formed with a longitudinal pocket being reduced at its front end, with glow ports extending from said pocket through the side and tip of said head, a mica insulating sleeve in said pocket, a metal sleeve having an annular flange on its lower end disposed in said mica sleeve, a carbon rod in said metal sleeve contacting the soldering head at its front end, a metal hinge yoke, superimposed metal washers disposed about said metal sleeve respectively contacting said annular flange and

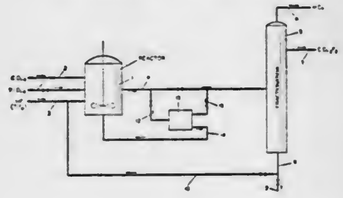
said metal hinge yoke, opposed clamp pins extending inwardly through said sleeves for holding the same in position, a mica insulating washer between said soldering head and said yoke, a second yoke pivoted to said first yoke, a handle, a conducting shank between said second yoke and

handle, a conductor connected to said conducting shank connectible with a suitable source of electric current supply, and the tip of said soldering head, when contacting its work, serving to close the circuit with said source of electric current supply to heat said carbon rod and said soldering head.



2,439,297
RAILWAY JOURNAL BEARING
James J. Hennessy, Montclair, N. J.
Application July 3, 1943, Serial No. 493,402
7 Claims. (Cl. 308—80)

1. A railway axle journal bearing with a semicylindrical downwardly presented concave journal engaging face provided near one end with a peripheral recess extending from near one lower side edge of the bearing to near the opposite lower side edge of the bearing whereby lubricant between the bearing and a journal to which it is applied will be relieved of pressure as it moves longitudinally of the bearing and reaches the recess, the peripheral recess terminating above the lower edge of the bearing in an upwardly facing ledge having an upper face extending substantially throughout the width of the recess and inclined inwardly and downwardly from the end of the bearing to drain surplus lubricant away from the end of the bearing, and means to remove surplus lubricant from said recess.

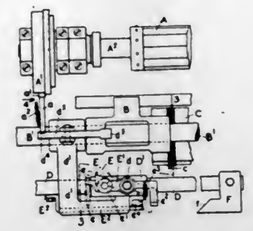


2,439,298
CASTING REEL
Timothy F. Horan, New Haven, Conn.
Application October 3, 1944, Serial No. 556,974
2 Claims. (Cl. 242—84.1)

2. A casting reel comprising a spool, a support upon which said spool is mounted, a bracket adapted to be attached to a rod, means pivotally securing said support to the bracket whereby the support may be rotated about an angle of 180°, means for releasably securing said support in positions at either end of its movement and in a

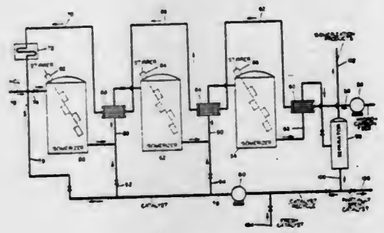
position intermediate said end positions, the axis of said spool being parallel to the rod in said intermediate position, and a handle slidably carried by the spool and movable relatively thereto in a direction parallel to the spool axis to project from either face of the spool.

2,439,299
PRODUCTION OF HALOGENATED HYDROCARBONS CONTAINING FLUORINE
Roger S. Hovey, Charleston, W. Va., and Paul H. Carnell, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
Application July 26, 1946, Serial No. 686,374
12 Claims. (Cl. 260—653)



1. The process of producing halogenated hydrocarbons containing fluorine and another halogen which comprises contacting a halogenated hydrocarbon containing a plurality of atoms of halogen other than fluorine with a fluorinating agent comprising a major proportion of substantially anhydrous hydrofluoric acid and a minor proportion of titanium tetrafluoride under conditions such that at least one of said atoms of halogen other than fluorine is replaced with fluorine.

2,439,300
FLAT SINGLE BED KNITTING MACHINE
Gustav Huber, Cleator, England, assignor to Kangol Wear Limited, Cleator, England, a company of Great Britain
Application December 20, 1946, Serial No. 717,553
In Great Britain January 6, 1946
8 Claims. (Cl. 66—147)

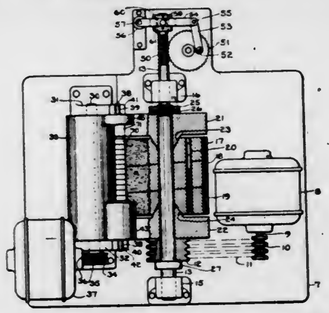


1. In a flat single bed knitting machine of the type referred to the combination with the bed and patterning mechanism of the machine of a carrier adapted to be reciprocated across the machine below the front edge of the bed, a knife supported by said carrier and means controlled

by the patterning mechanism for causing the reciprocating of the carrier at the appropriate

time in the cycle of operations to cause the knife to engage and sever the fabric.

2,439,301
ISOMERIZATION OF HYDROCARBONS
Thomas B. Hudson and John D. Upham, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
Application October 5, 1942, Serial No. 460,852
5 Claims. (Cl. 260—683.5)

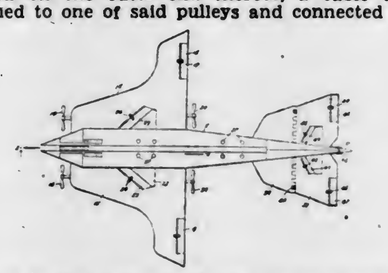


1. A process for the isomerization of normal butane to isobutane under conditions of decreasing temperature, decreasing concentration of reactants, and normally decreasing activity of catalyst which comprises passing liquid hydrocarbons comprising normal butane admixed with effective amounts of hydrogen chloride and finely divided aluminum chloride catalyst through a reaction zone, maintaining a decreasing temperature gradient in the direction of flow of said hydrocarbons and said catalyst, maintaining a flow rate such that the time of residence of said hydrocarbons at any temperature level is sufficient to effect substantial isomerization but insufficient to permit any substantial cracking, and such that the final temperature level is sufficiently low to obtain a concentration of isobutane in excess of the equilibrium concentration thereof at the highest temperature level, and introducing a separately controlled quantity of said finely divided aluminum chloride catalyst into said liquid hydrocarbons at each of a plurality of points along the direction of flow sufficient to more than overcome deactivation of catalyst which would normally occur in the absence of the catalyst thus introduced at said plurality of points and sufficient to increase the ratio of catalyst activity to hydrocarbons along the direction of flow, thereby establishing a constant rate of reaction throughout the reaction zone despite said decreasing temperature gradient, decreasing concentration of normal butane, and normally decreasing catalyst activity.

2,439,302
PREPARATION OF BENZOTETRONIC ACID
Martin E. Hultquist, Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application October 23, 1944, Serial No. 560,041
3 Claims. (Cl. 260—344.6)

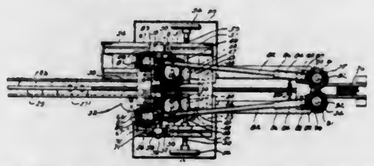
1. A method of preparing benzotetronic acid which comprises heating 3-acetylbenzotetronic acid with a strong mineral acid until the 3-acetyl group has been removed.

2,439,303
CENTERLESS GRINDER
Herbert S. Indge, Westboro, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application March 16, 1946, Serial No. 654,863
6 Claims. (Cl. 51—48)



2. An apparatus for simultaneously grinding a number of workpieces which are temporarily cemented together to form a column into a uniform shape and size with an automatic control to stop said grinding operation after said workpieces are ground to said size and shape, comprising a cylindrical grinding wheel, a feed roller to feed said column of workpieces to the grinding surface, hold it parallel to said grinding surface and rotate it against said grinding surface, a pair of guide templates which are cut to the size and shape to which it is desired to grind said workpieces and cemented to the ends of the column of said workpieces, and a pair of non-grinding guide rollers of the same diameter as said grinding wheel at each end thereof upon which said guide templates ride to prevent further grinding when said workpieces are ground to the size of said guide templates.

2,439,304
AEROPLANE EMPENNAGE
William H. Jackson, Johnstown, Pa.
Application February 1, 1943, Serial No. 474,348
1 Claim. (Cl. 244—87)



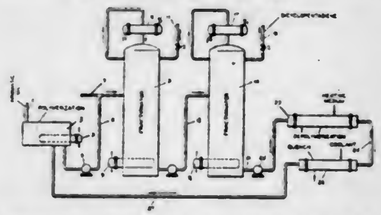
In an aeroplane having a fuselage, a tail structure on the rear end of the fuselage, comprising a stationary vertical fin having a rudder hinged on the rear edge thereof and provided with a vertically disposed arcuate slot, stationary horizontal fins on opposite sides of the forward portion of said vertical fin, a vertically adjustable stabilizer hinged to the rear edge of each horizontal fin and having an opening, said slot being concentric with the hinge axis of said stabilizers, a connection between said stabilizers extending through said slot, an emergency eleva-

tor hinged on each stabilizer within said opening of the latter, a second elevator hinged on the rear edge of each stabilizer, relatively rotatable concentric shafts journaled in the hinge of each stabilizer and each having a pulley secured on the outer end thereof, a cable attached to one of said pulleys and connected to

one of said elevators, a further cable attached to the other of said pulleys and connected to the other of said elevators, the inner ends of said shafts projecting into the vertical fin, and drive pulleys secured on the inner ends of said shafts and separately operable to selectively adjust the elevators of each stabilizer.

2,439,305
MACHINE FOR BRUSHING AND CLEANING PLATES
William C. Johnson, Milwaukee, Wis., assignor to Pfister and Vogal Tanning Company, Milwaukee, Wis., a corporation of Wisconsin
Application June 22, 1944, Serial No. 541,564
3 Claims. (Cl. 15—77)

1. In a machine for cleaning plates simultaneously on opposite sides thereof including a pair of oppositely related rotary brushes positioned to engage a plate on opposite sides thereof as it passes therebetween, means for adjustably mounting each of said brushes comprising brush supporting and adjusting arms in one end of which a brush is rotatably mounted, said arms at their other ends being carried by a pivotally mounted shaft whereby they swing as a unit about a common axis to provide lateral movement to the brush, a power-driven countershaft, helical gearing between said countershaft and each brush for driving the same and permitting lateral adjustment thereof, and adjusting shafts interengageable with said units and operable to swing the same to selected positions.

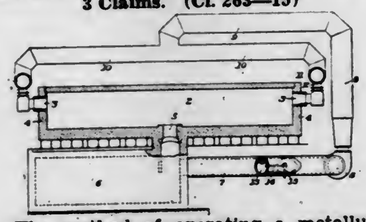


2,439,306
GASKET
Clarence D. Laidley, Los Angeles, Calif.
Application October 2, 1944, Serial No. 556,711
1 Claim. (Cl. 288—20)

A gasket for bolted tanks and the like comprising a strip of rubber or rubber-like material having spaced openings therein adapted to receive bolts, said openings being materially smaller in diameter than the diameter of the bolts and having pre-formed slits extending outwardly therefrom defining a plurality of mutually independ-

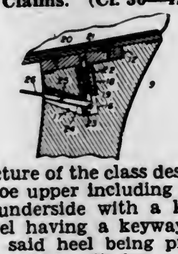
ent fingers, the thickness of the rubber being decreased in the area surrounding said openings.

2,439,307
RECOVERY AND PURIFICATION OF CYCLOPENTADIENE
Harold R. Legatski, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application October 18, 1945, Serial No. 623,147
1 Claim. (Cl. 260—666)



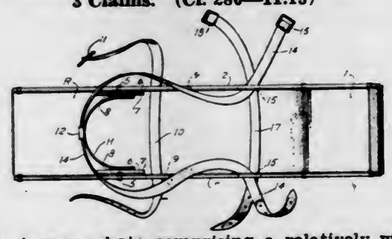
A process for recovering cyclopentadiene in the form of dicyclopentadiene from a mixture of close-boiling hydrocarbons containing the same which comprises subjecting said mixture to an elevated temperature within the range of 200 to 220° F. for a period of time such that substantially all of the cyclopentadiene content of said mixture is polymerized to dicyclopentadiene and higher polymers without substantial polymerization of other close-boiling hydrocarbons in the mixture, fractionally distilling from the resulting cyclopentadiene polymers substantially all of the lower boiling components present in said mixture, subjecting the cyclopentadiene polymers to a second fractional distillation at subatmospheric pressure under conditions such that the distillation temperature is not above about 220° F. effecting separation of substantially pure dicyclopentadiene from higher boiling cyclopentadiene polymers, subjecting said higher boiling polymers in vapor phase at substantially atmospheric pressure to an elevated temperature within the range of from 750 to 1100° F. for a period of time within the range of 10 to 30 seconds whereby said higher polymers are depolymerized to monomeric cyclopentadiene, and recycling said monomeric cyclopentadiene together with unconverted higher polymers to the polymerization step.

2,439,308
PROCESS FOR SIMULTANEOUS DIMERIZATION AND REDUCTION
Robert M. Leekley, Chicago, Ill., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 18, 1946, Serial No. 684,547
6 Claims. (Cl. 260—465.8)



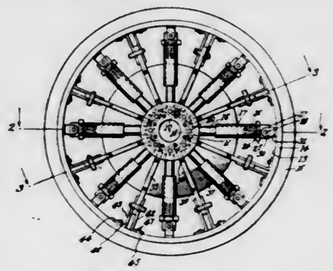
1. A process for the simultaneous dimerization and reduction of acrylonitrile to adiponitrile which comprises treating acrylonitrile in the presence of magnesium and mercuric chloride with active hydrogen produced by the reaction of said magnesium with a primary aliphatic monohydric alcohol.

2,439,309
INDUSTRIAL FURNACE AND METHOD OF OPERATING THE SAME
George Gordon Lloyd, Pittsburgh, Pa., assignor to Loftus Engineering Corporation, Inc., Pittsburgh, Pa., a corporation of Maryland
Application April 6, 1943, Serial No. 481,954
3 Claims. (Cl. 263—15)



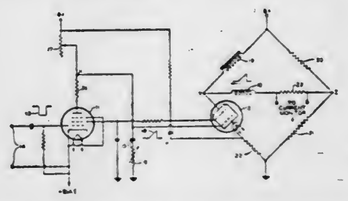
1. The method of operating a metallurgical heating furnace and maintaining a controlled thermal head therein which comprises supplying heated air for combustion to the furnace from a recuperator heated by the spent gases of the furnace, maintaining for selected time intervals the volume of heated combustion air delivered to the furnace substantially constant while controllably introducing atmospheric air into the heated air to reduce and regulate the reduction in the temperature thereof.

2,439,310
DETACHABLE HEEL
Frank M. Mancuso, Concord, Staten Island, N. Y.
Application November 21, 1946, Serial No. 711,294
3 Claims. (Cl. 36—42)



1. In a structure of the class described, in combination, a shoe upper including a counter provided on its underside with a keying plate, a detachable heel having a keyway for reception of said plate, said heel being provided with a substantially central cylinder, a spring-pressed latch-bolt mounted in said cylinder, said keying plate having a keeper recess for said latch-bolt, and a lever pivoted in a bore in said heel and operatively connected with said latch-bolt.

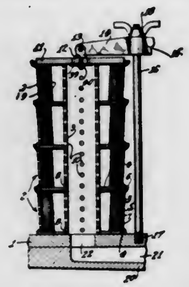
2,439,311
SNOW SKATE
Elbert Maybery, St. Louis, Mo.
Application June 29, 1945, Serial No. 602,262
3 Claims. (Cl. 280—11.13)



1. A snow skate comprising a relatively wide runner having vertical longitudinal side portions, side members secured to and extending lengthwise of the side portions and having lower marginal portions extending below the runner forming runner blades, the side members above the runner being provided with openings, and flexible members threading through said openings to engage over the foot to hold the skate to the foot.

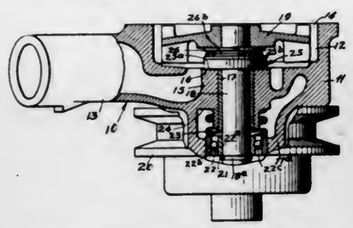
2,439,312
RESILIENT WHEEL
Jasper E. McGlaun, Shellman, Ga.
Application January 24, 1947, Serial No. 724,160
4 Claims. (Cl. 152—100)

1. A resilient wheel comprising a hub, a rim, resiliency-producing spoke members between said hub and rim, propulsion spoke members comprising rigid bar elements and pairs of spring bar elements slidably receiving adjacent end portions of the rigid bar elements, the remote ends of the elements connected respectively to said hub and rim, a disc parallel to the radii of the wheel, a plurality of rings separating the disc from said rigid bar elements, said rings being spaced from one another, and fastenings passing through said disc and said rigid bar elements and through the interposed rings to provide a truss construction.



2,439,313
ELECTRICAL CIRCUIT
Ralph E. Meagher, Watertown, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application January 24, 1945, Serial No. 574,371
4 Claims. (Cl. 315—27)

1. The combination in a circuit for driving current through the electromagnetic deflection coil of a cathode ray tube comprising a four-arm bridge arrangement having the deflection coil shunted across one pair of vertices, a source of direct current potential applied across the other pair of vertices of said bridge, a high reactance choke inserted in the first arm of said bridge, an electron discharge device having its plate circuit inserted in the second arm of said bridge

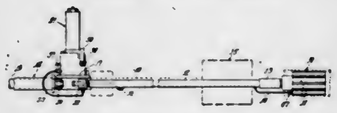


adjacent to said first arm, a first resistor inserted in the third arm of said bridge, a second resistor inserted in the fourth arm of said bridge, the values of said first and second resistor being such as to substantially balance the bridge when said discharge device is in a quiescent condition, means for slightly unbalancing the bridge arrangement whereby a slight current is made to flow in the deflection coil when said discharge device is in a quiescent condition in order to overcome the residual magnetism of said deflection coil, a saw-tooth voltage generator, and means for directly applying the output of said generator to the control circuit of said discharge device whereby the bridge is unbalanced and a current is made to flow through the deflection coil whose form is identical to the saw-tooth applied to said discharge device.

2,439,314
APPARATUS FOR TREATING YARN PACKAGES WITH FLUIDS
Wayne A. Mulligan, Utica, and William Kernan, New Hartford, N. Y., assignors to Skenandoa Rayon Corporation, Utica, N. Y., a corporation of Delaware
Application December 2, 1944, Serial No. 566,374
2 Claims. (Cl. 68—189)

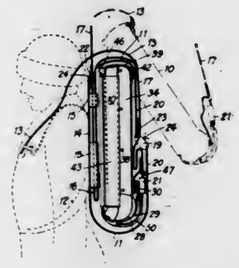
1. Apparatus for treating annular yarn packages with liquids, comprising means for holding an annular yarn package in a predetermined position, means for admitting a treating liquid into the interior of said annular yarn package through one end portion thereof, closure means for the other end portion of the interior of said yarn package for substantially confining the liquid against moving out said other end, the last named means being so constructed and arranged that the liquid supplied to the interior of the yarn package is constrained to flow outwardly therethrough, an aperture through said closure means, check valve means cooperating with said aperture for substantially preventing outflow of liquid through said aperture during the application of liquid for treating said yarn package as aforesaid, said check valve means comprising a sheet of flexible material disposed beneath and adjacent to said closure and adapted upon and during the supplying of liquid to the interior of said yarn package to be forced by the liquid to cover and close said hole, and to flex to open a passage from said hole to the interior of said yarn package upon and during the draining of the liquid from said interior to admit air from the atmosphere to prevent the creation of any substantial vacuum within said yarn package, and thereby to prevent any disarrangement of the yarn of said package which might tend to interfere with the subsequent unwinding thereof.

2,439,315
SEAL CONSTRUCTION
John A. Newton and Norman Hoertz, Cleveland, Ohio, assignors to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application November 29, 1943, Serial No. 512,164
3 Claims. (Cl. 103—103)



1. In a seal construction for a shaft and impeller assembly, a sealing washer loosely embracing said shaft, a deformable rubber-like bushing surrounding said shaft between said sealing washer and said impeller, said bushing having grooved end faces, and bonding material in said grooved end faces sealingly uniting said washer with said bushing and said bushing with said impeller.

2,439,316
CRUTCH
Willie S. Peacock, Atlanta, Ga.
Application November 21, 1945, Serial No. 629,954
3 Claims. (Cl. 135—49)

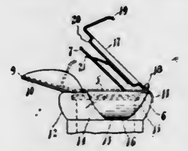


1. A crutch comprising a shaft, a handle carried by the shaft in spaced relation to its upper end and an arm encircling loop swivelly connected to the upper end of the shaft.

2,439,317
CYLINDER HONING
Victor W. Peterson, Chicago, Ill., assignor to Hannifin Corporation, a corporation of Illinois
Application February 17, 1944, Serial No. 522,690
5 Claims. (Cl. 51—184.3)

1. Honing apparatus comprising in combination a hydraulically expansible honing head including a hydraulically actuated cylinder for controlling honing pressure, a reciprocating cross-head and an elongated spindle carried thereby for operating said honing head, a hydraulic line carried by said spindle for conducting hydraulic pressure to said honing head cylinder, means connected with said cross-head for reciprocating said spindle and honing head, means including a small manually operated hydraulic pump and a low capacity accumulator therefor carried on and reciprocating with said cross-head for sensitively increasing and decreasing hydraulic pressure to said cylinder during operation of the hone to control the honing pressure, and a rotary hydraulic connection at the cross-head end of said spindle for connecting said accumulator with said line for transmitting pressure from said accumulator to said line.

2,439,318
PARACHUTE PACK
John Raymond Cuthbert Quilter, Woking, England
Application May 13, 1946, Serial No. 669,328
In Great Britain May 4, 1945
Section 1, Public Law 690, August 8, 1946
9 Claims. (Cl. 244—148)

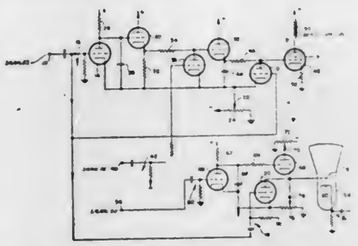


1. A parachute pack adapted for static release, comprising a container, means for connecting said container to an aircraft, said connecting means including a static line and a detachable connector, a trip device for releasing said detachable connector, a main parachute and shroud lines stowed in said container, an auxiliary parachute stowed in said container, frangible means for extracting said auxiliary parachute by the tension of said static line, means for extracting said shroud lines by the pull of the parachutist's weight, and means for operating said trip device by the initial withdrawal of said shroud lines prior to the extraction of said main parachute.

2,439,319
AIR PUMP ATTACHMENT FOR SEWING MACHINES
Walter O. Runcie, Lima, Peru
Application September 22, 1944, Serial No. 555,343
8 Claims. (Cl. 66—1.5)

1. An air pump for attachment to a sewing machine which has a presser foot shaft and a reciprocating needle carrier, comprising a cylinder having an outlet at one end, a piston slidable in said cylinder, a supporting arm carried by the opposite end of said cylinder for attachment to a presser foot shaft to thereby support said cylinder solely from the presser foot shaft, and means connected to said piston and extending laterally therefrom for connecting said piston to a needle carrier whereby said piston will be reciprocated by said needle carrier.

2,439,320
MILK BOTTLE COVER
George Simpson, Toronto, Ontario, Canada
Application October 21, 1946, Serial No. 704,646
1 Claim. (Cl. 215—101)



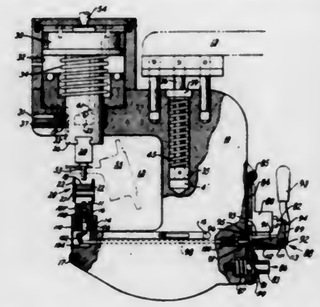
A cover of the class described comprising a body member of ring-like configuration for seating on the top end face of a milk bottle and providing an opening for registering with the mouth of the bottle, said member being formed with a flange around said opening and being formed with a pouring lip at a side of said opening, a lid for said opening, said lid being hinged to said member at the opposite side of said opening for swinging away from said pouring lip, a pair of diametrically opposite clips formed on said member laterally of said pouring lip, said clips being curved downwardly and inwardly to engage the bead on the bottle, said clips having a curvature which is enlarged through their length toward said pouring spout to enable the cover to be applied by holding it at a downward angle to the top of the bottle and sliding it forwardly thereon to engage said clips with said bead, and a pointed prong centrally depending from said lid for forwardly projecting into said bottle mouth at an angle so that when the lid is held closed in the application of the cover the prong will angularly engage the pasteboard stopper to remove the stopper as the lid is raised.

2,439,321
ELECTRICAL CIRCUIT
Merle A. Starr, Belmont, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application September 19, 1945, Serial No. 617,321
5 Claims. (Cl. 315—22)

2. A method of placing spaced position marks on the screen of a cathode ray tube comprising the steps of cyclically sweeping the beam of said

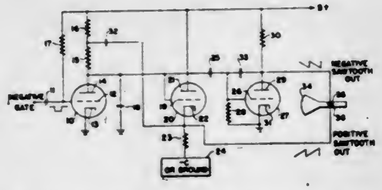
cathode ray tube between two spaced limits, interrupting the sweep of said beam at predetermined points intermediate said limits, momentarily clamping said beam in said intermediate

position and intensifying said beam while clamped in said intermediate position thereby causing stationary luminous position marks to appear on the screen of said cathode ray tube.



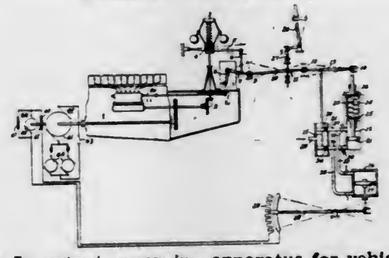
2,439,322
CHAIR
Herbert V. Thaden, Roanoke, Va., assignor to Thaden/Jordan Furniture Corporation, Roanoke, Va., a corporation of Virginia
Application February 25, 1946, Serial No. 649,884
2 Claims. (Cl. 155—193)

1. A plywood chair construction comprising a unitary seat and legs section and a unitary back section, said back section having a forward extension at its lower end, a slot in the seat and leg section adjacent the rear boundary of the seat adapted to receive said forward extension, and means for securing said forward extension to the under side of the seat.



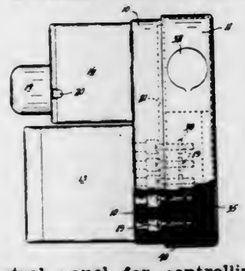
2,439,323
RIVETING MACHINE
Eugene F. Tuttle, North Hollywood, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application February 1, 1943, Serial No. 474,405
9 Claims. (Cl. 78—48)

7. In a riveting machine, the combination of: axially relatively movable members for engaging the shank and head respectively of a rivet set in position in work articles for upsetting the rivet shank; hydraulically operated means for applying pressure to said members to upset the rivet shank; a work article engaging member axially movable relative to said shank engaging member and loaded to move relative to said shank engaging member in a direction toward the rivet head engaging member; a control valve structure for actuating said hydraulically operated means to apply said pressure, said structure having a valve loaded to take the non-actuating position and being secured at an adjustably spaced relation from a frame part of said machine, and provided with a movable valve operating member; a lever for moving said valve operating member to open said valve, and a latching means for said lever comprising a catch and a latch, one of which is mounted on said valve structure and the other of which is mounted on said frame, the frame mounted one of which being releasingly actuated in correlation with movement of said article en-



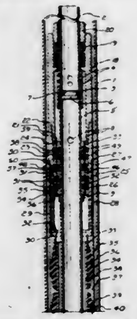
gaging member relative to said shank engaging member in a direction away from said rivet head engaging member, and the juncture of the release of said latch and catch member being dependent upon the said spacing of said valve structure and frame.

2,439,324
ELECTRICAL CIRCUIT
Robert M. Walker, Belmont, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application August 1, 1945, Serial No. 608,304
6 Claims. (Cl. 315—26)



1. A circuit for generating push-pull sawtooth sweep voltages for a cathode ray tube comprising a switch tube having a load circuit, capacitance means connected between the plate of said switch tube and a point of reference potential, means for applying pulses from a source external to said circuit onto said switch tube, whereby said switch tube is made impervious to current flow therethrough and a positive sawtooth wave of voltage is generated at the plate thereof, a buffer stage comprising a cathode follower circuit, means coupling said positive sawtooth wave to the grid of said cathode follower circuit, first condenser means coupling the cathode of said cathode follower circuit back to the load circuit of said switch tube, whereby the linearity of said positive sawtooth wave is increased over the linearity of an exponential wave, means coupling said positive sawtooth wave at the cathode of said buffer tube to a first deflection means of said cathode ray tube, an inverter tube, voltage divider means applying said positive sawtooth wave to the grid of said inverter tube, whereby a negative sawtooth wave is present on the plate of said inverter tube, and means applying said negative sawtooth wave to a second deflection means of said cathode ray tube.

2,439,325
GOVERNING ARRANGEMENT WITH SERVOMOTOR
Fritz Wiesendanger, Winterthur, Switzerland, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland
Application May 19, 1944, Serial No. 536,252
7 Claims. (Cl. 290—17)

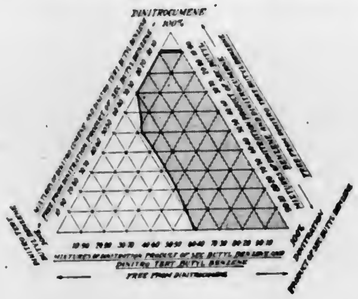


7. In output governing apparatus for vehicles driven by internal combustion engines with electrical power transmission including an electrical generator, the improvement which comprises a speed governor driven by the engine, a regulating device for varying astatically the output of the generator, servomotor with a piston for operating the regulating device, a control means for the servomotor including a control member and a regulating piston therefor, means for regulating statically the fuel supplied to the engine, linkage connecting the governor on one hand to the control member and its regulating piston and on the other hand to the fuel regulating means, an adjustable fulcrum for the linkage, means for setting the fulcrum in different positions to impose variations on the action of the governor, a pipe system for servomotor motive fluid connecting the control member and its regulating piston, and throttling means in the pipe system whereby the action of the regulating piston providing a return motion for the control member is retarded relative to the initial motion of that member.

2,439,326
CONTROL PANEL
John M. Wilson, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application May 10, 1944, Serial No. 534,898
3 Claims. (Cl. 175—308)

1. A control panel for controlling an electrically operated air conditioning mechanism, comprising in combination, a first assembly including a panel member and a plurality of dissimilar electrical devices mounted on the front of said panel, a plurality of conductors on the back of said panel interconnecting the electrical devices and terminating in a plurality of circular connecting lugs, headed projections inserted in the lugs of said conductors, a plate formed of insulating material removably attached to the base of said first assembly and having a plurality of openings adapted to retain the headed portions of said projections within said assembly, a second assembly removably receiving said first assembly, said second assembly being adapted for mounting on a rigid support and including a member having a plurality of wire receiving terminals adapted for connection to elements of said electrical mechanism and a source of power, and means forming a part of said second assembly adapted to receive said projections and rigidly retain the same and thereby said first assembly while also completing electrical connections between said electrical devices, the source of power and said electrical mechanism.

2,439,327
CROSSOVER FLOW DEVICE
Madden T. Works, Houston, Tex., assignor to Cameron Iron Works, Houston, Tex., a corporation of Texas
Application October 26, 1943, Serial No. 507,711
17 Claims. (Cl. 277—12)

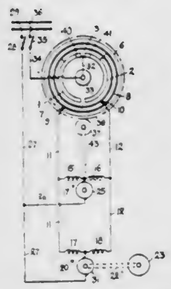


1. In a crossover flow device adaptable for use in a well bore having two producing formations, a conduit assembly having upper and lower lateral openings and upper and lower endwise openings, passageways interconnecting said openings, valve means interposed in said passageways and shiftable to either of two positions, said valve means in one position providing independent communication between said upper and lower lateral openings and between said upper and lower endwise openings respectively, and when in the second position providing independent communication between the lower lateral opening and the upper endwise opening and between the lower endwise opening, and the upper lateral opening respectively, means for shifting said valve from one position to another, and an annular seal forming means embracing said assembly between said upper and lower lateral openings adapted with the valve means in the second position, to separate the passageway including the lower endwise opening from the upper producing formation.

2,439,328
PLASTIC DETONATING COMPOSITIONS
Harold Reginald Wright, West Kilbride, and William Gordon Allan, Saltcoats, Scotland, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
Application March 22, 1945, Serial No. 584,258
In Great Britain June 2, 1944
8 Claims. (Cl. 52—13)

1. Plastic detonating explosives capable of being stored continuously at low temperatures with-

out setting irreversibly hard which comprise a self-explosive solid compound from the group consisting of self-explosive non-aromatic crystalline solid nitric esters and cyclo-trimethylene-trinitramine distributed through a continuous matrix comprising a liquid which freezes below



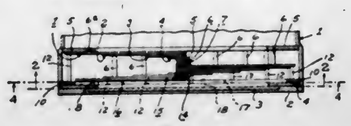
−15° C. and the composition of which is shown in the shaded portion of the triangular diagram for the multi-component system of dinitrocumene, dinitro tertiary-butylbenzene and the dinitration product of secondary-butylbenzene in the drawing accompanying the specification.

2,439,329

ELECTRIC CONTROL APPARATUS FOR RAPIDLY PLACING A LOAD IN ANY DESIRED POSITION

Michel N. Yardeny, New York, N. Y.

Application October 11, 1945, Serial No. 621,792
7 Claims. (Cl. 318—297)



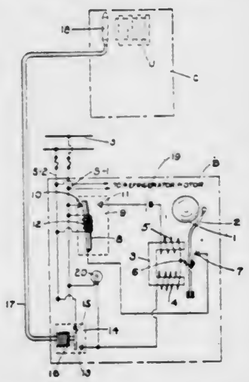
1. A control apparatus comprising a pair of relatively movable control members; a motor operatively connected to one of the members, the second member being movable by other means; one member comprising electrically conducting means, the other member comprising a contact arm for engaging the conducting means; circuit means to energize the motor when the contact arm engages the conducting means for causing the motor to rotate and to stop when the contact arm and the conducting means reach a predetermined relative position; and means capable of yieldably retaining the contact arm in engagement with the conducting means in a position other than said predetermined relative position until the second member is arrested, thereby causing the motor driven member to be placed in a position in which the contact arm and the conducting means occupy said predetermined relative position, thus stopping the motor.

2,439,330

SIGNAL AND SEARCHLIGHT SHUTTER

Otto J. Zander, Huguenot, N. Y.

Substituted for abandoned application Serial No. 490,287, June 10, 1943. This application July 1, 1947, Serial No. 758,344
4 Claims. (Cl. 177—329)



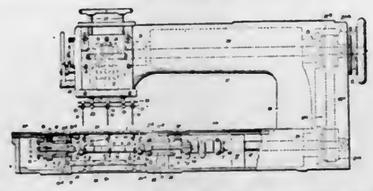
1. A signal and searchlight shutter comprising a casing having parallel front and rear plates with aligned circular apertures, a plurality of flat vanes pivotally mounted at points spaced at regular intervals around said casing and close to the edges of said circular apertures, the rearmost vane being pivoted on said rear plate, the foremost vane being pivoted on the front plate, pivot pins mounted at their rear ends to turn in the rear plate and gradually increasing in length from the second to the next to last by increments corresponding to the thickness of a vane, all of such vanes being fixed on the forward ends of said pins and each overlapping the vane to the rear, the vane pivoted on the front plate overlying the front vane on a pin, and means for actuating said vanes to closed and open positions.

2,439,331

WARNING SIGNAL SYSTEM FOR REFRIGERATORS

Roscoe D. Bean, Red Bank, N. J., assignor to Signal Engineering & Manufacturing Company, New York, N. Y., a corporation of Massachusetts

Application January 12, 1946, Serial No. 640,737
4 Claims. (Cl. 177—311)



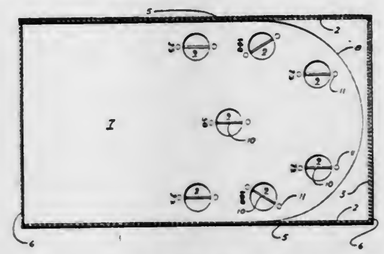
1. A warning signal system for refrigerators and the like comprising in combination, an electrically operated signal, separate sources of electrical power, a refrigerating device operable from one of said sources and providing a refrigerating chamber, means for operating said signal from the same power source as the refrigerating device, in response to a predetermined temperature rise within the chamber, and means responsive to failure of the first named source for a predetermined period to operate said signal from the other source.

2,439,332

LOOPER-ACTUATING MECHANISM FOR SEWING MACHINES

Rudolph Becker, North Plainfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey

Application November 28, 1945, Serial No. 631,302
16 Claims. (Cl. 112—199)



1. In a two-thread chain-stitch sewing machine having a reciprocatory eye-pointed needle, a thread-carrying looper formed with a blade having a loop-seizing beak, means to move said looper in an orbit about a field parallel to the needle, and means to oscillate said looper in the plane of and in time with its orbital movement so that the looper-blade moves in a downwardly inclined substantially straight path when advancing to seize a needle-loop and has an upwardly inclined movement in a curved path above the first named path when shedding the needle loop.

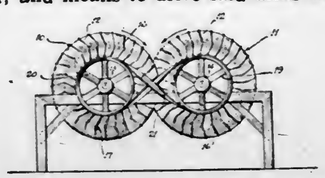
2,439,333

BALL GAME

Theodore J. Berning, Dayton, and Melvin P. Hoover, Lewisburg, Ohio

Application August 20, 1945, Serial No. 611,550
4 Claims. (Cl. 273—123)

1. In a game board, a board having therein a plurality of pockets and each pocket having extending across it a narrow strip of material dividing the pocket into two parts, and a ball adapted to be rolled over said board and into any of said pockets, said ball having therein a groove to receive said strip.



2,439,334

SURFACE CLEANING MACHINE

Oscar T. Bloom, Chicago, Ill., assignor to Industrial Patents Corporation, Chicago, Ill., a corporation of Delaware

Application September 23, 1942, Serial No. 459,450
7 Claims. (Cl. 17—11.1)

1. A device for pulling material removably attached to an irregularly shaped article from the surface thereof comprising a driven cylindrical means including a plurality of spaced disks for engaging the surface; said disks being deformable; each of said disks having a surface characteristic of a relatively high coefficient of friction and being provided with abrading ridges; said disks having a relatively large, flat, surface area of which a portion is adapted to be maintained continuously in contact with the surface being cleaned; and means to drive said disks whereby

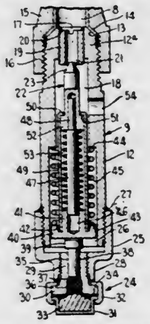
when an article is pressed into the engaging means and held stationary with respect to the disks, the driven disks will be deformed to frictionally engage the surface of the article to abrade the surface and pull the removable material from the surface of the article.

2,439,335

SANITARY HOLDER FOR SMALL ARTICLES

Lola A. Casnati, New York, N. Y.

Application May 28, 1945, Serial No. 596,282
2 Claims. (Cl. 294—25)

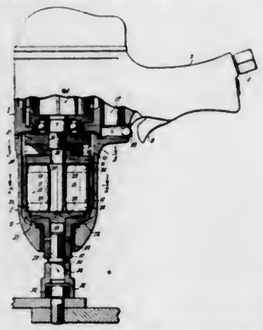


1. A sanitary holder for picking up small articles, comprising a sheet of folded paper, or the like material having an upwardly directed central apex portion and a plurality of downwardly directed side apex pocket portions into which one may engage one's fingers for pressing the side apex portions towards each other, extension sheets mounted on the walls of said side apex pocket portions, and pliable metallic strips mounted upon said extension sheets whereby the extension sheets will maintain different shapes into which they are bent.

2,439,336

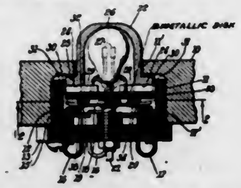
THERMOSTATIC VALVE

Earnest J. Dillman, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan



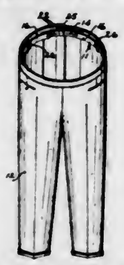
Application April 20, 1945, Serial No. 589,415
2 Claims. (Cl. 236—100)

1. A thermostatic valve comprising a tubular casing member having a valve chamber and having an end wall and an opposite open end, said end wall having a longitudinal opening there-



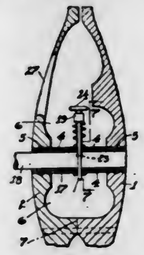
through into said chamber, a valve seat member in said opening and providing an inlet valve port into said chamber, a valve member having a conical end portion controlling flow through said port and engageable with said seat member to stop flow, said valve member having a surrounding shoulder facing said port and having a longitudinal central cylindrical recess facing away from said port, a cap member closing and sealed to said open casing member end and having a central aperture therethrough, a thermostatic power element casing having a tubular extension secured in and closing said central aperture, a piston guided in said tubular extension, temperature responsive material in said power element casing and operable on temperature increase to move said piston, a guide member seating on said piston and guided by and in said casing member, said guide member having a central cylindrical recess alined with and facing said valve member recess, a guide rod supported at one end in said valve member recess and having its other end reciprocally guided in said guide member recess, a sleeve member secured at one end to said guide member and reciprocally receiving said valve member, said sleeve member having an inturned flange receiving said valve member shoulder, a lost motion force transmitting spring within said sleeve member and held under compression between said guide member and said valve member to hold said valve member shoulder against said sleeve member flange, said casing member having an internal annular shoulder facing said open casing member end and having an outlet port through its side wall between said internal shoulder and said inlet port, and a spring surrounding said sleeve member and held under compression between said internal shoulder and said guide member to oppose movement of said valve member by said responsive material.

2,439,337
IMPACT CLUTCH
Frithiof P. Forss, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a corporation of Delaware
Application April 23, 1943, Serial No. 484,157
16 Claims. (Cl. 192—30.5)



1. An impact clutch of the character described comprising, relatively rotatable hammer and anvil members, the anvil member having a wall surrounding the hammer member and provided with internal abutments and track-ways therebetween, roller elements carried by the hammer member in recesses therein and movable by centrifugal force into the track-ways for delivering a series of rotational hammer blows on the abutments in the rotation of the hammer member relatively to the anvil, said hammer member providing side and end walls for the recesses for retaining the roller elements in operative position therein, said roller elements fitting wholly between the end walls of the recesses and having their opposite ends in sliding contact therewith, and means for rotating the hammer member.

2,439,338
SIGNAL DEVICE FOR THERMOSTATIC SWITCHES
Harry B. Fuge and James W. Momberg, Somerville, N. J., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application May 3, 1944, Serial No. 533,856
5 Claims. (Cl. 200—121)

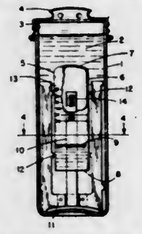


3. In a thermostatic electric switch comprising a base-member carrying spaced stationary electrical contacts, a heat responsive snap-acting disk located on one side of said contacts and adapted to engage said contacts in normal circuit closing position and to move away from said contacts to an open circuit position upon an abnormal rise in temperature, the improvement which comprises the provision of a pair of spaced resistors electrically connected to said contacts, a push-button located on the side of said disk opposite to the contacts, conductors carried by said push botton and contacting said resistors, and a signal light carried by said push button and electrically connected to said conductors.

2,439,339
TROUSER WAIST GRIP BELT
Amedeo D. Grisanti, Mount Vernon, N. Y.
Application January 26, 1946, Serial No. 643,508
1 Claim. (Cl. 2—237)

In combination with a pair of trousers having a waist band portion, an adjustable waist grip belt, on the trousers and two trouser loops each disposed on the inside of the waist band portion forward of and near the sides of said trousers, the waist grip belt comprising a three quarter belt member and an adjusting strap member, the three quarter belt member being formed with a non-elastic back portion and two elastic side portions each secured to an end of the said back portion, the free end of each elastic side portion being provided with a locking element, and the adjusting strap member being non-elastic and having a plurality of longitudinally aligned cooperating locking elements adapted to coact with the locking elements on said elastic side portion to join the belt members detachably and adjustably, the waist grip belt being disposed about the waist inside the trousers and extending through the trouser loops and being detachably secured to said trousers by fastening elements, one set of fastening elements joining the center of the adjusting strap member to the front of the trousers, and additional fastening elements joining the non-elastic back portion of the three quarter belt to the trousers at the back near its sides.

2,439,340
WHEEL CONSTRUCTION
Severine Hendrickson, Templeton, Mass., assignor to Heywood-Wakefield Company, Gardner, Mass., a corporation of Massachusetts
Application April 28, 1944, Serial No. 533,151
3 Claims. (Cl. 301—121)

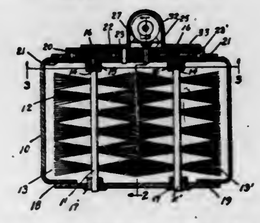


1. A wheel construction comprising half-portions assembled in complemental relation to form a complete wheel, with said half-portions providing centrally located alined bearing sleeves extending into registering recesses provided by said portions, a third sleeve extending within said first-named sleeves for receiving a supporting axle, and a locking device mounted on said third sleeve, within said recesses, for securing the wheel on said axle.

2,439,341
MOCCASIN WITH ORNAMENTAL EDGING
Charles Hlobil, Astoria, Long Island, N. Y.
Application May 18, 1945, Serial No. 594,390
1 Claim. (Cl. 36—11)

A slipper having a body portion comprising a sole and upper, said body portion being open at the top and perforated along the edges thereof, a plug set into said open top and having its peripheral edge perforated, and a lace passed through said perforations extended along the edge portions of said open top and said plug to elevate and maintain said upper in its final position and to hold said plug in position, said plug having a free back edge, and said lace being passed through openings extended along said back edge for stiffening and ornamenting the same.

2,439,342
PRESSURE MEASURING APPARATUS
William J. Hudson, Milwaukee, Wis.
Application February 23, 1944, Serial No. 523,778
8 Claims. (Cl. 73—403)



5. In an apparatus for indicating pressure variations the combination comprising transparent means containing a body of transparent liquid adapted to be put in contact with and subject to the pressure exerted by a medium to which said apparatus is to respond, a transparent responsive hollow member submerged within said liquid adapted to trap gas and to assume a submerged position of buoyant equilibrium, said hollow member having a downwardly facing opening in free communication with said liquid, an equilibrium restoring space occupying means positioned within said liquid and extending freely upwardly through said downwardly facing opening in said responsive hollow member and into the trapped gas contained therein, a plurality of externally visible pressure measuring scale markings vertically ranged on said transparent responsive hollow member, and an externally visible indicating mark on said space occupying means referable to said pressure measuring scale markings for reading the same.

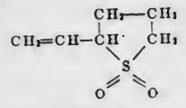
2,439,343
LIQUID COPOLYMER OF BETA MYRCENE AND PARA METHYL STYRENE
Edward L. Kropa, Old Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application July 12, 1947, Serial No. 760,702
2 Claims. (Cl. 260—86)

1. A liquid copolymer of β-myrcene and p-methyl styrene in a weight ratio of 3:1, β-myrcene to p-methyl styrene.

2,439,344
MECHANICAL SCRUB BRUSH
Edward A. Miller, Milwaukee, Wis.
Application February 7, 1945, Serial No. 576,543
1 Claim. (Cl. 15—23)

A device of the character described comprising an enclosure open at its lower face and provided with vertical side walls, a handle horizontally attached at both ends to its upper face, a plurality

of cylindrically shaped brushes, said brushes consisting of horizontal shafts provided with bristles extending outward therefrom, one end of each of said shafts provided with a flat surface thereon, an auxiliary plate longitudinally disposed and parallel to one of the vertical walls of said enclosure, a corresponding number of auxiliary shafts mounted within bearings, said bearings supported by one of the vertical walls of said enclosure and said auxiliary plate, said auxiliary shafts provided with sockets adapted to receive the flat surface of said brush shafts, a detachable plate supported by another of the vertical walls of said enclosure, said detachable plate provided with bearings to support the other end of said shafts, spur gears mounted to said auxiliary shafts at a point between said auxiliary plate and the vertical wall of said enclosure, an intermediate gear, a shaft for supporting said intermediate gear in direct alignment and in engagement with one of said spur gears, a drive gear, said drive gear mounted on a shaft and engaging said auxiliary gear and one of said spur gears, the shaft supporting said drive gear provided at one of its ends with a beveled gear, a vertical shaft mounted to the outside of said auxiliary plate, said vertical shaft provided with a beveled gear for engagement with the beveled gear on said drive shaft, and means for rotatably actuating said vertical shaft thereby providing a rotating motion to said brushes, revolving said brushes in opposite relation to and away from one another at their point of contact of the bristles with the surface contacted.



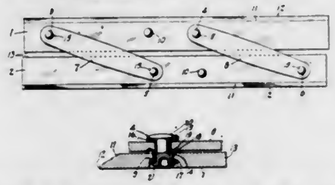
2,439,345

HYDROCARBON-SUBSTITUTED THIACYCLOPENTANE-1,1-DIOXIDE

Rupert C. Morris, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application July 13, 1943, Serial No. 494,587
4 Claims. (Cl. 260—329)

1. 2-vinyl-sulfolane having the general structural formula



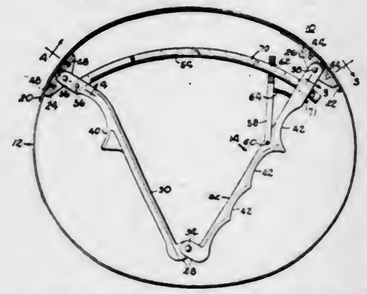
2,439,346

PARALLEL RULER AND METHOD OF MAKING THE SAME

James Nash, Milwaukee, Wis., assignor to Eclipse Moulded Products Company, Milwaukee, Wis., a corporation of Wisconsin

Application September 2, 1944, Serial No. 552,427
7 Claims. (Cl. 33—108)

5. A parallel ruler comprising a pair of blade members and link members with spaced holes to receive pivotal connections therefor with each connection comprising a rivet disposed within the concentrically aligned holes of a blade and link member and axially spaced from the walls of said members, a grommet disposed between the blade and link to separate the same, said grommet encircling said rivet within said blade and being seated at the upper end thereof in an annular groove in the bottom surface of the link around the hole therethrough to provide a bearing for said link, a resilient member encircling the upper end of the rivet above the link to maintain the seating of the grommet in said groove, and a washer encircling the lower end of the grommet, the lower end of said rivet being flared upwardly against said washer to secure the parts together.



6. The method of making a parallel ruler which comprises providing a pair of blade members and a pair of link members for joining said blade members in parallel relation, pivotally connecting the respective members in vertically spaced relation with the links mounted above the blades, and laterally interlocking the links and blades at each pivotal connection to prevent lateral displacement of one member relative to another and maintain the blades in accurate parallel relation at all times.

2,439,347

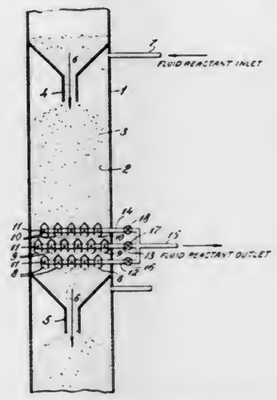
HAT CLAMP

Henry M. Pernini, Chicago, and Nano F. Contardi, Highland Park, Ill.

Application August 7, 1946, Serial No. 688,938
12 Claims. (Cl. 223—25)

12. A clamp for use with a forming flange in the blocking of hats comprising a generally circular sweatband-engaging strip having overlapping ends, a generally V-shaped grip having legs pivoted for movement toward one another and lying within said circular strip, means connecting the movable ends of said legs to said overlapping ends respectively of said strip so that manual gripping pressure on said legs causes an increase in the average diameter of said circular strip, a locking bar pivoted to one of said legs and slidable transversely with respect to the other, means acting on the slidable end of said locking bar for maintaining said strip in a condition of selected average diameter, and means including indicia on said locking bar for indicating the selected average diameter of said strip directly in terms of hat size.

2,439,348



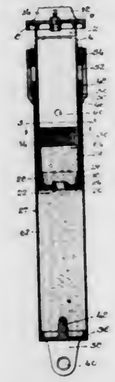
METHOD AND APPARATUS FOR CONVERSION OF HYDROCARBONS

Thomas P. Simpson, Woodbury, and Russell Lee and Frederick E. Ray, Mantua, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

Application September 21, 1943, Serial No. 503,188
7 Claims. (Cl. 196—52)

1. That method for the conversion of hydrocarbons in the presence of a particle form solid

contact mass material which comprises moving the contact mass through a confined reaction zone as a compact downwardly flowing column, passing reactants at reaction conditions longitudinally through said column and concurrently therewith, and separating reactant from contact



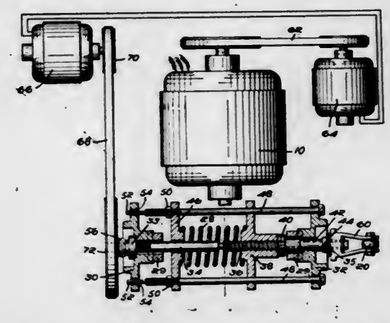
mass near the bottom of said column, in which the reactants are separated from contact mass at a disengaging surface located within said column the total area of which disengaging surface is substantially greater than the cross sectional area of the said column.

2,439,349

SHOCK STRUT

Carl E. Tack and Fred E. Bachman, Chicago, Ill., assignors to American Steel Foundries, Chicago, Ill., a corporation of New Jersey

Application October 6, 1944, Serial No. 557,420
3 Claims. (Cl. 267—64)



1. In an hydraulic shock absorber device, a bottom follower in the form of a cylinder containing hydraulic fluid, a top follower in the form of a hollow piston slidably reciprocal within said cylinder, said piston comprising a head at its lower end with a central orifice communicating with a chamber in said piston, a compressed gas spring in the upper extremity of said chamber for resisting the closure stroke of the device, means carried by said piston within said chamber intermediate said orifice and said spring for reducing the turbulence of the hydraulic fluid forced through said orifice on the closure stroke of the device, said means comprising a member with a plurality of fluid passages therethrough, the total cross-sectional area of said passages being greater than that of said orifice and affording a Reynold's number of less than two thousand, and a metering pin carried by said cylinder and adapted for reciprocation within said orifice at the end of said closure stroke, the length of said pin being substantially less than the distance between said orifice and said member.

2,439,350

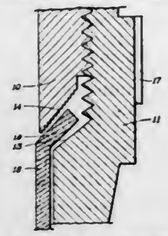
AUTOMATIC ADJUSTMENT FOR ELEVATOR BRAKES

Arthur M. Tarbox, Belmont, Mass., assignor to F. S. Payne Co., Cambridge, Mass., a corporation of Massachusetts

Application October 9, 1943, Serial No. 505,631
10 Claims. (Cl. 188—171)

1. In an elevator brake, a pair of brake shoes, a pair of collars engaging said brake shoes, a shaft carried by said collars, a bearing on said shaft engaging one of said collars, a ring slidably mounted on said shaft intermediate said brake shoes, adjustable rods connecting said ring to the other of said collars, a screw thread on said shaft, a nut threaded on said shaft and held against rotation by said rods, a compression spring acting between said nut and said ring, said spring being effective to apply said brake shoes, and automatic means responsive to variations in speed of the elevator for turning the shaft while the brake is released to cause said nut to move longitudinally and compress said spring.

2,439,351



PLASTIC TUBE FITTING

Gordon B. Thayer, Saginaw, and Robert D. Lowry, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

Application January 3, 1944, Serial No. 516,760
2 Claims. (Cl. 285—86)

1. A plastic fitting for flexible plastic tubing, comprising: centrally bored threaded male and female plastic members having cooperating right frustro-conical surfaces around the bore adapted to grip the flared end of a flexible plastic tube when the members are screwed together, the vertical angle between the generatrix of the conical surface and the axis of the male member being 2° to 15° more acute than that of the female member, when said members are not tightly

screwed together; the frusto-conical tip of the male member being yieldable, under normal coup-

ling stresses, to assume a position parallel to the cooperating surface of the female member.

2,439,352

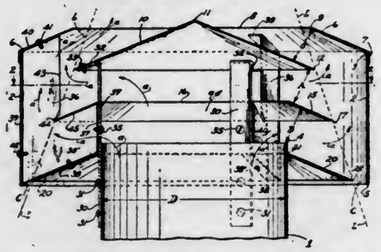
OPEN CHAIN ACTIVE METHYLENE COLOR COUPLERS

Arnold Weissberger and Henry D. Porter, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application March 21, 1946, Serial No. 656,149
12 Claims. (Cl. 95—6)

1. A color-forming photographic developer comprising a primary aromatic amino developing agent and a coupler compound having the formula

R—COCH$_2$CONHCO—R'



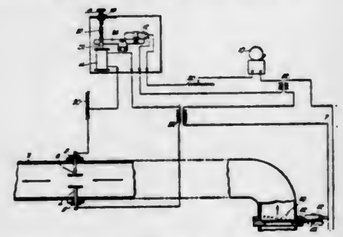
where R is selected from the class consisting of aryl and benzofuroyl radicals and R' is selected from the class consisting of alkyl and aryl radicals.

2,439,353

SMOKEJACK

Earl L. Wiseman, University Heights, Ohio, assignor to The Swartout Company, Cleveland, Ohio, a corporation of Ohio

Application January 17, 1945, Serial No. 573,237
5 Claims. (Cl. 98—84)



1. A smoke jack adapted to be associated with and supported by the open top end of a flue comprising a right conically formed cap with its apex disposed substantially in the axis of the flue and with its base edge of greater diameter than the flue, an annular storm band having a cylindrical part coaxial of the flue and extending from below the end of the flue to above the base edge of said conical cap and radially spaced from the edge of said cap and from said flue, said storm band also comprising an upper inturned inclined portion substantially paralleling the conical surface of said cap and spaced therefrom and defining a central circular opening coaxial of said flue and above the base edge of said cap, the apex of said cap protruding through said opening, a middle baffle of frusto-conical form disposed substantially midway between the end of the flue and said cap and having its surface inclined substantially parallel to the surface of said cap and having a circular opening coaxial of said flue and having its outer edge spaced from said storm band, a lower baffle of frusto-conical form pitched like said cap and said middle baffle having its inner upper edge substantially contacting the outer surface of said flue below the open end thereof and having its lower outer edge spaced from said storm band above the lower edge thereof and defining an annular opening therebetween of an area about one half the area of the area of said flue, vertical struts supported by the upper end of said flue and spaced circumferentially thereabout and having bent ends supporting said cap, and gussets having planar body parts lying in vertical radial planes outwardly of said struts and having bent edge portions secured to said struts and secured to said storm band and said lower baffle and securing same in assembled relation, said gussets also having notched edges supporting said middle baffle.

2,439,354

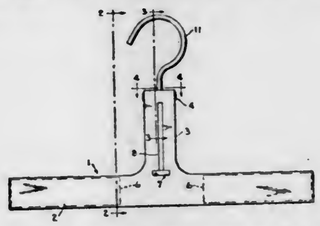
SUPERVISORY SIGNAL SYSTEM FOR WATER SOFTENERS

Herbert Wolcott, Columbia, Mo.

Application April 9, 1945, Serial No. 587,405
2 Claims. (Cl. 177—311)

1. Apparatus for testing water as to its hardness comprising, a conduit for passage of the water to be tested, an electric signal circuit provided with electrodes mounted in spaced relation in the path of the flow of water through said conduit, a circuit-breaking device included in said signal circuit, and a valve pivotally mounted within said conduit and having an exterior arm carrying said circuit-breaking device, whereby said valve is actuated by the flow of water through said conduit for automatically operating said device to maintain said circuit closed only when a normal flow of water is taking place through the conduit.

2,439,355



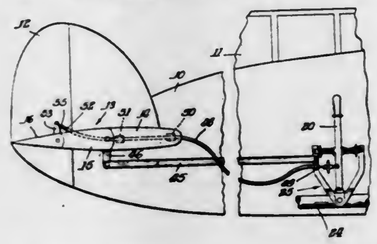
GARMENT HANGER

Robert H. Wollin, Milwaukee, Wis., assignor to William J. Nesbitt, Milwaukee, Wis.

Application July 1, 1946, Serial No. 680,635
1 Claim. (Cl. 223—96)

A garment hanger of the character described comprising, a pair of garment members, each having a base or cross-portion and an upwardly extending neck portion, said hanger members having inwardly extending marginal flanges to give the hanger members channel form, said flanges continuing to the upper ends of the neck portions and there provided with overlapping ear portions, a hinge pin extending through said ear

portions and fixed thereagainst to hingedly connect the hanger members together, said members having substantially co-planar outer surfaces coextensive with the hanger members and extending to the extreme upper ends of the neck portions, the latter having substantially centrally disposed slots therein extending lengthwise of the neck portions from just short of said hinge pin to said cross-portions, a key element having a substantially rectilinear shank extending through said slots with a non-rotative fit therein and provided at its opposite ends with rectilinear heads extending cross-wise of the slots and laterally beyond the same, said heads being engageable with



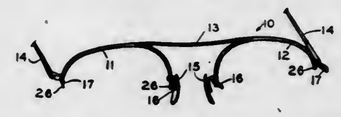
the outer sides of the neck portions along the slots and having inclined surfaces complementary to the angularity of the neck portions to move the garment members into clamping relation in the movement of the key element towards the cross-portions of the hanger members, a sleeve revolvably mounted on the hinge pin and having its ends opposed to the ear portions, and a hook member fixed to the sleeve for suspending the hanger member from an overhead support, said flanges at the upper ends of the neck portions being substantially parallel to the sleeve and limiting the lateral swing movement of the hook member.

2,439,356

CONTROL MECHANISM FOR RELATED CONTROL OF OPERATED MECHANISMS

Charles A. Arens, Chicago, Ill., assignor to Arens Controls, Inc., Chicago, Ill., a corporation of Illinois

Application November 8, 1943, Serial No. 509,399
2 Claims. (Cl. 74—470)



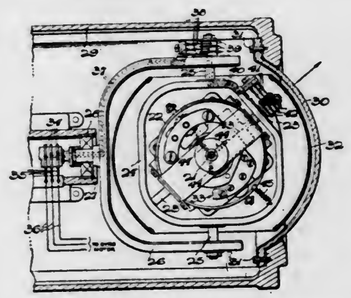
1. A control mechanism comprising a pair of operating members adapted selectively to effect the operation of a pair of operated devices, a composite control assembly comprising a pair of spring interconnected shiftable control members operatively connected to said operating members, one of said operating members being selectively actuated by the control members upon movement of the control members as a unit through a predetermined path of travel, and the other of said operating members being selectively actuated by the control members upon the shifting of one of said control members relative to the other along the same path of travel upon the yielding of said spring.

2,439,357

LENS HOLDING MEANS FOR SEMIRIMLESS TENSION SPECTACLE MOUNTINGS

Samuel E. Bouchard, Brighton, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York

Application October 11, 1945, Serial No. 621,698
3 Claims. (Cl. 88—47)



1. As an article of manufacture an ophthalmic mounting comprising a pair of spaced, resilient frame members, bridge means connecting the frame members, each of said members being curved so as to extend along the periphery of a lens which is adapted to be positioned against the front side of the member, each of said members having relatively straight bendable arms extending forwardly from its nasal and temporal portions, each of said arms having a substantially uniform cross sectional area throughout its length, the lengths of said arms being greater than the thickness of the thickest lenses which are to be positioned against the members whereby lenses of various thicknesses having nasal and temporal edge notches may be mounted in front of said members with the arms yieldably engaging the respective notches and the ends of the arms may be bent over at angles so as to engage the front faces of the lenses.

2,439,358

ATTITUDE GYRO

Richard L. Divoll, Concord, Mass., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware

Application July 3, 1945, Serial No. 603,047
6 Claims. (Cl. 74—5)

1. A navigational instrument for aircraft comprising a housing, a gyroscopic device within said housing comprising a rotor adapted for spinning about a normally vertical axis, a gimbal for supporting said rotor for oscillation about a first horizontal axis arranged at an angle to the fore and aft craft axis and about a second horizontal

axis parallel with the craft transverse axis, means rotatably mounted within said housing for supporting said gimbal for oscillation about a third horizontal axis aligned with the craft's fore and aft axis, all of said axes of oscillation being contained in a common and normally horizontal plane, and resilient means for maintaining a predetermined relation between said gimbal and said rotor.

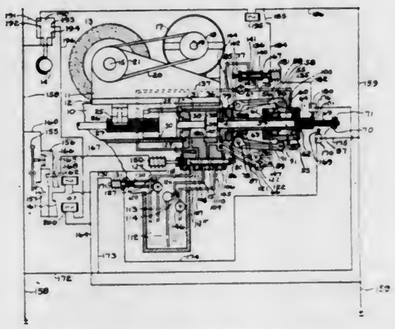
2,439,359

PRODUCTION OF AMINOPROPIONITRILES

James K. Dixon, Riverside, Conn., and Elmer W. Cook, New York, N. Y., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application January 8, 1946, Serial No. 639,904
7 Claims. (Cl. 260—464)

1. A method of producing an N-substituted β-aminopropionitrile which comprises bringing together ethylene cyanohydrin and a compound chosen from the group consisting of a heterocyclic amine which contains a hydrogen atom attached to nitrogen, and an aliphatic amine of the formula



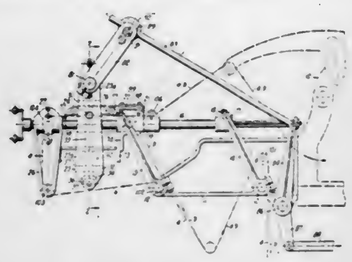
wherein R represents an aliphatic hydrocarbon radical and R' is a member of the group consisting of hydrogen and an aliphatic hydrocarbon radical, in the presence of a dehydration catalyst maintained at a temperature within the range of from about 225° C. to about 450° C.

2,439,360

INFEED FOR GRINDING MACHINES

William L. Drown, Paxton, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts

Application September 28, 1946, Serial No. 700,035
13 Claims. (Cl. 51—2)



1. In a grinding machine a cross slide mounted on ways, a feed shaft connected to said cross slide, means to move said cross slide in either direction, abutment means to control final movement of said cross slide in one direction including a collar on said shaft, a sleeve slidable on said shaft to abut said collar after movement of said shaft in one direction, a piston fixedly mounted on said sleeve, a cylinder slidably mounted on said piston and sleeve having cam surfaces to actuate said abutment means and fluid pressure means to actuate said cylinder.

2,439,361

LABEL OR LINER APPLYING MACHINE

Rene J. Gaubert, Oakland, Calif., assignor to Simplex Wrapping Machine Co., Oakland, Calif., a corporation of California

Application June 11, 1943, Serial No. 490,411
4 Claims. (Cl. 154—36)

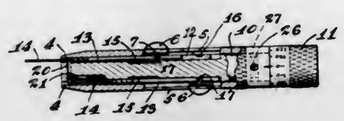
1. In a machine for use with mechanism to which superposed webs of material like moisture proof cellulose film or rubber hydrochloride are being fed, where the mechanism performs folding and sealing operations on superposed portions of the two webs, means for supporting a stack of sheets to be applied at regular intervals to the lower side of one web, means for causing one of the webs to travel over the top of the stack of sheets, a heater overlying the stack and the web, means for moving the heater in a vertical direction to press the web upon the stack, thereby heat bonding the top sheet of the stack to the under side of the web, and means for bringing the second web into registry with the lower side of the first named web, after sheets have been bonded to the first named web.

2,439,362

METHOD AND MEANS FOR ADJUSTING CONTACTS

Franklin C. Gill, Flint, Mich.

Application May 17, 1944, Serial No. 536,059
4 Claims. (Cl. 177—311)



2. In a method for adjusting a plurality of control contacts in a tracer head for a profiling machine whose follower arm varies the position of rapidly vibrating contacts that cooperate with the control contacts to control the machine, the steps of inserting in the control circuit lamps to indicate the flow of current therethrough, adjusting a portion of the contacts until a portion of the lamps are fully illuminated with the follower arm in neutral position, moving the follower arm to a displaced position and adjusting the remainder of the contacts until the remainder of the lamps are illuminated equally at approximately one-half full brilliance, said adjustment being of such degree that the transition from neutral to displaced position of the follower causes the first illuminated lamps to dim and the second mentioned lamps to gradually brighten to full brilliance at the maximum displacement and the first to be extinguished.

2,439,363

GAP GAUGE FOR SPARK PLUGS

Louis A. Habicht and Howard H. Vogel, Toledo, Ohio, assignors to Champion Spark Plug Company, Toledo, Ohio, a corporation of Delaware

Application January 15, 1945, Serial No. 572,952
8 Claims. (Cl. 33—168)

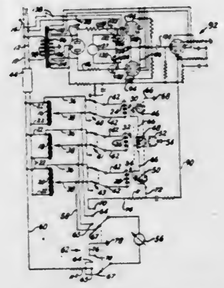
8. In a spark plug gap gauge, a barrel-like holder having two holes in one end, a magazine having a plurality of circumferentially spaced longitudinally extending passages therein, said magazine being rotatable in the holder to place the passages of predetermined pairs in register with respective of said holes, a gap gauge member slidable in each passage to be enclosed within the holder or projected in usable position therefrom through a registering hole, and a slide carried by the holder in association with each hole and being operable to project a registering member through a hole with which it registers or to retract the member within the holder and to lock the magazine and holder against relative rotary movements except when the slide and an engaged member are in retracted positions.

2,439,364

CLAMP

John W. King and James J. McNamee, Cleveland, Ohio, assignors to Miles Park Machine & Tool, Inc., Cleveland, Ohio, a corporation of Ohio

Application March 12, 1947, Serial No. 734,152
2 Claims. (Cl. 85—3)



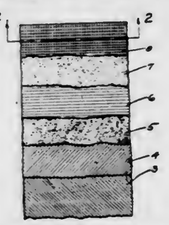
1. A clamp for clamping walls together consisting of a bolt having a head and a screw threaded shank, a nut on said shank, said head and nut being arranged to operate as abutment elements, a washer through which the shank extends and an anchor member shaped to provide a back and laterally extending side walls spaced to engage the opposite sides of either of said elements, the back being formed with an opening through which said shank loosely extends elongated longitudinally of the back and providing at its opposite sides a seat for either of said elements and a separate transversely elongated opening extending between said side walls, said back between said openings being transversely embossed arcuately in a direction opposite to said side walls and said back between the remote end of said elongated opening and the adjacent end of said back being transversely embossed arcuately in the direction of said side walls, said bolt and said anchor member being freely swingable one relative to the other to nest the bolt in said arcuate embossments with the adjacent abutment element in said separate opening when the shank and anchor member are to be projected through openings in the walls to be clamped.

2,439,365

COMPUTER

Wolfgang B. Klemperer, Los Angeles, and Everett H. Pier, West Los Angeles, Calif., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif.

Application February 15, 1943, Serial No. 476,030
10 Claims. (Cl. 235—61)

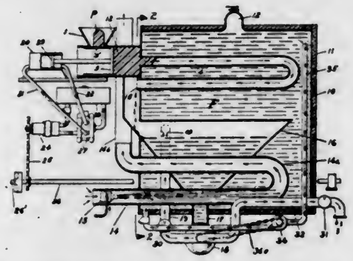


1. A computer for evaluating datum quantities having vectorial features, comprising: a source of alternating current; a plurality of conductor paths, said paths carrying currents of identical frequency and phase, branching off from said source; means for individually adjusting the potentials of said conductor paths to values proportional to the respective values of the datum quantities; inductive transformer means, the primaries of which respectively terminate the respective conductor paths, said transformer means including rotary secondaries having primary-coupling angles permanently arranged with respect to each other at equal parts of 360° and so operable as to concurrently modify the values of the secondary output potentials by factors related to each other as sine functions spaced at geometrical angles equal to the angular intervals of the directions of said vectorial features associated with said datum quantities; means for connecting said modified secondary potentials in a series circuit; and means for indicating the value of the potential across the outside terminals of said series circuit.

2,439,366

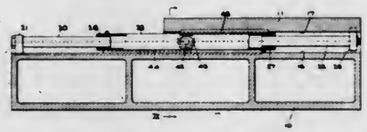
SELF-SEALING CONTAINER

Leone McLaughlin, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware



Application February 24, 1941, Serial No. 380,259
4 Claims. (Cl. 154—43.5)

1. A liner for self-sealing containers adapted to hold liquid hydrocarbons comprising a layer of partially cured rubber, two plies of weftless or broken-weft fabric with the warp threads of each at cross angles to those of the other bonded together and to one side of said rubber layer, a

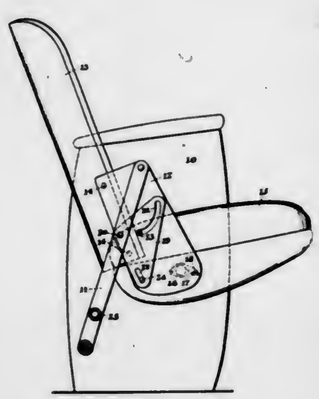


third ply of weftless or broken-weft fabric bonded to the other side of said rubber layer with the warp threads at an intermediate angle to the warp threads of the other two plies and a ply of polymerized chlorobutadiene coated fabric bonded to said third fabric ply.

2,439,367
APPARATUS FOR MELTING PLASTIC COMPOSITIONS
William F. Middlestadt, Baltimore, Md., assignor to The James Gibbons Company, Relay, Md.
Application December 27, 1945, Serial No. 637,433
3 Claims. (Cl. 126—343.5)

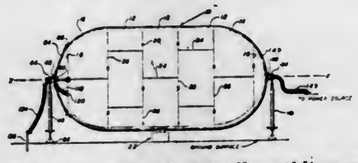
1. An apparatus for transforming a solid thermoplastic rubbery composition composed of rubber and/or bitumen, resins and inert fillers to a liquid pourable state, comprising a closed housing containing a heated liquid medium therein, a combustion gas conduit for heating said liquid medium, conduits disposed in said housing, hydraulically operated means for forcing said thermoplastic rubbery composition through said conduits in heat exchange relation to said liquid medium to transform said composition into molten particles, a container in said housing for receiving the extruded molten particles of said composition and means for applying additional heat thereto to liquefy the composition for hot flow purposes with no chemical breakdown or segregation of the constituents thereof, a pipe extending into said housing and opening into said container, a recirculating pump having the inlet thereof connected to the outlet of said container and the outlet of said pump connected to said pipe and control valve means in said pipe for controlling the quantity of the molten mass undergoing recirculation in and withdrawal from the apparatus.

2,439,368
MACHINE TOOL
Frederick E. Munschauer, Buffalo, N. Y., assignor to Niagara Machine & Tool Works, Buffalo, N. Y.
Original application June 1, 1945, Serial No. 597,137. Divided and this application May 22, 1947, Serial No. 749,697
4 Claims. (Cl. 51—233)



1. In a machine tool, a bed, a work table mounted for guided lineal movement thereon, and drive means for effecting lineal movement thereof, said drive means comprising a cylinder guided for longitudinal movement in the direction of its axis and parallel to the path of movement of said work table, piston means fixed relative to said bed and movable axially in said cylinder, other piston means fixed relative to said work table and movable axially in said cylinder, whereby fluid pressure in said cylinder between said piston means moves the latter relatively apart, gear means carried by said cylinder for free rotation, a rack fixed to said bed and meshing with said gear means, and a second rack fixed to said work table and meshing with said gear means at its opposite side, whereby said cylinder automatically moves along said bed at a rate bearing a fixed fractional relation to the rate of movement of the work table.

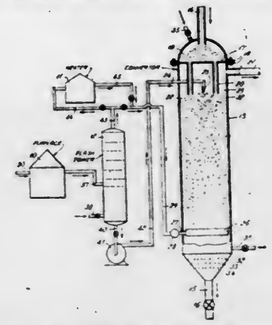
2,439,369
CONDENSATION DERIVATIVES OF RUBBER
William Howard Nicol, Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application November 15, 1943, Serial No. 510,383
3 Claims. (Cl. 260—768)



1. An adhesive which comprises a condensation derivative of rubber and a small amount of an organic diisocyanate.

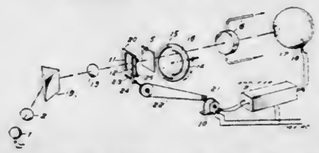
2,439,370
RETRACTING TYPE THEATER CHAIR
Merritt K. Orton, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application July 26, 1946, Serial No. 686,326
2 Claims. (Cl. 155—116)

1. In a chair, a frame, spaced supporting links having their lower ends pivotally associated with the frame, side plates having their upper ends pivotally connected to the upper ends of the supporting links, a chair back and a chair seat mounted on said side plates, guide members pivotally connected to the supporting links and having pairs of guide slots therein, pins on the frame extending into one pair of said guide slots, and pins on the side plates extending into the other pair of said guide slots.



2,439,371
GROUNDING SYSTEM FOR GAS TANK WELDERS
William A. Sandberg, Los Angeles, Calif., assignor to Lacy Manufacturing Company, Los Angeles, Calif., a corporation of California
Application October 3, 1947, Serial No. 777,813
4 Claims. (Cl. 219—17)

1. In apparatus for electrically welding seams of a cylindrical tank structure comprising metal ring sections and at least one centrally open metal head section all secured together and mounted for rotation in a cradle about a horizontal axis, the improved electrical grounding system which comprises a conductor rod firmly mounted on said head section coaxially with said tank and in electrical communication with said sections, a conductor terminal arranged to be maintained in sliding contact with said conductor as said tank is rotated to facilitate welding the seams, and a grounding conductor connected at one end to said conductor terminal and at the other end to ground.

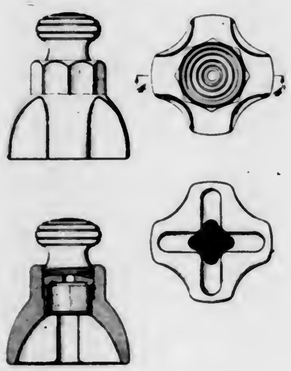


2,439,372
METHOD FOR HYDROCARBON CONVERSION
Thomas P. Simpson, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application June 12, 1946, Serial No. 676,222
14 Claims. (Cl. 196—52)

1. A method for conversion of gaseous and high boiling liquid hydrocarbon charges in the presence of a moving contact material which comprises: passing a particle form solid contact material at a suitable conversion supporting temperature through a confined conversion zone as a substantially compact, vertical column of downwardly moving particles, introducing a gaseous hydrocarbon charge into said column in the lower section of said conversion zone and passing said gaseous hydrocarbon charge upwardly through said column to effect its conversion to a gaseous product containing lower boiling hydrocarbons, distributing a high boiling liquid hydrocarbon charge onto the contact material in said column in said conversion zone at at least one level substantially above the level of gaseous hydrocarbon introduction to effect conversion of said liquid hydrocarbons to a lower boiling gaseous hydrocarbon product and withdrawing the

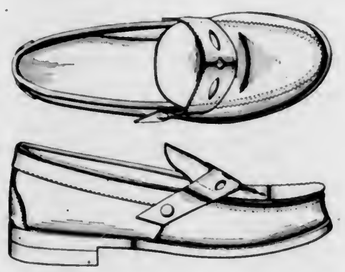
mixed gaseous products from the upper section of said conversion zone above the level of liquid and gaseous hydrocarbon introduction.

2,439,373
FLICKERING BEAM PHOTOMETER
Edwin I. Stearns, Jr., Plainfield, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
Application September 27, 1944, Serial No. 555,941
2 Claims. (Cl. 250—41.5)



1. A flickering beam photometer comprising in optical alignment a source of radiation of wave length sufficiently short to obey optical laws, dispersing means capable of producing a spectrum, an opaque plate provided with two openings passing two beams of spectral characteristics, means for containing a sample to be measured in the path of said two beams, a radiation detector receiving light from the two beams and capable of transforming variations in radiant energy into radiations of electrical current, and means for rapidly and alternately occulting first one beam and then the other.

DESIGNS

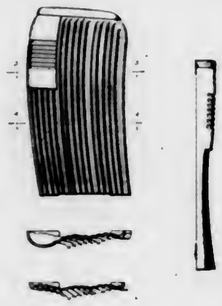


APRIL 6, 1948

149,159
DESIGN FOR AN APPLICATOR OR SIMILAR ARTICLE FOR BEAUTY AND HEALTH TREATMENTS
Dolletta M. Ackerman, Los Angeles, Calif.
Application June 29, 1946, Serial No. 131,177
Term of patent 14 years
(Cl. D83—1)

The ornamental design for an applicator or similar article for beauty and health treatments, as shown.

149,160
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Russell Bodie, Honesdale, and Stanley C. Bronson, Seelyville, Pa.
Application June 4, 1947, Serial No. 139,448
Term of patent 14 years
(Cl. D7—7)



The ornamental design for a shoe or similar article, as shown.

149,161
DESIGN FOR A FOLDING CHAIR
Willard H. Bond, Jr., Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application October 21, 1946, Serial No. 134,108
Term of patent 14 years
(Cl. D15—1)

The ornamental design for a folding chair, substantially as shown.

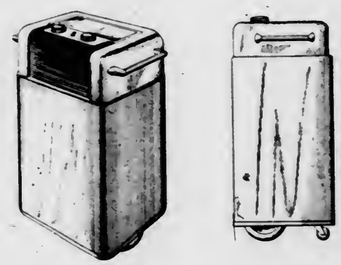
149,162
DESIGN FOR A CHAIR END STANDARD
Willard H. Bond, Jr., Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application November 7, 1946, Serial No. 134,579
Term of patent 14 years
(Cl. D15—8)

The ornamental design for a chair end standard, substantially as shown.

149,163
DESIGN FOR A DESK ORNAMENT
Violet Brown, Wrentham, Mass., assignor to R. M. Jordan & Company, Inc., a corporation of Rhode Island
Application September 10, 1946, Serial No. 133,212
Term of patent 3½ years
(Cl. D29—23)

The ornamental design for a desk ornament, substantially as shown.

149,164
DESIGN FOR A DESK ORNAMENT
Violet Brown, Wrentham, Mass., assignor to R. M. Jordan & Company, Inc., a corporation of Rhode Island
Application September 10, 1946, Serial No. 133,215
Term of patent 3½ years
(Cl. D29—23)

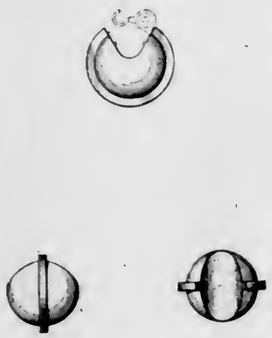


The ornamental design for a desk ornament, substantially as shown.

149,165
DESIGN FOR A WALKING FIGURE TOY
Salvatore Capillo, Ossining, N. Y.
Application August 26, 1946, Serial No. 132,874
Term of patent 14 years
(Cl. D34—15)

The ornamental design for a walking figure toy, as shown and described.

149,166
DESIGN FOR A PORTABLE ELECTRIC RECTIFIER
Dave Chapman, Chicago, Ill., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application May 23, 1946, Serial No. 130,026
Term of patent 7 years
(Cl. D26—5)



The ornamental design for a portable electric rectifier, as shown.

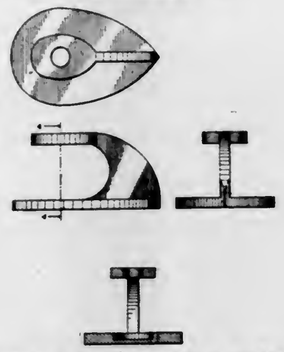
149,167
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application March 18, 1947, Serial No. 137,705
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

149,168
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application March 18, 1947, Serial No. 137,706
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

149,169
DESIGN FOR AN EARRING OR THE LIKE
Michael Chernow, New York, N. Y.
Application April 8, 1947, Serial No. 138,237
Term of patent 7 years
(Cl. D45—9)

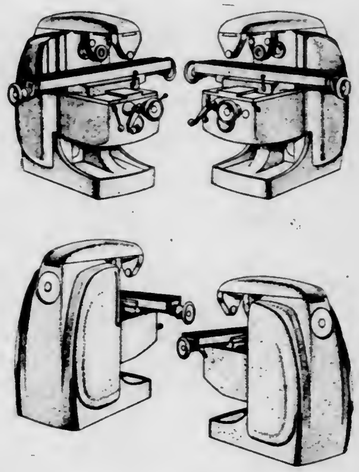


The ornamental design for an earring or the like, substantially as shown and described.

149,170
DESIGN FOR AN EARRING OR THE LIKE
Michael Chernow, New York, N. Y.
Application April 8, 1947, Serial No. 138,238
Term of patent 7 years
(Cl. D45—9)

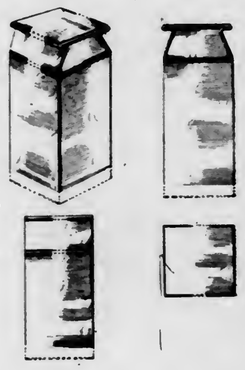
The ornamental design for an earring or the like, substantially as shown and described.

149,171
DESIGN FOR A COFFEE MAKER STAND
Jerome Cohen, Arverne, N. Y.
Application June 7, 1946, Serial No. 130,505
Term of patent 3½ years
(Cl. D44—26)



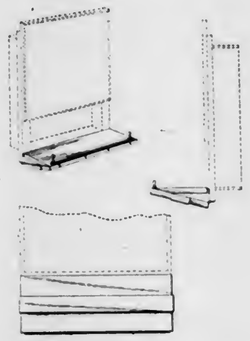
The ornamental design for a coffee maker stand, as shown.

149,172
DESIGN FOR A DOLL
Roger de Vries, Plainfield, N. J.
Application May 10, 1946, Serial No. 129,553
Term of patent 14 years
(Cl. D34—4)



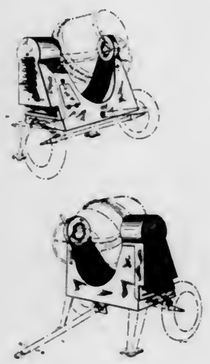
The ornamental design for a doll, substantially as shown.

149,173
DESIGN FOR A MILLING MACHINE
William B. Dulaney, Cincinnati, Ohio, assignor to The Cleveland Automatic Machine Company, Norwood, Ohio, a corporation of Ohio
Application November 22, 1946, Serial No. 135,023
Term of patent 14 years
(Cl. D54—14)



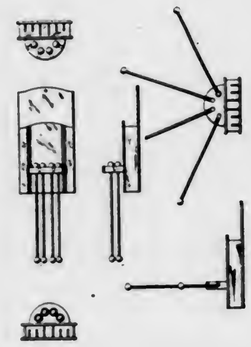
The ornamental design for a milling machine, as shown.

149,174
DESIGN FOR A BOXLIKE CONTAINER
Wilfred A. Eaton, Woodbury, Conn., assignor to Sanford Products, Inc., Woodbury, Conn., a corporation of Delaware
Application February 5, 1948, Serial No. 144,316
In Canada June 24, 1946
Term of patent 14 years
(Cl. D58—12)



The ornamental design for a boxlike container, substantially as shown and described.

149,175
DESIGN FOR A SHELF FOR BATHROOM CABINET OR SIMILAR ARTICLE
Walter Fanelli, South Euclid, Ohio, and Carl A. Laystrom, Chicago, Ill., assignors to Faries Manufacturing Company, Decatur, Ill., a corporation of Illinois
Application June 19, 1946, Serial No. 130,860
Term of patent 14 years
(Cl. D33—3)

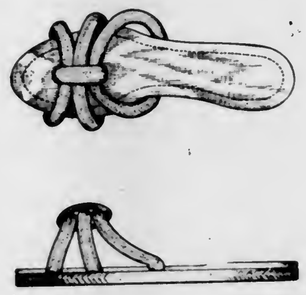


The ornamental design for a shelf for bathroom cabinet or similar article, as shown and described.

149,176
DESIGN FOR A TILTING TYPE CONCRETE MIXER
George A. Fleischmann, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application July 12, 1946, Serial No. 131,528
Term of patent 14 years
(Cl. D14—3)

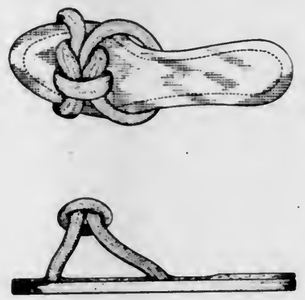
The ornamental design for a tilting type concrete mixer, substantially as shown and described.

149,177
DESIGN FOR A COMBINED KNIFE HOLDER AND TOWEL RACK
John T. Generale, Pelham Manor, N. Y.
Application October 1, 1946, Serial No. 133,678
Term of patent 3½ years
(Cl. D44—29)



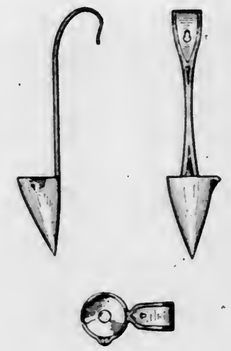
The ornamental design for a combined knife holder and towel rack, substantially as shown.

149,178
DESIGN FOR A BOTTLE
Hugh Genske, Philadelphia, Pa.
Application October 22, 1945, Serial No. 123,094
Term of patent 7 years
(Cl. D58—8)



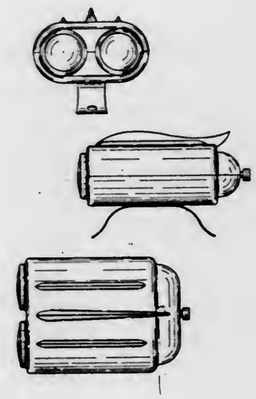
The ornamental design for a bottle, as shown.

149,179
DESIGN FOR A SLIPPER OR SIMILAR ARTICLE
Jon Gregg, New Hope, Pa.
Application August 2, 1946, Serial No. 132,207
Term of patent 3½ years
(Cl. D7—7)



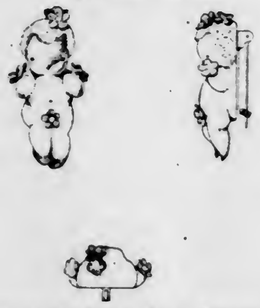
The ornamental design for a slipper or similar article, as shown.

149,180
DESIGN FOR A SLIPPER OR SIMILAR ARTICLE
Jon Gregg, New Hope, Pa.
Application August 2, 1946, Serial No. 132,208
Term of patent 3½ years
(Cl. D7—7)



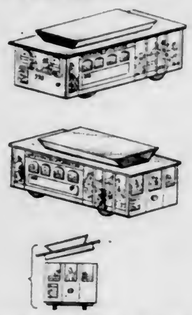
The ornamental design for a slipper or similar article, as shown.

149,181
DESIGN FOR A CREAM SKIMMER
Florence E. Hale, Kit Carson, Colo.
Application February 5, 1946, Serial No. 126,262
Term of patent 3½ years
(Cl. D44—29)



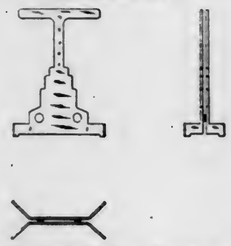
The ornamental design for a cream skimmer, as shown.

149,182
DESIGN FOR A BICYCLE HEADLIGHT
Orlando F. Ingle, Richmond, Ind., assignor to Herbert T. King, Union City, Ind., and T. Ivan King, Centerville, Ind.
Application June 11, 1946, Serial No. 130,640
Term of patent 14 years
(Cl. D48—24)



The ornamental design for a bicycle headlight, substantially as shown.

149,183
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Norma E. Jansen, Oakland, Calif.
Application February 7, 1946, Serial No. 126,352
Term of patent 3½ years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

149,184
DESIGN FOR A NOVELTY BOX
Geraldine H. Jolley, San Francisco, Calif.
Application May 10, 1946, Serial No. 129,555
Term of patent 7 years
(Cl. D58—11)

The ornamental design for a novelty box, as shown.

149,185
DESIGN FOR A NAPKIN HOLDER
Bernard Katshen, Sr., San Francisco, Calif.
Application March 11, 1946, Serial No. 127,363
Term of patent 3½ years
(Cl. D44—24)

The ornamental design for a napkin holder, substantially as shown.

149,186
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro Inc., New York, N. Y., a corporation of New York
Application March 12, 1947, Serial No. 137,540
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

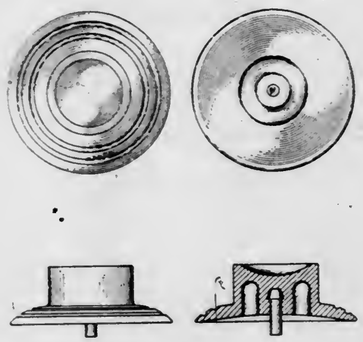
149,187
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 13, 1947, Serial No. 137,572
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a separable brooch or similar article, substantially as shown.

149,188
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 13, 1947, Serial No. 137,574
Term of patent 7 years
(Cl. D45—16)

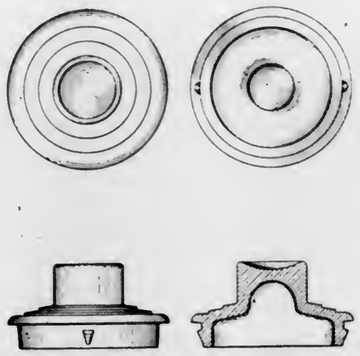
The ornamental design for a necklace or similar article, substantially as shown.

149,189
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 13, 1947, Serial No. 137,578
Term of patent 7 years
(Cl. D45—19)



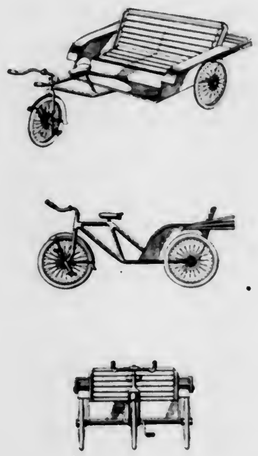
The ornamental design for a separable brooch or similar article, substantially as shown.

149,190
DESIGN FOR A FINGER RING
Felix P. Kinsley, St. Louis, Mo.
Application February 17, 1947, Serial No. 136,945
Term of patent 14 years
(Cl. D45—10)



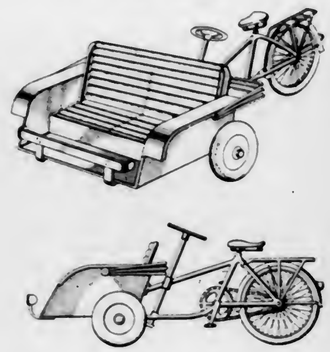
The ornamental design for a finger ring, as shown and described.

149,191
DESIGN FOR A KNOB FOR KITCHEN UTENSILS
Richard F. Krause, Massillon, Ohio, assignor to The Enterprise Aluminum Company, Massillon, Ohio, a corporation of Ohio
Application October 2, 1946, Serial No. 133,700
Term of patent 7 years
(Cl. D44—29)



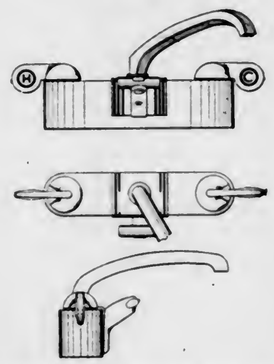
The ornamental design for a knob for kitchen utensils, substantially as shown.

149,192
DESIGN FOR A PERCOLATOR TOP
Richard F. Krause, Massillon, Ohio, assignor to The Enterprise Aluminum Company, Massillon, Ohio, a corporation of Ohio
Application October 2, 1946, Serial No. 133,701
Term of patent 7 years
(Cl. D44—26)



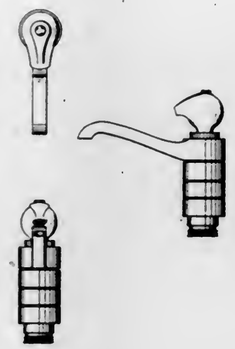
The ornamental design for a percolator top, substantially as shown.

149,193
DESIGN FOR A WHEELED VEHICLE OR SIMILAR ARTICLE
Edward Larralde, La Canada, Calif., assignor to A. C. Mfg. Co., Van Nuys, Calif., a corporation of California
Application January 13, 1947, Serial No. 136,127
Term of patent 3½ years
(Cl. D14—3)



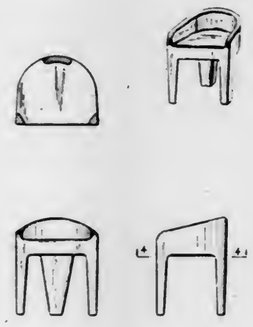
The ornamental design for a wheeled vehicle or similar article, substantially as shown.

149,194
DESIGN FOR A WHEELED VEHICLE OR SIMILAR ARTICLE
Edward Larralde, La Canada, Calif., assignor to A. C. Mfg. Co., Van Nuys, Calif., a corporation of California
Application January 13, 1947, Serial No. 136,128
Term of patent 3½ years
(Cl. D14—3)



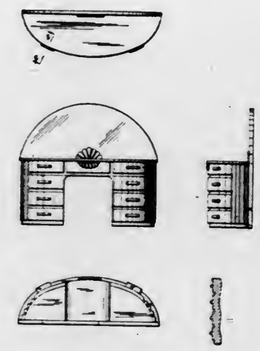
The ornamental design for a wheeled vehicle or similar article, substantially as shown.

149,195
DESIGN FOR A SINK FIXTURE
John M. Little, Toledo, Ohio
Application October 9, 1946, Serial No. 133,853
Term of patent 14 years
(Cl. D91—3)



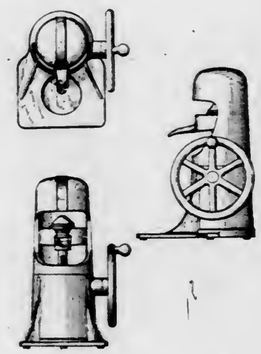
The ornamental design for sink fixture, substantially as described and shown.

149,196
DESIGN FOR A FAUCET UNIT
John M. Little and Amy L. Thomssen, Toledo, Ohio
Application October 9, 1946, Serial No. 133,854
Term of patent 14 years
(Cl. D91—3)



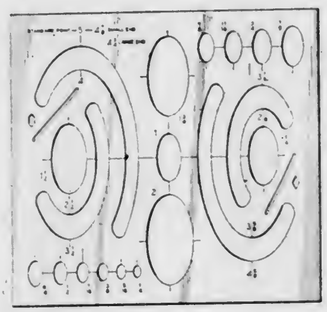
The ornamental design for a faucet unit, substantially as shown.

149,197
DESIGN FOR A BATHROOM VANITY CHAIR
Eugene J. Lux, New York, N. Y., assignor to Columbia Protektosite Company, Inc., Carlstadt, N. J., a corporation of New Jersey
Application September 14, 1946, Serial No. 133,332
Term of patent 7 years
(Cl. D15—8)



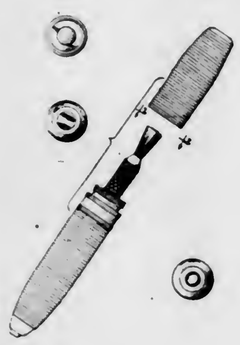
The ornamental design for a bathroom vanity chair, substantially as shown.

149,198
DESIGN FOR A TOY VANITY
Eugene J. Lux, New York, N. Y., assignor to Columbia Protektosite Company, Inc., Carlstadt, N. J., a corporation of New Jersey
Application September 14, 1946, Serial No. 133,334
Term of patent 7 years
(Cl. D34—15)



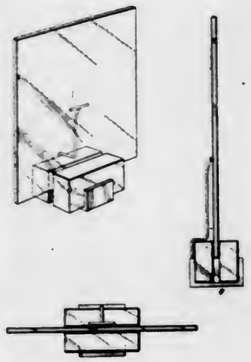
The ornamental design for a toy vanity, substantially as shown.

149,199
DESIGN FOR A FRUIT JUICER
Archibald L. Lynne, Chicago, Ill.
Application August 13, 1946, Serial No. 132,492
Term of patent 3½ years
(Cl. D89—1)



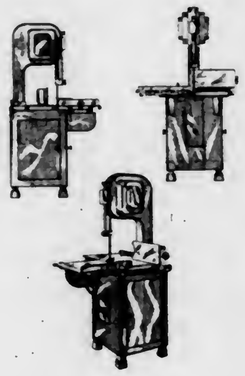
The ornamental design for a fruit juicer, as shown.

149,200
DESIGN FOR A DRAFTING TEMPLET
Raymond I. Martin, South Bend, Ind., assignor to Keuffel & Esser Company, Hoboken, N. J., a corporation of New Jersey
Application April 6, 1946, Serial No. 128,335
Term of patent 14 years
(Cl. D52—1)



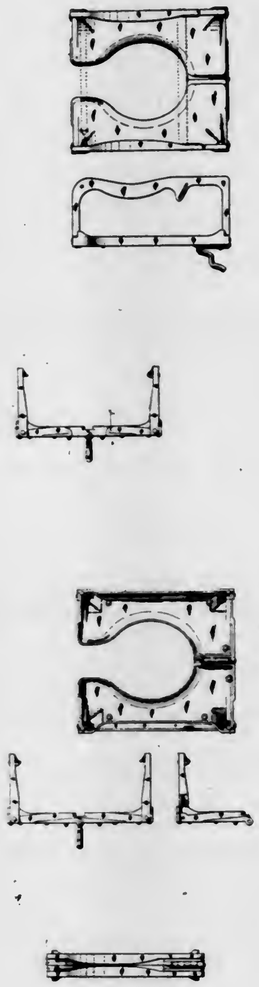
The ornamental design for a drafting templet, as shown.

149,201
DESIGN FOR A COMBINED BRUSH FOR CAMERA LENS AND CONTAINER FOR CLEANING FLUID
Richard F. Matthews, Huntington Park, Calif.
Application May 4, 1946, Serial No. 129,338
Term of patent 14 years
(Cl. D61—1)



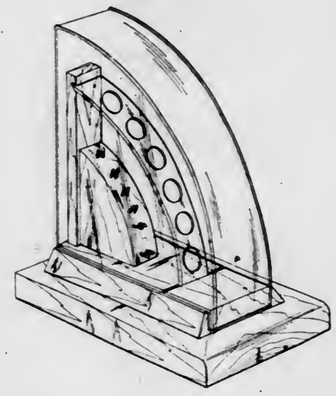
The ornamental design for a combined brush for camera lens and container for cleaning fluid, substantially as shown.

149,202
DESIGN FOR A PICTURE FRAME
Syrie Maugham, New York, N. Y.
Application December 13, 1947, Serial No. 143,125
Term of patent 3½ years
(Cl. D29—20)



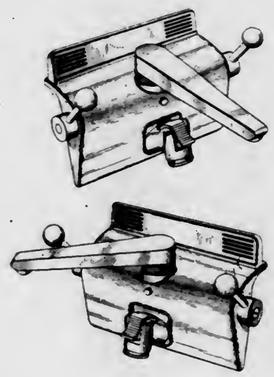
The ornamental design for a picture frame, as shown.

149,203
DESIGN FOR A MEAT SAW
David A. Meeker, Gerald B. Fox, and Burton E. Sullenberger, Troy, Ohio, assignors to The Hobart Manufacturing Company, Troy, Ohio, a corporation of Ohio
Application February 20, 1946, Serial No. 126,756
Term of patent 14 years
(Cl. D55—1)



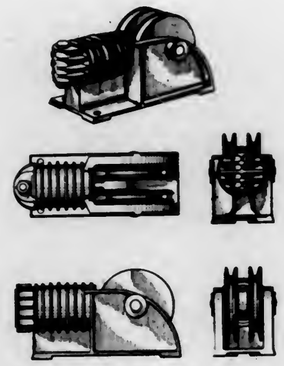
The ornamental design for a meat saw, substantially as shown and described.

149,204
DESIGN FOR A CHILD'S FOLDABLE TOILET SEAT
Leonard C. Neufeld, Des Moines, Iowa, assignor to Fel-Dee Seat Company, Des Moines, Iowa, a corporation of Iowa
Application December 26, 1946, Serial No. 135,775
Term of patent 14 years
(Cl. D4—5)



The ornamental design for a child's foldable toilet seat, substantially as shown and described.

149,205
DESIGN FOR A DISPLAY STAND OR SIMILAR ARTICLE
Monroe H. Newman, Brooklyn, N. Y., assignor to Duranol Products, Inc., Brooklyn, N. Y., a corporation of New York
Application November 22, 1946, Serial No. 135,018
Term of patent 3½ years
(Cl. D80—9)



The ornamental design for a display stand or similar article, as shown.

149,206
DESIGN FOR A FAUCET UNIT
Carl Louis Otto, New York, N. Y., assignor to The Aviation Corporation, New York, N. Y., a corporation of Delaware
Application January 30, 1947, Serial No. 136,520
Term of patent 14 years
(Cl. D91—3)

The ornamental design for a faucet unit, substantially as shown and described.

149,207
DESIGN FOR A COMPRESSOR
Wilbur P. Peterson, Independence, Mo.
Application November 25, 1946, Serial No. 135,067
Term of patent 7 years
(Cl. D65—1)

The ornamental design for a compressor, substantially as shown.

149,208
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 21, 1947, Serial No. 137,059
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

149,209
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 21, 1947, Serial No. 137,060
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

149,210
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application March 28, 1947, Serial No. 138,002
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown.

149,211
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 26, 1947, Serial No. 140,525
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

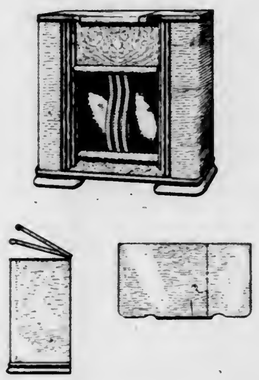
149,212
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 26, 1947, Serial No. 140,530
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

149,213
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 26, 1947, Serial No. 140,531
Term of patent 7 years
(Cl. D45—19)

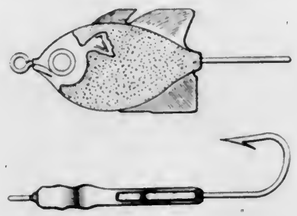
The ornamental design for a brooch or similar article, substantially as shown.

149,214
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 29, 1947, Serial No. 140,589
Term of patent 7 years
(Cl. D45—19)



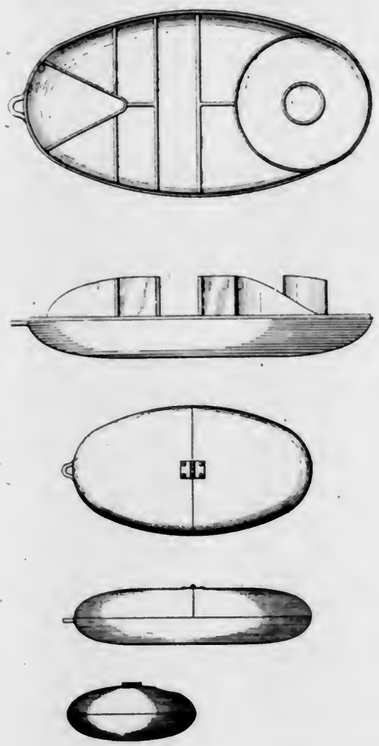
The ornamental design for a brooch or similar article, substantially as shown.

149,215
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman and Fishel, Inc., New York, N. Y.
Application August 6, 1947, Serial No. 140,718
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown and described.

149,216
DESIGN FOR A RADIO CABINET OR THE LIKE
Joseph B. Platt, New York, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application March 5, 1946, Serial No. 127,120
Term of patent 3½ years
(Cl. D56—4)



The ornamental design for a radio cabinet or the like, as shown.

149,217
DESIGN FOR A FISH LURE
Kenneth D. Richards, Gardner, Mass.
Application July 3, 1946, Serial No. 131,286
Term of patent 14 years
(Cl. D31—4)

The ornamental design for a fish lure, as shown.

149,218
DESIGN FOR A FLY BOX
Kenneth D. Richards, Gardner, Mass.
Application July 3, 1946, Serial No. 131,287
Term of patent 14 years
(Cl. D58—13)

The ornamental design for a fly box, as shown.

149,219
DESIGN FOR AN EMBROIDERED TRIMMING OR SIMILAR ARTICLE
Arno E. Riedel, North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y., a firm
Application April 26, 1947, Serial No. 138,622
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for an embroidered trimming or similar article, as shown.

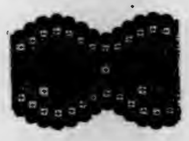
149,220
DESIGN FOR AN EMBROIDERED TRIMMING OR SIMILAR ARTICLE
Arno E. Riedel, North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y., a firm
Application April 26, 1947, Serial No. 138,623
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for an embroidered trimming or similar article, as shown.

149,221
DESIGN FOR AN EMBROIDERED TRIMMING OR SIMILAR ARTICLE
Arno E. Riedel, North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y., a firm
Application April 26, 1947, Serial No. 138,625
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for an embroidered trimming or similar article, as shown.

149,222
DESIGN FOR AN EMBROIDERED TRIMMING OR SIMILAR ARTICLE
Arno E. Riedel, North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y., a firm
Application April 26, 1947, Serial No. 138,626
Term of patent 3½ years
(Cl. D92—1)



The ornamental design for an embroidered trimming or similar article, as shown.

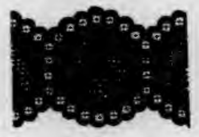
149,223
DESIGN FOR AN EMBROIDERED TRIMMING OR SIMILAR ARTICLE
Arno E. Riedel, North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y., a firm
Application April 26, 1947, Serial No. 138,628
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for an embroidered trimming or similar article, as shown.

149,224
DESIGN FOR AN EMBROIDERED TRIMMING OR SIMILAR ARTICLE
Arno E. Riedel, North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y., a firm
Application April 26, 1947, Serial No. 138,629
Term of patent 3½ years
(Cl. D92—1)

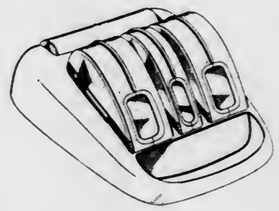
The ornamental design for an embroidered trimming or similar article, as shown.

149,225
DESIGN FOR AN EMBROIDERED TRIMMING OR SIMILAR ARTICLE
Arno E. Riedel, North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y., a firm
Application April 26, 1947, Serial No. 138,630
Term of patent 3½ years
(Cl. D92—1)



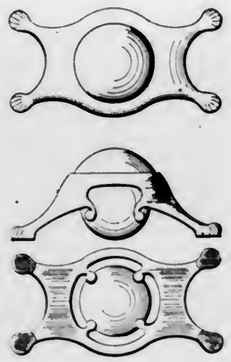
The ornamental design for an embroidered trimming or similar article, as shown.

149,226
DESIGN FOR AN EMBROIDERED TRIMMING OR SIMILAR ARTICLE
Arno E. Riedel, North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y., a firm
Application April 26, 1947, Serial No. 138,631
Term of patent 3½ years
(Cl. D92—1)



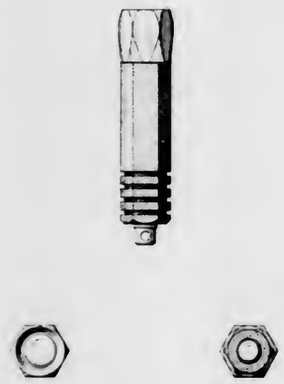
The ornamental design for an embroidered trimming or similar article, as shown.

149,227
DESIGN FOR AN EMBROIDERED TRIMMING OR SIMILAR ARTICLE
Arno E. Riedel, North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y., a firm
Application April 26, 1947, Serial No. 138,632
Term of patent 3½ years
(Cl. D92—1)



The ornamental design for an embroidered trimming or similar article, as shown.

149,228
DESIGN FOR A COMBINATION DESK UNIT
Hubert I. Salsbury, Los Angeles, Calif.
Application April 14, 1947, Serial No. 138,394
Term of patent 14 years
(Cl. D74—1)

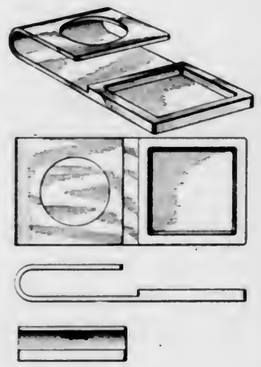


The ornamental design for a combination desk unit, as shown.

149,229
DESIGN FOR A PAPERWEIGHT
Gustave Scherff, New York, N. Y.
Application September 5, 1946, Serial No. 133,065
Term of patent 3½ years
(Cl. D74—12)

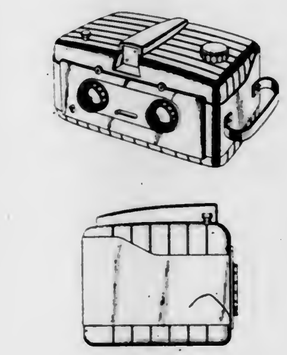
The ornamental design for a paperweight, as shown.

149,230
DESIGN FOR A FLASHLIGHT OR LIKE ARTICLE
Fred Schlotterbeck, New York, N. Y., assignor to Guth, Stern & Co., Inc., a corporation of New York
Application January 24, 1947, Serial No. 136,356
Term of patent 3½ years
(Cl. D48—24)



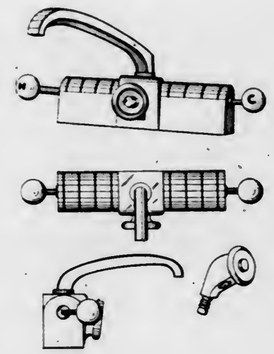
The ornamental design for a flashlight or like article, as shown.

149,231
DESIGN FOR A STORE FRONT
Nathan Sharaf, Brookline, Mass.
Application February 13, 1946, Serial No. 126,537
Term of patent 14 years
(Cl. D13—1)



The ornamental design for a store front, as shown.

149,232
DESIGN FOR A COMBINED ASH TRAY AND GLASS HOLDER
Robert M. Stafford, Kansas City, Mo.
Application November 25, 1946, Serial No. 135,065
Term of patent 3½ years
(Cl. D85—2)



The ornamental design for a combined ash tray and glass holder, as shown.

149,233
DESIGN FOR A CAMERA OR SIMILAR ARTICLE
Walter Dorwin Teague, Annandale, N. J., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application January 16, 1947, Serial No. 136,192
Term of patent 14 years
(Cl. D61—1)

The ornamental design for a camera or similar article, substantially as shown.

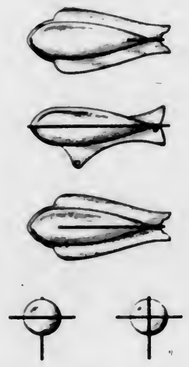
149,234
DESIGN FOR A SINK FIXTURE
Amy L. Thomssen and John M. Little, Toledo, Ohio
Application October 9, 1946, Serial No. 133,852
Term of patent 14 years
(Cl. D91—3)

The ornamental design for a sink fixture, substantially as shown.

149,235
DESIGN FOR AN EMBROIDERED TRIMMING OR SIMILAR ARTICLE
Hans Tobler, Teaneck, N. J.
Application May 24, 1947, Serial No. 139,258
Term of patent 3½ years
(Cl. D92—1)

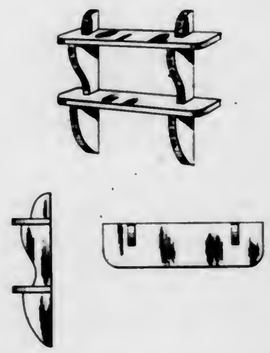
The ornamental design for an embroidered trimming or similar article, substantially as shown.

149,236
DESIGN FOR A WINTER SPORT SHOE
Floyd C. Treat, Barrington, Ill., assignor to Athletic Shoe Company, Chicago, Ill., a corporation of Illinois
Application September 27, 1947, Serial No. 141,598
Term of patent 14 years
(Cl. D7—7)



The ornamental design for a winter sport shoe, substantially as shown.

149,237
DESIGN FOR A GOLF TEE OR SIMILAR ARTICLE
John W. Tutt, Glendale, Calif.
Application July 11, 1946, Serial No. 131,515
Term of patent 14 years
(Cl. D34—5)



The ornamental design for a golf tee or similar article, as shown.

149,238
DESIGN FOR AN ARTIFICIAL FISH LURE
Eugene P. Vaars, Dayton, Ohio, assignor to Electronic Units Inc., Dayton, Ohio, a corporation of Ohio
Application February 16, 1946, Serial No. 126,626
Term of patent 14 years
(Cl. D31—4)

The ornamental design for an artificial fish lure, as shown and described.

149,239
DESIGN FOR A SHELF
Leo Wolf, Chicago, Ill., assignor to Maurice Wolf and Samuel S. Elgort, both of Chicago, Ill.
Application October 19, 1946, Serial No. 134,098
Term of patent 3½ years
(Cl. D33—3)

The ornamental design for a shelf, as shown.

Plasticizer and softener for rubber and synthetic rubbers. C. P. Hall Company. 500,076, Apr. 13; Serial No. 528,788, published Jan. 27, 1948.
Pomades, Hair. Young and Young Company. 438,246, Apr. 13; Serial No. 514,388, published Jan. 20, 1948.
Powder, Antiseptic vaginal douche. Buffington's, Incorporated. 500,089, Apr. 13; Serial No. 529,593, published Jan. 27, 1948.
Powders, Face. Guerlain Perfumery Corporation of New York. 237,797, renewed Jan. 17, 1948. O. G. Apr. 13.
Powders, perfumed washes and water, etc., Perfumed. Pinaud Incorporated. 239,302, renewed Feb. 28, 1948. O. G. Apr. 13.
Preparation for treatment of affections of the nervous system, etc. Sharp & Lohme, Incorporated. 438,241, Apr. 13; Serial No. 514,067, published Sept. 2, 1947.
Preparation for whitening and softening the hands, cuticle solvent, cuticle cream, etc. Dubarry Perfumery Company Limited. 236,279, renewed Dec. 6, 1947. O. G. Apr. 13.
Preparation in the form of a sirup. U. S. Standard Products Company. 368,050, June 6, 1939. Republished Apr. 13.
Preparations for the treatment of secondary and tertiary syphilis, etc. I. G. Farbenindustrie Aktiengesellschaft. 242,608, renewed May 29, 1948. O. G. Apr. 13.
Reagent comprising alkali metal linoleate and oleate, Frothing and collecting. Procter & Gamble Company. 398,170, Oct. 13, 1942. Republished Apr. 13.
Salt, Mercurial. Mallinckrodt Chemical Works. 500,057, Apr. 13; Serial No. 526,956, published Jan. 20, 1948.
Shampoo. Procter & Gamble Company. 417,434, Oct. 30, 1945. Republished Apr. 13.
Shampoo. Swadig, Ltd. 500,098, Apr. 13; Serial No. 531,051, published Jan. 27, 1948.
Shampoo and hair dressing. Kay Daumit, Inc. 438,370, Apr. 13; Serial No. 514,941.
Solution for parenteral administration. Hospital Liquids, Inc. 415,332, Aug. 7, 1945. Republished Apr. 13.
Solvent in the form of a liquid. Gray Company, Inc. 388,122, June 10, 1941. Republished Apr. 13.
Starch, Chemically treated. H. D. Meincke. 500,082, Apr. 13; Serial No. 529,185, published Jan. 20, 1948.
Sterilizer and deodorant. Acme Chemical Company. 422,569, July 30, 1946. Republished Apr. 13.
Synthetic resins in solution form. Monsanto Chemical Company. 414,768, June 26, 1945. Republished Apr. 13.
Syrup, Non-narcotic. Buffington's, Incorporated. 500,091, Apr. 13; Serial No. 529,595, published Jan. 27, 1948.
Toilet water, perfume, etc. Coty, Inc. 438,156, Apr. 13; Serial No. 484,292, published Apr. 15, 1947.

Toilet waters, colognes, and perfumery. Campana Corporation. 381,789, Oct. 8, 1940. Republished Apr. 13.
Toiletries, Men's. C. de Flandre. 438,167, Apr. 13; Serial No. 492,902, published Jan. 20, 1948.
Tonic, Animal. Chappel Bros., Inc. 237,372, renewed Jan. 10, 1948. O. G. Apr. 13.
Toothpaste, Saponaceous. Procter & Gamble Company. 414,148, May 29, 1945. Republished Apr. 13.
Tooth powder in tablet form. L. Perrigo Company. 438,251, Apr. 13; Serial No. 515,903, published Jan. 27, 1948.
Vasoconstrictor. Smith, Kline & French Laboratories. 438,148, Apr. 13; Serial No. 473,230, published May 8, 1945.
Viper venom for making solutions for use in controlling hemorrhage, Dry. Burroughs Wellcome & Co. (U. S. A.) Inc. 500,079, Apr. 13; Serial No. 529,143, published Jan. 20, 1948.
Vitamin B-Complex products in capsule, etc., form. Pasadena Research Laboratories, Inc. 500,058, Apr. 13; Serial No. 527,047, published Jan. 27, 1948.
Vitamin preparation. M. M. Winthroub. 500,097, Apr. 13; Serial No. 530,139, published Jan. 20, 1948.
Waving solutions and hair drying solutions, Permanent. Eugene, Ltd. 416,700, Sept. 25, 1945. Republished Apr. 13.
Waxes. Abril Corporation (Great Britain) Limited. 438,219, Apr. 13; Serial No. 510,465, published Jan. 13, 1948.

CLASS 7

Manila, sisal, and cotton rope, etc. Tubbs Cordage Company. 394,286, Mar. 31, 1942. Republished Apr. 13.
Twine. Bemis Bro. Bag Company. 421,218, May 21, 1946. Republished Apr. 13.
Twine. Bemis Bro. Bag Company. 426,536, Dec. 31, 1946. Republished Apr. 13.
Twine. International Harvester Company. 416,823, Oct. 2, 1945. Republished Apr. 13.
Twine, Paper-covered. Tubbs Cordage Company. 426,186, Dec. 17, 1946. Republished Apr. 13.

CLASS 8

Pipes, Smoker's. London House, Ltd. 372,727, Nov. 14, 1939. Republished Apr. 13.

CLASS 10

Fertilizer. Synthetic Nitrogen Products Corporation. 377,212, Apr. 23, 1940. Republished Apr. 13.
Fertilizers. Synthetic Nitrogen Products Corporation. 377,194, Apr. 23, 1940. Republished Apr. 13.
Potash, Muriate of. Potash Company of America. 415,392, Aug. 7, 1945. Republished Apr. 13.

CLASS 11

Ink, Writing. Parker Pen Company. 425,730, Dec. 3, 1946. Republished Apr. 13.
Organic solvent, Water soluble. Parker Pen Company. 421,733, June 18, 1946. Republished Apr. 13.
Paper, envelopes, visiting-cards, etc. Tiffany & Co. 30,699, re-renewed Oct. 5, 1947. O. G. Apr. 13.

CLASS 12

Asbestos siding. Asbestos Company of Texas. 500,052, Apr. 13; Serial No. 526,570, published Jan. 6, 1948.
Asphalt compounded. Presstite Engineering Company. 500,061, Apr. 13; Serial No. 527,168, published Jan. 13, 1948.
Asphalt compounded, Dry, powdered. Presstite Engineering Company. 500,059, Apr. 13; Serial No. 527,132, published Jan. 13, 1948.
Blocks and tile, Refractory. M. H. Detrick Company. 402,280, July 13, 1943. Republished Apr. 13.
Brick, Fire. A. P. Green Fire Brick Company. 438,285, Apr. 13; Serial No. 520,029, published Jan. 13, 1948.
Compound for sealing of expansion or contraction joints in concrete road, street, etc. Flintkote Company. 438,254, Apr. 13; Serial No. 516,121, published Dec. 16, 1947.
Doors for use in building construction, Plastic faced and plastic edged. National Plastic Products Company. 438,238, Apr. 13; Serial No. 513,190, published Dec. 23, 1947.
Fibre base composition boards and panels, Coated and uncoated. Arvey Corporation. 422,643, Aug. 6, 1946. Republished Apr. 13.
Floor composition, Paste-like readily setting. National Tile & Marble Corp. 438,291, Apr. 13; Serial No. 520,464, published Dec. 30, 1947.
Insulating material adapted for construction purposes. Roberts Enterprises. 438,312, Apr. 13; Serial No. 523,922, published Dec. 16, 1947.
Insulation, Corkboard. Armstrong Cork Company. 424,627, Oct. 15, 1946. Republished Apr. 13.
Insulation in nodulated form, Mineral wool thermal. Johns-Manville Corporation. 438,194, Apr. 13; Serial No. 503,817, published Dec. 16, 1947.
Lime for use in plasters, Hydrated finish. National Gypsum Company. 438,204, Apr. 13; Serial No. 507,066, published Jan. 6, 1948.
Liquid compositions for treating cement surfaces, etc. Preservative Products Company. 438,249, Apr. 13; Serial No. 515,275, published Jan. 13, 1948.
Lumber. F. C. Jay. 438,216, Apr. 13; Serial No. 509,987, published Jan. 6, 1948.
Mouldings, Metal and plastic. Kinkead Industries Incorporated. 425,811, Dec. 3, 1946. Republished Apr. 13.
Panel, Light-weight construction. J. C. Scurlock. 438,209, Apr. 13; Serial No. 508,071, published Jan. 13, 1948.
Panels, Sheet metal building. Celotex Corporation. 438,163, Apr. 13; Serial No. 490,100, published Jan. 13, 1948.
Patching materials for use on wood, concrete, etc., Dry, powder-form, water-mix. Ajax Floor Products Corporation. 438,210, Apr. 13; Serial No. 508,136, published Jan. 6, 1948.
Plywood or other laminated material. United States Plywood Corporation. 438,359, Apr. 13; Serial No. 525,987, published Dec. 16, 1947.
Sash and doors, combination storm windows and doors, etc., Storm. Chamberlin Company of America. 438,164–5, Apr. 13; Serial Nos. 490,789–90, published Dec. 23, 1947.
Sealing compound, Thread and gasket. Parker Appliance Company. 438,259, Apr. 13; Serial No. 516,864, published Nov. 25, 1947.
Seals, Metal. Libbey-Owens-Ford Glass Company. 438,147, Apr. 13; Serial No. 468,961, published Dec. 16, 1947.
Tiles. National Tile Company. 236,144, renewed Dec. 6, 1947. O. G. Apr. 13.
Veneer; plywood, hollow flush doors and hollow flush panels, Wood. Mengel Company. 438,315, Apr. 13; Serial No. 524,072, published Jan. 13, 1948.
Waterproofing compound. Vita-Var Corporation. 438,150, Apr. 13; Serial No. 473,353, published Jan. 13, 1948.

CLASS 13

Clips, Metal. Armstrong Cork Company. 389,070, July 22, 1941. Republished Apr. 13.
Coffee brewers, Glass. Hill-Shaw Company. 399,805, Feb. 2, 1943. Republished Apr. 13.
Enameled ware. Columbian Enameling & Stamping Co., Inc. 363,056, Dec. 13, 1938. Republished Apr. 13.
Filters of cloth and cloth filter holders and filters made of porcelain. Hill-Shaw Company. 417,470, Oct. 30, 1945. Republished Apr. 13.
Pipe and tubing, Plastic. Federal Electric Company, Inc. 416,840, Oct. 2, 1945. Republished Apr. 13.
Pump valves and parts thereof, Self-aligning. Madsen Iron Works. 424,430, Oct. 8, 1946. Republished Apr. 13.
Trays, Food serving. M. Heller. 438,364, Apr. 13; Serial No. 503,904.
Valve, Flow control. Alco Valve Co., Inc. 318,457, Oct. 23, 1934. Corrected. O. G. Apr. 13.
Valves. Grinnell Company, Inc. 237,399, renewed Jan. 10, 1948. O. G. Apr. 13.

CLASS 14

Castings and forgings, Ferrous. International Harvester Company. 420,804, May 7, 1946. Republished Apr. 13.
Castings, Metal alloy. Burgess-Parr Company. 293,368, Apr. 19, 1932. Republished Apr. 13.
Forgings, ingots, etc., Wrought bronze shapes. Ampco Metal, Inc. 423,957, Sept. 17, 1946. Republished Apr. 13.
Ingots, castings, forgings, etc. Ampco Metal, Inc. 415,617, Aug. 14, 1945. Republished Apr. 13.
Metals, metal compounds, and alloys. Electric Railway Improvement Company. 425,701, Dec. 3, 1946. Republished Apr. 13.
Welding rods and arc welding electrodes, Metallic. Ampco Metal, Inc. 411,815, Feb. 6, 1945. Republished Apr. 13.

CLASS 15

Candles. Candy & Company, Inc. 351,743, Nov. 9, 1937. Republished Apr. 13.
Oil, Lubricating. Pure Oil Company. 384,121, Jan. 7, 1941. Republished Apr. 13.
Oil, Lubricating. Pure Oil Company. 403,920, Oct. 26, 1943. Republished Apr. 13.
Oil, Lubricating. Pure Oil Company. 404,975, Jan. 4, 1944. Republished Apr. 13.
Oils, Lubricating. Pure Oil Company. 425,399, Nov. 19, 1946. Republished Apr. 13.
Oils, Motor fuel. Pure Oil Company. 384,417, Jan. 21, 1941. Republished Apr. 13.

CLASS 16

Coating compositions, Synthetic resin. Monsanto Chemical Company. 419,164, Feb. 5, 1946. Republished Apr. 13.
Naphtha. American Mineral Spirits Company. 277,758, Nov. 25, 1930. Republished Apr. 13.
Paints, pigments used for paints, stains, etc., Mixed. Sherwin-Williams Company. 67,166, re-renewed Jan. 21, 1948. O. G. Apr. 13.
Paints, Roof. W. Moreland. 238,067, renewed Jan. 24, 1948. O. G. Apr. 13.

Surfacing material, Liquid plastic. Federal Electric Company, Inc. 424,340, Oct. 1, 1946. Republished Apr. 13.
Varnish, Penetrating floor. Acme Chemical Company. 419,998, Mar. 19, 1946. Republished Apr. 13.
Wax. S. C. Johnson & Son. 333,868, Mar. 17, 1936. Republished Apr. 13.

CLASS 17

Cigars. P. Lorillard Company. 438,347, Apr. 13; Serial No. 525,354, published Jan. 20, 1948.
Cigarettes. P. Lorillard Company. 438,348, Apr. 13; Serial No. 525,356, published Jan. 20, 1948.
Tobacco, Chewing. P. Lorillard Company. 438,344, Apr. 13; Serial No. 525,347, published Jan. 20, 1948.
Tobacco, Chewing. P. Lorillard Company. 438,345–6, Apr. 13; Serial Nos. 425,349–50, published Jan. 20, 1948.

CLASS 19

Automobile seat covers and cushions. Protection Products Co. 438,206, Apr. 13; Serial No. 507,418, published Dec. 16, 1947.
Automobile sun shields. A. A. Reynolds. 438,228, Apr. 13; Serial No. 512,344, published Dec. 23, 1947.
Automobiles and structural parts thereof. Willys-Overland Motors, Inc. 438,144, Apr. 13; Serial No. 495,058, published Jan. 6, 1948.
Bicycles. Arnold, Schwinn & Co. 438,155, Apr. 13; Serial No. 483,418, published Jan. 6, 1948.
Boats. Flour City Ornamental Iron Company. 429,596, May 6, 1947. Republished Apr. 13.
Boats, Pleasure and fishing. General Housing Company. 438,213, Apr. 13; Serial No. 509,574, published Dec. 16, 1947.
Buses. Fixible Company. 438,233, Apr. 13; Serial No. 512,773, published Dec. 23, 1947.
Canoes. Link Aviation Devices, Inc. 438,180, Apr. 13; Serial No. 500,886, published Dec. 16, 1947.
Cart, Utility hand. Lincoln Engineering Company. 385,817, Mar. 18, 1941. Republished Apr. 13.
Holder for road charts and maps. J. S. Gee. 438,172, Apr. 13; Serial No. 494,744, published Dec. 16, 1947.
Propellers and propeller hubs and parts thereof, Airplane. Continental Aviation and Engineering Corporation. 438,181, Apr. 13; Serial No. 499,391, published Jan. 20, 1948.
Propellers and propeller hubs and parts thereof, Airplane. Continental Aviation and Engineering Corporation. 438,182, Apr. 13; Serial No. 499,893, published Jan. 27, 1948.
Radiators, radiator cores, and automobile heaters, Vehicle. Auto Radiator Manufacturing Company. 500,060, Apr. 13; Seral No. 527,157, published Jan. 20, 1948.
Scooters, Motor. Comet Manufacturing Co., Inc. 430,305, June 10, 1947. Republished Apr. 13.
Seats, side cars, skirts, etc., Auxiliary. Liley Specialty Company. 438,232, Apr. 13; Serial No. 512,594, published Dec. 23, 1947.
Trailers, Automotive vehicle. Elcar Coach Corp. 437,198, Apr. 13; Serial No. 504,756, published Dec. 23, 1947.
Trailers for mine workers, Passenger. Differential Steel Car Company. 438,207, Apr. 13; Serial No. 507,807, published Dec. 16, 1947.
Trailers, House. Chicago Streamlite Corporation. 438,269, Apr. 13; Serial No. 518,200, published Jan. 6, 1948.
Trailers, House or coach. E. A. Schumacher. 438,187, Apr. 13; Serial No. 500,493, published Dec. 16, 1947.
Trucks and trailers, Industrial. Colby Steel and Engineering Co. 169,994, July 10, 1923. Republished Apr. 13.
Trucks, farm wagons, tractor, etc., Automotive. International Harvester Company. 428,377, Mar. 25, 1947. Republished Apr. 13.

CLASS 20

Floor and wall coverings, Decorated hard surface. Armstrong Cork Company. 414,804, June 26, 1945. Republished Apr. 13.
Floor covering, Hard surfaced. Armstrong Cork Company. 430,803, June 24, 1947. Republished Apr. 13.

CLASS 21

Apparatus and equipment for use in paging service. Autocall Company. 267,132, Feb. 11, 1930. Republished Apr. 13.
Batteries, Electric storage. Power-Plus Battery Company. 243,032, June 12, 1928. Republished Apr. 13.
Clutches or couplings, Electro-magnetic. Dynamatic Corporation. 419,309, Feb. 12, 1946. Republished Apr. 13.
Dust collectors, Electric. Breuer Electric Mfg. Co. 426,446, Dec. 24, 1946. Republished Apr. 13.
Electric drives. Dynamatic Corporation. 409,713, Oct. 17, 1944. Republished Apr. 13.
Fixtures, Electric lighting. Edwin F. Guth Company. 352,394, Nov. 30, 1937. Republished Apr. 13.
Fixtures, Electric lighting. Edwin F. Guth Company. 362,223, Nov. 15, 1938. Republished Apr. 13.
Fixtures, Electric lighting. Edwin F. Guth Company. 407,485, June 6, 1944. Republished Apr. 13.
Hot plates or stoves, Electric. Hill-Shaw Company. 416,009, Aug. 21, 1945. Republished Apr. 13.
Insulators of glass, Electrical. Armstrong Cork Company. 382,463, Oct. 29, 1940. Republished Apr. 13.
Loud speakers for wireless telephony. Electrical Manufacturing & Plating Company. 284,216, renewed Oct. 18, 1947. O. G. Apr. 13.
Markers and etchers, Electric. Breuer Electric Mfg. Co. 426,445, Dec. 24, 1946. Republished Apr. 13.
Motor-clutches, including motors and controls therefor, Electric. Dynamatic Corporation. 373,583, Dec. 12, 1939. Republished Apr. 13.
Motors, Electrical. Brown-Brockmeyer Company. 429,008, Apr. 15, 1947. Republished Apr. 13.
Motors, Electrically operated. Small Motors, Inc. 412,044, Feb. 13, 1945. Republished Apr. 13.
Terminals and contacts, Electric. Ampco Metal, Inc. 428,384, Mar. 25, 1947. Republished Apr. 13.
Terminals and contacts, electric trolley shoes, etc., Electric. Ampco Metal, Inc. 426,942, Jan. 21, 1947. Republished Apr. 13.

CLASS 22

Amusement game apparatus, Coin controlled. Kruse & Connor. 426,581, Dec. 31, 1946. Republished Apr. 13.
Fishing-rods, Steel. Horton Manufacturing Company. 50,916, Apr. 3, 1906. Republished Apr. 13.
Golf bags. Henry Hotze & Sons Company. 428,917, Apr. 8, 1947. Republished Apr. 13.
Golf balls. Worthington Ball Company. 430,723, June 24, 1947. Republished Apr. 13.
Reels for fishing-rods. Horton Manufacturing Company. 117,560, July 17, 1917. Republished Apr. 13.
Toy constructing and erecting sets. Cinderella Manufacturing Company. 428,558, Mar. 25, 1947. Republished Apr. 13.
Toy painting kits. R. E. Grossman. 438,369, Apr. 13; Serial No. 508,723.

CLASS 23

Agricultural implements and hand tools, etc., Hand. American Fork & Hoe Company. 398,379, Oct. 27, 1942. Republished Apr. 13.
Axes, hammers, hatchets, etc. American Fork & Hoe Company. 409,831, Oct. 24, 1944. Republished Apr. 13.
Blades, Hacksaw. E. C. Atkins and Company. 388,082, June 10, 1941. Republished Apr. 13.
Boring machines, precision grinding machines, etc., Precision. Heald Machine Company. 382,468, Oct. 29, 1940. Republished Apr. 13.
Bushings for supporting tools in tool holders, Adapter. H. C. Clatfelter and Company. 438,161, Apr. 13; Serial No. 489,160, published Jan. 13, 1948.
Cleaning guns. Southern Supply Co. 424,461, Oct. 8, 1946. Republished Apr. 13.
Cork-screw. Korkmaster Company. 438,188, Apr. 13; Serial No. 500,758, published Jan. 13, 1948.
Cranes. Colby Steel and Engineering Co. 177,012, Dec. 11, 1923. Republished Apr. 13.
Crushers, shredders, breakers, etc. Gruendler Patent Crusher and Pulverizer Company. 239,231, renewed Feb. 28, 1948. O. G. Apr. 13.
Crushers, shredders, breakers, etc. Gruendler Patent Crusher and Pulverizer Company. 239,233, renewed Feb. 28, 1948. O. G. Apr. 13.
Crushers, shredders, breakers, etc. Gruendler Patent Crusher and Pulverizer Company. 240,680, renewed Apr. 3, 1948. O. G. Apr. 13.
Cultivators, Flame. Fijelen Research and Development Company. 438,173. Apr. 13; Serial No. 495,370, published Jan. 13, 1948.
Doublers, cheese winders, magazine creels, etc. Foster Machine Company. 402,319, July 13, 1943. Republished Apr. 13.
Extractors, Fruit juice. National Die Casting Company. 399,344, Dec. 29, 1942. Republished Apr. 13.
Fixture for hand operated portable power driven saws. M. W. Coleman. 438,168–9, Apr. 13; Serial No. 492,988, published Jan. 13, 1948.
Gas turbines, axial flow compressors, accessories, etc. Northrop Hendy Co. 438,180, Apr. 13; Serial No. 499,344, published Jan. 13, 1948.
Gliding-wheel, Hand-operated. W. H. Coe Manufacturing Co. 66,733–5, rerenewed Dec. 24, 1947. O. G. Apr. 13.
Grease guns, Portable. Pressurelube, Inc. 375,746. Feb. 27, 1940. Republished Apr. 13.
Knives, razor knives, and spoons, Pocket. Gits Molding Corporation. 436,125, Jan. 20, 1948. Corrected. O. G. Apr. 13.

Barbieri, Nicholas.
Victor Electric Products, Inc., assignee: *See*—
Lippincott, Joshua G.
Walker, Albert R., assignor to Fox West Coast Theatres Corporation, Los Angeles, Calif. Theatre. 149,324, Apr. 13.
Webster Industries, Inc., assignee: *See*—
Henne, Julius A.
Wigley, John T., assignor to Onondaga Pottery Company, Syracuse, N. Y. Dinner plate or similar article. 149,325, Apr. 13.
Wortman, Grant, Chicago, Ill. Tray. 149,326, Apr. 13.
Young, Hugh B., Denver, Colo., assignor to Tri-plex, Inc. Garment hanger. 149,327, Apr. 13.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 13TH DAY OF APRIL, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abraham, Hans A., Philadelphia, Pa. Electric outlet. 2,439,708, Apr. 13.
Abraham, Ralph, assignor to Seth E. Glem River Unit, Memphis, Tenn. Side dump truck body. 2,439,439, Apr. 13.
Adam, Frank, Electric Company, assignee: *See*—
Green, Floyd S.
Agins, George, assignor to Arma Corporation, Brooklyn, N. Y. Self-synchronous signalling system. 2,439,414, Apr. 13.
Air Control Products, Inc., assignee: *See*—
Babcock, Kenneth L., and Leigh.
Aircraft Mechanics Inc., assignee: *See*—
Robins, Jack B.
Aktiebolaget Separator-Nobel, assignee: *See*—
Lindgren, Hans O.
Albertson & Company, Inc., assignee: *See*—
Olsen, Gustav A.
Aleks, Vytant, Rockford, Ill., assignor to The Washburn Company, Worcester, Mass. Bicycle basket. 2,439,376, Apr. 13.
Allied Chemical & Dye Corporation, assignee: *See*—
Donleavy, John J., and Balzer.
Amberg, Charles R., and W. J. Knapp, Alfred, assignors to North American Cement Corporation, Catskill, N. Y. Making disinfectant hydraulic cement. 2,439,440, Apr. 13.
Amberg, Charles R., and W. J. Knapp, Alfred, assignors to North American Cement Corporation, Catskill, N. Y. Disinfectant hydraulic cement and making the same. 2,439,441, Apr. 13.
American Car and Foundry Company, assignee: *See*—
Steinmeyer, John W.
American Viscose Corporation, assignee: *See*—
Chaney, David W.
Davidson, Hobart O.
Wicker, Dan B.
American Well Works, The, assignee: *See*—
Walker, James D.
Amon, Fred H., Weston, and F. S. Thornhill, Hyde Park, assignors to Godfrey L. Cabot, Inc., Boston, Mass. Making hydrophilic carbon black. 2,439,442, Apr. 13.
Anderson, Arleigh W., Pasadena, Calif. Air register. 2,439,554, Apr. 13.
Andrews & Goodrich, Inc., assignee: *See*—
Dreisel, William.
Ankney, Ezra W., Acme, Pa. Apparatus for laying roll roofing. 2,439,681, Apr. 13.
Arma Corporation, assignee: *See*—
Agins, George.
Davenport, Charles T.
Armour and Company, assignee: *See*—
Whiting, John A., and Whitney.
Armstrong Cork Company, assignee: *See*—
Bare, Martin K., and Stubblebine.
Asbury, Charles T., Abington, Pa. Bearing lubricator. 2,439,709, Apr. 13.
Aske, Irving E., Muskegon, Mich. Casting apparatus for vibrating molds. 2,439,443, Apr. 13.
Atwood, Wilmerth R., Odessa, Tex. Gun perforator. 2,439,643, Apr. 13.
Austin, Albert B., Mineapolis, Minn. Air-heating device for fireplaces. 2,439,503, Apr. 13.
Avery, Harold T., Oakland, Calif., assignor to Marchant Calculating Machine Company. Reversible cyclic power transmission mechanism. 2,439,555, Apr. 13.
Babcock, Kenneth L., Muskegon, and R. L. Leigh, Grand Rapids, assignors to Air Control Products, Inc., Coopersville, Mich. Valve mechanism for registers and the like. 2,439,444, Apr. 13.
Bachman, Charles H., Scotia, N. Y., assignor to General Electric Company. Indexing telescope for electron diffraction instruments. 2,439,644, Apr. 13.
Bailey, Grant C.: *See*—
Himel, Chester M., and Bailey.
Bailey Meter Company, assignee: *See*—
Dickey, Paul S.
Balzer, Manuel M.: *See*—
Donleavy, John J., and Balzer.
Baldwin Company, The, assignee: *See*—
Jones, Edward M.
Ball, Charles O., Maumee, Ohio, assignor to Owens-Illinois Glass Company. Receptacle. 2,439,768, Apr. 13.
Bancroft, Joseph C., New York, N. Y. Scooter. 2,439,556, Apr. 13.
Banigan, William A., Redding, Calif. Collapsible wild fowl decoy. 2,439,710, Apr. 13.
Barber-Colman Company, assignee: *See*—
Kennedy, Walter W.
Marcellus, Brooks.
Barbour, Fenner S.: *See*—
Worthen, Eugene P., Barbour, and Putnam.
Bare, Martin K., and W. Stubblebine, Manheim Township, Lancaster County, assignors to Armstrong Cork Company, Lancaster, Pa. Utilization of tall oil. 2,439,377, Apr. 13.
Bassingdale, Isaac B., Grasscroft, England. Shuttle for carpet looms. 2,439,594, Apr. 13.
Beattie, Horace S., Poughkeepsie, assignor to International Business Machines Corporation, New York, N. Y. Combinational code entry controlling means for accumulators. 2,439,445, Apr. 13.
Begun, Semi J., Cleveland Heights, assignor to The Brush Development Company, Cleveland, Ohio. Control circuit for signal recording and reproducing systems. 2,439,446, Apr. 13.
Belden Manufacturing Company, assignee: *See*—
Wermine, Hugo H.
Belgau, Robert C., Detroit, Mich. Immersible electrical heater. 2,439,617, Apr. 13.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Darlington, Sidney, Townes, and Wooldridge.
Hussey, Lather W.
Prentner, Seward.
Bendix Aviation Corporation, assignee: *See*—
Stuart, Alfred A., Jr.
Tognola, Tullio.
Bendix-Westinghouse Automotive Air Brake Company, assignee: *See*—
Eaton, Wilfred A.
Berberich, Otto P.: *See*—
Carman, Everett F., and Berberich.
Berberich, Otto P., Jersey City, N. J., assignor to Interchemical Corporation, New York, N. Y. Printing ink. 2,439,378, Apr. 13.
Berger Bros. Company, assignee: *See*—
Wolfe, Morton B.
Bergman, Mendel, U. S. Navy. Water injection system for aircraft. 2,439,379, Apr. 13.
Bituminous Coal Research, Inc., assignee: *See*—
Engdahl, Richard B.
Bjering, Olav: *See*—
Hohl, John, and Bjering.
Blackledge, Lawrence C., Portland, Oreg. Rotary plow. 2,439,557, Apr. 13.
Bloomfield, Samuel, Wichita, Kans., assignor to C. E. Hovey, Kansas City, Mo., as trustee. Lock nut. 2,439,415, Apr. 13.
Bludworth, Joseph E., M. O. Robeson, and H. A. Truby, Jr., Corpus Christi, Tex., assignors to Celanese Corporation of America. Dehydration process. 2,439,416, Apr. 13.
Boardman, Harry D., assignee, trustee: *See*—
Merriman, Henry H.
Boerner, Thomas James, Collingswood, and John W. Sanborn, Merchantville, N. J., assignors to Radio Corporation of America. High-frequency apparatus. 2,439,682, Apr. 13.
Bolton, Wright, Jr., New Bedford, Mass. Preparation of multiend yarn packages. 2,439,645, Apr. 13.
Booth, Earl C., assignor to Noblitt-Sparks Industries, Inc., Columbus, Ind. Ironing board leg and brace structure. 2,439,769, Apr. 13.
Borg-Warner Corporation, assignee: *See*—
Nutt, Harold.
Boston Woven Hose & Rubber Company, assignee: *See*—
Marcy, Grosvenor D.
Bostwick, Rolla B., Pittsburgh, Pa. Sharpener for double-edged razor blades, with automatic blade-turning means. 2,439,646, Apr. 13.
Bovey, Donald E., assignor to Woodward Governor Company, Rockford, Ill. Electrical measurement of displacement. 2,439,711, Apr. 13.
Boyd, Thomas E.: *See*—
D'Ardenne, Walter H., Devore, Wolf and Boyd.
Brady, Clyde H., Danville, Va. Plumbing fitting. 2,439,712, Apr. 13.
Bramley, Arthur, Long Branch, N. J., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Photoelectric tube and manufacturing same. 2,439,647, Apr. 13.
Brandt, Wilfred H.: *See*—
Burtle, Jerome G. and Brandt.

Bredice, Pasquale Michael, assignor of fifty per cent to Gordon Lawrence Hubert, Middletown, R. I. Automatic warmer for musical instruments. 2,439,713, Apr. 13.

Broadway, Leonard F., Ickenham, assignor to Electric & Musical Industries Limited, Hayes, England. Flat beam cathode-ray tube and circuit. 2,439,504, Apr. 13.

Broderick, Ernest N., Detroit, Mich. Sanitary receptacle and supporter. 2,439,683, Apr. 13.

Broers, Henry J., Powell, Wyo. Attachment for well drilling derricks. 2,439,714, Apr. 13.

Broughton, Douglas J., assignor to Buxton, Incorporated, Springfield, Mass. Flexible pocket receptacle. 2,439,715, Apr. 13.

Brown, Doyes N., Vallejo, Calif. Attachment for mortise machines. 2,439,558, Apr. 13.

Brown, Harold A., State College, Mex., and Harry Gollob, El Paso, Tex. Electrically indicating liquid filled manometer. 2,439,770, Apr. 13.

Brown, Walter J.: *See*—
Williams, Alfred L. W. and Brown.

Brush Development Company, The, assignee: *See*—
Begun, Semi Joseph.
Gravley, Charles K.
Williams, Alfred L. W. and Brown.

Buck, Richard S., Glastonbury, and W. A. Ledwith, Hartford, assignors to United Aircraft Corporation, East Hartford, Conn. Turbine bearing construction. 2,439,447, Apr. 13.

Buckner, Cecil C., Grosse Pointe Park, Mich. Fluid pump. 2,439,448, Apr. 13.

Buena Vista Iron Company, assignee: *See*—
Worthen, Eugene P., Barbour and Putnam.

Buffalo Electro-Chemical Company, Inc., assignee: *See*—
Shanley, Edward S. and Hyatt.

Buffington, Marvin A., Cleveland, Ohio. Electroencephalograph electrode coordinator. 2,439,559, Apr. 13.

Burdick Corporation, The, assignee: *See*—
Sturm, Ralph E.

Burgess, C. J., Liberty, Mo. Deodorizing composition of matter for food storage compartments. 2,439,538, Apr. 13.

Burtie, Jerome G., and W. H. Brandt, Alton, Ill., assignors to Olin Industries, Inc. Cyclonite purification. 2,439,648, Apr. 13.

Buxton, Incorporated, assignee: *See*—
Broughton, Douglas J.
Hawes, George R.

Cabot, Godfrey L., Inc., assignee: *See*—
Amon, Fred H. and Thornhill.

Caffese, Joseph, Stockton, Calif. Cultivator disc supporting assembly. 2,439,449, Apr. 13.

Campbell, Phillip, Whittier, and W. H. Maxwell, Newport Beach, Calif. Casting apparatus compensating for shrinkage of the cast material. 2,439,450, Apr. 13.

Canfield, Robert W., and F. E. Wiley, West Hartford, and A. M. Guerreiro, assignors to Plax Corporation, Hartford, Conn. Forming hollow articles from oriented polymer. 2,439,716, Apr. 13.

Carbide and Carbon Chemicals Corporation, assignee: *See*—
Wilkes, Benjamin G., Jr.

Carborundum Company, The, assignee: *See*—
Dahlstrom, Eric P.

Carman, Everett F., Montclair, and O. P. Berberich, Jersey City, N. J., assignors to Interchemical Corporation, New York, N. Y. Printing inks. 2,439,380, Apr. 13.

Castedello, William, assignor to The Kalart Company Inc., Stamford, Conn. Photoflash synchronizing device for cameras. 2,439,417, Apr. 13.

Celanese Corporation of America, assignee: *See*—
Bludworth, Joseph E., Robeson, and Truby.

Cellwork, William E., assignor to Standard Steel Works, Kansas City, Mo. Valve for spray bars. 2,439,539, Apr. 13.

Century Geophysical Corporation, assignee: *See*—
Morrow, Marvin E.

Cerna, Wendell W., Mount Lebanon, assignor to Hall Laboratories, Inc., Pittsburgh, Pa. Boiling out steam boilers prior to placing them in operation and composition therefor. 2,439,784, Apr. 13.

Chaney, David W., Nether Providence Township, Delaware County, Pa., assignor to American Viscose Corporation, Wilmington, Del. Polyfluorinated acrylonitriles. 2,439,505, Apr. 13.

Chapal Donner Corporation, The, assignee: *See*—
Donner, Carl H.

Chicago Carton Company, assignee: *See*—
Richardson, Ralph R., Ritter and Ragan.

Christian, Rodney E., Royal Oak, Mich., assignor to Kerr Manufacturing Co. Apparatus for molding articles of wax. 2,439,506, Apr. 13.

Clark, George C., Pontiac, Mich. Fishing tackle. 2,439,451, Apr. 13.

Clarke, Louis A.: *See*—
Goldsby, Arthur R. and Clarke.

Cloutier, Felix J., Minneapolis, Minn. Combination intake and exhaust valve for four-cycle engines. 2,439,618, Apr. 13.

Cohn, Irwin, Leominster, Mass. Toy propelled boat. 2,439,649, Apr. 13.

Coley, Silas B., assignee: *See*—
Reavis, Charles N.

Combustion Engineering Company, Inc., assignee: *See*—
Mittendorf, Harvey C.

Conmar Products Corporation, assignee: *See*—
Kuzmick, Joseph N.

Connor, Robert S., Little Marais, Minn. Animal snare. 2,439,560, Apr. 13.

Conrad, Joshua C., Oklahoma City, Okla. Cotton cleaning attachment for harvesters. 2,439,718, Apr. 13.

Conterman, Fred A., assignor to Jamestown Metal Equipment Company, Inc., Jamestown, N. Y. Wringer. 2,439,452, Apr. 13.

Continental Motors Corporation, assignee: *See*—
Jackson, Thomas.

Cooke, Ernest A., assignor to Taylor, Taylor & Hobson Limited, Leicester, England. Bore gauge. 2,439,595, Apr. 13.

Cooke, Grady Carlyle, Winston-Salem, N. C. Rotary gas engine of the reaction type. 2,439,717, Apr. 13.

Cooper, Kenneth C., Portland, assignor to United Aircraft Corporation, East Hartford, Conn. Starting system for free-piston units. 2,439,453, Apr. 13.

Corning Glass Works, assignee: *See*—
Hyde, James Franklin.

Courtier, Armand: *See*—
Guinot, Henri M. and Courtier.

Courtright, John L.: *See*—
Klein, Harold L., and Courtright.

Crafts, Curtis S., Oak Park, assignor to The Goss Printing Press Company, Chicago, Ill. Rotary printing press. 2,439,454, Apr. 13.

Crawford, Robert B. P., Kansas City, Mo. Incubator. 2,439,719, Apr. 13.

Cressey, Peter A., McGregor, Tex. Pressure indicator for pneumatic tires. 2,439,561, Apr. 13.

Crompton & Knowles Loom Works, assignee: *See*—
Gordon, Albert A., 3d.
Turner, Richard G.

Crosby, Stephen A., Chicago, Ill., assignor to Sterling Tool Products Company. Air filter for polishing machines. 2,439,596, Apr. 13.

Crosley, Raymond W., Hazel Crest, and A. L. Raymond, Northfield, assignors to G. D. Searle & Co., Skokie, Ill. Producing sodium tetrathionate. 2,439,720, Apr. 13.

Cunningham, Marion M., South Bend, Ind., assignor to United States Rubber Company, New York, N. Y. Fuel tank. 2,439,562, Apr. 13.

Cuno, Charles W., Wilmington, Ill., assignor to The Lehon Company. Making granules. 2,439,650, Apr. 13.

Curtiss-Wright Corporation, assignee: *See*—
Hathorn, Charles E.
Julian, George J.

Cutler-Hammer, Inc., assignee: *See*—
Hunter, Richard B.

Dahlstrom, Eric P., assignor to The Carborundum Company, Niagara Falls, N. Y. Apparatus for facing and truing abrasive articles. 2,439,771, Apr. 13.

Dainty, Ralph, Willenhall, England. Manufacture of sand cores. 2,439,563, Apr. 13.

D'Ardenne, Walter H., Jenkintown Manor, W. Devore, Horsham Township, Montgomery County, R. W. Wolf, Philadelphia, and T. E. Boyd, Melrose Park, assignors to Heintz Manufacturing Company, Philadelphia, Pa. Mobile gun mount. 2,439,564, Apr. 13.

Darlington, Sidney, New York, N. Y., and C. H. Townes, Mendham, and D. E. Wooldridge, Chatham, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Computing bombsight. 2,439,381, Apr. 13.

Davenport, Charles T., assignor to Arma Corporation, Brooklyn, N. Y. Gyroscope stabilizing mechanism. 2,439,418, Apr. 13.

Davidson, Hobart O., Swarthmore, Pa., assignor to American Viscose Corporation, Wilmington, Del. Apparatus for handling viscose solutions. 2,439,619, Apr. 13.

Davison Chemical Corporation, The, assignee: *See*—
Litty, Frederick L., Jr.

Day, Charles B., Colorado Springs, Colo. Sprinkling hose support. 2,439,684, Apr. 13.

Debonair, Inc., assignee: *See*—
Renz, Emil K.

De Grazia, Joseph, Washington, D. C. Field jacket hood. 2,439,382, Apr. 13.

De Lancey, Ralph W., assignor to The Miller Company, Meriden, Conn. Thermostatic device. 2,439,455, Apr. 13.

De Satnick, Irvin, Philadelphia, Pa. Shoulder-pad. 2,439,597, Apr. 13.

Devore, Weber: *See*—
D'Ardenne, Walter H., Devore, Wolf, and Boyd.

Dickey, Paul S., Shaker Heights, Ohio, assignor to Bailey Meter Company. Control system for feeding fuel to furnaces. 2,439,721, Apr. 13.

Dinsley, Alfred, La Canada, Calif. Luminescent signaling composition. 2,439,598, Apr. 13.

Dodge, Ralph L.: *See*—
Keenen, Frank G., and Dodge.

Dodge, Ronald D., Poughkeepsie, assignor to International Business Machines Corporation, New York, N. Y. Power operated case shift mechanism for typewriting machines. 2,439,456, Apr. 13.

Dome, Robert B., Bridgeport, Conn., assignor to General Electric Company. Attenuation control network. 2,439,651, Apr. 13.

Donleavy, John J., Montclair, N. J., and M. M. Balzer, Flushing, N. Y., assignors to Allied Chemical & Dye Corporation. Alkylation of benzene by long chain polymeric olefins using sulfuric acid catalyst. 2,439,457, Apr. 13.

Donner, Carl H., Summit, assignor to The Chapal Donner Corporation, Newark, N. J. Fur pelt or skin stretching apparatus. 2,439,419, Apr. 13.

Dravo Corporation, assignee: *See*—
Johnson, Wallace C.

Dreisel, William, Lawrence, assignor to Andrews & Goodrich, Inc., Dorchester, Mass. Drying apparatus. 2,439,722, Apr. 13.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Gresham, William F.
Gross, Peter F.
Hamblet, Clement H., and McAlevy.
Herndon, Lee R.
Keenen, Frank G., and Dodge.
Miller, Charles F.
Roedel, Milton J.
Walker, Joseph F., and Londergan.

Eaton Manufacturing Company, assignee: *See*—
Findley, Howard J.

Eaton, Wilfred A., assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio. Fluid pressure control mechanism for airplane deicers. 2,439,458, Apr. 13.

Eberle, Frank V., Newark, and H. Hansen, Lyndhurst, N. J. Artificial body members. 2,439,507, Apr. 13.

Eckhard, William K., Newark, N. J., and E. W. Goodwin, New Rochelle, assignors to R. Hoe & Co., Inc., New York, N. Y. Sheet registering mechanism for printing machines. 2,439,420, Apr. 13.

Eddy, William C., Michigan City, Ind., assignor to Television Associates, Inc., Chicago, Ill. Sound pickup unit. 2,439,459, Apr. 13.

Eddy, William C., Michigan City, Ind., assignor to Television Associates, Chicago, Ill. Alarm switch. 2,439,509, Apr. 13.

Edwards, Miles L., and D. K. MacBain, Longview, and L. M. Johnson, Everett, assignors to Weyerhaeuser Timber Company, Longview, Wash. Log turning apparatus. 2,439,508, Apr. 13.

Egor, Basil, Valley Stream, N. Y. Contour and depth gauge of dial indicator type. 2,439,565, Apr. 13.

Electric & Musical Industries Limited, assignee: *See*—
Broadway, Leonard F.

Electro-Physical Laboratories, Inc., assignee: *See*—
Traugott, Paul.

Endicott Johnson Corporation, assignee: *See*—
Exley, Leo F.

Engdahl, Richard B., Columbus, Ohio, assignor, by mesne assignments, to Bituminous Coal Research, Inc., Pittsburgh, Pa. Flow meter. 2,439,723, Apr. 13.

Engler, Herman, assignor to P. Koletzko and C. A. Hands, New York, N. Y. Preparation for treating launderable fabric articles. 2,439,460, Apr. 13.

Erickson, Edwin R., Niagara Falls, assignor to The Mathieson Alkali Works, Inc., New York, N. Y. Production of dialkylated polyhydric phenols. 2,439,421, Apr. 13.

Erickson, Lester H., Los Angeles, Calif. Surgical stitching instrument. 2,439,383, Apr. 13.

Euclid Road Machinery Co., The, assignee: *See*—
Snow, Virgil L.

Exhibit Supply Company, The, assignee: *See*—
Smith, Percy C.

Exley, Leo F., Johnson City, assignor to Endicott Johnson Corporation, Endicott, N. Y. Cutting block. 2,439,652, Apr. 13.

Faber, John P., assignor to Ransome Machinery Company, Dunellen, N. J. Concrete spreader. 2,439,620, Apr. 13.

Farnsworth Research Corporation, assignee: *See*—
Hallmark, Clyde E.

Feagles, Don D.: *See*—
Thompson, Oscar T., and Feagles.

Fear, Ralph G., Reseda, Calif. Shearing tool. 2,439,422, Apr. 13.

Feitl, Rudolf, Brooklyn, and H. Wurzel, Bronx, assignors to Waldes Koh-I-Noor, Inc., Long Island City, N. Y. Tool for handling open-ended retaining rings. 2,439,785, Apr. 13.

Ferro Engineering Company, The, assignee: *See*—
Urmetz, Walter W.

Fetzer, Walter R., Clayton, Mo., assignor to Union Starch & Refining Company, Columbus, Ind. Solid corn syrup manufacture. 2,439,384, Apr. 13.

Fillmore, William E.: *See*—
Schmid, William, and Fillmore.

Finck, Albert M., Bellevue, Ky. Combination lock. 2,439,461, Apr. 13.

Findley, Howard J., Shaker Heights, assignor to Eaton Manufacturing Company, Cleveland, Ohio. Thread insert. 2,439,685, Apr. 13.

Findley, Howard J., Chardon, assignor to Eaton Manufacturing Company, Cleveland, Ohio. Drive for air compressors. 2,439,686, Apr. 13.

Findley, Howard J., Chardon, assignor to Eaton Manufacturing Company, Cleveland, Ohio. Mold-in thread insert. 2,439,687, Apr. 13.

Finley, Hugh, Berlin, N. J., assignor to Owens-Illinois Glass Company. Apparatus for molding pipe coverings. 2,439,724, Apr. 13.

First Industrial Corporation, assignee: *See*—
Nelson, Royal G.

Forbes, William J., Joplin, Mo. Finger stall. 2,439,653, Apr. 13.

Fowler, Harlan D., San Diego, Calif. Locking and safety signal combination for cargo airplanes. 2,439,423, Apr. 13.

Framhein, Herbert J., Chicago, Ill., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Lifting mechanism for industrial trucks. 2,439,599, Apr. 13.

Frank, Louis, Fellows, Calif. Electric plug and socket latch. 2,439,462, Apr. 13.

Frost, Robert P., Redding, Calif. Press assembly. 2,439,725, Apr. 13.

Fuel Refining Corporation, assignee: *See*—
Otto, Carl.

Fuller, Frederic B.: *See*—
Gulbert, Francis W., and Fuller.

Gaiser, Romey A., and P. T. Mattimoe, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Silvering surfaces. 2,439,654, Apr. 13.

Galuska, Stanley, Chicago, Ill. Window sash construction. 2,439,726, Apr. 13.

Gamache, Armand R., Springfield, Mass., assignor to United States Rubber Company, New York, N. Y. Hydraulic gun. 2,439,566, Apr. 13.

Gaul, Blair H., assignor to Toledo Scale Company, Toledo, Ohio. Connecting means. 2,439,510, Apr. 13.

Gebauer, Adam H., Short Hills, assignor to Tide Water Associated Oil Company, Bayonne, N. J. Oil-wax separator. 2,439,463, Apr. 13.

General Aniline & Film Corporation, assignee: *See*—
Guenther, Alfred, and Morgan.

General Electric Company, assignee: *See*—
Bachman, Charles H.
Dome, Robert B.
Hausz, Walter.
Mathes, Kenneth N.
Nordlander, Birger W.
Schuck, Carl L.
Thomas, Charles A.

General Steel Castings Corporation, assignee: *See*—
Travilla, James C., Jr., and Krautheim.

George Angus & Company Limited, assignee: *See*—
Sowerby, George A., and Short.

Glem, Seth E., River Unit, assignee: *See*—
Abraham, Ralph.

Glasser, Albert A., Los Angeles, Calif. Brassière. 2,439,567, Apr. 13.

Glenny, Arthur P.: *See*—
Nisbet, Robert H., and Glenny.

Goldberg, Morris, Pittsburgh, Pa. Electric socket. 2,439,385, Apr. 13.

Goldsby, Arthur R., Beacon, and L. A. Clarke, Fishkill, assignors to The Texas Company, New York, N. Y. Manufacture of motor fuel by alkylation with a light cracked naphtha. 2,439,600, Apr. 13.

Gollob, Harry: *See*—
Brown, Harold A., and Gollob.

Good, Paul F., Baltimore, assignor to The Glenn L. Martin Company, Middle River, Md. Battery container for airplanes. 2,439,464, Apr. 13.

Goodloe, Alfred M., Montclair, and O. H. York, Maplewood, assignors to Metal Textile Corporation, West Orange, N. J. Producing compressed wire units. 2,439,424, Apr. 13.

Goodwin, Edwin W.: *See*—
Eckhard, William K., and Goodwin.

Gookin, Sylvester L., Quincy, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Eyeleting machine. 2,439,465, Apr. 13.

Gordon, Albert A., 3rd, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Hand rail and reed holder. 2,439,688, Apr. 13.

Gordon, James J.: *See*—
Leader, Sidney A., and Gordon.

Goss Printing Press Company, The, assignee: *See*—
Crafts, Curtis S.

Gow, James T., Columbus, Ohio, assignor, by mesne assignments, to Steel Shot Producers, Inc., Butler, Pa. Method and apparatus for forming solidified particles from molten material. 2,439,772, Apr. 13.

Graham, Harry C., assignor to Pittsburgh Screw & Bolt Company, Pittsburgh, Pa. Spliced lumber. 2,439,655, Apr. 13.

Granat, Leo, San Francisco, Calif. Engagement and wedding ring ensemble. 2,439,727, Apr. 13.

Gravley, Charles K., Cleveland Heights, assignor to The Brush Development Company, Cleveland, Ohio. Piezoelectric crystal element and fabricating same. 2,439,466, Apr. 13.

Green, Floyd S., assignor to Frank Adam Electric Company, St. Louis, Mo. Latching or tripping mechanism of circuit breakers. 2,439,511, Apr. 13.

Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparing dialkyl esters of dicarboxylic acids. 2,439,425, Apr. 13.

Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Conversion of saturated aliphatic carboxylic amides to nitriles. 2,439,426, Apr. 13.

Gross, Peter F., Woodstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Pyridine carbonyl amides of the benzene series. 2,439,728, Apr. 13.

Grubbs, Edward G., Los Angeles, Calif. Rotary valve for internal-combustion engines. 2,439,540, Apr. 13.

Guenther, Alfred, Riegelsville, Pa., and J. F. Morgan, Phillipsburg, N. J., assignors to General Aniline & Film Corporation, New York, N. Y. Preparation of quinazolones. 2,439,886, Apr. 13.

Guerreiro, Antone M.: *See*—
Canfield, Robert W., Wiley, and Guerriro.

Guibert, Francis W., Los Angeles, and F. B. Fuller, Whittier, Calif. Replaceable tooth structure. 2,439,427, Apr. 13.

Guilfoil, Oscar D., Jr., Syracuse, N. Y. Candle lamp. 2,439,467, Apr. 13.

Guinot, Henri M., Versailles, and A. Courtier, Melle, assignors to Les Usines De Melle (Societe Anonyme), Saint-Leger-les-Melle, France. Oil for industrial purposes and manufacture thereof. 2,439,729, Apr. 13.

Hall Laboratories, Inc., assignee: *See*—
Cerna, Wendell W.

Hall, Leyel C., Connell, Wash. Saw guard. 2,439,568, Apr. 13.

Hall, Marshall V., Hiawatha, Kans. Self-unloading feed wagon. 2,439,541, Apr. 13.

Hallmark, Clyde E., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Ultra high frequency power oscillator. 2,439,512, Apr. 13.

Hamblet, Clement H., and A. McAlevey, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Adipic acid process. 2,439,513, Apr. 13.

Hands, C. Alfred, assignee, et al.: *See*—
Engler, Herman.

Hansen, Harry: *See*—
Eberle, Frank V., and Hansen.

Hansen, William W., Garden City, N. Y., assignor to The Sperry Corporation. Resonator wave meter. 2,439,388, Apr. 13.

Hansen, William W., Garden City, and R. H. Varian, Bellmore, N. Y., assignors to The Sperry Corporation. Electronic tuning control. 2,439,387, Apr. 13.

Happel, John, Brooklyn, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated. Cracking process to produce gaseous olefins. 2,439,730, Apr. 13.

Hart, William F.: *See*—
Niederl, Joseph B., and Hart.

Hartford National Bank and Trust Company, assignee: *See*—
Strutt, Maximiliaan J. O., van der Ziel, and van Overbeek.

Hathorn, Charles E., Kenmore, N. Y., assignor to Curtiss-Wright Corporation. Universal joint. 2,439,569, Apr. 13.

Hausz, Walter, Schenectady, N. Y., assignor to General Electric Company. Receiver protective device. 2,439,656, Apr. 13.

Hawes, George R., Longmeadow, assignor to Buxton, Incorporated, Springfield, Mass. Flexible pocket receptacle having pivotally supported units. 2,439,731, Apr. 13.

Haydon, Arthur W., Marion, assignor to Haydon Manufacturing Company, Inc., Forestville, Conn. Radio time switch. 2,439,732, Apr. 13.

Haydon Manufacturing Company, Inc., assignee: *See*—
Haydon, Arthur W.

Hazeltine Research, Inc., assignee: *See*—
Lewis, Harold M.
Wheeler, Harold A.

Heintz Manufacturing Company, assignee: *See*—
D'Ardenne, Walter H., Devore, Wolf, and Boyd.

Helbush, Herman H., assignee: *See*—
Wallace, Frank C.

Hemphill Company, assignee: *See*—
St. Pierre, Eugene.

Hensel, Franz R., E. I. Larsen, and E. F. Swazy, assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind. Electric contact. 2,439,570, Apr. 13.

Heritage, Clark C., Cloquet, assignor to Wood Conversion Company, St. Paul, Minn. Insulating confined spaces. 2,430,601, Apr. 13.

Heritage, Clark C., assignor to Wood Conversion Company, Cloquet, Minn. Insulating confined spaces. 2,439,602, Apr. 13.

Heritage, Clark C., assignor to Wood Conversion Company, Cloquet, Minn. Insulating confined spaces. 2,439,603, Apr. 13.

Heritage, Clark C., Cloquet, assignor to Wood Conversion Company, St. Paul, Minn. Insulating confined spaces. 2,439,604, Apr. 13.

Hermes, Theodore J., Stonington, Conn. Mute for musical instruments. 2,439,733, Apr. 13.

Herndon, Lee R., Snyder, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Composite structures. 2,439,514, Apr. 13.

Hexter, Joseph, and W. E. Lanham, Atlanta, Ga.; said Lanham assignor to said Hexter. Sliced loaf dividing mechanism. 2,439,657, Apr. 13.

Hillberg, Bror, assignor to Superior Concrete Accessories, Chicago, Ill. Combined bar support and spacer. 2,439,428, Apr. 13.

Himel, Chester M., and G. C. Bailey, Bartlesville, Okla., assignors to Phillips Petroleum Company. Lubricating oil additives. 2,439,734, Apr. 13.

Himottu, Waino E., Gardner, Mass. Fishing lure. 2,439,621, Apr. 13.

Hodgson, Richard H., Vancouver, British Columbia, Canada. Valve for step-by-step servomotors. 2,439,515, Apr. 13.

Hoe, R., & Co., Inc., assignee: *See*—
Eckhard, William K., and Goodwin.

Hofmann, Frank J., New York, N. Y. Combined dental powder dispenser and brush holder. 2,439,429, Apr. 13.

Hohl, John, and O. Bjering, Toledo, Ohio, assignors to Owens-Illinois Glass Company. Steam distributor for vacuumizing containers in sealing machines. 2,439,773, Apr. 13.

Holcomb, Robert L., assignor of one-half to Sally O'B. Holcomb, Fairfield, Conn. Nail sealing washer. 2,439,516, Apr. 13.

Holcomb, Sally O'B.: *See*—
Holcomb, Robert L.

Holloway, Irma, Cedar Rapids, Iowa. Bed garment for infants. 2,439,658, Apr. 13.

Homrighous, John H., Oak Park, Ill. Electrical control system. 2,439,735, Apr. 13.

Hopkins, Roy H., Alice, Tex. Screened pump. 2,439,468, Apr. 13.

Hospital Specialty Company, assignee: *See*—
Kruse, George A.

Horne, Hal, New York, N. Y. Acoustic device. 2,439,736, Apr. 13.

Houston, Victor E., and A. G. Oblad, Dallas, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Manufacture of aluminum bromide. 2,439,737, Apr. 13.

Hovey, C. Earl, assignee, trustee: *See*—
Bloomfield, Samuel.

Howe, Robert F., assignor to E. B. Kingman Co., Leominster, Mass. Knitting needle. 2,439,622, Apr. 13.

Howells, Thomas G., Girard, Ohio. Support for vehicles. 2,439,623, Apr. 13.

Hubert, Gordon L.: *See*—
Bredice, Pasquale M.

Hunt, Raymond S., Mount Pleasant, Mich. Water detector for oil wells. 2,439,542, Apr. 13.

Hunter, Richard B., Shorewood, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Adjustable cable guided member for limit stop weights. 2,439,738, Apr. 13.

Hurd, George K., Toronto, Ontario, Canada. Hook attachment for ladders. 2,439,430, Apr. 13.

Hurt, Joel, Village of North Bay Island, Fla. Retaining sea wall. 2,439,606, Apr. 13.

Hussey, Luther W., Madison, N. J., assignor to Bell Telephone Laboratories Incorporated, New York, N. Y. Pulse generator. 2,439,389, Apr. 13.

Hussman, Carl, Chicago, Ill. Vibration absorbing mounting. 2,439,739, Apr. 13.

Husted, Harry F., Shavertown, Pa. Auxiliary tub attachment for washing machines. 2,439,469, Apr. 13.

Hyatt, Harlow G.: *See*—
Shanley, Edward S., and Hyatt.

Hyde, James F., assignor to Corning Glass Works, Corning, N. Y. Rendering glass water repellent. 2,439,689, Apr. 13.

Imperial Chemical Industries Limited, assignee: *See*—
Murray, Arthur G.

Interchemical Corporation, assignee: *See*—
Berberich, Otto P.
Carman, Everett F., and Berberich.

International Business Machines Corporation, assignee: *See*—
Beattie, Horace S.
Dodge, Ronald D.
Jackson, Carlton T.
Tholstrup, Henry L.

International Cellucotton Products Company, assignee: *See*—
Thompson, Oscar T., and Feagles.

Irwin, Frederick D., Warsaw, Ind. Adjustable bracket. 2,439,624, Apr. 13.

Irwin, Samuel E., Jr., Ponta, Tex. Tree felling and log sawing attachment for tractors. 2,439,607, Apr. 13.

Jablon, Theodore M., Elmhurst, Long Island, N. Y. Slide mounting. 2,439,390, Apr. 13.

Jack & Heintz Precision Industries, Inc., assignee: *See*—
Walters, Russell W.

Jackson, Carlton T., Rochester, assignor to International Business Machines Corporation, New York, N. Y. Variable spacing mechanism for typewriting machines. 2,439,470, Apr. 13.

Jackson, John G., assignor to Square D Company, Detroit, Mich. Conductor arrangement for current distribution. 2,439,471, Apr. 13.

Jackson, Thomas, North Muskegon, assignor to Continental Motors Corporation, Muskegon, Mich. Induction system for multicylinder opposed piston engines. 2,439,472, Apr. 13.

Jaeger, Gebhard, assignor to The Jaeger Machine Company, Columbus, Ohio. Concrete mixer. 2,439,774, Apr. 13.

Jaeger Machine Company, The, assignee: *See*—
Jaeger, Gebhard.

Jamestown Metal Equipment Company, Inc., assignee: *See*—
Conterman, Fred A.

Jeffrey Manufacturing Company, The, assignee: *See*—
Mercier, Stanley M.

Jobson, Frederic H., Jeffersonville, Ga. Artificial minnow. 2,439,391, Apr. 13.

Johnson, Joel R., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Induction heating apparatus. 2,439,517, Apr. 13.

Johnson, Lester M.: *See*—
Edwards, Miles L., MacBaine, and Johnson.

Johnson, Moses, Indianapolis, Ind. Foot support. 2,439,625, Apr. 13.

Johnson, Wallace C., Sewickley, assignor to Dravo Corporation, Pittsburgh, Pa. Arc welding apparatus. 2,439,740, Apr. 13.

Jones, Edward M., assignor to The Baldwin Company, Cincinnati, Ohio. Generation of tones in photoelectric musical instruments. 2,439,392, Apr. 13.

Joy Manufacturing Company, assignee: *See*—
Simmons, Leon E.

Julian, George J., Columbus, Ohio, assignor to Curtiss-Wright Corporation. Wrinkle removing device. 2,439,571, Apr. 13.

Julien, Maurice F. A., Toulouse, France. Vehicle chassis bracket structure and wheel suspension and engine connections thereto. 2,439,659, Apr. 13.

Kalart Company Inc., The, assignee: *See*—
Castedello, William.

Kalitinsky, Andrew, Eagleville, assignor to United Aircraft Corporation, East Hartford, Conn. Pressurized protective conduit for hot gas power plants. 2,439,473, Apr. 13.

Kasboske, Clement B., assignor to M. Loeber, Chicago, Ill. Draw bar. 2,439,518, Apr. 13.

Kaufmann, Melville, Los Angeles, Calif. Shank reinforced shoe construction. 2,439,431, Apr. 13.

Keenen, Frank G., Swarthmore, Pa., and R. L. Dodge, Wilmington, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Ammoniation of fertilizers. 2,439,432, Apr. 13.

Keever, Donald B., Colfax, N. C. System for true amplitude modulation of a radio wave. 2,439,661, Apr. 13.

Kell, Rudolph, Pelham Manor, N. Y. Wheeled trunk and the like. 2,439,660, Apr. 13.

Keller Tool Company, assignee: *See*—
Shaff, Ernest H.

Kendall Company, The, assignee: *See*—
Martin, John B.

Kennedy, Walter W., assignor to Barber-Colman Company, Rockford, Ill. Heat exchanger. 2,439,775, Apr. 13.

Kennelly, Jeremiah D., Oak Park, Ill. Brake pressure responsive signal system. 2,439,474, Apr. 13.

Kern, Walter, Sissach, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Anthraquinone vat dyestuffs. 2,439,626, Apr. 13.

Kerr Manufacturing Co., assignee: *See*—
Christian, Rodney E.

Kerr, Ralph W., Bowman, N. Dak. Synchronized control unit. 2,439,393, Apr. 13.

Ketchum, William R., Maricopa County, Ariz. Citrus juice screener. 2,439,543, Apr. 13.

Kidd, Frederick and T. D., Stockton-on-Tees, England. Chuck and face-plate for grinding machines. 2,439,662, Apr. 13.

Kidd, Thomas D.: *See*—
Kidd, Frederick and T. D.

Kingman, E. B., Co., assignee: *See*—
Howe, Robert F.

Klein, Harold L., and J. L. Courtright, Columbus, Ohio, assignors, by mesne assignments, to Steel Shot Producers, Inc., Butler, Pa. Apparatus for forming solidified particles from molten material. 2,439,776, Apr. 13.

Knapp, William J.: *See*—
Amberg, Charles R., and Knapp.

Koletzko, Paul, assignee, et al.: *See*—
Engler, Herman.

Kolts, Tennies F., Long Beach, Calif. Dispensing container. 2,439,627, Apr. 13.

Kopecky, Donald G., Taft, Calif. Bottle stopper. 2,439,628, Apr. 13.

Koppers Company, Inc., assignee: *See*—
Stahly, Eldon E.

Krauer, Otto A., Yonkers, assignor to Otis Elevator Company, New York, N. Y. Elevator load weighing apparatus. 2,439,608, Apr. 13.

Krautheim, William C.: *See*—
Travillia, Jame C., Jr., and Krautheim.

Kroll, Nathan J.: *See*—
Kroll, Samuel and N. J.

Kroll, Samuel and N. J., Chicago, Ill. Baby carriage. 2,439,544, Apr. 13.

Kruse, George A., East Orwell, Ohio, assignor to The Hospital Specialty Company. Article gauging dispensing device. 2,439,475, Apr. 13.

Kuzmick, Joseph N., Clifton, assignor to Conmar Products Corporation, Newark, N. J. Mold for slide fasteners. 2,439,433, Apr. 13.

Lake, George R., and J. M. Stribley, Long Beach, assignors to Union Oil Company of California, Los Angeles, Calif. Separation of thiophenes from hydrocarbons by azeotropic distillation. 2,439,777, Apr. 13.

Lanham, William E.: *See*—
Hexter, Joseph, and Lanham.

Lanzalotti, Samuel J., Williamstown, and M. Skobel, Eatontown, N. J., assignors to the United States of America, as represented by the Secretary of War. Grommet insulating bushing unit. 2,439,394, Apr. 13.

Larsen, Earl I.: *See*—
Hensel, Franz R., Larsen, and Swazy.

Leader, Sidney A., and J. J. Gordon, assignors to Portland Plastics Limited, London, England. Methyl methacrylate compositions opaque to X-rays. 2,439,374, Apr. 13.

Leatherman, Martin, Hyattsville, Md. Fire-resistant coating composition. 2,439,395, Apr. 13.

Leatherman, Martin, Hyattsville, Md. Fire-resistant coating composition. 2,439,396, Apr. 13.

Ledwith, Walter A.: *See*—
Buck, Richard S., and Ledwith.

Leggett, Guy O., and C. Nathan, Chicago, Ill. Indicator. 2,439,476, Apr. 13.

Lehon Company, The, assignee: *See*—
Cuno, Charles W.

Leigh, Robert L.: *See*—
Babcock, Kenneth L., and Leigh.

Le Roux, Bernard L. J. F., Paris, France. Sound warning device. 2,439,477, Apr. 13.

Les Usines De Melle (Societe Anonyme), assignee: *See*—
Guinot, Henri M., and Courtier.

Levin, Samuel B., Jerusalem, Palestine. Apparatus and process for the cultivation of microorganisms. 2,439,572, Apr. 13.

Lewis, Harold M., Allenhurst, N. J., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. System for navigating aircraft. 2,439,663, Apr. 13.

Libbey-Owens-Ford Glass Company, assignee: *See*—
Gaiser, Romey A., and Mattimoe.

Libby, Stewart N., Chicago, Ill. Multiple thermochemical cutting attachment. 2,439,629, Apr. 13.

Linde Air Products Company, The, assignee: *See*—
Miller, Alfred J., and Young.

Lindgren, Hans O., Smedslatten, assignor to Aktiebolaget Separator-Nobel, Stockholm, Sweden. Method and apparatus for dewaxing oils. 2,439,434, Apr. 13.

Lindström, Dag V. L.: *See*—
Wallgren, Johan V., and Lindström.

Lippenberger, Raymond E., Alexandria, Va. Furniture. 2,439,690, Apr. 13.

Litty, Frederick L., Jr., assignor to The Davidson Chemical Corporation, Baltimore, Md. Controlling drier discharge. 2,439,741, Apr. 13.

Loeber, Martin, assignee: *See*—
Kasboske, Clement B.

Loewer, Henry B., Kenmore, N. Y., assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock absorber. 2,439,478, Apr. 13.

Loftus, Clarence J., assignee: *See*—
Reilly, Frank J.

Londergan, Thomas E.: *See*—
Walker, Joseph F., and Londergan.

Lynnwood Laboratories, Inc., assignee: *See*—
Shapiro, Carl L.

MacBain, Donald K.: *See*—
Edwards, Miles L., MacBain, and Johnson.

Mackmann, Arthur, Chicago, Ill. Universal coupling. 2,439,479, Apr. 13.

MacLean, John A., Jr., Winnetka, Ill., and B. F. Money, Tulsa, Okla., assignors to McLean-Fogg Lock Nut Company, Chicago, Ill. Cotter key. 2,439,778, Apr. 13.

Majusick, Walter, assignor of one-half to E. O. Miller, Dayton, Ohio. Light socket. 2,439,480, Apr. 13.

Mallory, Marion, Detroit, Mich. Degasser for internal combustion engines. 2,439,573, Apr. 13.

Mallory, P. R., & Co., Inc., assignee: *See*—
Hensel, Franz R., Larsen, Swazy.

Manning, Maxwell & Moore, Incorporated, assignee: *See*—
Roper, Charles G.

Mannon, Lloyd, San Francisco, Calif. Film control for automatic shutter on moving picture projector. 2,439,691, Apr. 13.

Marcellus, Brooks, assignor to Barber-Colman Company, Rockford, Ill. Machine for winding bobbins. 2,439,519, Apr. 13.

Marchand, Adolph, Jackson Heights, N. Y. Glass-lined metal shelf wall closet. 2,439,664, Apr. 13.

Marchant Calculating Machine Company, assignee: *See*—
Avery, Harold T.

Marcy, Grosvenor D., Newton Highlands, assignor to Boston Woven Hose & Rubber Company, Cambridge, Mass. Apparatus for controlling pressure bands. 2,439,779, Apr. 13.

Marquis, John F., Haddonfield, N. J., assignor to Radio Corporation of America. Sound reproducing device. 2,439,665, Apr. 13.

Marquis, John F., Haddonfield, N. J., assignor to Radio Corporation of America. Loudspeaker diaphragm support. 2,439,666, Apr. 13.

Marquis, Thomas V.: *See*—
Peebles, David D., and Marquis.
Martin, Glenn L., Company, The, assignee: *See*—
Good, Paul F.
Martin, James V., Paramus, N. J. Distortable circle tire. 2,439,742, Apr. 13.
Martin, John B., Glen Ellyn, Ill., assignor to The Kendall Company, Boston, Mass. Pressure-sensitive adhesive sheet material. 2,439,481, Apr. 13.
Martinec, Eugene F., Cleveland, Ohio. Gauging-device actuated light-beam responsive selecting apparatus. 2,439,406, Apr. 13.
Mason, Bernard: *See*—
Mercer, Arthur A.
Mathes, Kenneth N., Schenectady, N. Y., assignor to General Electric Company. Making laminated electrical insulating material. 2,439,667, Apr. 13.
Mathieson Alkali Works, Inc., The, assignee: *See*—
Erickson, Edwin R.
Matlas, Jean, New York, N. Y. Arch support device. 2,439,545, Apr. 13.
Mattimoe, Paul T.: *See*—
Gaiser, Romey A.
Maxwell, William H.: *See*—
Campbell, Phillip, and Maxwell.
McAlevy, Ambrose: *See*—
Hamblet, Clement H., and McAlevy.
McEwen, Samuel M., Baltimore, Md. Subsoiler and aerator. 2,439,743, Apr. 13.
McFall, Thurlow E., Sparta, Mich. Piston ring. 2,439,546, Apr. 13.
McKay, Frank W., Charlestown, Ind. Dowel pin. 2,439,692, Apr. 13.
McLean-Fogg Lock Nut Company, assignee: *See*—
MacLean, John A., Jr., and Money.
Meitzler, Donald E., Manchester, assignor to United Aircraft Corporation, East Hartford, Conn. Starting system for free piston engines. 2,439,482, Apr. 13.
Mentor, Eugene L., Westminster, assignor to Simplex Time Recorder Co., Gardner, Mass. Plug and jack assembly. 2,439,744, Apr. 13.
Mercer, Arthur A., assignor of ten per cent to B. Mason, Colchester, England. Pump or compressor. 2,439,668, Apr. 13.
Mercier, Stanley M., Bexley, Ohio, assignor to The Jeffrey Manufacturing Company. Jarring mechanism for conveyer flights. 2,439,574, Apr. 13.
Merriman, Henry H., assignor to H. D. Boardman, Jackson, Mich. Combination toggle and cam clamp. 2,439,483, Apr. 13.
Metal Textile Corporation, assignee: *See*—
Goodloe, Alfred M., and York.
Miami Boiler & Machine Company, Inc., assignee: *See*—
Napier, Melvin J.
Miller, Alfred J., Garwood, and L. W. Young, Elizabeth, N. J., assignors to The Linde Air Products Company. Piston-operated valve mechanism. 2,439,523, Apr. 13.
Miller, Charles F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Composition comprising caprolactam for printing nylon fiber. 2,439,745. Apr. 13.
Miller Company, The, assignee: *See*—
De Lancey, Ralph W.
Miller, Everett O., assignee: *See*—
Majusick, Walter.
Miller, Frank, Chicago, Ill. Driving mechanism. 2,439,520, Apr. 13.
Miller, Frank, Chicago, Ill. Reducing gear mechanism. 2,439,521, Apr. 13.
Miller Pottery Engineering Company, assignee: *See*—
Miller, William J.
Miller, Robert S., assignor to Pacific Chain and Manufacturing Company, Portland, Oreg. Chain and method of making the same. 2,439,522, Apr. 13.
Miller, William J., Pittsburgh, assignor to Miller Pottery Engineering Company, Swissvale, Pa. Dinnerware finishing apparatus. 2,439,407, Apr. 13.
Miner, Henry A., Evanston, assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock absorber. 2,439,484, Apr. 13.
Miner, W. H., Inc., assignee: *See*—
Loewer, Henry B.
Miner, Henry A.
Mitchell, Donald H., Chicago, Ill., assignor to Motorola, Inc. Portable radio transmitting and receiving set. 2,439,408, Apr. 13.
Mitchell, Donald H., Chicago, Ill., assignor to Motorola, Inc. System for providing an energizing direct current. 2,439,409, Apr. 13.
Mitchell, Donald H., Chicago, Ill., assignor to Motorola, Inc. Combined radio transmitter and receiver. 2,439,410, Apr. 13.
Mitchell, Donald H., Chicago, Ill., assignor to Motorola, Inc. Portable two-way wave-signal space-communication set. 2,439,411, Apr. 13.
Mitchell, Donald H., Chicago, Ill.., assignor to Motorola, Inc. Multistage plug-in frequency-determining unit. 2,439,412. Apr. 13.
Mitchell, Robert M.., U. S. Army. Cryptographic slide rule. 2,439,413, Apr. 13.
Mitchell-Tyler Company, The, assignee: *See*—
Porter, Harold M.
Mittendorf, Harvey C., East Orange, N. J., assignor to Combustion Engineering Company, Inc., New York, N. Y. Control for plural retractable fuel burners. 2,439,609, Apr. 13.
Money, Benjamin F.: *See*—
MacLean, John A., Jr., and Money.
Moore, Earl E., Los Angeles, Calif. Tubular hand garden weeder. 2,439,524, Apr. 13.
Morgan, Jack F.: *See*—
Guenther, Alfred, and Morgan.
Morris, John M., Atlanta, Ga. Current wheel. 2,439,575, Apr. 13.
Morris, Rupert C., and J. L. Van Winkle, Berkeley, and A. V. Snider, Richmond, assignors to Shell Development Company, San Francisco, Calif. Stabilized organic composition. 2,439,610, Apr. 13.
Morrow, Marvin E., assignor to Century Geophysical Corporation, Tulsa, Okla. Galvanometer movable coil support. 2,439,576, Apr. 13.
Motorola, Inc., assignee: *See*—
Mitchell, Donald H.
Murray, Arthur G., Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited. Preparing mepacrine dihydrochloride dihydrate. 2,439,746, Apr. 13.
Nabstedt, Arthur T., Hamden, assignor to The Snow-Nabstedt Gear Corporation, New Haven, Conn. Axially engaging friction clutch. 2,439,611, Apr. 13.
Napier, Melvin J., assignor to Miami Boiler & Machine Company, Inc., Akron, Ohio. Cooking apparatus. 2,439,780. Apr. 13.
Nathan, Carl: *See*—
Leggett, Guy O., and Nathan.
National Brass Company, assignee: *See*—
Quigley, Herbert, and Ter Meer.
National Lock Co., assignee: *See*—
Stone, Roy A.
Nelson, Royal G., Freeport, Ill., assignor, by mesne assignments, to First Industrial Corporation, Wilmington, Del. Electric switch. 2,439,747, Apr. 13.
Nettel, Frederick, Manhasset, N. Y. Heat engine. 2,439,748, Apr. 13.
Niederl, Joseph B., Brooklyn, N. Y., and W. F. Hart, Easton, Pa. N-alkyl thiomorpholines and derivatives. 2,439,749, Apr. 13.
Nisbet, Robert H., Stroud, and A. P. Glenny, Amberley, assignors to The Sperry Gyroscope Company Limited, Brentford, England. Automatic control system for aircraft. 2,439,750, Apr. 13.
Noblitt-Sparks Industries, Inc., assignee: *See*—
Booth, Earl C.
Nordlander, Birger W., Schenectady, N. Y., assignor to General Electric Company. Chlorinated methylpolysiloxane resins. 2,439,669, Apr. 13.
Norquist, Glenn H., Jamestown, N. Y. Apparatus and method for flanging metal-clad fibrous base panels. 2,439,397, Apr. 13.
North American Cement Corporation, assignee: *See*—
Amberg, Charles R., and Knapp.
Norton, Orlo C., Erie, Pa. Centrifugal pump. 2,439,577, Apr. 13.
Nutt, Harold, assignor to Borg-Warner Corporation, Chicago, Ill. Fluid coupling. 2,439,630, Apr. 13.
Oblad Alex G.: *See*—
Houston, Victor E., and Oblad.
Olin Industries, Inc., assignee: *See*—
Burlte, Jerome G., and Brandt.
Olsen, Gustav A., assignor to Albertson & Company, Inc., Sioux City, Iowa. Abrasive disc holder. 2,439,751, Apr. 13.
Oosterhout, Johan C. D., Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Removing acid components from organic liquids. 2,439,670, Apr. 13.
Otis Elevator Company, assignee: *See*—
Krauer, Otto A.
Ott, Harvey N., Buffalo, N. Y. Fine adjustment of microscope objective. 2,439,525, Apr. 13.
Ott, Harvey, Buffalo, N. Y. Adjustable microscope eyepiece mounting. 2,439,526, Apr. 13.
Ott, Harvey N., Buffalo, N. Y. Knife holder for microtomes. 2,439,671, Apr. 13.
Otto, Carl, Manhasset, assignor to Fuel Refining Corporation, New York, N. Y. Apparatus for production of ammonium sulphate. 2,439,547, Apr. 13.
Owens-Illinois Glass Company, assignee: *See*—
Ball, Charles O.
Finley, Hugh P.
Hohl, John, and Bjering.
Schmid, William, and Fillmore.
Schutz, Harold R.
Pacific Chain and Manufacturing Company, assignee: *See*—
Miller, Robert S.
Papa, Domenick: *See*—
Schwenk, Erwin, and Papa.
Pauley, Robert D., assignor to Wood Conversion Company, Cloquet, Minn. Packing insulation material. 2,439,605, Apr. 13.
Paulson, Christian, Elmhurst, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Wave meter. 2,439,527, Apr. 13.

Peebles, David D., Hillsborough, and T. V. Marquis, Santa Cruz, assignors to Western Condensing Company, San Francisco, Calif. Manufacture of milk sugar. 2,439,612, Apr. 13.
Perfect Circle Company, The, assignee: *See*—
Teetor, Ralph R.
Pfeil, Arthur P., Williamsville, N. Y. Umbrella. 2,439,752, Apr. 13.
Philco Corporation, assignee: *See*—
Bramley, Arthur.
Phillips Petroleum Company, assignee: *See*—
Himel, Chester M. and Bailey.
Pierce, John B., Foundation, assignee: *See*—
Stilwell, William E., Jr.
Pisciotta, Immacolata, New York, N. Y. Cover for bed-forming structures. 2,439,631, Apr. 13.
Pittsburgh Screw & Bolt Company, assignee: *See*—
Graham, Harry C.
Planeta, Anthony, assignee: *See*—
Planeta, Paul H.
Planeta, Paul H., assignor to Anthony Planeta, Linden, N. J. Making supports. 2,439,548, Apr. 13.
Plax Corporation, assignee: *See*—
Canfield, Robert W., Wiley and Guerreiro.
Porter, Harold M., assignor to The Mitchel-Tyler Company, Hagerstown, Md. Adjustment mechanism for microscopes. 2,439,485, Apr. 13.
Portland Plastics Limited, assignee: *See*—
Leader, Sidney A. and G.
Poston, Herbert L., Kalispell, Mont. Drive for pumps. 2,439,693, Apr. 13.
Praizner, Edward, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telegraph system provided with channel assurance and transmission regulation. 2,439,398, Apr. 13.
Priest, Herbert C., Bexley, near Sidney, New South Wales, Australia. Counting mechanism. 2,439,578, Apr. 13.
Putnam, Stephen R.: *See*—
Worthen, Eugene P., Barbour and Putnam.
Pyrene Company Limited, The, assignee: *See*—
Zieschang, Richard.
Quayle, George, Philadelphia, Pa., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Hand lift truck. 2,439,781, Apr. 13.
Quigley, Herbert, and H. T. Meer, assignors to National Brass Company, Grand Rapids, Mich. Cupboard catch. 2,439,549, Apr. 13.
Quilter, John R. C., Woking, England. Parachute harness. 2,439,613, Apr. 13.
Radio Corporation of America, assignee: *See*—
Boerner, Thomas J. and Sanborn.
Marquis, John F.
Roberds, Wesley M.
Rosenthal, Fritz.
Schell, Roger E.
Ragan, Robert O.: *See*—
Richardson, Ralph R., Ritter, and Ragan.
Ramirez, Ernest A., assignor of fifty per cent to F. M. Ramirez, Grand Rapids, Mich. Rocker swing. 2,439,632, Apr. 13.
Ramirez, Florence M., assignee: *See*—
Ramirez, Ernest A.
Ransome Machinery Company, assignee: *See*—
Faber, John P.
Ray, Eugene J., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Rotary cutter-head. 2,439,486, Apr. 13.
Raymond, Albert L.: *See*—
Crosley, Raymond W. and R.
Raytheon Manufacturing Company, assignee: *See*—
Smith, Charles G.
Reavis, Charles N., deceased; C. L. Reavis administratrix, assignor of two-thirds to S. B. Coley. Float-operated switch. 2,439,753, Apr. 13.
Reavis, Charlotte L., administratrix: *See*—
Reavis, Charles N.
Reilly, Frank J., Daytona Beach, Fla., assignor of one-third to C. J. Loftus, Chicago, Ill. Precooling the lading of refrigerator cars comprising the reversal of air flow. 2,439,487, Apr. 13.
Reimsnider, William: *See*—
Robey, Lee E.
Reinhart, Frederick J., Ludlow, Ky. Automatic filter apparatus. 2,439,633, Apr. 13.
Remington Arms Company, Inc., assignee: *See*—
Wilson, Ellsworth M.
Renz, Emil K., Dedham, assignor, by mesne assignments, to Debonair, Inc., Boston, Mass. Multipocketed billfold having interlocked end and edge flaps. 2,439,579, Apr. 13.
Renz, Emil K., Dedham, assignor, by mesne assignments, to Debonair, Inc., Boston, Mass. Stitchless billfold with interlocked pocket forming flaps. 2,439,580, Apr. 13.
Richardson, Ralph R., Chicago, W. T. Ritter, River Forest, and R. O. Ragan, Oak Park, assignors to Chicago Carton Company, Chicago, Ill. Moistureproof packaging. 2,439,435, Apr. 13.
Ritter, Walter T.: *See*—
Richardson, Ralph R., Ritter, and Ragan.
Roberds, Wesley M., Collingswood, N. J., assignor to Radio Corporation of America. Electrical condenser. 2,439,672, Apr. 13.
Roberts, George E., Martinsville, Mo. Wash check collar. 2,439,488, Apr. 13.
Robertson, Harry M., assignor to Turco Products, Inc., Los Angeles, Calif. Separation of mercury by hydraulic concentration and screening. 2,439,694, Apr. 13.
Robeson, Max O.: *See*—
Bludworth, Joseph E., Robeson, and Truby.
Robey, Lee E., Odenton, assignor of one-half to W. Reicsnider, Dorsey, Md. Electrical safety device. 2,439,634, Apr. 13.
Robins, Jack B., assignor to Aircraft Mechanics, Inc., Colorado Springs, Colo. Vertically adjustable barrel truck. 2,439,581, Apr. 13.
Rocheville, Charles F., West Los Angeles, Calif. Combustion gas turbine. 2,439,695, Apr. 13.
Roedel, Milton J., Talleyville, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Azines as olefin polymerization catalysts. 2,439,528, Apr. 13.
Roper, Charles G., Fairfield, Conn., assignor to Mafining, Maxwell & Moore, Incorporated, New York, N. Y. Air volume controller. 2,439,673, Apr. 13.
Rosenthal, Fritz, Bellmawr, N. J., assignor to Radio Corporation of America. Preparation of silver foil. 2,439,489, Apr. 13.
Rothe, William H., Irvington, N. J. Hairpin. 2,439,436, Apr. 13.
Ruch, Eugene, Farmington, Mich. Tool holder. 2,439,635, Apr. 13.
St. Pierre, Eugene, Pawtucket, assignor to Hemphill Company, Central Falls, R. I. Pick. 2,439,759, Apr. 13.
Sanborn, John W.: *See*—
Boerner, Thomas J. and Sanborn.
Saracchi, Vicente A. P., Buenos Aires, Argentina. Steering handle. 2,439,636, Apr. 13.
Schaal, Alvin H., Butte, Mont. Cylinder cap. 2,439,696, Apr. 13.
Scheineman, Fred W., assignor to Standard Oil Company, Chicago, Ill. Catalytic conversion system. 2,439,582, Apr. 13.
Schell, Roger E., West Collingswood, N. J., assignor to Radio Corporation of America. Check circuit for inspection apparatus. 2,439,490, Apr. 13.
Schering Corporation, assignee: *See*—
Schwenk, Erwin, and Papa.
Schiffl, Charles, Montclair, N. J. Enclosed electroplating tank. 2,439,491, Apr. 13.
Schmid, William, and W. E. Fillmore, Toledo, Ohio, assignors to Owens-Illinois Glass Company. Stripping means for molds. 2,439,782, Apr. 13.
Schramm, Milton E., Edwardsville, Ill., assignor to Shell Development Company, San Francisco, Calif. Flow-ratio meter. 2,439,614, Apr. 13.
Schuck, Carl L., Drexel Hill, Pa., assignor to General Electric Company. Current limiting fuse. 2,439,674, Apr. 13.
Schutz, Harold R., assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio. Burn-off method. 2,439,754, Apr. 13.
Schwenk, Erwin, Montclair, N. J., and D. Papa, Brooklyn, N. Y., assignors to Schering Corporation, Bloomfield, N. J. Preparation of meta-substituted phenols. 2,439,375, Apr. 13.
Schwinn, Frank W., Chicago, Ill. Quadricycle. 2,439,755, Apr. 13.
Scott, Laurie J., Chilliwack, British Columbia, Canada. Device for dispensing lump sugar. 2,439,697, Apr. 13.
Searle, G. D., & Co., assignee: *See*—
Crosley, Raymond W. and R.
Seeloff, Melvin M., assignor to The Taylor-Winfield Corporation, Warren, Ohio. Flash welder construction. 2,439,783, Apr. 13.
Segal, Samuel, New York, N. Y., assignor to Wilson-Jones Company, Chicago, Ill. Loose-leaf binder. 2,439,675, Apr. 13.
Selberling Latex Products Company, assignee: *See*—
Sidnell, Albert E.
Seitz, Warren W., Wilkinsburg, assignor to The Union Switch and Signal Company, Swissvale, Pa. Interlocking line-circuit railway traffic controlling apparatus. 2,439,676, Apr. 13.
Shaff, Ernest H., assignor to Keller Tool Company, Grand Haven, Mich. Impact clutch. 2,439,756, Apr. 13.
Shaler, Saul, Jackson Heights, Long Island, N. Y. Level. 2,439,698, Apr. 13.
Shamah, Israel, Maida Vale, London, England. Amusement device consisting of interwoven adjustable picture bands. 2,439,583, Apr. 13.
Shanley, Edward S., Kenmore, and H. G. Hyatt, Buffalo, assignors to Buffalo Electro-Chemical Company, Inc., Tonawanda, N. Y. Preparation of acetyl peroxide. 2,439,399, Apr. 13.
Shapiro, Carl L., Crafton, Pa., assignor, by mesne assignments, to Lynnwood Laboratories, Inc., Newark, N. J. Coating composition comprising a vinyl halide resin and a hydroxy polycarboxylic acid. 2,439,677, Apr. 13.
Sharratt, Albert G.: *See*—
Sharratt, John G. and A. G.
Sharratt, John G. and A. G., West Bromwich, England. Boring apparatus. 2,439,492, Apr. 13.
Shelby Cycle Company, The, assignee: *See*—
Smith, Leon A.
Shell Development Company, assignee: *See*—
Morris, Rupert C., Van Winkle, and Snider.
Schramm, Milton E.

Short, William S.: *See*—
Sowerby, George A., and Short.
Shumann, Harold F., Pittsburgh, Pa. Bag adapted for display by suspension. 2,439,584, Apr. 13.
Sidnell, Albert E., Akron, assignor to Selberling Latex Products Company, Barberton, Ohio. Perforated rubber laundry bag. 2,439,757, Apr. 13.
Silverman, Willie, Jacksonville, Fla. Preventing duplication of marks on laundry. 2,439,679, Apr. 13.
Simmons, Leon E., Claremont, N. H., assignor to Joy Manufacturing Company. Cutter chain. 2,439,400, Apr. 13.
Simon, Gerald H., San Francisco, Calif. Hat. 2,439,700, Apr. 13.
Simplex Time Recorder Co., assignee: *See*—
Menton, Eugene L.
Skobel, Max: *See*—
Lanzalotti, Samuel J., and Skobel.
Smith, Charles G., Medford, assignor to Raytheon Manufacturing Company, Newton, Mass. Magnetron oscillator of the resonant cavity type. 2,439,401, Apr. 13.
Smith, Leon A., assignor to The Shelby Cycle Company, Shelby, Ohio. Pedestal mounted circumferentially traveling shoe type tire mounting device. 2,439,615, Apr. 13.
Smith, Maurice, Co., Inc., assignee: *See*—
Smith, William H.
Smith, Percy C., assignor to The Exhibit Supply Company, Chicago, Ill. Vending machine. 2,439,550, Apr. 13.
Smith, William H., Warwick, assignor to Maurice C. Smith Co., Inc., Providence, R. I. Double boot. 2,439,493, Apr. 13.
Smoot, John H., Darien, Conn., assignor to Trans-Lux Corporation, New York, N. Y. Controller. 2,439,699, Apr. 13.
Snider, Alva V.: *See*—
Morris, Rupert C., Van Winkle, and Snider.
Snow-Nabstedt Gear Corporation, The, assignee: *See*—
Nabstedt, Arthur T.
Snow, Virgil L., assignor to The Euclid Road Machinery Co., Euclid, Ohio. Semistationary tail gate for rear dump bodies. 2,439,585, Apr. 13.
Society of Chemical Industry in Basle, assignee: *See*—
Kern, Walter.
Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Happel, John.
Houston, Victor E., and Oblad.
Sorrentino, Antonio M., Brooklyn, N. Y. Antiskid jacking device for vehicles. 2,439,758, Apr. 13.
Sowerby, George A., Newcastle-on-Tyne, and W. S. Short, Seaton Burn, Newcastle-on-Tyne, assignors to George Angus & Company Limited, Newcastle-on-Tyne, England Belting. 2,439,586, Apr. 13.
Sperry Corporation, The, assignee: *See*—
Hansen, William W.
Hansen, William W., and Varian.
Sperry Gyroscope Company, Limited, The, assignee: *See*—
Nisbet, Robert H., and Glenny.
Square D Company, assignee: *See*—
Jackson, John G.
Stahly, Eldon E., assignor to Koppers Company, Inc., Pittsburgh, Pa. Manufacture of dienes. 2,439,587, Apr. 13.
Standard Oil Company, assignee: *See*—
Scheineman, Fred W.
Standard Steel Works, assignee: *See*—
Cellwork, William E.
Steel Shot Producers, Inc., assignee: *See*—
Gow, James T.
Klein, Harold L., and Courtright.
Steinmeyer, John W., Berwick, Pa., assignor to American Car and Foundry Company, New York, N. Y. Preparing weldable ferrous members having high carbon faces. 2,439,637, Apr. 13.
Stephenson, Hyrum, Tracy, Calif. Direction signal for motor vehicles. 2,439,588, Apr. 13.
Sterling Industries Limited, assignee: *See*—
Thomas, Percival E.
Sterling Tool Products Company, assignee: *See*—
Crosby, Stephen A.
Stevenson, Andrew, Los Angeles, Calif. Hanger for garments, wearing apparel, etc. 2,439,529, Apr. 13.
Stilwell, William E., Jr., Cincinnati, Ohio, assignor to John B. Pierce Foundation, New York, N. Y. Combined electromagnetic and thermal circuit breaker. 2,439,402, Apr. 13.
Stone, Roy A., assignor to National Lock Co., Rockford, Ill. Lid and tray supporting hinge. 2,439,494, Apr. 13.
Stop-Motion Devices Corp., assignee: *See*—
Vossen, Edward.
Stribley, Josephine M.: *See*—
Lake, George R., and Stribley.
Strutt, Maximiliaan J. O., A. van der Ziel, and A. J. W. M. van Overbeek, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn. Circuit arrangement for amplifying or generating ultra high frequency oscillation. 2,439,638, Apr. 13.
Stuart, Alfred A., Jr., Hasbrouck Heights, assignor to Bendix Aviation Corporation, Teterboro, N. J. Induction system. 2,439,701, Apr. 13.
Stubblebine, Warren: *See*—
Bare, Martin K., and Stubblebine.
Stull, John S., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for forming glass beads on metallic elements. 2,439,437, Apr. 13.
Sturm, Ralph E., assignor to The Burdick Corporation, Milton, Wis. Heart beat rate indicating apparatus. 2,439,495, Apr. 13.
Sundell, Carl H., Ithaca, N. Y. Socket connection for radio tubes. 2,439,589, Apr. 13.
Superior Concrete Accessories, assignee: *See*—
Hillberg, Bror.
Swazy, Earl F.: *See*—
Hensel, Franz R., Larsen, and Swazy.
Szantay, Daniel, Chicago, Ill. Flashlight. 2,439,496, Apr. 13.
Tate, Thomas J., Talladega, Ala. Automatic fire alarm system. 2,439,502, Apr. 13.
Taylor & Hobson Limited, assignee: *See*—
Cooke, Ernest A.
Taylor-Winfield Corporation, The, assignee: *See*—
Seeloff, Melvin M.
Tea, Clark A., Detroit, Mich. Cushion spring and making the same. 2,439,530, Apr. 13.
Teetor, Ralph R., assignor to The Perfect Circle Company, Hagerstown, Ind. Piston ring. 2,439,702, Apr. 13.
Telkowski, Edward D., Milwaukee, Wis. Accordion with amplifier attachment. 2,439,551, Apr. 13.
Television Associates, Inc., assignee: *See*—
Eddy, William C.
Ter Meer, Herman: *See*—
Quigley, Herbert, and Ter Meer.
Texas Company, The, assignee: *See*—
Goldsby, Arthur R., and Clarke.
Oosterhout, Johan C. D.
Tholstrup, Henry L., Rochester, assignor to International Business Machines Corporation, New York, N. Y. Carriage spacing means for signal-controlled printing apparatus. 2,439,497, Apr. 13.
Thomas, Charles A., Fort Wayne, Ind., assignor to General Electric Company. Current collector contact member. 2,439,678, Apr. 13.
Thomas, Percival E., Worcester Park, assignor to Sterling Industries Limited, London, England. Self-sealing pipe coupling. 2,439,760, Apr. 13.
Thompson, Oscar T., Neenah, Wis., and D. D. Feagles, Niagara Falls, N. Y., assignors to International Cellucotton Products Company, Chicago, Ill. Apparatus for softening sanitary napkin pads. 2,439,761, Apr. 13.
Thomson, Leslie, Minneapolis, Minn. Holder for pressing irons. 2,439,438, Apr. 13.
Thornhill, Fred S.: *See*—
Amon, Fred H., and Thornhill.
Tide Water Associated Oil Company, assignee: *See*—
Gebauer, Adam H.
Tilly, James O., Tulsa, Okla. Envelope and package opener. 2,439,639, Apr. 13.
Tomlemire, Benjamin F., La Fayette, Calif. Matrix retainer. 2,439,703, Apr. 13.
Tognola, Tullio, Sidney, assignor to Bendix Aviation Corporation, New York, N. Y. Spark plug electrode structure. 2,439,590, Apr. 13.
Toledo Scale Company, assignee: *See*—
Gaul, Blair H.
Williams, Lawrence S.
Townes, Charles H.: *See*—
Darlington, Sidney, Townes, and Wooldridge.
Trans-Lux Corporation, assignee: *See*—
Smoot, John H.
Trangott Paul, assignor to Electro-Physical Laboratories, Inc., New York, N. Y. Electrocardiograph. 2,439,640, Apr. 13.
Travilla, James C., Jr., Swarthmore, Pa., and W. C. Krautheim, Normandy, Mo., assignors to General Steel Castings Corporation, Granite City, Ill. Retractable coupler for locomotive structures. 2,439,762, Apr. 13.
Truby, Harry A., Jr.: *See*—
Bludworth, Joseph E., Robeson, and Truby.
Turco Products, Inc., assignee: *See*—
Robertson, Harry M.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Bobbin control for weft replenishing mechanism. 2,439,704, Apr. 13.
Union Oil Company of California, assignee: *See*—
Lake, George R., and Stribley.
Union Starch & Refining Company, assignee: *See*—
Fetzer, Walter R.
Union Switch and Signal Company, The, assignee: *See*—
Seitz, Warren W.
Volz, Carl.
United Aircraft Corporation, assignee: *See*—
Buck, Richard S., and Ledwith.
Cooper, Kenneth C.
Kalitinsky, Andrew.
Meitzler, Donald E.
United Shoe Machinery Corporation, assignee: *See*—
Gookin, Sylvester L.
Ray, Eugene J.
United States Rubber Company, assignee: *See*—
Cunningham, Marion M.
Gamache, Armand R.
Urmetz, Walter W., Parma, assignor to The Ferro Engineering Company, Cleveland, Ohio. Hot top stripper. 2,439,705, Apr. 13.

Van der Ziel, Aldert: *See*—
Strutt, Maximiliaan J. O., van der Ziel, and van Overbeek.

Strutt, Maximiliaan J. O., van der Ziel, and van Overbeek.
Van Winkle, John L.: *See*—
Morris, Rupert C., Van Winkle, and Snider.
Varian, Russell H.: *See*—
Hansen, William W., and Varian.
Victoreen, Charles J. H., Dayton, Ohio. Variable inductive tuner. 2,439,403, Apr. 13.
Volz, Carl, Penn Township, Allegheny County, assignor to The Union Switch & Signal Company, Swissvale, Pa. Control circuits for vacuum tubes. 2,439,680, Apr. 13.
Vossen, Edward, assignor to Stop-Motion Devices Corp., Brooklyn, N. Y. Slide-controlled stop motion. 2,439,591, Apr. 13.
Waldes Koh-I-Noor, Inc., assignee: *See*—
Feiti, Rudolf, and Wurzel.
Walker, James D., Aurora, Ill., assignor to The American Well Works. Water treating apparatus. 2,439,764, Apr. 13.
Walker, Joseph F., Westfield, N. J., and T. E. Londergan, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Supported metal acetylide catalyst. 2,439,765, Apr. 13.
Wallace, Frank C., North Hollywood, assignor to H. H. Heibush, Los Angeles, Calif. Sheet metal clamp. 2,439,531, Apr. 13.
Wallace, Russell B., Plymouth, Mich. Fuel injecting pump. 2,439,498, Apr. 13.
Wallgren, Johan V., and D. V. L. Lindström, Stockholm, Sweden. Temporarily repairing electric cables damaged by moisture. 2,439,592, Apr. 13.
Walters, Russell W., assignor, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio. Indicator for play of gyro rotors in frames. 2,439,552, Apr. 13.
War, United States of America, as represented by the Secretary of, assignee: *See*—
Lanzalotti, Samuel J., and Skobel.
Washburn Company, The, assignee: *See*—
Aleks, Vytant.
Weissman, Eugene, Baltimore, Md. Audible and visual electrical signaling device. 2,439,766, Apr. 13.
Wermine, Hugo H., Wheaton, Ill., assignor to Belden Manufacturing Company. Electrical connector. 2,439,767, Apr. 13.
West, Charles A., Southbridge, Mass. Temperature controlled actuating mechanism. 2,439,706, Apr. 13.
Western Condensing Company, assignee: *See*—
Peebles, David D., and Marquis.
Western Electric Company, Incorporated, assignee: *See*—
Johnson, Joel R.
Paulson, Christian.
Stull, John S.
Weyerhaeuser Timber Company, assignee: *See*—
Edwards, Miles L., MacBain, and Johnson.
Wheeler, Harold A., Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Arrangement for conducting heat and high-frequency currents. 2,439,641, Apr. 13.
White, Mayfield C., New York, N. Y. Adjustable hose holder. 2,439,642, Apr. 13.
Whiting, John A., and D. V. Whitney, Jr., Kansas City, Mo., assignors to Armour and Company, Chicago, Ill. Anthelmintic compositions. 2,439,532, Apr. 13.
Whitney, David V., Jr.: *See*—
Whiting, John A., and Whitney.
Wicker, Dan B., Dunbar, W. Va., assignor to American Viscose Corporation, Wilmington, Del. Production of alkali metal and alkaline earth metal hydroxides. 2,439,404, Apr. 13.
Wiley, Fred E.: *See*—
Canfield, Robert W., Wiley, and Guerreiro.
Wilkes, Benjamin G., Jr., Wilkinsburg, Pa., assignor to Carbide and Carbon Chemicals Corporation. Extraction of hydrocarbons. 2,439,534, Apr. 13.
Williams, Alfred L. W., and W. J. Brown, Cleveland Heights, assignors to The Brush Development Company, Cleveland, Ohio. Piezoelectric motor. 2,439,499, Apr. 13.
Williams, Lawrence S., assignor to Toledo Scale Company, Toledo, Ohio. Hydraulic weighing scale. 2,439,533, Apr. 13.
Wilson, Ellsworth M., Southport, assignor to Remington Arms Company, Inc., Bridgeport, Conn. Filter. 2,439,535, Apr. 13.
Wilson-Jones Company, assignee: *See*—
Segal, Samuel.
Winn, Roy W., Kansas City, Mo. Selectively controlled light shielding liquid system for multiple window construction. 2,439,553, Apr. 13.
Wolf, Robert W.: *See*—
D'Ardenne, Walter H., Devore, Wolf, and Boyd.
Wolfe, Morton B., Norwood, assignor to Berger Bros. Company, Philadelphia, Pa. Conductor pipe hook. 2,439,616, Apr. 13.
Wood Conversion Company, assignee: *See*—
Heritage, Clark C.
Pauley, Robert D.
Wood, Richard T., Memphis, Tenn. Bridging switch for testing series light circuits. 2,439,500, Apr. 13.
Woodward Governor Company, assignee: *See*—
Bovey, Donald E.
Wooldridge, Dean E.: *See*—
Darlington, Sidney, Townes, and Wooldridge.
Worthen, Eugene P., Braintree, F. S. Barbour, Wollaston, and S. R. Putnam, North Quincy, Mass., assignors, by mesne assignments, to Buena Vista Iron Company. Separator. 2,439,536, Apr. 13.
Wright, Roger E., San Antonio, Tex. Automobile bumper support for outboard motors. 2,439,707, Apr. 13.
Wurzel, Hugo: *See*—
Feiti, Rudolf and Wurzel.
Yale & Towne Manufacturing Company, The, assignee: *See*—
Framhein, Herbert J.
Quayle, George.
Yelkin, Herman J., Long Beach, Calif. Assembling resilient grommets to gear shift selector arms. 2,439,501, Apr. 13.
York, Otto H.: *See*—
Goodloe, Alfred M., and York.
Young, Irvin, Falmouth, Ky. Combination tie plate and rail joint. 2,439,593, Apr. 13.
Young, Lloyd W.: *See*—
Miller, Alfred, and Young.
Zalkind, Joseph, New York, N. Y. Bookkeeping appliance. 2,439,537, Apr. 13.
Zierdt, Conrad H., Jr., Pittsburgh, Pa. Pulse counting relay system. 2,439,405, Apr. 13.
Zieschang, Richard, assignor to The Pyrene Company Limited, Brentford, England. Fire-extinguishing pump. 2,439,763, Apr. 13.

LIST OF DESIGN INVENTIONS

Alphabet for forming monograms or the like. M. Chernow. 149,250, Apr. 13.
Atomizer. V. R. Schlesinger. 149,309, Apr. 13.
Atomizer or the like. C. E. McNutt. 149,289, Apr. 13.
Bicycle. O. A. Trnka. 149,322, Apr. 13.
Book end. A. Leva. 149,280–3, Apr. 13.
Bottle, Perfume. B. A. Shapiro. 149,313–16, Apr. 13.
Bracelet or similar article. A. Philippe. 149,297–8, Apr. 13.
Braid. L. Beer and H. Stern. 149,246, Apr. 13.
Brooch or similar article. H. Armao. 149,241, Apr. 13.
Brooch or similar article. N. Barbieri. 149,242, Apr. 13.
Brooch or similar article. G. J. Lederer. 149,275–9, Apr. 13.
Brooch or similar article. A. Philippe. 149,295, Apr. 13.
Brooch or similar article. W. G. Schreiber. 149,311, Apr. 13.
Brooch or similar article, Chatelaine. A. Katz. 149,270, Apr. 13.
Building. A. T. Moore. 149,292, Apr. 13.
Camera, Photographic film. J. A. Henne. 149,267, Apr. 13.
Casing, Space heater. J. O. Reinecke. 149,300–2, Apr. 13.
Clip and pencil, Combined tie. R. B. Maxwell. 149,288, Apr. 13.
Cooler or similar article, Water. J. J. Corey. 149,257, Apr. 13.
Display stand and perfume bottles, Combined. V. Civita. 149,251, Apr. 13.
Display stand or similar article. M. H. Newman. 149,294, Apr. 13.
Dress. R. Maliuk. 149,286–7, Apr. 13.
Dress ensemble. J. Kipness. 149,272, Apr. 13.
Electric irradiation device of the like. J. Radinsky. 149,299, Apr. 13.
Extractor, Juice. A. M. Travis. 149,319–21, Apr. 13.
Figurine. L. C. Danz. 149,260, Apr. 13.
Fountain pen clip or similar article. F. Ferber. 149,263, Apr. 13.
Gauge, Height measuring. J. E. Sonnhalter. 149,318, Apr. 13.
Grater. E. H. Daniels. 149,259, Apr. 13.
Handbag or similar article. H. Morris. 149,293, Apr. 13.
Hanger, Garment. H. B. Young. 149,327, Apr. 13.
Heater, Electric. R. L. Fitch. 149,264, Apr. 13.
Heater, Electric. J. G. Lippincott. 149,284, Apr. 13.
Heater, Portable electric space. W. A. Gustafson. 149,266, Apr. 13.
Hobbyhorse. H. J. Hiller. 149,269, Apr. 13.
Holder for a cylindrical fire extinguisher or similar article. A. De Mott. 149,261, Apr. 13.
Horological instrument or similar article, Illuminable. R. Doolin. 149,262, Apr. 13.
Housing for a motion-picture projector or similar article. E. Boecking. 149,247, Apr. 13.
Kettle, Water. P. Schlumbohm. 149,310, Apr. 13.
Light fixture. C. A. Trowbridge. 149,323, Apr. 13.
Lighting fixture or similar article, Fluorescent. T. G. Beckett. 149,245, Apr. 13.
Necklace or similar article. A. Philippe. 149,296, Apr. 13.
Nozzle, Vacuum cleaner. J. G. Lippincott. 149,285, Apr. 13.
Ornament, Desk. V. Brown. 149,248–9, Apr. 13.
Overall, Lady's one-piece. H. C. Cookman. 149,256, Apr. 13.
Peeler, Vegetable and fruit. L. R. Meyran. 149,290, Apr. 13.
Perfume diffuser. H. Cobbs. 149,252, Apr. 13.
Plaque, Advertising. C. Kompas. 149,273, Apr. 13.
Plate or similar article, Dinner. J. T. Wigley. 149,325, Apr. 13.
Refrigerator. N. Achs. 149,240, Apr. 13.
Sandglass. M. L. Lavine. 149,274, Apr. 13.
Spoon or other article of flatware. E. J. Conroy. 149,253–5, Apr. 13.
Spoon or other article of flatware. A. A. Dabrowski. 149,258, Apr. 13.
Stopper or similar article, Perfume bottle. J. Herbst. 149,268, Apr. 13.
Sweater. J. Rosenfeld. 149,303–7, Apr. 13.
Temple member for spectacles or similar articles. M. Schwartz. 149,312, Apr. 13.
Theatre. C. G. Moeller. 149,291, Apr. 13.
Theatre. A. R. Walker. 149,324, Apr. 13.
Toy, Airplane. T. A. Schaad. 149,308, Apr. 13.
Tray. G. Wortman. 149,326, Apr. 13.
Tray, Ash. L. Grey. 149,265, Apr. 13.
Tray or similar article, Sandwich. L. Sonn. 149,317, Apr. 13.
Trimming, Embroidered. H. Kaufman. 149,271, Apr. 13.
Velocipede. W. M. Bashaw and W. O. Dixon. 149,243–4, Apr. 13.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 13TH DAY OF APRIL, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive disc holder. G. A. Olsen. 2,439,751, Apr. 13.
Accordion with amplifier attachment. E. D. Teikowski. 2,439,551, Apr. 13.
Acid components from organic liquids, Removing. J. C. D. Oosterhout. 2,439,670, Apr. 13.
Acoustic device. H. Horne. 2,439,736, Apr. 13.
Adhesive sheet material, Pressure-sensitive. J. B. Martin. 2,439,481, Apr. 13.
Adipic acid process. C. H. Hamblet and A. McAlevy. 2,439,513, Apr. 13.
Adjustable bracket. F. D. Irwin. 2,439,624, Apr. 13.
Adjustable hose holder. M. C. White. 2,439,642, Apr. 13.
Adjustable microscope eyepiece mounting. H. N. Ott. 2,439,526, Apr. 13.
Adjustment mechanism for microscopes. H. M. Porter. 2,439,485, Apr. 13.
Air filter for polishing machines. S. A. Crosby. 2,439,596, Apr. 13.
Air-heating device for fireplaces. A. B. Austin. 2,439,503, Apr. 13.
Alarm switch. W. C. Eddy. 2,439,509, Apr. 13.
Alkali metal and alkaline earth metal hydroxides, Production of. D. B. Wicker. 2,439,404, Apr. 13.
Alkylation of benzene by long chain polymeric olefins using sulfuric acid catalyst. J. J. Donleavy and M. M. Balzer. 2,439,457, Apr. 13.
Aluminum bromide, Manufacture of. V. E. Houston and A. G. Oblad. 2,439,737, Apr. 13.
Ammoniation of fertilizers. F. G. Keenen and R. L. Dodge. 2,439,432, Apr. 13.
Amusement device consisting of interwoven adjustable picture bands. I. Shamah. 2,439,583, Apr. 13.
Anthelmintic compositions. J. A. Whiting and D. V. Whitney, Jr. 2,439,532, Apr. 13.
Apparatus and method for flanging metal-clad fibrous base panels. G. H. Norquist. 2,439,397, Apr. 13.
Apparatus and method for softening sanitary napkin pads. O. T. Thompson and D. D. Feagles. 2,439,761, Apr. 13.
Apparatus and process for the cultivation of microorganisms. S. B. Levin. 2,439,572, Apr. 13.
Apparatus for controlling pressure bands. G. D. Marcy. 2,439,779, Apr. 13.
Apparatus for facing and truing abrasive articles. E. P. Dahlstrom. 2,439,771, Apr. 13.
Apparatus for forming glass beads on metallic elements. J. S. Stull. 2,439,437. Apr. 13.
Apparatus for forming solidified particles from molten material. H. L. Klein and J. L. Courtright. 2,439,776, Apr. 13.
Apparatus for handling viscose solutions. H. O. Davidson. 2,439,619, Apr. 13.
Apparatus for laying roll roofing. E. W. Ankney. 2,439,681, Apr. 13.
Apparatus for molding articles of wax. R. E. Christian. 2,439,506, Apr. 13.
Apparatus for molding pipe coverings. H. Finley. 2,439,724, Apr. 13.
Apparatus for production of ammonium sulphate. C. Otto. 2,439,547, Apr. 13.
Arc welding apparatus. W. C. Johnson. 2,439,740, Apr. 13.
Arch support device. J. Matlas. 2,439,545, Apr. 13.
Arrangement for conducting heat and high-frequency currents. H. A. Wheeler. 2,439,641, Apr. 13.
Artificial body members. F. V. Eberle and H. Hansen. 2,439,507, Apr. 13.
Assembling resilient grommets to gear shift selector arms. H. J. Yelkin. 2,439,501, Apr. 13.
Attachment for well drilling derricks. H. J. Broers. 2,439,714, Apr. 13.
Attachment for mortise machines. D. N. Brown. 2,439,558, Apr. 13.
Attenuation control network. R. B. Dome. 2,439,651, Apr. 13.
Automatic filter apparatus. F. J. Reinhart. 2,439,633, April 13.
Automatic fire alarm system. T. J. Tate. 2,439,502, Apr. 13.
Automatic warmer for musical instruments. P. M. Bredice. 2,439,713, Apr. 13.
Automobile bumper support for outboard motors. R. E. Wright. 2,439,707, Apr. 13.
Axially engaging friction clutch. A. T. Nabstedt. 2,439,611, Apr. 13.
Azines as olefin polymerization catalysts. M. J. Roedel. 2,439,528, Apr. 13.
Bag adapted for display by suspension. H. F. Shumann. 2,439,584, Apr. 13.
Bar support and spacer, Combined. B. Hillberg. 2,439,428, Apr. 13.
Basket, Bicycle. V. Aleks. 2,439,376, Apr. 13.
Battery container for airplanes. P. F. Good. 2,439,464, Apr. 13.
Bearing lubricator. C. T. Asbury. 2,439,709, Apr. 13.
Belting. G. A. Sowerby and W. S. Short. 2,439,586, Apr. 13.
Billfold having interlocked end and edge flaps, Multipocketed. E. K. Renz. 2,439,579, Apr. 13.
Billfold with interlocked pocket forming flaps, Stitchless. E. K. Renz. 2,439,580, Apr. 13.
Binder, Loose-leaf. S. Segal. 2,439,675, Apr. 13.
Block: *See*—
Cutting block.
Bobbin control for weft replenishing mechanism. R. G. Turner. 2,439,704, Apr. 13.
Boiling out steam boilers prior to placing them in operation and composition therefor. W. W. Cerna. 2,439,784, Apr. 13.
Bombsight, Computing. S. Darlington, C. H. Townes, and D. E. Wooldridge. 2,439,381, Apr. 13.
Bookkeeping appliance. J. Zalkind. 2,439,537, Apr. 13.
Boot, Double. W. H. Smith. 2,439,493, Apr. 13.
Bore gauge. E. A. Cooke. 2,439,595, Apr. 13.
Boring apparatus. J. G. and A. G. Sharratt. 2,439,492, Apr. 13.
Bracket: *See*—
Adjustable bracket.
Brassière. A. A. Glasser. 2,439,567, Apr. 13.
Burn-off method. H. R. Schutz. 2,439,754, Apr. 13.
Bushing unit, Grommet insulating. S. J. Lanzalotti and M. Skobel. 2,439,394, Apr. 13.
Cable guided member for limit stop weights, Adjustable. R. B. Hunter. 2,439,738, Apr. 13.
Cap: *See*—
Cylinder cap.
Carbon black, Making hydrophilic. F. H. Amon and F. S. Thornhill. 2,439,442, Apr. 13.
Carriage, Baby. S. and N. J. Kroll. 2,439,544, Apr. 13.
Carriage spacing means for signal-controlled printing apparatus. H. L. Tholstrup. 2,439,497, Apr. 13.
Case shift mechanism for typewriting machines, Power operated. R. D. Dodge. 2,439,456, Apr. 13.
Casting apparatus compensating for shrinkage of the cast material. P. Campbell and W. H. Maxwell. 2,439,450, Apr. 13.
Casting apparatus for vibrating molds. I. E. Aske. 2,439,443, Apr. 13.
Catalyst, Supported metal acetylide. J. F. Walker and T. E. Londergan. 2,439,765, Apr. 13.
Catalytic conversion system. F. W. Scheineman. 2,439,582, Apr. 13.
Catch, Cupboard. H. Quigley and H. Ter Meer. 2,439,549, Apr. 13.
Cathode-ray tube and circuit, Flat beam. L. F. Broadway. 2,439,504, Apr. 13.
Cement and making the same, Disinfectant hydraulic. C. R. Amberg and W. J. Knapp. 2,439,441, Apr. 13.
Cement, Making disinfectant hydraulic. C. R. Amberg and W. J. Knapp. 2,439,440, Apr. 13.
Centrifugal pump. O. C. Norton. 2,439,577, Apr. 13.
Chain: *See*—
Cutter chain.
Chain and making the same. R. S. Miller. 2,439,522, Apr. 13.
Check circuit for inspection apparatus. R. E. Schell. 2,439,490, Apr. 13.
Chuck and face-plate for grinding machines. F. and T. D. Kidd. 2,439,662, Apr. 13.
Circuit arrangement for amplifying or generating ultra high frequency oscillation. M. J. O. Strutt, A. van der Ziel, and A. J. W. M. van Overbeek. 2,439,638, Apr. 13.
Clamp: *See*—
Combination toggle and Sheet metal clamp.
cam clamp.
Closet, Glass-lined metal shelf wall. A. Marchand. 2,439,664, Apr. 13.
Clutch: *See*—
Axially engaging friction Impact clutch.
clutch.
Coating composition comprising a vinyl halide resin and a hydroxy polycarboxylic acid. C. L. Shapiro. 2,439,677, Apr. 13.
Coating composition, Fire-resistant. M. Leatherman. 2,439,395–6, Apr. 13.
Code entry controlling means for accumulators, Combination. H. S. Beattie. 2,439,445, Apr. 13.

LIST OF DESIGN INVENTIONS

Alphabet for forming monograms or the like. M. Chernow. 149,250, Apr. 13.
Atomizer. V. R. Schlesinger. 149,309, Apr. 13.
Atomizer or the like. C. E. McNutt. 149,289, Apr. 13.
Bicycle. O. A. Trnka. 149,322, Apr. 13.
Book end. A. Leva. 149,280–3, Apr. 13.
Bottle, Perfume. B. A. Shapiro. 149,313–16, Apr. 13.
Bracelet or similar article. A. Philippe. 149,297–8, Apr. 13.
Braid. L. Beer and H. Stern. 149,246, Apr. 13.
Brooch or similar article. H. Armao. 149,241, Apr. 13.
Brooch or similar article. N. Barbieri. 149,242, Apr. 13.
Brooch or similar article. G. J. Lederer. 149,275–9, Apr. 13.
Brooch or similar article. A. Philippe. 149,295, Apr. 13.
Brooch or similar article. W. G. Schreiber. 149,311, Apr. 13.
Brooch or similar article, Chatelaine. A. Katz. 149,270, Apr. 13.
Building. A. T. Moore. 149,292, Apr. 13.
Camera, Photographic film. J. A. Henne. 149,267, Apr. 13.
Casing, Space heater. J. O. Reinecke. 149,300–2, Apr. 13.
Clip and pencil, Combined tie. R. B. Maxwell. 149,288, Apr. 13.
Cooler or similar article, Water. J. J. Corey. 149,257, Apr. 13.
Display stand and perfume bottles, Combined. V. Civita. 149,251, Apr. 13.
Display stand or similar article. M. H. Newman. 149,294, Apr. 13.
Dress. R. Maluk. 149,286–7, Apr. 13.
Dress ensemble. J. Kipness. 149,272, Apr. 13.
Electric irradiation device of the like. J. Radinsky. 149,299, Apr. 13.
Extractor, Juice. A. M. Travis. 149,319–21, Apr. 13.
Figurine. L. C. Danz. 149,260, Apr. 13.
Fountain pen clip or similar article. F. Ferber. 149,263, Apr. 13.
Gauge, Height measuring. J. E. Sonnhalter. 149,318, Apr. 13.
Grater. E. H. Daniels. 149,259, Apr. 13.
Handbag or similar article. H. Morris. 149,293, Apr. 13.
Hanger, Garment. H. B. Young. 149,327, Apr. 13.
Heater, Electric. R. L. Fitch. 149,264, Apr. 13.
Heater, Electric. J. G. Lippincott. 149,284, Apr. 13.
Heater, Portable electric space. W. A. Gustafson. 149,266, Apr. 13.
Hobbyhorse. H. J. Hiller. 149,269, Apr. 13.
Holder for a cylindrical fire extinguisher or similar article. A. De Motte. 149,261, Apr. 13.
Horological instrument or similar article, Illuminable. R. Doolin. 149,262, Apr. 13.
Housing for a motion-picture projector or similar article. E. Boecking. 149,247, Apr. 13.
Kettle, Water. P. Schlumbohm. 149,310, Apr. 13.
Light fixture. C. A. Trowbridge. 149,323, Apr. 13.
Lighting fixture or similar article, Fluorescent. T. G. Beckett. 149,245, Apr. 13.
Necklace or similar article. A. Philippe. 149,296, Apr. 13.
Nozzle, Vacuum cleaner. J. G. Lippincott. 149,285, Apr. 13.
Ornament, Desk. V. Brown. 149,248–9, Apr. 13.
Overall, Lady's one-piece. H. C. Cookman. 149,256, Apr. 13.
Peeler, Vegetable and fruit. L. R. Meyran. 149,290, Apr. 13.
Perfume diffuser. H. Cobbs. 149,252, Apr. 13.
Plaque, Advertising. C. Kompas. 149,273, Apr. 13.
Plate or similar article, Dinner. J. T. Wigley. 149,325, Apr. 13.
Refrigerator. N. Achs. 149,240, Apr. 13.
Sandglass. M. L. Lavine. 149,274, Apr. 13.
Spoon or other article of flatware. E. J. Conroy. 149,253–5, Apr. 13.
Spoon or other article of flatware. A. A. Dabrowski. 149,258, Apr. 13.
Stopper or similar article, Perfume bottle. J. Herbst. 149,268, Apr. 13.
Sweater. J. Rosenfeld. 149,303–7, Apr. 13.
Temple member for spectacles or similar articles. M. Schwartz. 149,312, Apr. 13.
Theatre. C. G. Moeller. 149,291, Apr. 13.
Theatre. A. R. Walker. 149,324, Apr. 13.
Toy, Airplane. T. A. Schaad. 149,308, Apr. 13.
Tray. G. Wortman. 149,326, Apr. 13.
Tray, Ash. L. Grey. 149,265, Apr. 13.
Tray or similar article, Sandwich. L. Sonn. 149,317, Apr. 13.
Trimming, Embroidered. H. Kaufman. 149,271, Apr. 13.
Velocipede. W. M. Bashaw and W. O. Dixon. 149,243–4, Apr. 13.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 13TH DAY OF APRIL, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive disc holder. G. A. Olsen. 2,439,751, Apr. 13.
Accordion with amplifier attachment. E. D. Telkowski. 2,439,551, Apr. 13.
Acid components from organic liquids, Removing. J. C. D. Oosterhout. 2,439,670, Apr. 13.
Acoustic device. H. Horne. 2,439,736, Apr. 13.
Adhesive sheet material, Pressure-sensitive. J. B. Martin. 2,439,481, Apr. 13.
Adipic acid process. C. H. Hamblet and A. McAlevy. 2,439,513, Apr. 13.
Adjustable bracket. F. D. Irwin. 2,439,624, Apr. 13.
Adjustable hose holder. M. C. White. 2,439,642, Apr. 13.
Adjustable microscope eyepiece mounting. H. N. Ott. 2,439,526, Apr. 13.
Adjustment mechanism for microscopes. H. M. Porter. 2,439,485, Apr. 13.
Air filter for polishing machines. S. A. Crosby. 2,439,596, Apr. 13.
Air-heating device for fireplaces. A. B. Austin. 2,439,503, Apr. 13.
Alarm switch. W. C. Eddy. 2,439,509, Apr. 13.
Alkali metal and alkaline earth metal hydroxides, Production of. D. B. Wicker. 2,439,404, Apr. 13.
Alkylation of benzene by long chain polymeric olefins using sulfuric acid catalyst. J. J. Donleavy and M. M. Balzer. 2,439,457, Apr. 13.
Aluminum bromide, Manufacture of. V. E. Houston and A. G. Oblad. 2,439,737, Apr. 13.
Ammoniation of fertilizers. F. G. Keenen and R. L. Dodge. 2,439,432, Apr. 13.
Amusement device consisting of interwoven adjustable picture bands. I. Shamah. 2,439,583, Apr. 13.
Anthelmintic compositions. J. A. Whiting and D. V. Whitney, Jr. 2,439,532, Apr. 13.
Apparatus and method for flanging metal-clad fibrous base panels. G. H. Norquist. 2,439,397, Apr. 13.
Apparatus and method for softening sanitary napkin pads. O. T. Thompson and D. D. Feagles. 2,439,761, Apr. 13.
Apparatus and process for the cultivation of microorganisms. S. B. Levin. 2,439,572, Apr. 13.
Apparatus for controlling pressure bands. G. D. Marcy. 2,439,779, Apr. 13.
Apparatus for facing and truing abrasive articles. E. P. Dahlstrom. 2,439,771, Apr. 13.
Apparatus for forming glass beads on metallic elements. J. S. Stull. 2,439,437. Apr. 13.
Apparatus for forming solidified particles from molten material. H. L. Klein and J. L. Courtright. 2,439,776, Apr. 13.
Apparatus for handling viscose solutions. H. O. Davidson. 2,439,619, Apr. 13.
Apparatus for laying roll roofing. E. W. Ankney. 2,439,681, Apr. 13.
Apparatus for molding articles of wax. R. E. Christian. 2,439,506, Apr. 13.
Apparatus for molding pipe coverings. H. Finley. 2,439,724, Apr. 13.
Apparatus for production of ammonium sulphate. C. Otto. 2,439,547, Apr. 13.
Arc welding apparatus. W. C. Johnson. 2,439,740, Apr. 13.
Arch support device. J. Matlas. 2,439,545, Apr. 13.
Arrangement for conducting heat and high-frequency currents. H. A. Wheeler. 2,439,641, Apr. 13.
Artificial body members. F. V. Eberle and H. Hansen. 2,439,507, Apr. 13.
Assembling resilient grommets to gear shift selector arms. H. J. Yelkin. 2,439,501, Apr. 13.
Attachment for well drilling derricks. H. J. Broers. 2,439,714, Apr. 13.
Attachment for mortise machines. D. N. Brown. 2,439,558, Apr. 13.
Attenuation control network. R. B. Dome. 2,439,651, Apr. 13.
Automatic filter apparatus. F. J. Reinhart. 2,439,633, April 13.
Automatic fire alarm system. T. J. Tate. 2,439,502, Apr. 13.
Automatic warmer for musical instruments. P. M. Bredice. 2,439,713, Apr. 13.
Automobile bumper support for outboard motors. R. E. Wright. 2,439,707, Apr. 13.
Axially engaging friction clutch. A. T. Nabstedt. 2,439,611, Apr. 13.
Azines as olefin polymerization catalysts. M. J. Roedel. 2,439,528, Apr. 13.
Bag adapted for display by suspension. H. F. Shumann. 2,439,584, Apr. 13.
Bar support and spacer, Combined. B. Hillberg. 2,439,428, Apr. 13.
Basket, Bicycle. V. Aleks. 2,439,376, Apr. 13.
Battery container for airplanes. P. F. Good. 2,439,464, Apr. 13.
Bearing lubricator. C. T. Asbury. 2,439,709, Apr. 13.
Belting. G. A. Sowerby and W. S. Short. 2,439,586, Apr. 13.
Billfold having interlocked end and edge flaps, Multipocketed. E. K. Renz. 2,439,579, Apr. 13.
Billfold with interlocked pocket forming flaps, Stitchless. E. K. Renz. 2,439,580, Apr. 13.
Binder, Loose-leaf. S. Segal. 2,439,675, Apr. 13.
Block: *See*—
Cutting block.
Bobbin control for weft replenishing mechanism. R. G. Turner. 2,439,704, Apr. 13.
Boiling out steam boilers prior to placing them in operation and composition therefor. W. W. Cerna. 2,439,784, Apr. 13.
Bombsight, Computing. S. Darlington, C. H. Townes, and D. E. Wooldridge. 2,439,381, Apr. 13.
Bookkeeping appliance. J. Zalkind. 2,439,537, Apr. 13.
Boot, Double. W. H. Smith. 2,439,493, Apr. 13.
Bore gauge. E. A. Cooke. 2,439,595, Apr. 13.
Boring apparatus. J. G. and A. G. Sharratt. 2,439,492, Apr. 13.
Bracket: *See*—
Adjustable bracket.
Brassière. A. A. Glasser. 2,439,567, Apr. 13.
Burn-off method. H. R. Schutz. 2,439,754, Apr. 13.
Bushing unit, Grommet insulating. S. J. Lanzalotti and M. Skobel. 2,439,394, Apr. 13.
Cable guided member for limit stop weights, Adjustable. R. B. Hunter. 2,439,738, Apr. 13.
Cap: *See*—
Cylinder cap.
Carbon black, Making hydrophilic. F. H. Amon and F. S. Thornhill. 2,439,442, Apr. 13.
Carriage, Baby. S. and N. J. Kroll. 2,439,544, Apr. 13.
Carriage spacing means for signal-controlled printing apparatus. H. L. Tholstrup. 2,439,497, Apr. 13.
Case shift mechanism for typewriting machines, Power operated. R. D. Dodge. 2,439,456, Apr. 13.
Casting apparatus compensating for shrinkage of the cast material. P. Campbell and W. H. Maxwell. 2,439,450, Apr. 13.
Casting apparatus for vibrating molds. I. E. Aske. 2,439,443, Apr. 13.
Catalyst, Supported metal acetylide. J. F. Walker and T. E. Londergan. 2,439,765, Apr. 13.
Catalytic conversion system. F. W. Scheineman. 2,439,582, Apr. 13.
Catch, Cupboard. H. Quigley and H. Ter Meer. 2,439,549, Apr. 13.
Cathode-ray tube and circuit, Flat beam. L. F. Broadway. 2,439,504, Apr. 13.
Cement and making the same, Disinfectant hydraulic. C. R. Amberg and W. J. Knapp. 2,439,441, Apr. 13.
Cement, Making disinfectant hydraulic. C. R. Amberg and W. J. Knapp. 2,439,440. Apr. 13.
Centrifugal pump. O. C. Norton. 2,439,577, Apr. 13.
Chain: *See*—
Cutter chain.
Chain and making the same. R. S. Miller. 2,439,522, Apr. 13.
Check circuit for inspection apparatus. R. E. Schell. 2,439,490. Apr. 13.
Chuck and face-plate for grinding machines. F. and T. D. Kidd. 2,439,662, Apr. 13.
Circuit arrangement for amplifying or generating ultra high frequency oscillation. M. J. O. Strutt, A. van der Ziel, and A. J. W. M. van Overbeek. 2,439,638, Apr. 13.
Clamp: *See*—
Combination toggle and Sheet metal clamp.
cam clamp.
Closet, Glass-lined metal shelf wall. A. Marchand. 2,439,664, Apr. 13.
Clutch: *See*—
Axially engaging friction Impact clutch.
clutch.
Coating composition comprising a vinyl halide resin and a hydroxy polycarboxylic acid. C. L. Shapiro. 2,439,677, Apr. 13.
Coating composition, Fire-resistant. M. Leatherman. 2,439,395–6, Apr. 13.
Code entry controlling means for accumulators, Combination. H. S. Beattie. 2,439,445, Apr. 13.

Collar, Wash check. G. E. Roberts. 2,439,488, Apr. 13.
Combination lock. A. M. Finck. 2,439,461, Apr. 13.
Combination toggle and cam clamp. H. H. Merriman. 2,439,483, Apr. 13.
Composite structures. L. R. Herndon. 2,439,514, Apr. 13.
Composition comprising caprolactam for printing nylon fiber. C. F. Miller. 2,439,745, Apr. 13.
Compressed wire units, Producing. A. M. Goodloe and O. H. York. 2,439,424, Apr. 13.
Concrete mixer. G. Jaeger. 2,439,774, Apr. 13.
Condenser: *See*—
Electrical condenser.
Conductor arrangement for current distribution. J. G. Jackson. 2,439,471, Apr. 13.
Conductor pipe hook. M. B. Wolfe. 2,439,616, Apr. 13.
Conduit for hot gas power plants, Pressurized protective. A. Kalitinsky. 2,439,473, Apr. 13.
Connecting means. B. H. Gaul. 2,439,510, Apr. 13.
Container: *See*—
Dispensing container.
Control circuit for signal recording and reproducing systems. S. J. Begun. 2,439,446, Apr. 13.
Control circuits for vacuum tubes. C. Volz. 2,439,680, Apr. 13.
Control for plural retractable fuel burners. H. C. Mittendorf. 2,439,609, Apr. 13.
Control system for aircraft, Automatic. R. H. Nisbet and A. P. Glenny. 2,439,750, Apr. 13.
Control system for feeding fuel to furnaces. P. S. Dickey. 2,439,721, Apr. 13.
Control unit, Synchronized. R. W. Kerr. 2,439,393, Apr. 13.
Controller. J. H. Smoot. 2,439,699, Apr. 13.
Controller, Air volume. C. G. Roper. 2,439,673, Apr. 13.
Conversion of saturated aliphatic carboxylic amides to nitriles. W. F. Gresham. 2,439,426, Apr. 13.
Cooking apparatus. M. J. Napier. 2,439,780, Apr. 13.
Corn syrup manufacture, Solid. W. R. Fetzer. 2,439,384, Apr. 13.
Cotton cleaning attachment for harvesters. J. C. Conrad. 2,439,718, Apr. 13.
Counting mechanism. H. C. Priest. 2,439,578, Apr. 13.
Coupler for locomotive structures, Retractable. J. C. Travilla, Jr., and W. C. Krautheim. 2,439,762, Apr. 13.
Coupling: *See*—
Fluid coupling. Universal coupling.
Self-sealing pipe coupling.
Cover for bed-forming structures. I. Pisciotta. 2,439,631, Apr. 13.
Cracking process to produce gaseous olefins. J. Happel. 2,439,730, Apr. 13.
Crystal element and fabricating same, Piezoelectric. C. K. Gravley. 2,439,466, Apr. 13.
Cultivator disc supporting assembly. J. Caffese. 2,439,449, Apr. 13.
Current collector contact member. C. A. Thomas. 2,439,678, Apr. 13.
Current wheel. J. M. Morris. 2,439,575, Apr. 13.
Cushion spring and making the same. C. A. Tea. 2,439,530, Apr. 13.
Cutter chain. L. E. Simmons. 2,439,400, Apr. 13.
Cutter-head, Rotary. E. J. Ray. 2,439,486, Apr. 13.
Cutting attachment, Multiple thermochemical. S. N. Libby. 2,439,629, Apr. 13.
Cutting block. L. F. Exley. 2,439,652, Apr. 13.
Cyclonite purification. J. G. Burtle and W. H. Brandt. 2,439,648, Apr. 13.
Cylinder cap. A. H. Schaal. 2,439,696, Apr. 13.
Decoy, Collapsible wild fowl. W. A. Banigan. 2,439,710, Apr. 13.
Degasser for internal combustion engines. M. Mallory. 2,439,573, Apr. 13.
Dehydration process. J. E. Bludworth, M. O. Robeson, and H. A. Truby, Jr. 2,439,416, Apr. 13.
Deodorizing composition of matter for food storage compartments. C. J. Burgess. 2,439,538, Apr. 13.
Device for dispensing lump sugar. L. J. Scott. 2,439,697, Apr. 13.
Dewaxing oils, Method and apparatus for. H. O. Lindgren. 2,439,434, Apr. 13.
Dialkyl esters of dicarboxylic acids, Preparing. W. F. Gresham. 2,439,425, Apr. 13.
Dialkylated polyhydric phenols, Production of. E. R. Erickson. 2,439,421, Apr. 13.
Dienes, Manufacture of. E. E. Stahly. 2,439,587, Apr. 13.
Dinnerware finishing apparatus. W. J. Miller. 2,439,407, Apr. 13.
Dispensing container. T. F. Kolts. 2,439,627, Apr. 13.
Dowel pin. F. W. McKay. 2,439,692, Apr. 13.
Draw bar. C. B. Kasboske. 2,439,518, Apr. 13.
Drier discharge, Controlling. F. L. Litty, Jr. 2,439,741, Apr. 13.
Drying apparatus. W. Dreisel. 2,439,722, Apr. 13.
Drive for air compressors. H. J. Findley. 2,439,686, Apr. 13.
Drive for pumps. H. L. Poston. 2,439,693, Apr. 13.
Driving mechanism. F. Miller. 2,439,520, Apr. 13.
Duplication of marks on laundry, Preventing. W. Silverman. 2,439,679, Apr. 13.
Dyestuffs, Anthraquinone vat. W. Kern. 2,439,626, Apr. 13.
Electric contact. F. R. Hensel, E. I. Larsen, and E. F. Swazy. 2,439,570, Apr. 13.
Electric outlet. H. A. Abraham. 2,439,708, Apr. 13.
Electric plug and socket latch. L. Frank. 2,439,462, Apr. 13.
Electric switch. R. G. Nelson. 2,439,747, Apr. 13.
Electrical condenser. W. M. Roberds. 2,439,672, Apr. 13.
Electrical connector. H. H. Wermine. 2,439,767, Apr. 13.
Electrical control system. J. H. Homrighous. 2,439,735, Apr. 13.
Electrical measurement of displacement. D. E. Bovey. 2,439,711, Apr. 13.
Electrical safety device. L. E. Robey. 2,439,634, Apr. 13.
Electrical signaling device, Audible and visual. E. Weissman. 2,439,766, Apr. 13.
Electrically indicating liquid filled manometer. H. A. Brown and H. Gotlob. 2,439,770, Apr. 13.
Electrocardiograph. P. Traugott. 2,439,640, Apr. 13.
Electrode coordinator, Electro encephalograph. M. A. Bullington. 2,439,559, Apr. 13.
Electromagnetic and thermal circuit breaker, Combined. W. E. Stilwell, Jr. 2,439,402, Apr. 13.
Electronic tuning control. W. W. Hansen and R. H. Varian. 2,439,387, Apr. 13.
Enclosed electroplating tank. C. Schiffl. 2,439,491, Apr. 13.
Engine: *See*—
Heat engine.
Engine of the reaction type, Rotary gas. G. C. Cooke. 2,439,717, Apr. 13.
Exchanger, Heat. W. W. Kennedy. 2,439,775, Apr. 13.
Eyeleting machine. S. L. Gookin. 2,439,465, Apr. 13.
Film control for automatic shutter on moving picture projector. L. Mannon. 2,439,691, Apr. 13.
Filter. E. M. Wilson. 2,439,535, Apr. 13.
Fine adjustment of microscope objective. H. N. Ott. 2,439,525, Apr 13.
Fire-extinguishing pump. R. Zieschang. 2,439,763, Apr. 13.
Fishing lure. W. E. Himottu. 2,439,621, Apr. 13.
Fishing tackle. G. C. Clark. 2,439,451, Apr. 13.
Fitting, Plumbing. C. H. Brady. 2,439,712, Apr. 13.
Flashlight. D. Szantay. 2,439,496, Apr. 13.
Flexible pocket receptacle. D. J. Broughton. 2,439,715, Apr. 13.
Float-operated switch. C. N. Reavis. 2,439,753, Apr. 13.
Flow meter. R. B. Engdahl. 2,439,723, Apr. 13.
Flow-ratio meter. M. E. Schramm. 2,439,614, Apr. 13.
Fluid coupling. H. Nutt. 2,439,630, Apr. 13.
Fluid pressure control mechanism for airplane deicers. W. A. Eaton. 2,439,458, Apr. 13.
Fluid pump. C. C. Buckner. 2,439,448, Apr. 13.
Foil, Preparation of silver. F. Rosenthal. 2,439,489, Apr. 13.
Foot support. M. Johnson. 2,439,625, Apr. 13.
Frequency-determining unit, Multistage plug-in. D. H. Mitchell. 2,439,412, Apr. 13.
Fuel injecting pump. R. B. Wallace. 2,439,498, Apr. 13.
Fuel tank. M. M. Cunningham. 2,439,562, Apr. 13.
Fur pelt or skin stretching apparatus. C. H. Donner. 2,439,419, Apr. 13.
Furniture. R. E. Lippenberger. 2,439,690, Apr. 13.
Fuse, Current limiting. C. L. Schuck. 2,439,674, Apr. 13.
Galvanometer movable coil support. M. E. Morrow. 2,439,576, Apr. 13.
Garment for infants, Bed. I. Holloway. 2,439,658, Apr. 13.
Gauge: *See*—
Bore gauge.
Gauge of dial indicator type, Contour and depth. B. Egor. 2,439,565, Apr. 13.
Gauging-device actuated light-beam responsive selecting apparatus. E. F. Martinec. 2,439,406, Apr. 13.
Gauging dispensing device, Article. G. A. Kruse. 2,439,475, Apr. 13.
Gear mechanism, Reducing. F. Miller. 2,439,521, Apr. 13.
Generator: *See*—
Pulse generator.
Granules, Making. C. W. Cuno. 2,439,650, Apr. 13.
Guard, Saw. L. C. Hall. 2,439,568, Apr. 13.
Gun mount, Mobile. W. H. D'Ardenne, W. Devore, R. W. Wolf, and T. E. Boyd. 2,439,564, Apr. 13.
Gyroscope stabilizing mechanism. C. T. Davenport. 2,439,418, Apr. 13.
Hairpin. W. H. Rothe. 2,439,436, Apr. 13.
Hand rail and reed holder. A. A. Gordon. 2,439,688, Apr. 13.
Handle: *See*—
Steering handle.
Hanger for garments, wearing apparel, etc. A. Stevenson. 2,439,529, Apr. 13.
Hat. G. H. Simon. 2,439,700, Apr. 13.
Heat engine. F. Nettel. 2,439,748, Apr. 13.
Heater: *See*—
Immersible electrical heater.
Heating apparatus, Induction. J. R. Johnson. 2,439,517, Apr. 13.
High-frequency apparatus. T. J. Boerner and J. W. Sanborn. 2,439,682, Apr. 13.
Hinge, L'd and tray supporting. R. A. Stone. 2,439,494, Apr. 13.

Holder: *See*—
Abrasive disc holder. Hand rail and reed holder.
Adjustable hose holder. Tool holder.
Holder for microtomes, Knife. H. N. Ott. 2,439,671, Apr. 13.
Holder for pressing irons. L. Thomson. 2,439,438, Apr. 13.
Hollow articles from oriented polymer, Forming. R. W. Canfield, F. E. Wiley, and A. M. Guerreiro. 2,439,716, Apr. 13.
Hood, Field jacket. J. De Grazia. 2,439,382, Apr. 13.
Hook: *See*—
Conductor pipe hook.
Hook attachment for ladders. G. K. Hurd. 2,439,430, Apr. 13.
Hydraulic gun. A. R. Gamache. 2,439,566, Apr. 13.
Hydrocarbons, Extraction of. B. G. Wilkes, Jr. 2,439,534, Apr. 13.
Immersible electrical heater. R. C. Belgau. 2,439,617, Apr. 13.
Impact clutch. E. H. Shaff. 2,439,756, Apr. 13.
Incubator. R. B. P. Crawford. 2,439,719, Apr. 13.
Indexing telescope for electron diffraction instruments. C. H. Bachman. 2,439,644, Apr. 13.
Indicating apparatus, Heart beat rate. R. E. Sturm. 2,439,495, Apr. 13.
Indicator. G. O. Leggett and C. Nathan. 2,439,476, Apr. 13.
Indicator for play of gyro rotors in frames. R. W. Walters. 2,439,552, Apr. 13.
Indicator for pneumatic tires, Pressure. P. A. Cressey. 2,439,561, Apr. 13.
Induction system. A. A. Stuart, Jr. 2,439,701, Apr. 13.
Induction system for multicylinder opposed piston engines. T. Jackson. 2,439,472, Apr. 13.
Ink, Printing. O. P. Berberich. 2,439,378, Apr. 13.
Ink, Printing. E. F. Carman and O. P. Berberich. 2,439,380, Apr. 13.
Insulating confined spaces. C. C. Heritage. 2,439,601–4, Apr. 13.
Ironing board leg and brace structure. E. C. Booth. 2,439,769, Apr. 13.
Jacking device for vehicles, Antiskid. A. M. Sorrentino. 2,439,758, Apr. 13.
Jarring mechanism for conveyer flights. S. M. Mercier. 2,439,574, Apr. 13.
Joint: *See*—
Universal joint.
Key, Cotter. J. A. MacLean, Jr., and B. F. Money. 2,439,778, Apr. 13.
Laminated electrical insulating material, Making. K. N. Mathes. 2,439,667, Apr. 13.
Lamp, Candle. O. D. Guilfoil, Jr. 2,439,467, Apr. 13.
Latching or tripping mechanism of circuit breakers. F. S. Green. 2,439,511, Apr. 13.
Laundry bag, Perforated rubber. A. E. Sidnell. 2,439,757, Apr. 13.
Level. S. Shaler. 2,439,698, Apr. 13.
Lifting mechanism for industrial trucks. H. J. Framhein. 2,439,599, Apr. 13.
Light shielding liquid system for multiple window construction, Selectively controlled. R. W. Winn. 2,439,553, Apr. 13.
Loaf dividing mechanism, Sliced. J. Hexter and W. E. Lanham. 2,439,657, Apr. 13.
Lock: *See*—
Combination lock.
Log turning apparatus. M. L. Edwards, D. K. MacBain, and L. M. Johnson. 2,439,508, Apr. 13.
Loudspeaker diaphragm support. J. F. Marquis. 2,439,666, Apr. 13.
Lubricator: *See*—
Bearing lubricator.
Lumber, Spliced. H. C. Graham. 2,439,655, Apr. 13.
Machine for winding bobbins. B. Marcellus. 2,439,519, Apr. 13.
Magnetron oscillator of the resonant cavity type. C. G. Smith. 2,439,401, Apr. 13.
Matrix retainer. B. F. Tollemire. 2,439,703, Apr. 13.
Mepacrine dihydrochloride dihydrate, Preparing. A. G. Murray. 2,439,746, Apr. 13.
Meta-substituted phenols, Preparation of. E. Schwenk and D. Papa. 2,439,375, Apr. 13.
Meter: *See*—
Flow meter. Resonator wave meter.
Flow-ratio meter. Wave meter.
Methyl methacrylate compositions opaque to X-rays. S. A. Leuder and J. J. Gordon. 2,439,374, Apr. 13.
Milk sugar, Manufacture of. D. D. Peebles and T. V. Marquis. 2,439,612, Apr. 13.
Minnow, Artificial. F. H. Jobson. 2,439,391, Apr. 13.
Mixer: *See*—
Concrete mixer.
Mold for slide fasteners. J. N. Kuzmick. 2,439,433, Apr. 13.
Mold-in thread insert. H. J. Findley. 2,439,687, Apr. 13.
Motor: *See*—
Piezoelectric motor.
Motor fuel by alkylation with a light cracked naphtha, Manufacture of. A. R. Goldsby and L. A. Clarke. 2,439,600, Apr. 13.
Mounting: *See*—
Adjustable microscope eyepiece mounting. Vibration absorbing mounting.
Slide mounting.
Mute for musical instrument. T. J. Hermes. 2,439,733, Apr. 13.
N-alkyl thiamorpholines and derivatives. J. B. Niederl and W. F. Hart. 2,439,749, Apr. 13.
Nail sealing washer. R. L. Holcomb. 2,439,516, Apr. 13.
Needle, Knitting. R. F. Howe. 2,439,622, Apr. 13.
Nut, Lock. S. Bloomfield. 2,439,415, Apr. 13.
Oil additives, Lubricating. C. M. Himel and G. C. Bailey. 2,439,734, Apr. 13.
Oil for industrial purposes and manufacture thereof. H. M. Guinot and A. Courtier. 2,439,729, Apr. 13.
Oil-wax separator. A. H. Gebauer. 2,439,463, Apr. 13.
Opener, Envelope and package. J. O. Tilly. 2,439,639, Apr. 13.
Organic composition, Stabilized. R. C. Morris, J. L. Van Winkle, and A. V. Snider. 2,439,610, Apr. 13.
Oscillator, Ultra high frequency power. C. E. Hallmark. 2,439,512, Apr. 13.
Packaging, Moistureproof. R. R. Richardson, W. T. Ritter, and R. O. Ragan. 2,439,435, Apr. 13.
Packing insultaion material. R. D. Pauley. 2,439,605, Apr. 13.
Parachute harness. J. R. C. Quilter. 2,439,613, Apr. 13.
Pedestal mounted circumferentially traveling shoe type tire mounting device. L. A. Smith. 2,439,615, Apr. 13.
Perforator, Gun. W. R. Atwood. 2,439,643, Apr. 13.
Photoelectric tube and manufacturing same. A. Bramley. 2,439,647, Apr. 13.
Pick. E. St. Pierre. 2,439,759, Apr. 13.
Piezoelectric motor. A. L. W. Williams and W. J. Brown. 2,439,499, Apr. 13.
Pin: *See*—
Dowel pin.
Piston ring. T. E. McFall. 2,439,546, Apr. 13.
Piston ring. R. R. Teetor. 2,439,702, Apr. 13.
Plow, Rotary. L. C. Blackledge. 2,439,557, Apr. 13.
Plug and jack assembly. E. L. Mentor. 2,439,744, Apr. 13.
Polyfluorinated acrylonitriles. D. W. Chaney. 2,439,505, Apr. 13.
Powder dispenser and brush holder, Combined dental. F. J. Hofmann. 2,439,429, Apr. 13.
Power transmission mechanism, Reversible cyclic. H. T. Avery. 2,439,555, Apr. 13.
Precooling the lading of refrigerator cars comprising the reversal of air flow. F. J. Reilly. 2,439,487, Apr. 13.
Preparation for treating launderable fabric articles. H. Engler. 2,439,460, Apr. 13.
Preparation of acetyl peroxide. E. S. Shanley and H. G. Hyatt. 2,439,399, Apr. 13.
Preparation of multiend yarn packages. W. Bolton, Jr. 2,439,645, Apr. 13.
Preparing weldable ferrous members having high carbon faces. J. W. Steinmeyer. 2,439,637, Apr. 13.
Press: *See*—
Rotary printing press.
Press assembly. R. P. Frost. 2,439,725, Apr. 13.
Pulse generator. L. W. Hussey. 2,439,389, Apr. 13.
Pump: *See*—
Centrifugal pump. Fuel injecting pump.
Fire-extinguishing pump. Screened pump.
Fluid pump.
Pump or compressor. A. A. Mercer. 2,439,668, Apr. 13.
Pyridine carbonyl amides of the benzene series. P. F. Gross. 2,439,728, Apr. 13.
Quadricycle. F. W. Schwinn. 2,439,755, Apr. 13.
Quinazolones, Preparation of. A. Guenther and J. F. Morgan. 2,439,386, Apr. 13.
Radio time switch. A. W. Haydon. 2,439,732, Apr. 13.
Radio transmitting and receiving set, Portable. D. H. Mitchell. 2,439,408, Apr. 13.
Railway traffic controlling apparatus, Interlocking line-circuit. W. W. Seitz. 2,439,676, Apr. 13.
Receiver protective device. W. Hausz. 2,439,656, Apr. 13.
Receptacle: *See*—
Flexible pocket receptacle.
Receptacle. C. O. Ball. 2,439,768, Apr. 13.
Receptacle and supporter, Sanitary. E. N. Broderick. 2,439,683, Apr. 13.
Receptacle having pivotally supported units, Flexible pocket. G. R. Hawes. 2,439,731, Apr. 13.
Register, Air. A. W. Anderson. 2,439,554, Apr. 13.
Relay system, Pulse counting. C. H. Zierdt, Jr. 2,439,405, Apr. 13.
Repairing electric cables damaged by moisture, Temporarily. J. V. Wallgren and D. V. L. Lindström. 2,439,592, Apr. 13.
Resins, Chlorinated methylpolysiloxane. B. W. Nordlander. 2,439,669, Apr. 13.
Resonator wave meter. W. W. Hansen. 2,439,388, Apr. 13.
Ring: *See*—
Piston ring.
Ring ensemble, Engagement and wedding. L. Granat. 2,439,727, Apr. 13.
Rotary printing press. C. S. Crafts. 2,439,454, Apr. 13.
Rotary valve for internal-combustion engines. E. G. Grubbs. 2,439,540, Apr. 13.

Sand cores, Manufacture of. R. Dainty. 2,439,563, Apr. 13.
Sawing attachment for tractors, Tree felling and log. S. E. Irwin, Jr. 2,439,607, Apr. 13.
Scale, Hydraulic weighing. L. S. Williams. 2,439,533, Apr. 13.
Scooter. J. C. Bancroft. 2,439,556, Apr. 13.
Screened pump. R. H. Hopkins. 2,439,468, Apr. 13.
Screener, Citrus juice. W. R. Ketchum. 2,439,543, Apr. 13.
Sea wall, Retaining. J. Hurt. 2,439,606, Apr. 13.
Self-sealing pipe coupling. P. E. Thomas. 2,439,760, Apr. 13.
Separation of mercury by hydraulic concentration and screening. H. M. Robertson. 2,439,694, Apr. 13.
Separator: *See*—
Oil-wax separator.
Separator. E. P. Worthen, F. S. Barbour, and F. S. Putnam. 2,439,536, Apr. 13.
Sharpener for double-edged razor blades, with automatic blade-turning means. R. B. Bostwick. 2,439,646, Apr. 13.
Shearing tool. R. G. Fear. 2,439,422, Apr. 13.
Sheet metal clamp. F. C. Wallace. 2,439,531, Apr. 13.
Sheet registering mechanism for printing machines. W. K. Eckhard and E. W. Goodwin. 2,439,420, Apr. 13.
Shock absorber, Friction. H. B. Loewer. 2,439,478, Apr. 13.
Shock absorber, Friction. H. A. Miner. 2,439,484, Apr. 13.
Shoe construction, Shank reinforced. M. Kaufmann. 2,439,431, Apr. 13.
Shoulder-pad. I. de Satnick. 2,439,597, Apr. 13.
Shuttle for carpet looms. I. B. Bassingdale. 2,439,594, Apr. 13.
Signal combination for cargo airplanes, Locking and safety. H. D. Fowler. 2,439,423, Apr. 13.
Signal for motor vehicles, Direction. H. Stephenson. 2,439,588, Apr. 13.
Signal system, Brake-pressure responsive. J. D. Kennelly. 2,439,474, Apr. 13.
Signalling composition, Luminescent. A. Dinsley. 2,439,598, Apr. 13.
Signalling system, Self-synchronous. G. Agins. 2,439,414, Apr. 13.
Silvering surfaces. R. A. Gaiser and P. T. Mattimoe. 2,439,654, Apr. 13.
Slide mounting. T. M. Jablon. 2,439,390, Apr. 13.
Slide rule, Cryptographic. R. M. Mitchell. 2,439,413, Apr. 13.
Snare, Animal. R. S. Connor. 2,439,560, Apr. 13.
Socket connection for radio tubes. C. H. Sundell. 2,439,589, Apr. 13.
Socket, Electric. M. Goldberg. 2,439,385, Apr. 13.
Socket, Light. W. Majusick. 2,439,480, Apr. 13.
Sodium tetrathionate, Producing. R. W. Crosley and A. L. Raymond. 2,439,720, Apr. 13.
Solidified particles from molten material, Method and apparatus for forming. J. T. Gow. 2,439,772, Apr. 13.
Sound pickup unit. W. C. Eddy. 2,439,459, Apr. 13.
Sound reproducing device. J. F. Marquis. 2,439,665, Apr. 13.
Spacing mechanism for typewriting machines, Variable. C. T. Jackson. 2,439,470, Apr. 13.
Spark plug electrode structure. T. Tognola. 2,439,590, Apr. 13.
Spreader, Concrete. J. P. Faber. 2,439,620, Apr. 13.
Sprinkling hose support. C. B. Day. 2,439,684, Apr. 13.
Stall, Finger. W. J. Forbes. 2,439,653, Apr. 13.
Starting system for free piston engines. D. E. Meitzler. 2,439,482, Apr. 13.
Starting system for free-piston units. K. C. Cooper. 2,439,453, Apr. 13.
Steam distributor for vacuumizing containers in sealing machines. J. Hohl and O. Bjering. 2,439,773, Apr. 13.
Steering handle. V. A. P. Saracchi. 2,439,636, Apr. 13.
Stitching instrument, Surgical. L. H. Erickson. 2,439,383, Apr. 13.
Stop motion, Slide-controlled. E. Vossen. 2,439,591, Apr. 13.
Stopper, Bottle. D. G. Kopecky. 2,439,628, Apr. 13.
Stripper, Hot top. W. W. Urmetz. 2,439,705, Apr. 13.
Stripping means for molds. W. Schmid and W. E. Fillmore. 2,439,782, Apr. 13.
Subsoiler and aerator. S. M. McEwen. 2,439,743, Apr. 13.
Support: *See*—
Foot support.
Galvanometer movable coil support.
Loudspeaker diaphragm support.
Sprinkling hose support.
Support for vehicles. T. G. Howells. 2,439,623, Apr. 13.
Supports, Making. P. H. Planeta. 2,439,548, Apr. 13.
Swing, Rocker. E. A. Ramirez. 2,439,632, Apr. 13.
Switch: *See*—
Alarm switch.
Electric switch.
Float-operated switch.
Radio time switch.
Switch for testing series light circuits, Bridging. R. T. Wood. 2,439,500, Apr. 13.
Synchronizing device for cameras, Photoflash. W. Castedello. 2,439,417, Apr. 13.
System for navigating aircraft. H. M. Lewis. 2,439,663, Apr. 13.
System for providing an energizing direct current. D. H. Mitchell. 2,439,409, Apr. 13.
System for true amplitude modulation of a radio wave. D. B. Keever. 2,439,661, Apr. 13.
Tail gate for rear dump bodies, Semistationary. V. L. Snow. 2,439,585, Apr. 13.
Tall oil, Utilization of. M. K. Bare and W. Stubblebine. 2,439,377, Apr. 13.
Tank: *See*—
Enclosed electroplating tank.
Fuel tank.
Telegraph system provided with channel assurance and transmission regulation. E. Praizner. 2,439,398, Apr. 13.
Temperature controlled actuating mechanism. C. A. West. 2,439,706, Apr. 13.
Thermostatic device. R. W. De Lancey. 2,439,455, Apr. 13.
Thiophenes from hydrocarbons by azeotropic distillation, Separation of. G. R. Lake and J. M. Stribley. 2,439,777, Apr. 13.
Thread insert. H. J. Findley. 2,439,685, Apr. 13.
Tie plate and rail joint, Combination. I. Young. 2,439,593, Apr. 13.
Tire, Distortable circle. J. V. Martin. 2,439,742, Apr. 13.
Tones in photoelectric musical instruments, Generation of. E. M. Jones. 2,439,392, Apr. 13.
Tool: *See*—
Shearing tool.
Tool for handling open-ended retaining rings. R. Feltl and H. Wurzel. 2,439,785, Apr. 13.
Tool holder. E. Ruch. 2,439,635, Apr. 13.
Tooth structure, Replaceable. F. W. Gulbert and F. B. Fuller. 2,439,427, Apr. 13.
Toy propelled boat. I. Cohn. 2,439,649, Apr. 13.
Transmitter and receiver, Combined radio. D. H. Mitchell. 2,439,410, Apr. 13.
Truck body, Side dump. R. Abraham. 2,439,439, Apr. 13.
Truck, Hand lift. G. Quayle. 2,439,781, Apr. 13.
Truck, Vertically adjustable barrel. J. B. Robins. 2,493,581, Apr. 13.
Trunk and the like, Wheeled. R. Keil. 2,439,660, Apr. 13.
Tub attachment for washing machines, Auxiliary. H. F. Husted. 2,439,469, Apr. 13.
Tuner, Variable inductive. C. J. H. Victoreen. 2,439,403, Apr. 13.
Turbine bearing construction. R. S. Buck and W. A. Ledwith. 2,439,447, Apr. 13.
Turbine, Combustion gas. C. F. Rocheville. 2,439,695, Apr. 13.
Umbrella. A. P. Pfeil. 2,439,752, Apr. 13.
Universal coupling. A. Machmann. 2,439,479, Apr. 13.
Universal joint. C. E. Hathorn. 2,439,569, Apr. 13.
Valve for four-cycle engines, Combination intake and exhaust. F. J. Cloutier. 2,439,618, Apr. 13.
Valve for spray bars. W. E. Cellwork. 2,439,539, Apr. 13.
Valve for step-by-step servomotors. R. H. Hodgson 2,439,515, Apr. 13.
Valve mechanism for registers and the like. K. L. Babcock, and R. L. Leigh. 2,439,444, Apr. 13.
Valve mechanism, Piston-operated. A. J. Miller and L. W. Young. 2,439,523, Apr. 13.
Vehicle chassis bracket structure and wheel suspension and engine connections thereto. M. F. A. Jullen. 2,439,659, Apr. 13.
Vending machine. P. C. Smith. 2,439,550, Apr. 13.
Vibration absorbing mounting. C. Hussman. 2,439,739, Apr. 13.
Wagon, Self-unloading feed. M. V. Hall. 2,439,541, Apr. 13.
Warning device, Sound. B. L. J. F. Le Roux. 2,439,477, Apr. 13.
Washer: *See*—
Nail sealing washer.
Water detector for oil wells. R. S. Hunt. 2,439,542, Apr. 13.
Water injection system for aircraft. M. Bergman. 2,439,379, Apr. 13.
Water repellent, Rendering glass. J. F. Hyde. 2,439,689, Apr. 13.
Water treating apparatus. J. D. Walker. 2,439,764, Apr. 13.
Wave meter. C. Paulson. 2,439,527, Apr. 13.
Wave-signal space-communication set, Portable two-way. D. H. Mitchell. 2,439,411, Apr. 13.
Weeder, Tubular hand garden. E. E. Moore. 2,439,524, Apr. 13.
Weighing apparatus, Elevator load. O. A. Krauer. 2,439,608, Apr. 13.
Welder construction, Flash. M. M. Seeloff. 2,439,783, Apr. 13.
Wheel: *See*—
Current wheel.
Window sash construction. S. Galuska. 2,439,726, Apr. 13.
Wringer. F. A. Conterman. 2,439,452, Apr. 13.
Wrinkle removing device. G. J. Julian. 2,439,571, Apr. 13.

CLASSIFICATION OF PATENTS

ISSUED APRIL 13, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

U. S. GOVERNMENT PRINTING OFFICE: 1948

Condition of Applications Under Examination at Close of Business Mar. 19, 1948

(Total number of applications awaiting action, exclusive Trade-Mark Division, 152,288; Trade-Mark Division, 33,941. Oldest new case, Apr. 6, 1946; oldest amended, Mar. 4, 1946.)

DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application and oldest action by applicant awaiting office action: New	Amended	Applications awaiting action
1. GOLDBERG, A. J., Food Apparatus; Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons, Sewerage.	June 15	July 11	3,585
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Bee Culture; Dairy; Animal Husbandry; Presses; Tobacco; Textile Wringers; Butchering.	May 3	Apr. 12	4,094
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	†June 10	†Jan. 25	1,530
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	Aug. 2	July 12	3,611
5. ROBINSON, C. W., Harvesters; Acoustics; Sound Recording; Knotters	Apr. 15	Apr. 22	1,885
6. SURLE, H., Carbon Chemistry (part)	†June 2	†May 7	1,806
7. HANLIN, GEORGE, Optics; Photographic Apparatus	†May 22	†Jan. 28	1,765
8. IMUS, A. E., Furniture; Racks and Cabinets	June 4	May 13	4,096
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	Aug. 19	Apr. 19	2,359
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	†Apr. 11	†Mar. 19	1,396
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	†June 19	†July 5	828
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	†May 23	June 24	2,027
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	June 3	May 1	2,488
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	†Mar. 31	†Feb. 4	1,205
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	Oct. 5	May 3	1,962
16. LOVEWELL, N. N., Telegraphy, Telephony	†June 4	Oct. 29	1,842
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or W[illegible] Feeding.	Oct. 17	July 24	1,858
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	Aug. 28	Apr. 23	1,746
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	Aug. 16	Aug. 27	1,863
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	Aug. 12	Aug. 3	2,068
21. MADER, R. C., Textiles	†Apr. 23	†Mar. 17	1,171
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	Sept. 11	July 15	1,884
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	July 3	May 28	1,344
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	Nov. 4	Aug. 5	2,365
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	†Feb. 24	June 14	1,759
26. YOUNG, R. R., Electricity—Generation and Motive Power	†Mar. 15	July 30	1,433
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush; Broom and Mop Making.	†Feb. 4	Aug. 30	3,045
28. SOLYOM, H. L., Heating; Metallurgical Apparatus; Internal-Combustion Engines (part); Cylinders; Pistons.	†Feb. 12	Oct. 29	1,212
29. SHKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools.	Oct. 21	June 25	2,973

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE LEWENSTEIN

No. 5370. Decided January 6, 1948

[165 F.2d 458; 76 USPQ 322]

1. PRACTICE—EXAMINER'S FINDINGS OF FACT—EVIDENCE NECESSARY.

Where the Examiner in the consideration of technical features supplements his knowledge by the citation of a recognized standard authority, the accuracy of which has not been questioned, the appellant, if he had disagreed with any of the Examiner's findings of fact, had the opportunity under the Patent Office Rules of Practice to present pertinent evidence contradicting such findings.

2. PATENTABILITY—BROAD CLAIMS BASED ON SINGLE SPECIES.

Certain claims to an auro-thio-anilide of a carboxylic acid *Held* properly rejected as not supported by an adequate disclosure, and *Held* that broader claims which have no basis of disclosure, other than that of a single species are not allowable.

APPEAL from the Patent Office. Serial No. 376,841. AFFIRMED.

Asher Blum and *Raymond J. Mawhinney* for Lewenstein.

W. W. Cochran (*Joseph Schimmel* of counsel) for the Commissioner of Patents.

GARRETT, *P. J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the Examiner's rejection of two claims, numbered respectively, 18 and 19, of appellant's application for patent entitled "Improvements in Cold Compounds and Method of Making the Same."

Both claims are product claims. We reproduce claim 18 as representative.

18. As a new and improved compound, an auro-thio-anilide of a carboxylic acid, said compound having a straight carbon chain which has at least two carbon atoms, one terminal carbon atom of said chain being connected by a monovalent linkage to an Au S group, the other terminal carbon atom of said chain being linked by a divalent linkage to oxygen and being also linked by a monovalent linkage to a nitrogen atom, said nitrogen atom being linked by respective monovalent linkages to a hydrogen atom and also to a phenyl radical, said new compound being substantially insoluble in water and in lipoids, said new compound being soluble in body liquids other than lipoids, said new compound being sufficiently pure and non-toxic so that it can be safely injected into the human body, the anilide of the thio-derivative of said carboxylic acid being soluble in a solvent in which aurous bromide is also soluble.

Claim 18 is the broader of the appealed claims in that claim 19, as stated in the brief of the Solicitor for the Patent Office, "specifically lists * * * substituent groups of a particular class which have the effect of limiting the scope of the compounds defined in claim 18."

It is not suggested, however, that the difference in breadth or phraseology patentably distinguishes the appealed claims from each other; so they stand or fall together.

We quote the following explanatory matter from appellant's specification:

My invention relates to new and improved gold compounds, which are especially adapted for therapeutic use, and in particular, for treating tuberculosis, arthritis and other diseases in which gold compounds have heretofore been employed.

Another object of the invention is to provide gold compounds for therapeutic purposes which are substantially insoluble in water and in certain body liquids, such as the lipoids and muscular liquids, so that a large injection of the compound can be made at relatively long intervals, of about 2–3 months, whereas the gold compounds which are now used and which are soluble in water and in said body liquids, require biweekly or weekly injections.

A compound of the improved type can thus be injected into the body in a regulated dose, thus providing a continuous treatment for a long period, whereas the gold compounds which are now used, are absorbed quickly after each injection.

Two claims, numbered respectively, 1 and 17, stand allowed. No. 1 is for a product defined in the claim as "auro-thio-glycolic-acid-anilide." It was held to be specific to a compound the formula for which is set forth in the specification of the application. It is stated in appellant's brief that this particular product is being sold under the trademark "Lauron"; that it is sold only as an ethical preparation; and that it is administered only by physicians.

It appears that claim 1 was in the application as originally filed (being one of eight claims included therein and the only original claim allowed) and was, therefore, a part of appellant's original disclosure; that it was allowed by the Examiner in his first decision appearing of record; and that it stood allowed throughout the prosecution of the application in the Patent Office which covered a period of more than five years.

Allowed claim 17, which was finally substituted for original claim 5, is for "A method of making an organic gold compound which is substantially insoluble in water and in lipoids." The basic substance used in the method is the thio-glycolic-acid-anilide named in claim 1.

Neither allowed claim 17 nor the two rejected claims were included in the application as originally filed. The history of their introduction is hereinafter related.

It is noted that the product named in claim 18 is "an auro-thio-anilide of a carboxylic acid," and that the product in claim 19 is not given a scientific name but is referred to as "An improved compound." It

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

contains a specified formula which did not appear in the specification as filed, nor in any amendment of the specification subsequently entered, so far as we have found.

It appears that during the prosecution of the application in the Patent Office certain patents were cited as references and these are listed in the statement of the Examiner and in the decision of the Board, but no one of them was relied upon as a basis of rejection by either the Examiner or the Board and there is no reason for encumbering this opinion with them.

As an ancillary reference "to show usage" the Examiner cited and the Board listed in its decision "Heilbron, Dictionary of Organic Compounds, 1938, Vol. III," specifying the text on pages 752 to 759, inclusive, which text is reproduced in the printed record before us.

In concluding his official statement upon the appeal to the Board the Examiner said:

For reasons indicated, claims 18 and 19 were refused as (1) not supported by an adequate description and (2) as inclusive of and dependent on new matter.

The Board made no reference to new matter in its decision, but did not overrule the Examiner's holding on that point. It expressly agreed that appellant's "disclosure is too meager and indefinite to warrant the allowance of claim 18," and that "the disclosure is inadequate to support" claim 19. The Board also used an expression, to which reference is hereinafter made, that seems to have led counsel for appellant and the Solicitor for the Patent Office to conclude that it proposed rejection of the appealed claims on the ground of lack of a showing of utility.

Appellant's reasons for appeal embrace twenty-seven allegations of error, but the brief on his behalf states:

In general, applicant urges that the Board erred in holding that claims 18 and 19 were not based upon a sufficient original disclosure, and in refusing to reverse the ruling of the Examiner on this basic point, and in raising the issue of doubtful value.

The case presents questions of a technical character; the arguments in the briefs, particularly in that for appellant, bristle with formulas; and, adding to the complexity, especially from the standpoint of a layman, "There appears to be," as the Board expressed it, "considerable difference between the Examiner and appellant as to the nomenclature to be used." The Board, however, stated that it had not considered this difference as to nomenclature since it did not regard that as "germane to the matter in issue."

No question seems to have been raised at any time respecting the disclosure by the application as originally filed of the subject matter of allowed claim 1, nor as to the disclosure (after certain permissible corrections of the specification) of allowed claim 17, but all that appellant can claim with respect to original disclosure of the broader claims 18 and 19 appears to be the following brief paragraph of the specification:

Instead of reacting a "thio" derivative of glycolic acid with the gold salt, I can use a thio derivative of propionic acid, and the corresponding allyl thio-derivative and in general, the higher thio acids, saturated and unsaturated.

The application was filed in the Patent Office January 31, 1941, and was before the Examiner until the latter part of January 1945. During that time the application, except as to claim 1, was several times rejected by the Examiner and several times amended as to both the specification and the claims.

In a decision of May 27, 1944, the Examiner denied all the claims then in the case except claim 1. This was the fourth rejection by the Examiner and he declared it final, but on September 27, 1944, appellant proposed another amendment which the Examiner considered in an advisory action of October 12, 1944, refusing it entry because "it does not make the application allowable." On November 25, 1944, appeal on the rejected claims was taken to the Board of Appeals and on that same date appellant filed another proposed amendment which the Examiner (in conformity, as we understand it, with the practice) considered and acted upon advisorily before forwarding the appeal to the Board.

By the amendment it was proposed to cancel original claim 5 and substitute claim 17 therefor, and also to cancel claims 13 to 16, inclusive, and substitute claims 18 and 19 therefor.

It was also proposed to amend the specification by adding at the end of what is line 8 on page 13 of the printed record before us (the line and page having been different in the typewritten copy before the Examiner) the following:

The formula of thio-glycolic acid, which is also designated as 2-mercapto-ethanoic acid is, $HS.CH_2.COOH$. It is a derivative of ethanoic acid, which is, regarded as being derived from ethane, $CH_3.CH_3$, by oxidizing the methyl group, CH_3, to the carboxyl group, COOH. Since ethane has a normal chain C—C, said normal chain is retained in the above-mentioned improved compound. In said compound, each carbon atom is a terminal carbon atom of said normal chain. One of said carbon atoms is linked by a monovalent linkage to the AuS group. The other carbon atom is linked by a divalent linkage to an oxygen atom, and by a monovalent linkage to a nitrogen atom which is linked by a monovalent linkage to a C_6H_5 radical, namely, a phenyl radical.

As later stated herein, thio-propion-anilide can be substituted for the thio-glycolic-anilide, in the reaction later stated herein. The formula of thio-propion-anilide is $HS.CH_2.CH_2.CONH.C_6H_5$. Hence the corresponding auro-thio-anilide has the formula, $AuS.CH_2CH_2.CONH.C_6H_5$. This has a normal or straight chain of three carbon atoms, one terminal carbon atom of said chain being connected to the AuS group, the other terminal carbon atom of said chain being, connected to said nitrogen atom. As later stated herein, the corresponding allyl derivative can be reacted with aurous bromide. The allyl radical is

$CH_2:CH.CH_2.$—

In his advisory action taken on December 11, 1944, the Examiner, after a full discussion, advised, in effect, that appellant might amend the description in a manner which he (the Examiner) indicated, and that when so amended claim 17 (the substitute for original claim 5) would be allowable.

As to the amendment to the specification, which was intended to furnish support for proposed claims 18 and 19 additional to the paragraph hereinabove quoted from the original specification, the Examiner, acting under the authorization of the Supervisory Examiner, after giving his reasons for regarding the new claims not allowable, offered appellant the option of having "the case forwarded on appeal in the condition as of the final [May 27, 1944] rejection" or of having "the amendment of November 25, 1944, entered and the case forwarded with claims 18 and 19 refused for the reasons indicated above."

Appellant elected to have the amendment of November 25 entered and the appeal forwarded to the Board with claims 18 and 19 refused.

In discussing the proposed amendment, so far as it related to substitute claims 18 and 19, the Examiner said:

The amendment of Nov. 25, 1944, has not been entered. It will be entered at applicant's option for purpose of appeal. Its entry will not remove the confusion and error in the description. The entry proposed for the end of line 3 of page 3 [line 8 of page 13 of the printed record before us] insofar as it explains "thioglycollic acid" is inaccurate and unnecessary. The second paragraph of the proposed insertion attempts to define thiopropionic acid as 2-mercaptopropionic acid. The dictionary shows that a thiopropionic acid is not a mercaptopropionic acid. There are two mercaptopropionic acids depending on the position of the mercapto group. Even if it be assumed that applicant contemplated a mercaptopropionic acid when he used the term a "thio derivative of propionic acid," it is impossible to determine which of the two alternatives was meant and it certainly cannot be assumed that this teaches the class of omega-mercapto fatty acids. It will therefore be held that this portion of the insert is new matter and that proposed claims 18 and 19 are not adequately disclosed and are dependent on new matter. The statement concerning allyl derivative is not understood and does not appear to have any relation to the rest of the description in the case.

Claim 19 will be additionally rejected as inoperatively broad and as not supported by an adequate description.

In his statement after the appeal had been forwarded to the Board the Examiner elaborated the foregoing holding. He stated in effect that appellant had presented a variety of generalizations during the prosecution of the case all of which had as their starting points the specific compound of the allowed claims, and said:

• • • It is the Examiner's opinion that these generalizations have been based primarily on language without regard to generally understood chemical knowledge. In part, these generalizations have been based on an erroneous interpretation of the language involved.

With respect to the amendment to the specification of November 25, 1944, hereinbefore quoted, the Examiner held it "to be in part new matter and in part unnecessary and also in part erroneous," saying:

The first paragraph is directed to statements concerning thio glycolic, its supposed derivation, and generalized statements concerning its constitution. Error appears in that ethane is not $CH_3.CH_3$ and methly is not CH_3. Since the acid has only two carbon atoms the term "normal" (as distinguished from branched) chain has no significance and the same criticism applies to "terminal" carbon atoms, as distinguished from adjacent, or middle, carbon atoms.

This description of thioglycolic acid is used to support the generalizations in claim 19 describing —x—c as "a *normal* chain of *at least* two carbon atoms" and (in the structure shown) with the linkages at the terminal carbon atoms. The corresponding limitations of claim 18 are similarly supported.

The second paragraph of the insert • • • is in error in stating that the anilide of thio-propionic acid possesses the structure shown. The structure shown is that corresponding to thio-hydracrylic acid (2-mercapto-propionic acid). This will be apparent from Heilbron who shows two different mercapto propionic acids, as well as a thio-propionic acid and the anilide thereof.

The last two sentences of the paragraph, relating to "the corresponding allyl derivative" has no possible significance, as may be seen by attempting to place the "allyl radical" in the structure of claim 19 or the limitations of claim 18.

In his discussion relating specifically to claim 18 the Examiner held that it is misleading or erroneous in the expression "auro-thio-anilide of a carboxylic acid," saying:

The illustration is a gold derivative of an anilide of *thio*glycolic acid, (i. e. of a mercapto acetic acid). The prefix "thio" modifies the succeeding term. A "thio-anilide," a "thio-carboxylic acid," and a "thio-hydroxy acid" implies entirely different substitutions of sulphur.

The Examiner by the use of italics in quoting from the text of the claim also pointed out what he designated as the critical limitations of the claim not found originally disclosed, as follows:

The critical radical is defined as "a *straight* carbon chain which has *at least* two carbon atoms, one *terminal* carbon atom of said chain being connected by a monovalent linkage to an AuS group, the *other terminal* carbon atom of said chain being linked by a divalent linkage to oxygen • • •." [Italics supplied by the Examiner.]

It was the Examiner's position that to support the class of acid radical required by claim 18, it would be necessary for appellant to read "thio-propionic" (as used in the specification as filed) as "mercapto propionic" and limit the latter to beta mercapto form as distinguished from the alpha mercapto form.

In the brief on behalf of appellant before us it is said: "Applicant used 'thio' as meaning the same as 'mercapto'."

The brief of the Solicitor for the Patent Office states with respect to this:

That statement is unsupported in appellant's original description, and, in effect, is actually at variance with the statement in the specification • • • that a thioglycolic acid anilide is the same as a mercapto acetic acid anilide. If the terms "thio" and "mercapto" meant the same thing, then, it is submitted, no need would exist for using glycolic acid with "thio" and acetic acid with "mercapto" in order to properly identify the compound. To those skilled in the art these prefixes are used advisedly to denote different compounds • • •.

We fail to find any mention in the record indicating that appellant advised the tribunals of the Patent Office that he used "thio" as meaning "mercapto," until after the Examiner had filed his official statement following the appeal to the Board. Appellant seems to have filed some statement in response (it is not in the record before us) which was referred to the Examiner under rule 137, who replied in part as follows:

On page 5, applicant seems to confuse the issue by alleging that the terms mercapto and thio are interchangeable. These terms per se are not used interchangeably in the illustration given by appellant. The examples given by appellant confirm the Examiner's position. 2-mercapto ethanoic acid and thioglycolic acid do describe the same compound. It is significant however that the term *mercapto* is used to modify the term ethonoic acid (which does not contain a 2 hydroxy group as does glycolic acid) whereas the term *thio* is used to modify the term glycolic acid, to show that the oxygen of the OH group is replaced by S (i. e. SH). This distinction in these terms has been emphasized in the Examiner's statement. [Italics quoted.]

The brief on behalf of appellant further pointed out that the Heilbron Dictionary under the heading "Thioglycolic acid (Mercaptoacetic acid)" gave the formula "$HS.CH_2.COOH$," and asserted:

This illustrates the equivalence of "thio" and "mercapto" and it repels the Examiner's theory that in a thio acid, the carboxy group, COOH, must be changed to COSH. According to Heilbron, thioglycolic acid has the unchanged carboxy group, and the substitution of "S" for "O" is made outside the carboxy group.

It is pointed out in the brief on behalf of appellant that in his specification as originally filed he stated that thioglycolicacidanilide "is a derivative of *mercapto*-acetic acid (-2-*mercapto*-ethanoic acid or *thio*glycolic acid" (emphasis supplied in the brief), and other citations from Heilbron are made to show examples "of a thio acid which retains the unchanged carboxy group," but we fail to see wherein these matters affect the merits of the issue.

It is further asserted that "Claim 18 • • • clearly states that the AuS group is at one end of the straight carbon chain, and that the other end of

said chain has the carbon atom linked to oxygen, not to sulphur," and that this applies to claim 19 as well.

We do not deem it necessary to our decision to discuss claim 19 in greater detail than hereinabove stated.

We confess that we do not understand why the Board did not regard the nomenclature question germane to the matter in issue.

Appellant evidently did not agree with this view at the time he appealed to this court because in his reasons for appeal he alleged that the Board erred "in failing to reverse the ruling of the Examiner as to the nomenclature to be used." He does not discuss the assignment in his brief, however, and we suppose he intended to abandon it. The Solicitor for the Patent Office discusses it, and we fail to discern how the case could be decided without considering it, at least to some extent.

As noted, supra, appellant states that he used "mercapto" as having the meaning of "thio." Assuming this to be correct, although not recited originally, it means that the paragraph of appellant's original specification upon which he relies for disclosure of the appealed claims is to be considered as if it read:

> Instead of reacting a "thio" derivative of glycolic acid with the gold salt, I can also use a *mercapto* derivative of propionic acid * * * [italics supplied].

and claim 18, supra, is to be considered as if it read "an auro-*mercapto*-anilide of a *carboxylic* acid * * *" [italics supplied].

The product named in claim 18 is an auro-thio-anilide of a carboxylic acid. It is a derivative of propionic acid (which is a homolog, being next above acetic acid in a list of fatty acids), the substance named in the paragraph quoted, supra, from appellant's original specification upon which he relies for original disclosure to support appealed claims 18 and 19. Propionic acid has the formula $CH_3CH_2.COOH$. It is important to bear in mind that propionic acid contains no hydroxyl group.

Acetic acid is also a homolog (formula CH_3COOH) from which glycolic acid (hydroxy acetic acid) having the formula $CH_2OH.COOH$ is derived. Glycolic acid contains both hydroxy and carboxy groups and, as we understand from the Examiner's statement supported by the Heilbron Dictionary, it is understood in the chemical art that "thio" placed before "glycolic" means that sulphur has been substituted in the hydroxy group—not in carboxy group.

The correctness of the Examiner's statement based upon the Heilbron Dictionary that "the prefix 'thio' indicates replacement of an oxygen atom in the compound otherwise named" is not questioned, nor do we find his statement that "the prefix 'mercapto' describes the presence of an—SH group, in contrast to 'thio' which indicates the replacement of an oxygen by sulfur" challenged.

Stated differently, when "thio" is used as a prefix, it indicates, according to standard usage, that oxygen has been replaced by sulphur; when "mercapto" is used as a prefix it indicates the replacement by sulphur of either hydrogen or hydroxyl, but not the replacement of oxygen in carboxyl.

The standard usage is stated in the brief of the Solicitor for the Patent Office as follows Heilbron's Dictionary, pages 752, 753, 755, and 759 being cited):

> * * * where the prefix "thio" modifies the name of a compound containing both a hydroxyl (OH) and a carboxyl (COOH) group, proper terminology limits the meaning to a compound in which the hydroxyl group only is replaced by the mercapto group—SH.

It may be said that "mercapto" used as a prefix, according to standard authorities, indicates the presence of an SH group.

It is suggested in the brief of the Solicitor for the Patent Office that, since propionic acid contains no hydroxyl groups, the term thio-propionic acid would be an acid in which sulphur replaces oxygen in the carboxyl group.

We observe that the formula for thio-propionic acid as given by Heilbron is CH_3CH_2CSCH and that for thioglycolic acid is $CH_2SHCOOH$; so they differ in that the sulphur is in a different portion of the molecule.

In view of the foregoing, it appears that in asserting that the fact that thioglycolic acid and mercapto-acetic acid have the same formula "repels the Examiner's theory that in a thio acid, the carboxy group, COOH, must be changed to COSH," appellant failed to take into account the effect, according to standard usage in the chemical art, of the use of the word "thio" when the compound to which it is applied as a prefix has both hydroxyl and carboxyl groups.

It appears from the specification that appellant clearly described the method by which the product named in claim 1 could be made, so that a person skilled in the art could readily follow it and produce the article which obviously was regarded as new. This cannot be said concerning the products defined in the appended claims. Appellant seems to us to have endeavored to build up the disclosure, by the use of an elaborate series of formulas, of subject matter which, if he had invented it, or had it in mind at the time of filing his application, might have been and should have been described at least as fully as he described the subject matter of claims 1 and 17. If he, in fact, had the invention but failed to meet the statutory requirement for a clear description in his application as filed, it would seem that upon discovering the oversight he might have protected such invention by filing another application as a continuation in part of his original application.

[1] The Examiner appears to have stated fully and clearly the essential facts of this somewhat complicated case. Upon the technical features he supplemented his knowledge resulting from his training as a chemist by the citation of a recognized standard authority, the accuracy of which has not been questioned. If appellant had disagreed with any of the findings of fact, and there were good grounds for disagreement, he had opportunity under the Patent Office rules of practice to present pertinent evidence contradicting such findings. We speak, of course, of facts, not deductions. Deductions may be and frequently are a proper subject for argument; facts are matters to be established by evidence.

In the instant case we think the Examiner drew the correct deductions from the established facts.

Up to this point we have confined ourselves almost exclusively to the consideration of the decisions and statements of the Examiner so far as the Patent Office's view of the case is concerned.

It has been necessary to do this because with one possible exception the Board from whose decision the appeal actually comes to us did not state in any detail reasons for its conclusions, but simply gave sweeping approval to the Examiner's decision. Even in the possible exception to which we have just referred, the Board's statement seems to us to be somewhat cryptic, or at least difficult to interpret.

In its decision after approving the Examiner's finding as to meagreness and indefiniteness the Board said:

> * * * Judging by what is said in the publication cited the only aurothio compound tested was that defined in allowed claim 1, and even that was of doubtful value. While theoretically the mere addition of CH_2 to the molecule should make but little difference still one cannot predict positively that such is the case for in medicines such small changes may make the product react quite differently from the lower homolog. There is nothing in this case that any higher homologs have been tried out.

The "publication" mentioned has reference to one filed at an early stage of the proceedings when the Examiner required proof of utility.

The Examiner presumably was satisfied with the showing of utility so far as claims 1 and 17 were concerned and we find nothing to indicate that he raised any question as to the utility of the products covered by claims 18 and 19.

Patent Office rule 139 provides:

> * * * Should it [the Board of Appeals] discover any apparent grounds not involved in the appeal for granting or refusing letters patent in the formed claimed, or in any other form, it shall include in its decision a statement to that effect with its reasons for so holding.

It seems to us that the Board's statement would admit of the interpretation that, in its opinion, claim 1 itself is of doubtful value, but both counsel for appellant and the Solicitor for the Patent Office seem to interpret it as applying only to claims 18 and 19, and error respecting the holding is assigned on behalf of appellant, who claims it to be a new ground of rejection. If it be a rejection on the ground that it does not meet the requirement of Sec. 4886 R. S., U. S. C. Title 35, § 31, such rejection even though new would lie within the province of the Board under Patent Office rule 139, supra.

However, we are not convinced that it was the purpose of the Board to hold that claims 1 and 17 should not be allowed. In our opinion, if the Board had so thought it would have found language with which to give clear-cut expression to the thought.

In view of our conclusion that the appealed claims were properly rejected on other grounds, it is not necessary to determine whether the Board intended its expression "of doubtful value" to mean that claims 18 and 19 were rejectable on the ground of lack of utility, but it is not improper to say that, in our opinion, where the Board proposes to declare a claim not allowable under the authority given it by rule 139, supra, it should state that finding clearly, and not use a phrase which leaves its meaning in doubt. A claim may not always be rejectable simply because the product is "of doubtful value;" doubts are frequently resolved in favor of utility.

One other phase of the controversy appears to require notice.

Appellant seems to be of opinion that the Board "concedes that thio-propion-acid-anilide is $HS.CH_2CH_2CONHC_6H_5$," as stated by appellant, rather than $CH_3CH_2CS.N.H.C_6H_5$, as stated by the Examiner.

What the Board said, after quoting the paragraph, supra, from appellant's original specification relied upon for disclosure of claims 18 and 19, was:

> This brief statement was somewhat amplified by amendment, but about all that can be said as to the amendment is that it tends to show that it is probable that the next higher homolog ($HS.CH_2.CH_2CONHC_6H_5$) would react in the same way as thioglycolic anilide. Less is said about the corresponding allyl derivative.

As a matter of fact, the Board merely cited what had been asserted in the November 25, 1944, amendment to the application, and this could hardly be regarded as a concession of its correctness. However, even if it were treated as a concession by the Board it would not be of any benefit to appellant if erroneous in fact which we understand to be the case.

[2] From our study of the case we are convinced that appellant's disclosure is sufficient to support only the claims which have been allowed covering only a single species, and, under the well-settled rule, broader claims which have no basis of disclosure other than that of the single species are not allowable. *In re Wahlforss et al.*, 28 CCPA (Patents) 867, 117 F.2d 270, 48 USPQ 397, 526 O. G. 575.

For the reasons indicated, the decision of the Board of Appeals is affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

APOLLO SHIRT COMPANY
v.
THE ENBO SHIRT COMPANY, INC.
No. 5374. Decided January 6, 1948
[165 F.2d 471; 76 USPQ 331]

TRADE-MARKS — CANCELLATION — DESCRIPTIVENESS — "SPORTSTER."

Where it is clear that the term "sportster" has not up to the present time been embodied in the English vocabulary under the law of usage, since it does not appear in any dictionary that has been called to our attention or to which we have access, and where no user has been shown of such word in a descriptive sense, *Held* that the term "sportster," though highly suggestive, cannot properly be held to be merely descriptive of the goods to which it is applied, and, accordingly, the decision of the Commissioner dismissing appellant's petition for cancellation is affirmed.

APPEAL from the Patent Office. Cancellation No. 4414.

AFFIRMED.

Mock and Blum (*Asher Blum* and *Charles R. Allen* of counsel) for Apollo.

Edward A. Brand for Enro.

JACKSON, *J.*:

This is an appeal, in a trade-mark cancellation proceeding, from a decision of the Commissioner of Patents, 69 USPQ 444, affirming that of the Examiner of Interferences dismissing appellant's petition to cancel the registration of appellee's mark, "SPORTSTER" dated June 15, 1926, on an application filed April 1, 1925, claiming use of the mark since August 1924 on the ground that the said mark as applied to sport shirts is descriptive.

Appellant is the owner of the registered mark "SPORTMASTER" as used on "men's dress, work, and under shirts." The mark was registered July 21, 1936, on an application filed March 9, 1936, and is said to have been in use since February 24, 1936.

In its petition, filed under section 13 of the Trade-Mark Act of 1905, appellant invoked the descriptiveness clause of section 5 of the Act as the statutory ground for cancellation. Appellant alleged that appellee had previously filed a petition to cancel the mark "SPORTMASTER" on the ground of confusing similarity between the marks "SPORTSTER" and "SPORTMASTER" and that it was damaged by such petition; and that it will be further damaged if its registration for the word "SPORTMASTER" were cancelled, and that such damage could only be mitigated by the cancellation of appellee's mark in this proceeding.

The cancellation proceeding initiated by appellee's petition, as aforesaid, was finally determined in Appeal No. 5372, entitled *Apollo Shirt Company* v. *The Enro Shirt Company, Inc.*, in favor of appellee and decided concurrently herewith.

There is no contention by the parties that the Trade-Mark Act of 1946 has any application to the present proceeding and the sole question to be decided is whether or not appellee's mark "SPORTSTER" is descriptive of the goods to which it is applied.

Only the petitioner has taken testimony.

It is contended by appellant that the word "SPORTSTER" has a similar meaning and is equivalent to the word "sporter." That word is defined in Webster's New International Dictionary, Second Edition, Unabridged, as "one who sports; a sportsman; also, colloq., one who wears sport clothes, or who spends lavishly and ostentatiously." While appellee contends "SPORTSTER" is a natural word properly used to describe a sportsman who ostensibly would be clad in sports attire, it bases its reasoning on such contention by the meanings attached to such common words as "gamester," "songster," "funster," "trickster," "teamster" etc. It endeavors to invariably attach the same meaning to the suffixes "ster" and "er." It apparently invokes the law of usage by which coined words by reason of long general use become fixed in the English vocabulary, arguing that one who would use the word "sporter" would probably be a person of erudition, but that the public in general would say and would refer to a sportsman as a "sportster."

That the term "sportster" has not up to the present time been embodied in the English vocabulary under the law of usage is clear. It does not appear in any dictionary that has been called to our attention or to which we have access.

Furthermore, appellant has not by its evidence satisfied the tribunals of the Patent Office nor this court that appellee's mark is descriptive of sport shirts, and, therefore, we must conclude, as did the Examiner of Interferences and the Commissioner, that, since no use has been shown of such word in a descriptive sense, the decision appealed from should be affirmed. The term is probably highly suggestive, but, in our opinion, it cannot properly be held as merely descriptive of the goods to which it is applied as required by the statute.

We find no error in the decision appealed from, and it is accordingly affirmed.

AFFIRMED.

BLAND, *J.*, sat during the argument of this case, but resigned before the opinion was prepared.

U. S. Court of Customs and Patent Appeals

IN RE CASEY

No. 5350. Decided January 27, 1948

[— F.2d —; 76 USPQ 463]

1. PRACTICE—STATEMENTS OF FACTS—MUST APPEAR IN RECORD TO BE CONSIDERED.

   Where appellant argued that a problem long existent in the art has been solved by the device defined in the appealed claims and that the wide commercial success of the device indicates invention, and where such statements are based essentially upon alleged facts which do not appear in the evidence in the record, *Held* that they cannot be considered or relied upon as the basis for action by this court.

2. PATENTABILITY—ANALOGOUS ART—PROXIMATE AND REMOTE FUNCTIONS.

   Where the appellant contends that the secondary references are in a remote and non-analogous art because they do not disclose a journal box, *Held* that insofar as these references are concerned, the actual art involved is the function of providing wear members to protect parts from wear, not the remote function of the device.

3. SAME—COMBINING REFERENCES PROPER.

   Though it is clear that no single reference discloses the subject matter defined in the appealed claims, *Held* that in patent jurisprudence combinations of references are proper and if their teachings be combined so as to render obvious to one skilled in the art the structure sought to be patented, there is no exercise of the inventive faculty.

4. SAME—JOURNAL BOX.

   Certain claims for a journal box *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 494,363.

AFFIRMED.

Ernest F. Mechlin (*George F. Vala* of counsel) for Casey.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

O'CONNELL, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner who rejected all the claims in appellant's application for alleged new and useful improvements in a journal box for use in a railway truck and more particularly to an improved hinge lug therefor.

The references are: King, 1,445,693, February 20, 1923; Pope et al., 1,554,757, September 22, 1925; Adams, 1,640,228, August 23, 1927; Flodin et al., 2,126,546, August 9, 1938; Couch, 2,258,584, October 14, 1941.

The attorneys for appellant have recited the rejected claims in their brief, and in so doing have italicized the language in each claim which they contend defines patentable subject matter. As thus recited, the claims read:

1. In a journal box having an apertured hinging lug upstanding from the roof of said box and provided with a vertically and horizontally directed surface, the combination of, *an angular plate conforming substantially to said surfaces and welded to said hinging lug, and a crescent shaped shim disposed within said hinging lug aperture.*

2. In a journal box having an apertured cast lug extending from the roof of said journal box and provided with a front vertically directed surface and a top horizontally directed surface, the combination of, *a substantially L-shaped plate conforming substantially to said surfaces and welded to said lug, and a crescent shaped shim having surfaces formed of equal radii disposed within said aperture and welded to said lug.*

3. In a journal box having an apertured cast lug extending from a wall of said box and provided with a front substantially vertical surface and a top substantially horizontal surface, the combination of, *a substantially L-shaped plate approximating in configuration said top and front surfaces, and means for securing said plate to said lug.*

The subject matter of the claims relates to a journal box particularly employed in the truck of a railway car to house the extremity of a wheel and axle assembly. Such a journal box is concededly old in the art. Appellant's alleged invention pertains to a relatively simple structure comprising a hinge lug upstanding from the roof of a journal box, which is thus described in his brief:

> • • • As viewed in the drawing (R—7) the hinge lug is formed in part by a member 3 formed integral with the roof of the cast journal box. The member has angularly disposed surfaces exposed horizontally 10 and vertically 8 and in full bearing relation with these surfaces is an angularly shaped plate or clip 13 which is welded or otherwise secured to the member. A pintle aperture 7, eccentric in cross section, is formed in the hinge lug and into the aperture is fitted a crescent shaped shim 12 to define one or an outer side of the aperture and remove the eccentricity of the aperture. The angular shaped plate and shim may be formed of relatively hard material since they are adapted to be related with movable parts associated with the journal box.
>
> • • • The purpose of attaching a movable lid to the journal box is so that access may be had to the interior of the box for inspection of the bearing, lubricant carrying material, application of lubricant and application or removal of the bearing. If the lid when, in closed position, is not held firmly against the journal box to cover completely the access opening, foreign substance such as water, snow, grit, etc., will find its way to the interior of the box to result in the bearing becoming damaged. • • •
>
> • • • A part of the lid moves along the angularly disposed faces of the clip and the hinge pin forming the connection between the lid and hinge lug bears against the crescent shaped shim. It is only after the clip and shim become worn to such a degree that the lid is no longer held firmly against the journal box that the clip and shim are replaced to thereby completely renovate the journal box.

The patent to Couch discloses a ball-jointed lid for closing the access opening to a journal box for railway vehicles, wherein the pivotal portions of the lid are cast integral with associated parts. The specification states that:

> A principal object of the present invention is the provision of a ball-jointed lid, the particular construction of which provides for an unrestricted vertical and horizontal equalization of the cover portion thereof in order to insure a full bearing engagement between the cover and the juxtapositioned surface of an associated journal box, thereby excluding dust, water or any other foreign substance from the interior of the journal box.
>
> • • • • • • • • •
>
> Referring now in detail to the drawings, • • • there is indicated, diagrammatically, a portion of a journal box 1 having an access opening 2 and a hinge lug 3 extending upwardly from and adjacent the front portion of the roof or top wall 4 of said box. The hinge lug 3 is provided with an aperture 3ª through which extends a rod or pintle 5 pivotally connecting an articulated journal box lid, generally designated as 6, to the box. The lug 3 has angularly disposed surfaces 7 and 8 formed thereon which are engaged by a portion of the lid, whereby said lid is retained in either open or closed position. • • •

The patent to Flodin et al. relates to the conventional type of journal box for railway vehicles, and particularly to a spring-actuated lid therefor. As described in the specification, and referring in detail to the drawings, the journal box

> • • • is provided at its front face with the usual opening 2. A member, preferably in the form of a lug 3, is carried by the box beyond the upper side of the opening 2 and centrally thereof. The lug is provided at its front with a cam face 4 which is directed to make a definite angle with the face 5 of the box. The lug is further provided at its top with a cam face 6 and with an orifice 7 in which a hinge pintle 8 is mounted with its opposite end portions 9 and 10 extending from the opposite sides of the lug.

The two patents hereinbefore described are the basic reference and, as noted, clearly disclose the conventional features of the device claimed by appellant.

Neither reference discloses, however, an external angular or L-shaped plate conforming substantially to the front and top surfaces of the hinge lug and welded to the lug, nor an internal crescent-shaped shim in the aperture of the lug, the specific structures upon which appellant relies as defining the pateutable subject matter of his claims.

The tribunals of the Patent Office held that appellant's purpose in using the angular L-shaped plate, and the crescent-shaped shim, was to protect the journal box against wear by providing bearing surfaces which are less subject to wear in the repeated hinging action of the lid. That particular holding has not been adequately traversed by appellant.

The expedient of providing bearing surfaces which by constant and severe use are less subject to wear, such as the claimed L-shaped plate, or its equivalent, and the crescent-shaped shim, on things other than journal boxes, is disclosed by the secondary references, the patents to Pope et al., to Adams, and to King.

The patent to Pope et al. relates to a device, a bushing and reenforce for coupling rods, which may be employed in connection with various forms of machinery, but is more particularly adapted for use in coupling the radius bars to the crank shaft or other part of a motor driven vehicle.

The device comprises a base member adapted to be attached by its flanges to a support, for instance, to the crank casing of a motor driven vehicle, and having a half socket in one face and an opposing half socket. Fitting one or both of the half sockets is a semi-globular bushing, and extending from each bushing member is a semi-cylindrical lip or projection.

A portion of the stock of the member to be supported in the device is provided with a globular terminal to engage in the bushings and the half sockets. The lip portions or projections, extending from each bushing member, bear over the portion of the stock adjacent to the globular terminal, and reenforce and support the stock at its junction therewith.

The patentees state in their specification that their invention

> • • • has for one of its objects to improve the construction and increase the efficiency and utility of devices of this character.
>
> Another object of the invention is to provide a device of this character having wear preventing means, and means whereby the parts are supported and strengthened and worn parts readily renewable without discarding the unworn or unimpaired parts.

The patent to Adams relates to brake hangers. To increase the life of the socket member thereof, a hard metal bushing for the socket member is provided which is secured to the socket member by spot-welding. On cutting the weld, or chipping it off, the bushing can be removed and readily replaced. Adams states in his specification:

> In this type of brake hanger, the walls of the sockets wear considerably, and the main object of this invention is to provide the sockets with a hard metal bushing, which is firmly attached to the bracket but which can be readily removed when it is necessary to replace the bushing.

The patent to King relates to shaft bearings and more particularly to a removable bearing sleeve which is especially useful for renewing the bearing surfaces of connecting rods such as are employed in the engines of Ford automobiles for connecting the pistons with the crank shaft.

The bearing sleeve of the invention, which is adapted to be fitted within the bearing recess of the connecting rod, is longitudinally divided along an axial plane thereby providing two separated, crescent-shaped, parts or sections each of which is a duplicate of the other.

King states in his specification:

> One object of the present invention is to provide a bearing sleeve of novel and improved construction which may be readily and quickly applied to connecting rods of the above described character either to replace a worn bearing surface, or to provide a suitable bearing surface in the first instance and which will in either case, accurately fit the crankshaft and be adapted for rigid assembly with the connecting rod.

The Board applied no specific reference to any of the rejected claims and in affirming the action of the Examiner expressed the view that appellant's accomplishment in providing a wear plate or a wear shim to protect the journal box against becoming worn amounted to no more than an engineering expedient; and that no invention was involved in appellant's appropriation and use of the expedient that had previously been used for the same purpose on things other than journal boxes, as illustrated in the references cited.

The Primary Examiner based his action upon the same ground, but in so doing specifically applied the teachings of each of the cited references and gave a precise statement of his respective grounds of rejection.

Claims 1 and 2 were rejected by the Examiner as lacking invention over each of the disclosures of Couch and Flodin et al. in view of the disclosures of the patents to Pope et al. or Adams and King. Claim 3, which does not recite the crescent shaped shim, was rejected by him as unpatentable over the patent to Couch or the patent to Flodin et al. in view of the patent to Pope et al. or the patent to Adams.

Both the Examiner and the Board, appellant contends, erroneously failed to realize that never before in the history of railroads in this country has there ever been any modification of the conventional type of hinge lug for a journal box as characterized by the basic references of Couch and Flodin et al.

[1] Appellant argues in his brief that the distinct defects in the conventional type of hinge lug have been recognized from its inception; that the device defined by his claims solved the problem which so long had existed in the art; and that the wide commercial success of his device indicates it is a meritorious invention and a broad advancement in a very old and crowded art.

The court has no reason to doubt the truth of any of appellant's statements as to the existence of a problem which confronted the art and as to the commercial success of his device.

Such statements, however, cannot be verified herein by the prior art of record. Those statements are based essentially upon alleged facts which do not appear in the evidence in the record before us. Therefore, under well-established authority they cannot be considered by the court or relied upon as the basis of its action. See *In re Spohn*, 22 CCPA (Patents) 1304, 77 F.2d 768, 25 USPQ 409, 461 O. G. 473; *In re Beeson*, 26 CCPA (Patents) 755, 100 F.2d 191, 40 USPQ 122, 500 O. G. 574.

Appellant also contends that no single reference defines the identical structural arrangement of the device defined by the claims on appeal, and that the respective references are in a remote and non-analogous art and do not constitute an anticipation of appellant's device.

The Solicitor for the Patent Office correctly states that obviously the patents to Couch and to Flodin et al. each discloses a journal box, which is the identical name applied to the device claimed in each of the appealed claims. He frankly concedes that none of the patents to Pope et al., Adams, and King discloses a journal box of the type described and claimed in appellant's application.

[2] The Solicitor points out, however, that it is not the remote function of the respective devices defined by the secondary references which is the art here involved, but rather the actual art involved is the proximate function of providing wear members to protect parts from wear; which is the very thing that appellant has done. We agree with the Solicitor that the actual art involved herein is the function of providing wear members to protect parts from wear. It is not the remote function of the device that is here involved. See *Paul H. Smyth, Jr.*, 28 CCPA (Patents) 1217, 120 F.2d 348, 49 USPQ 746, 531 O. G. 280, and authorities therein cited.

[3] It is clear that no single reference discloses the subject matter defined in the appealed claims.

It is trite, however, to say that in patent jurisprudence combinations of references are proper and if their teachings be combined so as to render obvious to one skilled in the art the structure he seeks to patent there is no exercise of the inventive faculty. *In re Stover*, 32 CCPA (Patents) 823, 146 F.2d 299, 64 USPQ 186, 573 O. G. 367.

We have carefully examined all the arguments and authorities cited by counsel for appellant but we find therein no ground upon which we are authorized to reverse the decision of the Board of Appeals. That decision, for the reasons hereinbefore stated, is affirmed.

AFFIRMED.

BLAND, *J.*, sat during the argument of this case, but resigned before the opinion was prepared.

Disclaimers

Re. No. 22,812.—*John D. Jenkins*, Milwaukee, Wis. PLASTICIZATION OF PLASTICS. Patent dated Dec. 3, 1946. Disclaimer filed Mar. 15, 1948, by the assignee, *Pittsburgh Plate Glass Company*.

Hereby disclaims all coating compositions covered by claims 1 to 4 inclusive of said patent except those in which the combination of pulverulent plastic and plasticizer, but for the presence of the non-solvent, would result in the gelling of the plastic particles to the point of coherence;

And disclaims all methods of coating covered by claim 5 except those involving the application of a film of a coating composition in which the combination of pulverulent plastic and plasticizer, but for the presence of the non-solvent, would result in the gelling of the plastic particles to the point of coherence;

And further disclaims all methods of coating covered by claims 6 to 9 inclusive except those involving the application of a film of a suspension in which the combination of finely divided plastic and plasticizer, but for the presence of the non-solvent, would result in the gelling of the plastic particles to the point of coherence.

2,346,173.—*George G. Light*, Kew Gardens, N. Y. TRANSMISSION SYSTEM. Patent dated Apr. 11, 1944. Disclaimer filed Mar. 11, 1948, by the assignee, *The Western Union Telegraph Company*.

Hereby enters this disclaimer to claims 1, 2, 3, 4, 5, 7, 11, 13, and 15 of said patent.

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 2,405,625, L. C. Whiton, J. E. Watson, and C. B. McBride, Dust separator, decided Mar. 16, 1948, claim 7.

Pat. 2,346,173, G. G. Light, Transmission system, decided Jan. 21, 1948, claims 1, 2, 3, 4, 5, 7, 11, 13, and 15.

Pat. 2,365,646, A. L. New, S. G. Foord, and D. R. Beckwith, Electric insulating material, decided Jan. 26, 1948, claims 1 and 3.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,434,803. FREEZING MOLD FOR ICE STICKS. Patented Jan. 20, 1948. A freezing mold for producing ice sticks which may be conveniently inserted in Thermos bottles and other receptacles having narrow openings. The mold is composed of top and bottom trays, each forming a separate unit and both adapted to fit within an ordinary refrigerator ice pan. The molds, which may be made of rubber, are partitioned into a number of long narrow compartments for producing ice sticks. The bottom tray has a shelf-like formation with upstanding vertical edges to seat the top tray. A removable metal plate may be inserted on the shelf beneath the top tray to speed freezing. (Co-owner) Avin C. Johnson, 1311 Main, Houston, Tex. Groups 30—32; 40. Reg. No. 9,471.

Pat. 2,435,081. COUPLING DEVICE. Patented Jan. 27, 1948. Coupling is particularly adapted for tethering animals, allowing them to completely circle the coupling device without the likelihood of becoming entangled in ropes or chains by which they are tied. Two circular plates, staked (horizontally parallel) close to the ground, are slotted to provide a race between them for a freely rolling ball connected to a chain by a double swivel. Both the ball and coupling swivel are free to turn independently so that the tethered animal is free to exercise, range, or graze. (Owner) Herman Gordon Howard, 521 Majestic Bldg., Sixteenth at Broadway, Denver 2, Colo. Group 35—69. Reg. No. 9,472.

Pat. 2,430,339. WORK FOLDING ATTACHMENT FOR SEWING MACHINES. Patented Nov. 4, 1947. Attachment is adapted for use with sewing machines of the double needle type which are used for simultaneously hemming the edges of two strips of work material. The attachment, which is adjustable to accommodate strips of varying width, will automatically fold the inner edges of two spaced strips of material and guide them with their folded edges below the presser foot for engagement with the needles. It consists of a skeleton frame hinged to a right angular work table which has its lower edge hinged to the machine. Attachment and work table cooperate for swinging movement into and out of operative position. Folder, guide, and presser plates are mounted in pairs on the frame. The presser plates retain the strips in folded flat position as they leave the folders for engagement with needles. (Owner) Jonas F. Imberman, 738 South Spalding Ave., Los Angeles, Calif. Groups 33—73; 35—83. Reg. No. 9,473.

Des. Pat. 142,864. DESIGN FOR A FACE GUARD FOR SEWING MACHINE OPERATORS. Patented Nov. 13, 1945. Guard may be adjustably secured to a sewing machine to prevent broken needles from striking the face of an operator. It may be quickly attached to or detached from machine. It consists of an elongated one-piece upright hanger having a downwardly inclined transparent plate secured to its lower end. (Owner) Jonas F. Imberman, 738 South Spalding Ave., Los Angeles, Calif. Groups 33—73; 35—83. Reg. No. 9,474.

Pat. 2,231,988. METALLIC SHOE TOE PROTECTOR. Patented Feb. 18, 1941. Protector is a narrow semi-circular strip of sheet metal with ear formed at each end. Ears are nailed to upper exposed edges of shoe sole, the protector encircling tip of the shoe toe. The lower edge is curved to fit between the toe of the shoe and the sole. (Owner) Salvatore Catania, 2062 Hoyt Ave., Fort Lee, N. J. Groups 31—32; 33—73; 40. Reg. No. 9,475.

Pat. 2,430,600. BEATER. Patented Nov. 11, 1947. Egg beater may be held and manipulated by one hand only. Depressing a plunger imparts rotary motion to a flywheel which drives a pair of conventional beaters in opposite directions. When pressure on plunger is released, gearing for effecting driving connection between flywheel and plunger is automatically disengaged, permitting flywheel to continue to revolve as a spring retracts plunger. Repeatedly depressing plunger increases the speed of the flywheel. (Owner) Fred C. Booth, 1108 Greenwood Cliff, Charlotte, N. C. Groups 34—41—99; 40. Reg. No. 9,476.

Des. Pat. 147,994. EGG COOKING AND SERVING CUP. Patented Nov. 25, 1947. An egg-shaped cup supported on flat base, in which an egg may be cooked and served. Made of heat-resistant plastic in variety of colors. May be used to serve boiled eggs in the shell or to hold candies or colored eggs as an Easter novelty. (Owner) Joseph L. Siessmayr, Box 392 AC-1A, Rt. 2, Mesa, Ariz. Groups 39—81; 40. Reg. No. 9,477.

Pat. 2,433,527. DRAPE HANGER. Patented Dec. 30, 1947. Combination drapery hanger and cornice support is capable of a wide range of adjustments so as to be easily adapted to various types and sizes of windows, doors, etc. The device includes a Z-shaped bracket which may be secured to either the right or left hand edge of a window. The bracket is connected to a drapery-supporting bar by a pair of adjustable arms. This permits both vertical and horizontal adjustment of the drapery bar as well as variation in the spacing of the drapery bar toward or away from the window. The invention further provides for the optional use of a cornice plate for concealing the upper edge of the drapery and its supporting instrumentalities. The cornice plate is carried on the outer end of a bolt which is threaded through a transverse hole in an arm carried by the outer flange of the bracket. (Co-owner) Leander F. Krause. Address correspondence to Robb & Robb, Woodward Bldg., Washington 5, D. C. Groups 25—62; 33—73; 40. Reg. No. 9,478.

Pat. 2,430,360. BATHING FLOAT WITH PROPELLING APPLIANCE. Patented Nov. 4, 1947. Float especially useful for handicapped persons may be propelled through the water by a person reclining or in outstretched position on the float. The float consists of an adjustable frame formed of separable sections, with the forward section forming a rest conforming to the shape of a person's body. The propulsion mechanism at the stern includes a pair of foot pedals with straps for holding the user's feet on the pedals during the pushing and pulling operations. Each pedal is pivoted on the inner end of a push-pull rod having a single blade on its rear end for steering and propulsion purposes. The pedals may be independently operated. When one of the levers is pushed rearwardly, its blade plows through the water in vertical position until it nears the end of its stroke. The blade then swings to horizontal position and becomes latched in such position as to permit the float to travel after the impulse. The blade remains in latched horizontal position until after it has passed midway of its return stroke and then gradually returns to vertical position. Springs tend to return the levers to their starting positions. (Owner) Paul E. Meyer, 646 Prospect Ave., Hartford, Conn. Group 39—49. Reg. No. 9,479.

Pat. 2,431,159. CAM ASSEMBLY FOR SCREW MACHINES. Patented Nov. 18, 1947. In this cam assembly a group of differently designed segmental cam members and cam spacers are clamped between a pair of circular plates which are held together by cap screws. A selected number, say five cams and one spacer, may be utilized, and this number may be varied to suit different operations. Only one of the circular plates is rigidly secured to a cam shaft to permit the other plate to be slid into and out of clamping engagement therewith. After installation on a shaft removal or replacement of any or all cam and spacer members may be accomplished without entailing complete disassembly by simply loosening the cap screws sufficiently to permit removal and insertion of the cam and spacer members. The inner arcuate marginal edge of each cam and spacer is of dovetail formation with teeth on opposite sides for interlocking engagement with similar teeth on the opposed marginal faces of the plates and a dovetail groove formed between the plates. (Owner) Roy W. Bates, Rockwood, Mich. Group 35—41—69. Reg. No. 9,480.

Pat. 2,429,288. FISHING POLE HOLDER. Patented Oct. 21, 1947. A holder for fishing poles may be clamped to edge of a boat or spiked into ground. A socket mounted for horizontal rotation on a pin (fixed to clamping member) supports a horizontal bar pivotally attached at its center to socket head. Spaced parallel arms extending from ends of the bar are provided with transverse grooves (at different angles) so that poles are seated obliquely over one arm with ends held under other arm. (Owner) Chant A. Miller, 620 South Riverside Drive, Winamac, Ind. Group 39—49. Reg. No. 9,481.

Pat. 2,117,884. BRACKET FOR ELECTRIC LAMPS. Patented May 17, 1938. This bracket may be removably attached to and used to support a conventional extension light (bulb, socket, and cord) in various positions. The bracket (which may be stamped from sheet metal) consists of a pair of spaced parallel plates, each having an opening for engaging the large and small ends, respectively, of the extension socket, with small openings communicating with the first openings for receiving a loop of the cord. These members are connected by a back plate carrying a suction cup for securing bracket to a flat surface. The lower extremity of the back portion is bent into a U to steady bracket against a supporting surface. (Owner) Henry W. Hapman, 2405 West McNichols, Detroit 21, Mich. Group 34—81. Reg. No. 9,482.

Pat. 2,226,609. MASSAGE APPARATUS. Patented Dec. 31, 1940. In this massaging device the applicator proper may consist of a sac-like member of rubber or other elastic material slipped over a U-shaped vibrator frame with the closed end of the sac in contact with the cross bar of the frame. Rocking motion and horizontal reciprocating motion are imparted to the frame by a suitable power source. To obtain a massage a person simply presses his face against the sac. The sac is provided with an opening for the nose. The device may be adapted for massaging various parts of the body. It may be placed on a table or mounted on a stand for barber shop or home use. Several modifications are shown. (Owner) Henry W. Hapman, 2405 West McNichols, Detroit 21, Mich. Group 39—91. Reg. No. 9,483.

Pat. 2,288,450. ACCELERATOR DEVICE. Patented June 30, 1942. Accelerator for motor vehicles is provided with a foot- and a leg-operated throttle. The operator may control the engine operation either by a foot pedal or by a side movement of knee or leg against a lever. The knee-operated throttle includes an elongated plate-like bracket attached to the steering post with an adjustable operating lever pivotally operated by knee of operator. An arm is connected to lever, and an adjustable slider is connected to the foot pedal to change the range of operation of the foot pedal by the lever. (Owner) Henry W. Hapman, 2405 West McNichols, Detroit 21, Mich. Group 38—31. Reg. No. 9,484.

Pat. 2,436,275. TEMPERATURE CONTROL SYSTEM. Patented Feb. 17, 1948. Semi-automatic control for hand-fired furnaces automatically checks draft on fire when heat rises beyond the set temperature. Draft regulator of furnace is connected by chain to a yoke made of metal having a lower coefficient of expansion than the column which it holds. When set temperature is reached, unequal expansion of yoke and column actuates a bimetallic disc which strikes a pawl, unlatching a hook which disengages a chain, closing the draft regulator so that the rate of combustion in the furnace is retarded. The thermostat is reset manually when the temperature falls below the set point. (Owner) Irvin E. Wiegers, 2243 Benton St., St. Louis 6, Mo. Group 33—66. Reg. No. 9,485.

Pat. 2,433,247. UTILITY RACK. Patented Dec. 23, 1947. Foldable clothes rack (of wood or plastic) for supporting various articles of clothing has a supporting arm which is capable of being swung from horizontal to vertical position to conserve space. When the arm is swung to vertical position, articles of clothing supported by conventional wire garment hangers depending from the arm will overlie each other in substantially flat relationship. The rack consists of a short support, for attachment to a wall, having a tongue on its upper end fitted into the bifurcated end of the arm and held by a pin to permit swinging movement of the arm. The arm is held in vertical position in axial alignment with the support by a cooperating spring detent and keeper in the end of the tongue and bifurcation. A slight outward pull on the arm will displace detent from keeper. Shoulders at the base of the tongue hold the arm in horizontal position. (Owner) Ralph E. Stowell, Wellington, Tex. Groups 25—41; 33—49; 39—81. Reg. No. 9,486.

Pat. 2,273,881. VARIABLE AIRFOIL. Patented Feb. 24, 1942. To provide increased lifting power, the conventional wing structure is open to provide a chamber for an auxiliary airfoil or flap so seated that its trailing edge closes the entrance to the chamber. The flap rides on a downwardly curved interior track and, when extended, the flap assumes an inclined position as a continuation of the upper and lower surface of the main wing without break. The flap is cable operated and may be projected into the position best suited for normal take off and climbing. Naumann Aircraft Corporation, 226 West Spruce St., Inglewood, Calif. Group 37—22. Reg. No. 9,487.

Pat. 2,426,785. VARIABLE AIRFOIL. Patented Sept. 2, 1947. This auxiliary airfoil, like that described in Patent 2,273,881, is housed within the conventional wing. This flap, however, is composed of a number of rigidly interconnected sections movable to various positions in and out of a chamber provided within the wing to increase

the curvature and area of the combined airfoils for additional lifting power. A gap is formed between each two sections allowing the sections to be moved rearwardly and inclined downwardly with respect to the wing to be exposed to the airflow depending on the lift coefficient desired. The unexposed sections remain within the chamber and do not add to the drag coefficient. (Owner) Naumann Aircraft Corporation, 226 West Spruce St., Inglewood, Calif. Group 37—22. Reg. No. 9,488.

Pat. 2,430,114. ARTIFICIAL BAIT. Patented Nov. 4, 1947. Bait carries spring-driven propellers on opposite sides, one larger than the other, causing bait to move slowly in a circular path through the water to simulate movements of a live fish. Bait consists of a hollow body with the propellers mounted on a common shaft. A spring with one end secured to the shaft is wound therearound by a key. Other end of spring is secured to a fixed shaft on which the spring has a tendency to wind. A spring arm frictionally engages and retards movement of the spring as it winds on fixed shaft. Top side of bait at center has an eye for attachment to fishing line. Front, rear, and bottom of bait are provided with fishhooks. (Owner) A. J. R. Helmus, Box 570, Spartanburg, S. C. Groups 39—49; 40. Reg. No. 9,489.

Pat. 2,419,746. ERASER. Patented Apr. 29, 1947. A detachable eraser (preferably of rubber) for pencil, having a sponge rubber area for moistening purposes or for turning pages. Lower half of eraser is hollow and fits over end of pencil. Upper half tapers to erasing tip, with flat faces. Sponge rubber is anchored in central bore, extending through and slightly beyond one face of tip. (Owner) Rosario Veria, 317 South Olive St., Los Angeles 13, Calif. Groups 30—51; 39—51—52; 40. Reg. No. 9,490.

Pat. 2,431,330. TOILET FIXTURE. Patented Nov. 25, 1947. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Sheet metal urinal for use on ships or other places where vitreous types are impracticable because of weight and fragility. Comprises a horizontal bowl and a vertical apron pressed as a single unit from sheet metal, with a combined reenforcing and flushing tube extending continuously around the edges of bowl and apron. A chamber inside top of apron connects an inlet fitting with the tube. Tube is perforated at inner part to direct flushing liquid against inner surface of bowl and apron. The chamber is also perforated to direct flushing liquid against apron in back of the chamber. This construction makes the urinal more sanitary and less expensive than ordinary urinals. (Owner) Alford C. Johnson, 140 Woodside Ave., Winthrop 52, Mass. Group 33—61. Reg. No. 9,491.

Des. Pat. 147,788. SUITCASE SEAT. Patented Nov. 4, 1947. Suitcase of rigid construction is designed with a seat for use when desired. (Owner) P. J. Gormley, 306 High St., Frankfort, Ky. Group 31—61. Reg. No. 9,492.

Pat. 2,429,019. MAIL BAG PROTECTOR. Patented Oct. 14, 1947. Cape-like protector is adapted for attachment to a postman's bag of the type having a shoulder strap with buckles near opposite ends for coupling strap to bag. The protector effectively shields contents of bag from rain, etc., without interfering with access by postman to contents. It consists of a light-weight sheet of waterproof material (wider at bottom than at top) with a strap inserted in a hem at the top. When attached, hem and strap overlie strap of bag with opposite ends of protector strap inserted through the buckles. Top of sheet is wider than the distance between the buckles to permit it to be gathered or shirred when being attached so that the hem will lie between the buckles. (Owner) Raymond W. Freed, 605 West Buckthorn St., Inglewood, Calif. Groups 23—86; 39—81; 40. Reg. No. 9,493.

Pat. 2,430,765. REPAIR DEVICE FOR FLUSH TANKS. Patented Nov. 11, 1947. Valve repair fixture may be quickly inserted as a unit to repair a leaky valve of a flush tank. It consists of a short pipe having a flared seat on its upper end for a ball valve, a substantially L-shaped overflow tube integrally formed with and communicating with the side of the pipe, and an actuating rod extending downwardly inside the tube for lifting the ball off the seat. The pipe near its lower end has an annular shoulder on its outer surface adapted to seat on a gasket placed on the old valve seat, which projects upwardly inside tank. Short straps, each carrying a thumb screw, are provided for detachably clamping the shoulder to the old seat when securing fixture to tank. (Owner) W. A. Garrigan, 820 North Pearl St., Beaumont, Tex. Group 33—61. Reg. No. 9,494.

Pat. 2,434,242. SPACE MISER CLOTHES RACK. Patented Jan. 13, 1948. This collapsible garment rack comprises a support having a channel which acts as a compartment for a resiliently and slidably mounted bar equipped with hooks. The bar, which conforms to the shape of the channel, may be folded back so that its underside is flush with the outer surface of the support, concealing the hooks from view within the compartment. The rack is adapted for use in airplane cabins, railway cars, boats, automobiles, and other places where conservation of space is essential. A modification of the rack is shown. (Owner) B. P. Hermes, 1620 Lemon St., Cottage "E", Alhambra, Calif. Groups 25—99; 40. Reg. No. 9,495.

Pat. 2,429,725. ENGINE. Patented Oct. 28, 1947. This patent relates to internal combustion engine systems in which power generated by the combustion of fuel is utilized in a turbine and in which a compressor unit directly associated with the combustion chamber is used to furnish and compress air necessary for combustion. The gases under high pressure are stored in a tank and then supplied to the turbine. The turbine shaft drives the compressor piston. An air admission slide valve on the side of the compressor cylinder controls admission of the quantity of air to be compressed. A centrifugal governor carried by flywheel on turbine shaft is operatively connected to the slide valve and fuel pump. The action of the governor in response to engine speed adjusts the valve to control the admission of air and simultaneously controls the amount of fuel injected into the combustion chamber. Pressure operated valves are provided for admitting air from compressor into combustion chamber and discharge of exhaust gases from combustion chamber into tank. (Owner) Frank Kucera, 512 North 14th St., Lincoln 8, Nebr. Group 35—19. Reg. No. 9,496.

Correction

Patent of the Hoover Company for an ice tray, Reg. No. 9,123, appearing in OFFICIAL GAZETTE of February 17, 1948, as Pat. No. 1,993,614, should bear Pat. No. 1,933,614.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 13, 1948

[VOL. 609. NO. 2]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 2

RECEPTACLES

Ser. No. 507,202. LUCE MANUFACTURING COMPANY, Kansas City, Mo. Filed Aug. 10, 1946.

Take-me-along

FOR VANITY CASES HAVING A WOOD FRAME BASE COVERED WITH PAPER OR CLOTH AND SOLD EMPTY.

Claims use since Jan. 1, 1939.

Ser. No. 512,652. DURANOL PRODUCTS, INC., Brooklyn, N. Y. Filed Nov. 15, 1946.

DUR-A-LIFT

Applicant is the owner of Reg. No. 335,139.

FOR HAT BOXES, SHOE BOXES, FUR BOXES, LINGERIE BOXES, TISSUE BOXES, POWDER BOXES, HOSE BOXES, TRINKET BOXES, UTILITY BOXES, FLOWER BOXES, COLLAR BOXES, SEWING AND KNITTING BOXES, MADE OF PLASTIC, PLASTIC COMPOSITION, FIBER, AND/OR WOOD.

Claims use since Sept. 25, 1946.

Ser. No. 523,052. CAMPBELL ROBINSON BATCHELLER, doing business as Robinwood, New York, N. Y. Filed May 26, 1947.

ROBINWOOD

FOR CHESTS AND BOXES, FOR STORAGE OR GENERAL UTILITY PURPOSES, SALAD BOWLS, AND TRAYS, MADE OF WOOD OR OF WOOD AND VENEER.

Claims use since Sept. 9, 1941.

Ser. No. 523,316. BERNARD H. KAMINER, New York, N. Y. Filed May 31, 1947.

SHU-TOGS

No claim is made to the word "Shu" apart from the mark.

FOR PROTECTIVE KNITTED FABRIC BAGS FOR SHOES.

Claims use since Apr. 30, 1947.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 514,378. RICARDO METAL MFG. CO., Denver, Colo. Filed Dec. 16, 1946.

FOR ANIMAL EQUIPMENT — NAMELY, BITS, SPURS, ALUMINUM SADDLE AND HARNESS ORNAMENTS, AND BUCKLES.

Claims use since Nov. 1, 1941.

Ser. No. 516,474. PHILIP FLORIN, INC., New York, N. Y. Filed Jan. 28, 1947.

FOR WALLETS.

Claims use since Jan. 20, 1947.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 519,976. PEERLESS PACKERS, New York, N. Y. Filed Apr. 1, 1947.

VEGTABATH

FOR PREPARATION, IN TABLET FORM, WHICH IS DISSOLVED IN WATER AND USED FOR WASHING FRUIT AND VEGETABLES.
Claims use since Oct. 5, 1946.

Ser. No. 521,937. LEONARD J. SPRANGER, doing business as L. Spranger Products Co., Oak Park, Ill. Filed May 5, 1947.

GRE-SORBENT

FOR CLEANER, IN POWDER FORM, FOR OILS AND GREASES.
Claims use since June 7, 1940.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 474,992. CHANDLER-EVANS CORPORATION, South Meriden, Conn., assignor to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey. Filed Oct. 6, 1944.

CECO-PLUG

The word "Plug" is disclaimed.
FOR CONTAINERS CARRYING DESICCATING MATERIAL, OR OTHER AGENTS IN THE NATURE OF CHEMICALS, TO BE POSITIONED IN CYLINDERS OF IDLE INTERNAL COMBUSTION ENGINES, OR OTHER CHAMBERS, TO PREVENT CORROSION OR OTHER DESTRUCTIVE EFFECTS OF VAPORS OR GASES.
Claims use since Feb. 29, 1944.

Ser. No. 497,371. CORN PRODUCTS REFINING COMPANY, New York, N. Y. Filed Feb. 28, 1946.

DEXTROPUR

FOR DEXTROSE USED FOR PHARMACEUTICAL AND INDUSTRIAL PURPOSES.
Claims use since Jan. 25, 1946.

Ser. No. 504,896. GREAT LAKES CARBON CORPORATION, Chicago, Ill., and Los Angeles, Calif. Filed July 1, 1946.

DICALITE

FOR COMPOSITIONS OF INERT MINERAL ABSORBENTS AND HYGROSCOPIC SALTS, IN POWDERED OR LUMP FORM, FOR DEHUMIDIFYING AIR AND OTHER GASES.
Claims use since June 1, 1946.

Ser. No. 507,411. SOCIETE MURY-EXPORTATION, Paris, France. Filed Aug. 14, 1946.

NARCISSE BLEU

FOR PERFUME, LIPSTICK, HAND AND FACE LOTION, HAND AND FACE CREAM, AND TOILET WATER.
Claims use since Aug. 22, 1940.

Ser. No. 512,671. RICHARD HUDNUT, New York, N. Y. Filed Nov. 15, 1946.

BRIGHT FLIGHT

FOR FACE POWDER, ROUGE, AND LIPSTICK.
Claims use since Aug. 15, 1946, on lipstick; and since Sept. 25, 1946, on face powder and rouge.

Ser. No. 518,583. THE ANDREW JERGENS COMPANY, Cincinnati, Ohio. Filed Mar. 6, 1947.

PINK FROSTING

No claim is made for the word "Pink" apart from the mark as shown.
FOR FACE POWDER.
Claims use since Dec. 5, 1946.

Ser. No. 520,035. THE HIGLEY CHEMICAL COMPANY, Dubuque, Iowa. Filed Apr. 2, 1947.

Dead-Lite

No request is herein made for registration of the word "Dead" apart from the mark as shown.
FOR LIQUID INSECTICIDE COMPOSITION.
Claims use since Oct. 27, 1931.

Ser. No. 521,252. GOODWIN LABORATORIES, INC., New York, N. Y. Filed Apr. 24, 1947.

TICKAWAY

FOR INSECTICIDES.
Claims use since Apr. 22, 1947.

Ser. No. 521,476. SOCIETE A RESPONSABILITE LIMITEE: COTTAN, PARFUMEUR, Asnieres, France. Filed Apr. 28, 1947. Under 10-year proviso.

Cottan

FOR PERFUME.
Claims use since 1879.

Ser. No. 523,768. COMMANDITAIRE VENNOOTSCHAP PENTO COSMETIC, Amsterdam, Netherlands. Filed June 7, 1947.

CONOX

FOR EAU DE COLOGNE, PERFUMERY, COSMETICS AND TOILET ARTICLES—NAMELY, DENTIFRICES IN PASTE, POWDER AND LIQUID FORM, MOUTH WASH, VANISHING CREAM, COLD CREAM, HAND JELLY, LIQUID CREAM, TALCUM POWDER, BABY POWDER, MASCARA, CLEANSING CREAM, SKIN CREAM, LIQUID AND POWDER SHAMPOO, BRILLIANTINE IN SOLID AND LIQUID FORM, AFTER SHAVE LOTIONS, FACE LOTION, FACE POWDER, HAIR TONIC, LIPSTICKS, COMPACT ROUGE AND CREAM ROUGE.
Claims use since April 1946.

Ser. No. 523,901. THE MABEX CO., Philadelphia, Pa. Filed June 10, 1947.

MABEX

FOR MOTH CAKES AND CRYSTALS, AND DEODORANTS.

PLASTI-CARBON

No claim is made to the word "Carbon" apart from the mark.
FOR CARBON PAPER.
Claims use since May 30, 1946.

Ser. No. 535,738. OLD TOWN RIBBON & CARBON CO., INC., Brooklyn, N. Y. Filed Sept. 25, 1947. Under section 2f of the act of 1946.

Hi-test

Applicant claims ownership of registration No. 362,652.
FOR CARBON PAPER.
Claims use since Oct. 15, 1937.

Ser. No. 535,739. OLD TOWN RIBBON & CARBON CO., INC., Brooklyn, N. Y. Filed Sept. 25, 1947. Under section 2f of the act of 1946.

NOTACK

Applicant claims ownership of registration No. 355,809.
FOR CARBON PAPER.
Claims use since Dec. 10, 1936.

Ser. No. 539,023. CODO MANUFACTURING CORPORATION, Chicago, Ill., and Coraopolis, Pa. Filed Oct. 25, 1947. Under section 2f of the act of 1946.

KANT-STIK

Applicant claims ownership of registration No. 370,012.
FOR CARBON PAPER.
Claims use since June 16, 1938.

Ser. No. 540,173. COLUMBIA RIBBON & CARBON MANUFACTURING COMPANY, INC., Glen Cove, N. Y. Filed Nov. 5, 1947.

Commander

Applicant claims ownership of registration No. 276,603.
FOR CARBON PAPER.
Claims use since April 1923.

Ser. No. 541,645. COLUMBIA RIBBON & CARBON MANUFACTURING COMPANY, INC., Glen Cove, N. Y. Filed Nov. 19, 1947.

Colitho

Applicant claims ownership of registration No. 430,108.
FOR INK REPELLANT FLUIDS FOR LITHOGRAPHIC REPRODUCTION, LITHOGRAPHIC INKS, LITHOGRAPHIC TYPEWRITING RIBBONS, AND LITHOGRAPHIC CARBON PAPER.
Claims use since June 15, 1945.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 521,180. FALCON PRODUCTS COMPANY, Jersey City, N. J. Filed Oct. 7, 1947.

FALCON

FOR PLASTIC TILES FOR CONSTRUCTION PURPOSES, AND PLASTIC TILE CORNICES, PLASTIC TILE WALL BASES, PLASTIC TILE ENGAGING STRIPS.
Claims use since Mar. 29, 1947.

Ser. No. 528,979. ACME BRICK COMPANY, Fort Worth, Tex. Filed July 21, 1947. Under section 2f of the act of 1946.

CASTILIAN

Applicant claims ownership of registration No. 239,966.
FOR BRICK.
Claims use since Feb. 1, 1927.

Ser. No. 530,126. SPA PRODUCTS, INC., Hot Springs, Ark. Filed July 31, 1947.

SPACO
MAGIC-MIX

Applicant disclaims the word "Mix" apart from the mark.
FOR MIXTURE OF POWDERED ASPHALT IN DRY FORM ADAPTED TO BE MIXED WITH A LIQUID CARRIER OR SOLVENT.
Claims use since June 30, 1947.

Ser. No. 530,127. SPA PRODUCTS, INC., Hot Springs, Ark. Filed July 31, 1947.

SPACO

FOR MIXTURE OF POWDERED ASPHALT IN DRY FORM ADAPTED TO BE MIXED WITH A LIQUID CARRIER OR SOLVENT.
Claims use since June 30, 1947.

Ser. No. 531,195. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn. Filed Aug. 13, 1947.

TERALITE

FOR METAL DIVIDING STRIPS FOR CEMENT AND OTHER COMPOSITION FLOORS.
Claims use since July 8, 1947.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 531,038. W. J. HOLLIDAY & CO., Indianapolis, Ind. Filed Aug. 11, 1947. Under section 2f of the act of 1946.

SANDOW

Applicant claims ownership of registration No. 294,447.
FOR ALLOY STEEL.
Claims use since June 1, 1930.

CLASS 15

OILS AND GREASES

Ser. No. 527,421. JENKIN-GUERIN INC., St. Louis, Mo. Filed July 5, 1947.

Casminoyl

Applicant claims ownership of registration No. 230,714.
FOR LUBRICATING OILS AND GREASES.
Claims use since Mar. 7, 1927.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 528,853. ANDERSEN SPECIALTY MFG. CORP., Chicago, Ill. Filed July 18, 1947. Under section 2f of the act of 1946.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Reg. No. 306,419. Registered Sept. 19, 1933. HENRY K. BARNES COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant, present location Salem, Mass.

GAM-OIL

The word "Oil" is disclaimed.
FOR LACE LEATHER.
Claims use since July 1903.

Reg. No. 373,769. Registered Dec. 19, 1939. FOUKE FUR COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

MATARA

FOR FURS, SKINS, HIDES, AND PELTS.
Claims use since Aug. 22, 1939.

Reg. No. 375,005. Registered Feb. 6, 1940. THE GENERAL TIRE & RUBBER COMPANY, Akron, Ohio, a corporation of Ohio. Republished by registrant.

MILON

FOR CAMELBACK, A STRIP OF UNVULCANIZED RUBBER COMPOUND FOR RETREADING PNEUMATIC AUTOMOBILE TIRES.
Claims use since Aug. 22, 1938.

Reg. No. 382,507. Registered Oct. 29, 1940. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

LUSTRON

FOR ARTIFICIAL RESINS IN SOLID FORM SUITABLE FOR MOLDING, CASTING, OR EXTRUDING.
Claims use since May 28, 1940.

Reg. No. 382,673. Registered Nov. 5, 1940. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

SAFLEX

FOR PLASTIC INTERLINER FOR SAFETY GLASS.
Claims use since May 29, 1940.

Reg. No. 395,626. Registered June 2, 1942. NORTHRUP, KING & CO., Berkeley, Calif., a corporation of Minnesota. Republished by registrant, present location Minneapolis, Minn.

FOR FIELD AND GARDEN SEEDS AND FARM AND GRASS SEEDS.
Claims use since August 1938.

Reg. No. 411,952. Registered Feb. 13, 1945. KIMBERLY-CLARK CORPORATION, Neenah, Wis., a corporation of Delaware. Republished by registrant.

Kimpreg

FOR PAPER AND CREPED CELLULOSE WADDING, BOTH IMPREGNATED WITH PHENOLIC RESIN PLASTIC, AND USED FOR APPLYING TO SURFACES OF ARTICLES OF MANUFACTURE.
Claims use since May 27, 1943.

Reg. No. 413,605. Registered May 1, 1945. ASSOCIATED SEED GROWERS, INC., New Haven, Conn., a corporation of Connecticut. Republished by registrant.

JEROME B RICE SEED CO

The words "Seed Co." are disclaimed.
FOR GARDEN AND FIELD SEEDS, BULBS, AND PLANTS.
Claims use since on or about Feb. 1, 1936.

Reg. No. 414,446. Registered June 12, 1945. FOUKE FUR COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

SAFARI

FOR FUR SKINS, HIDES, AND PELTS.
Claims use since Aug. 16, 1934.

Reg. No. 418,557. Registered Jan. 1, 1946. FOUKE FUR COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

FOR FUR SKINS, HIDES, AND PELTS.
Claims use since Dec. 10, 1919.

Reg. No. 425,543. Registered Nov. 26, 1946. GERMAIN SEED AND PLANT COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

GOLDEN WEST

FOR VEGETABLE AND FLOWER SEEDS.
Claims use since Nov. 30, 1943.

Reg. No. 425,736. Registered Dec. 3, 1946. GERMAIN SEED AND PLANT COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

PREMIUM

FOR GRASS SEED.
Claims use since Nov. 30, 1943.

Reg. No. 426,997. Registered Jan. 21, 1947. ASSOCIATED SEED GROWERS, INC., New Haven, Conn., a corporation of Connecticut. Republished by registrant.

The outline of the packet shown on the drawing is disclaimed.
FOR GARDEN AND FIELD SEEDS, BULBS, AND PLANTS.
Claims use since on or about April 4, 1946.

CLASS 2

RECEPTACLES

Reg. No. 365,057. Registered Feb. 21, 1939. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

DELTAGRIP

FOR PAPER BAGS.
Claims use since Sept. 28, 1938.

Reg. No. 372,807. Registered Nov. 14, 1939. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

The words "Waterproof Bags" are disclaimed.
FOR BAGS MADE FROM LAMINATED MATERIAL COMPOSED OF LAYERS OF TEXTILE AND PAPER.
Claims use since Jan. 3, 1939.

Reg. No. 379,830. Registered July 30, 1940. DILLMAN INDUSTRIES, INC., Caruthersville, Mo., a corporation of Delaware. Republished by registrant, present location Memphis, Tenn.

FOR SHIPPING CONTAINERS—TO-WIT, BOXES, MADE OF WOOD, VENEER, CORRUGATED BOARD OR A COMBINATION OF CORRUGATED BOARD AND WOOD.
Claims use since about Mar. 1, 1939.

Reg. No. 408,023. Registered July 11, 1944. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

B-Tex

FOR WOVEN COTTON FABRIC BAGS.
Claims use since about Dec. 31, 1943.

Reg. No. 410,221. Registered Nov. 14, 1944. ZELLERBACH PAPER COMPANY, San Francisco, Calif., a corporation of California. Republished by registrant.

Lockerseal

FOR CARTONS.
Claims use since May 1, 1944.

Reg. No. 416,343. Registered Sept. 4, 1945. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

BEMIS

FOR BAGS AND SACKS MADE OF PAPER, FABRIC, LAMINATED FABRIC AND PAPER, AND/OR OTHER MATERIALS.
Claims use since 1881.

Reg. No. 416,879. Registered Oct. 2, 1945. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

BEMITEX

FOR BAGS AND SACKS MADE OF TEXTILE MATERIALS.
Claims use since July 1, 1925.

Reg. No. 422,691. Registered Aug. 6, 1946. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

FOR WATERPROOF SHIPPING BAGS OF COMPOSITE MATERIAL USUALLY FABRIC LINED WITH ONE OR MORE LAYERS OF PAPER, WHICH LAYER OR LAYERS OF PAPER HAVE A WATERPROOF ADHESIVE AS A BINDING AGENT.
Claims use since Jan. 3, 1939.

Reg. No. 424,440. Registered Oct. 8, 1946. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

AQUATEX

FOR PAPER BAGS AND SACKS.
Claims use since Sept. 11, 1944.

Reg. No. 424,930. Registered Oct. 29, 1946. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

PARCHLINED

FOR WATERPROOF BAGS OF FABRIC WITH LINERS.
Claims use since Jan. 1, 1936.

Reg. No. 424,933. Registered Oct. 29, 1946. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

BEMIS
A

FOR FABRIC BAGS AND SACKS.
Claims use since 1908.

Reg. No. 425,551. Registered Nov. 26, 1946. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

TRY-SAX

The word "Sax" is disclaimed.
FOR FABRIC BAGS AND SACKS.
Claims use since about January 1941.

Reg. No. 426,740. Registered Jan. 7, 1947. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

Textite

FOR BAGS MADE OF TEXTILE MATERIAL LAMINATED OR COATED WITH OTHER MATERIALS.
Claims use since Aug. 6, 1946.

Reg. No. 426,940. Registered Jan. 21, 1947. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

BEMISAX

FOR FABRIC AND PAPER BAGS AND SACKS FOR CONTAINING PULVERIZED OR GRANULAR MATERIAL AND THE LIKE.
Claims use since July 1, 1929.

Reg. No. 427,085. Registered Jan. 28, 1947. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

BEMITINT

FOR FABRIC BAGS.
Claims use since January 1940.

Reg. No. 427,086. Registered Jan. 28, 1947. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

BEMILIN

FOR FABRIC BAGS.
Claims use since May 1940.

Reg. No. 429,910. Registered May 20, 1947. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

VISISAC

FOR OPEN-MESH BAGS.
Claims use since Nov. 26, 1946.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Reg. No. 410,607. Registered Dec. 5, 1944. PIONEER SUSPENDER COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

LOK-SEAM

The word "Lok" is disclaimed.
FOR WALLETS AND BILLFOLDS.
Claims use since Feb. 25, 1944.

Reg. No. 427,573. Registered Feb. 11, 1947. PIONEER SUSPENDER COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

SIR

FOR TRAVEL CASES.
Claims use since May 17, 1946.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Reg. No. 382,688. Registered Nov. 5, 1940. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

Chipso

FOR SOAP FLAKES AND GRANULES.
Claims use since Sept. 17, 1920.

Reg. No. 392,112. Registered Dec. 9, 1941. JOHN HUDSON MOORE, INC., New York, N. Y., a corporation of New York. Republished by registrant.

SPORTSMAN

FOR HAND SOAP AND SHAVING SOAP.
Claims use since July 7, 1941.

Reg. No. 410,282. Registered Nov. 21, 1944. ACME CHEMICAL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

PEROXO

FOR COMBINED CHEMICAL CLEANSER AND SOAP IN POWDERED FORM.
Claims use since Jan. 1, 1927.

Reg. No. 410,603. Registered Dec. 5, 1944. GRAY COMPANY, INC., Minneapolis, Minn., a corporation of South Dakota. Republished by registrant.

G-A

FOR PREPARATION COMPRISING AN ABSORBENT POWDERED MATERIAL RESEMBLING FULLER'S EARTH, ADAPTED TO REMOVE OIL AND GREASE FROM FLOORS BY ABSORPTION, AND TO PREVENT SLIPPING.
Claims use since November 1938.

Reg. No. 413,266. Registered Apr. 17, 1945. U. S. SANITARY SPECIALTIES CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Sarene

FOR LATHER OIL HAND CLEANER.
Claims use since May 19, 1944.

Reg. No. 421,370. Registered May 28, 1946. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

LILT

FOR SOAP.
Claims use since July 30, 1945.

Reg. No. 421,739. Registered June 18, 1946. ACME CHEMICAL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

SCRAM

FOR SURFACE CLEANER IN PASTE FORM, ALSO USABLE AS SOAP.
Claims use since Apr. 29, 1939.

Reg. No. 421,818. Registered June 18, 1946. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

STEROX

FOR SYNTHETIC SOLID DETERGENTS.
Claims use since about Oct. 9, 1945.

Reg. No. 422,361. Registered July 16, 1946. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

PROCTO

FOR SUDSING CLEANER, CLEANSER, AND DETERGENT.
Claims use since Oct. 31, 1945.

Reg. No. 423,995. Registered Sept. 17, 1946. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

BIZ

FOR SUDSING CLEANER, CLEANSER, AND DETERGENT.
Claims use since Dec. 1, 1945.

Reg. No. 423,996. Registered Sept. 17, 1946. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

KETCH

FOR SUDSING CLEANER, CLEANSER, AND DETERGENT.
Claims use since Dec. 1, 1945.

Reg. No. 423,997. Registered Sept. 17, 1946. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

SKURRY

FOR SUDSING CLEANER, CLEANSER, AND DETERGENT.
Claims use since Dec. 1, 1945.

Reg. No. 424,339. Registered Oct. 1, 1946. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

TIDE

FOR SUDSING, SOAP-LIKE DETERGENTS IN SOLID (NON-LIQUID) FORM FOR HOUSEHOLD AND LAUNDRY PURPOSES.
Claims use since Oct. 9, 1945.

Reg. No. 427,126. Registered Jan. 28, 1947. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

ROCKET

FOR SUDSING CLEANER, CLEANSER AND DETERGENT.
Claims use since Feb. 29, 1932.

Reg. No. 429,548. Registered May 6, 1947. THE CARBORUNDUM COMPANY, Niagara Falls, N. Y., a corporation of Delaware. Republished by registrant.

CARBORUNDUM

The words "Trade Mark" are disclaimed.
FOR MOLDED ABRASIVE ARTICLES—NAMELY, BLOCKS, BRICKS, HONES, STICKS, STONES, DISCS AND WHEELS; ABRASIVE COATED PRODUCTS—NAMELY, ABRASIVE COATED PAPER, ABRASIVE COATED CLOTH, AND ABRASIVE COATED SHEET FIBER; AND ABRASIVE GRAINS AND POWDERS.
Claims use since November 1944 for molded abrasive articles; since July 1945 for abrasive coated products; and since November 1945 for abrasive grains and powders.

CLASS 5

ADHESIVES

Reg. No. 413,037. Registered Apr. 3, 1945. I. F. LAUCKS, INC., Seattle, Wash. Republished by Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware.

Speedbond

FOR GLUE.
Claims use since Nov. 16, 1944.

Reg. No. 416,431. Registered Sept. 11, 1945. CORK IMPORT CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant, present location Englewood, N. J.

NOVOID

FOR WATERPROOF ADHESIVE CEMENTS.
Claims use since on or about June 1933.

Reg. No. 428,806. Registered Apr. 1, 1947. VELSICOL CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

CORESIN

FOR CORE OILS USED AS BINDERS IN MOLDING OPERATIONS.
Claims use since Feb. 1, 1946.

Reg. No. 429,906. Registered May 20, 1947. MIRACLE ADHESIVES CORPORATION, Newark, N. J., a corporation of New Jersey. Republished by registrant.

Miracle

FOR ADHESIVES FOR HOUSEHOLD OR INDUSTRIAL USES MADE OF RESINOUS MATERIALS, RUBBER PRODUCTS, STARCHES OR GLUES.
Claims use since on or about June 1938.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 183,160. Registered Apr. 22, 1924. S. C. JOHNSON & SON, Racine, Wis. Republished by S. C. Johnson & Son, Inc., Racine, Wis., a corporation of Wisconsin.

JOHNSON'S

FOR LIQUID COMPOUND FOR REMOVING CARBON DEPOSITS FROM THE CYLINDERS AND ASSOCIATED PARTS OF INTERNAL-COMBUSTION ENGINES.
Claims use since September 1916.

Reg. No. 255,743. Registered Apr. 30, 1929. ACME CHEMICAL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

KLOMINE

FOR DISINFECTANT, ANTISEPTIC, AND GERMICIDE PREPARATION.
Claims use since February 1923.

Reg. No. 328,691. Registered Oct. 1, 1935. HOSPITAL LIQUIDS, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

FILTRAIR

FOR INTRAVENOUS AND SUBCUTANEOUS SOLUTIONS, PARTICULARLY RINGER'S SOLUTIONS WITH AND WITHOUT PROCAINE BORATE; AND ALL THE GOODS NAMED IN SAID REGISTRATION.
Claims use since Mar. 19, 1935.

Reg. No. 351,665. Registered Nov. 2, 1937. E. DALTROFF & CIE., doing business as Parfumerie Caron, Paris, France, assignor to Caron Corporation, New York, N. Y., a corporation of New York. Republished by Caron Corporation, New York, N. Y., a corporation of New York.

FRENCH CANCAN

The word "French" is disclaimed.
FOR PERFUME.
Claims use since April 1936.

Reg. No. 361,932. Registered Nov. 8, 1938. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

AURAGREEN

FOR DYE PREPARATION WHICH IS APPLIED TO GRASS FOR BROWN PATCH CONTROL.
Claims use since Mar. 2, 1937.

Reg. No. 363,737. Registered Jan. 3, 1939. JAMES L. YOUNGHUSBAND, Chicago, Ill. Republished by registrant.

GAY BANDIT

FOR LIPSTICK, ROUGE, FACE POWDER, EYELASH AND EYEBROW MASCARA, PADS IMPREGNATED WITH DEODORANT AND ANTI-PERSPIRANT LOTION, CREAMS FOR THE HANDS AND FACE, CLEANSING PADS IMPREGNATED WITH LOTION; PREPARATIONS FOR SKIN, HAIR, AND FINGER NAILS; AND PERFUMES.
Claims use since Apr. 20, 1937.

Reg. No. 368,050. Registered June 6, 1939. U. S. STANDARD PRODUCTS COMPANY, Woodworth, Wis., a corporation of Wisconsin. Republished by registrant.

Morome

FOR PREPARATION IN THE FORM OF A SIRUP, ELIXIR, AND IN TABLET AND CAPSULE FORM, ALL CONTAINING IRON AND COPPER, AND FOR USE IN TREATING ANEMIC CONDITIONS AND AS A TONIC.
Claims use since Dec. 19, 1938.

Reg. No. 380,462. Registered Aug. 20, 1940. WRIGHT & LAWRENCE, INC., Chicago, Ill. Republished by The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio.

Best Man

FOR AFTER-SHAVING LOTION AND TALCUM POWDER.
Claims use since Sept. 15, 1939.

Reg. No. 380,505. Registered Aug. 20, 1940. THE GROSS PHOTO SUPPLY COMPANY, Toledo, Ohio, a corporation of Ohio. Republished by registrant.

GOLBLEND

FOR DEVELOPING SOLUTION USED IN PHOTOGRAPHY.
Claims use since on or about Sept. 1, 1937.

Reg. No. 381,067. Registered Sept. 10, 1940. HOSPITAL LIQUIDS, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

CHORIONE

FOR ANTERIOR PITUITARY-LIKE SEX HORMONES, CHORIONIC GONADATROPHIN IN POWDERED FORM OR IN SOLUTIONS OF DISTILLED WATER, FOR TREATMENT OF MENORRHAGIA, METRORRHAGIA, DYSMENORRHEA, HYPOGONADISM, HABITUAL ABORTION, UNDESCENDED TESTES, AND STERILITY OF THE MALE.
Claims use since Oct. 8, 1937.

Reg. No. 381,789. Registered Oct. 8, 1940. CAMPANA CORPORATION, Batavia, Ill. Republished by Campana Sales Company, Batavia, Ill., a corporation of Delaware.

OLD SOUTH

FOR TOILET WATERS, COLOGNES, AND PERFUMERY.
Claims use since Feb. 22, 1940.

Reg. No. 382,886. Registered Nov. 12, 1940. THE DAVIES-YOUNG SOAP COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

TIK

FOR PASTE-SHAMPOO.
Claims use since July 12, 1940.

Reg. No. 388,122. Registered June 10, 1941. GRAY COMPANY, INC., Minneapolis, Minn., a corporation of South Dakota. Republished by registrant.

VITALENE

FOR SOLVENT IN THE FORM OF A LIQUID TO BE USED AS A GUM SOLVENT IN WASHING OUT ENGINES.
Claims use since Feb. 3, 1939.

Reg. No. 397,571. Registered Sept. 8, 1942. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

PETROPON

FOR HYDROCARBON POLYMERS FOR USE IN THE INDUSTRIAL ARTS.
Claims use since on or about Apr. 24, 1942.

Reg. No. 398,075. Registered Oct. 6, 1942. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

D.P.SOLUTION

The word "Solution" is disclaimed.
FOR CHEMICAL ADJUVANTS FOR LACQUERS, SHELLACS, NITROCELLULOSE SOLUTIONS, AND OTHER COATING COMPOSITIONS, PARTICULARLY ADJUVANTS FOR PREVENTING DETERIORATION OF SUCH COATING COMPOSITIONS ON STANDING.
Claims use since about May 6, 1942.

Reg. No. 398,170. Registered Oct. 13, 1942. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

ORSO

FOR FROTHING AND COLLECTING REAGENT COMPRISING ALKALI METAL LINOLEATE AND OLEATE FOR ORE FLOTATION PROCESSING.
Claims use since Apr. 17, 1942.

Reg. No. 412,008. Registered Feb. 13, 1945. JOHN L. PRIESS, Chicago, Ill. Republished by Grand Products Company, Chicago, Ill., a corporation of Illinois.

Creation

FOR DRY PERFUME.
Claims use since Mar. 10, 1939.

Reg. No. 414,148. Registered May 29, 1945. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

Ivory

FOR SAPONACEOUS TOOTHPASTE.
Claims use since May 11, 1944.

Reg. No. 414,768. Registered June 26, 1945. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

RESLOOM

FOR SYNTHETIC RESINS IN SOLUTION FORM FOR USE IN TREATING TEXTILES TO IMPROVE OR MODIFY THE CHARACTERISTICS THEREOF, INCLUDING IMPROVING THE APPEARANCE AND FEEL AND INCREASING THE RESISTANCE TO DETERIORATION, WEAR AND SHRINKAGE.
Claims use since about July 24, 1944.

Reg. No. 414,769. Registered June 26, 1945. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

SYTON

FOR COLLOIDAL OR TRUE SOLUTIONS OF CHEMICAL SUBSTANCES FOR USE IN TREATING TEXTILES TO IMPROVE OR MODIFY THE CHARACTERISTICS THEREOF, INCLUDING IMPROVING TENSILE STRENGTH OF FIBERS AND RESISTANCE OF FIBERS TO SLIPPAGE.
Claims use since about June 21, 1944.

Reg. No. 415,332. Registered Aug. 7, 1945. HOSPITAL LIQUIDS, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

DEXPLEX

FOR SOLUTION FOR PARENTERAL ADMINISTRATION, CONTAINING DEXTROSE 5% WITH THIAMINE HYDROCHLORIDE, RIBOFLAVIN AND NICOTINAMIDE IN ISOTONIC SODIUM CHLORIDE SOLUTION.
Claims use since Nov. 10, 1942.

Reg. No. 415,693. Registered Aug. 14, 1945. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

SANTOWHITE

FOR CHEMICAL ADJUVANTS USED IN RUBBER PARTICULARLY FOR THE PRESERVATION OF RUBBER WHETHER NATURAL OR SYNTHETIC.
Claims use since on or about Oct. 17, 1944.

Reg. No. 416,293. Registered Sept. 4, 1945. ELGIN SOFTENER CORPORATION, Elgin, Ill., a corporation of Illinois. Republished by registrant.

ELCARB

FOR ION EXCHANGING MATERIALS SUITABLE FOR USE AS WATER SOFTENING AGENTS.
Claims use since Feb. 15, 1940.

Reg. No. 416,294. Registered Sept. 4, 1945. ELGIN SOFTENER CORPORATION, Elgin, Ill., a corporation of Illinois. Republished by registrant.

REZEX

FOR ION EXCHANGING MATERIALS SUITABLE FOR USE AS WATER SOFTENING AGENTS.
Claims use since Jan. 2, 1945.

Reg. No. 416,321. Registered Sept. 4, 1945. JOHN L. PRIESS, Chicago, Ill. Republished by Grand Products Company, Chicago, Ill., a corporation of Illinois.

MADCAP

FOR PERFUME, COLOGNE, TOILET WATER, FACE POWDER, ROUGE, AND NAIL POLISH.
Claims use since July 5, 1941.

Reg. No. 416,700. Registered Sept. 25, 1945. EUGENE, LTD., Brooklyn, N. Y., a corporation of New York. Republished by registrant.

radar

FOR PERMANENT WAVING SOLUTIONS AND HAIR DRYING SOLUTIONS.
Claims use since Jan. 26, 1945.

Reg. No. 417,434. Registered Oct. 30, 1945. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

Prell

FOR SHAMPOO.
Claims use since Sept. 20, 1944.

Reg. No. 417,448. Registered Oct. 30, 1945. E. S. MILLER LABORATORIES, INC., Los Angeles, Calif., a corporation of California. Republished by registrant.

GONADO-TRONE

The word "Gonado" is disclaimed.
FOR PITUITARY PREPARATION.
Claims use since Dec. 13, 1944.

Reg. No. 417,465. Registered Oct. 30, 1945. JOHN L. PRIESS, Chicago, Ill. Republished by Grand Products Company, Chicago, Ill., a corporation of Illinois.

CALIPH

FOR PERFUME, COLOGNE, TOILET WATER, FACE POWDER, ROUGE, AND NAIL POLISH.
Claims use since July 5, 1941.

Reg. No. 418,861. Registered Jan. 15, 1946. WALKER VITAMIN PRODUCTS, INC., Mount Vernon, N. Y., a corporation of New York. Republished by registrant.

FEOPLEX

FOR CAPSULES CONTAINING FERROUS SULFATE EXSICCATE WITH ADDED VITAMINS FROM THE B COMPLEX GROUP.
Claims use since Aug. 3, 1943.

Reg. No. 419,472. Registered Feb. 19, 1946. ELGIN SOFTENER CORPORATION, Elgin, Ill., a corporation of Illinois. Republished by registrant.

ELCONITE

FOR ION EXCHANGING MATERIALS SUITABLE FOR USE AS WATER SOFTENING AGENTS.
Claims use since on or about Nov. 1, 1934.

Reg. No. 421,604. Registered June 4, 1946. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

Gauntlet

FOR COSMETIC CREAM.
Claims use since Oct. 22, 1945.

Reg. No. 421,941. Registered June 25, 1946. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

velvet skin

FOR LOTION CREAM.
Claims use since Oct. 13, 1944.

Reg. No. 422,569. Registered July 30, 1946. ACME CHEMICAL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

AJAX JUNIOR

FOR STERILIZER AND DEODORANT IN POWDERED FORM HAVING INCIDENTAL CLEANING PROPERTIES.
Claims use since June 9, 1936.

Reg. No. 423,713. Registered Sept. 10, 1946. CONSOLIDATED COSMETICS, Chicago, Ill., a firm. Republished by registrant.

MING TOY

FOR PERFUME, LIPSTICK, FACE POWDER, BRILLIANTINE, AND HAND LOTION.
Claims use since June 8, 1945.

Reg. No. 425,674. Registered Nov. 26, 1946. VELSICOL CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

VELSICOL

FOR INSECTICIDES AND FUNGICIDES.
Claims use since September 1940.

Reg. No. 425,675. Registered Nov. 26, 1946. VELSICOL CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

1068

FOR INSECTICIDES AND FUNGICIDES.
Claims use since Feb. 11, 1946.

Reg. No. 425,676. Registered Nov. 26, 1946. VELSICOL CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

VELSICOL

FOR INSECTICIDES AND FUNGICIDES.
Claims use since September 1940.

Reg. No. 426,267. Registered Dec. 24, 1946. GENERAL ANILINE & FILM CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant.

DICOLAMINE

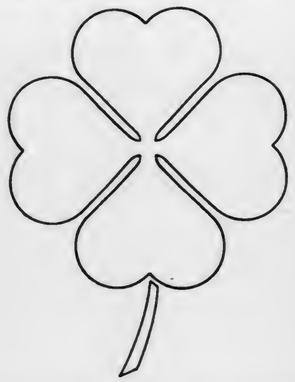
FOR CHEMICALS AND PREPARATIONS AND COMPOUNDS THEREOF USED IN PHOTOGRAPHIC PROCESSES, PARTICULARLY PHOTOGRAPHIC DEVELOPERS.
Claims use since Aug. 9, 1945.

Reg. No. 428,774. Registered Apr. 1, 1947. FLOWER FOODS, INC., Maywood, Ill., a corporation of Illinois. Republished by registrant.

FLOWERMASTER

FOR COMPOSITION CONTAINING CHEMICAL INGREDIENTS FOR STRENGTHENING, FEEDING, AND PROMOTING THE DEVELOPMENT OF CUT PLANTS AND FLOWERS.
Claims use since Feb. 1, 1939.

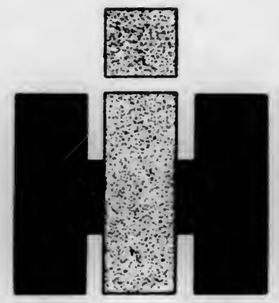
Reg. No. 430,377. Registered June 10, 1947. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.



1080

FOR CHEMICAL PRODUCTS FOR USE AS RODENTICIDES AND INSECTIVORICIDES.
Claims use since about Jan. 10, 1945.

CLASS 7



CORDAGE

Reg. No. 394,286. Registered Mar. 31, 1942. TUBBS CORDAGE COMPANY, San Francisco, Calif., a corporation of California. Republished by registrant.

FOR MANILA, SISAL, AND COTTON ROPE, AND CORDAGE AND TWINE—NAMELY, BINDER TWINE MADE OF COTTON, HEMP, FLAX, JUTE, LINEN, SISAL AND MANILA, AND COMBINATIONS THEREOF.
Claims use since 1923.

Reg. No. 416,823. Registered Oct. 2, 1945. INTERNATIONAL HARVESTER COMPANY, Chicago, Ill., a corporation of New Jersey. Republished by registrant.

FOR TWINE.
Claims use since on or about Sept. 25, 1944.

Reg. No. 421,218. Registered May 21, 1946. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

BEMIS

FOR TWINE.
Claims use since Aug. 2, 1922.

Reg. No. 426,186. Registered Dec. 17, 1946. TUBBS CORDAGE COMPANY, San Francisco, Calif., a corporation of California. Republished by registrant.

PACORD

FOR PAPER COVERED TWINE.
Claims use since Dec. 1, 1926.

Reg. No. 426,536. Registered Dec. 31, 1946. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

Mainstay

FOR TWINE.
Claims use since Aug. 2, 1922.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Reg. No. 372,727. Registered Nov. 14, 1939. LONDON HOUSE, LTD., New York, N. Y. Republished by John Hudson Moore, Inc., New York, N. Y., a corporation of New York.

JOHN BULL

FOR SMOKER'S PIPES.
Claims use since July 19, 1938.

CLASS 10

FERTILIZERS

Reg. No. 377,194. Registered Apr. 23, 1940. SYNTHETIC NITROGEN PRODUCTS CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

Cal-Nitro

FOR FERTILIZERS.
Claims use since Nov. 15, 1928.

Reg. No. 377,212. Registered Apr. 23, 1940. SYNTHETIC NITROGEN PRODUCTS CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

CALNITRO

FOR FERTILIZER.
Claims use since Nov. 15, 1928.

Reg. No. 415,392. Registered Aug. 7, 1945. POTASH COMPANY OF AMERICA, Atlanta, Ga., New York, N. Y., and Carlsbad, N. Mex., a corporation of Colorado. Republished by registrant, present location New York, N. Y.

The words "Red Muriate" and "Salt" are disclaimed.
FOR MURIATE OF POTASH.
Claims use since on or about Oct. 15, 1937.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 421,733. Registered June 18, 1946. THE PARKER PEN COMPANY, Janesville, Wis., a corporation of Wisconsin. Republished by registrant.

SOLV-X

FOR WATER SOLUBLE ORGANIC SOLVENT USED AS AN INGREDIENT FOR INK.
Claims use since July 11, 1942.

Reg. No. 425,730. Registered Dec. 3, 1946. THE PARKER PEN COMPANY, Janesville, Wis., a corporation of Wisconsin. Republished by registrant.

Parker "51"

FOR WRITING INK.
Claims use since Aug. 29, 1940.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 402,280. Registered July 13, 1943. M. H. DETRICK COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

DETRED

FOR REFRACTORY BLOCKS AND TILE EMPLOYED FOR THE CONSTRUCTION OF WALLS AND ARCHES, METAL MASONRY HOLDING AND SUPPORTING LUGS, AND FRAMES THEREFOR, AND HEAT INSULATION FOR SAID WALLS AND ARCHES.
Claims use since Nov. 16, 1942.

Reg. No. 422,643. Registered Aug. 6, 1946. ARVEY CORPORATION, Chicago, Ill., and Detroit, Mich., a corporation of Illinois. Republished by registrant, present location Chicago, Ill.

FOR COATED AND UNCOATED FIBRE BASE COMPOSITION BOARDS AND PANELS.
Claims use since Jan. 1, 1930.

Reg. No. 424,627. Registered Oct. 15, 1946. ARMSTRONG CORK COMPANY, Manheim Township, Lancaster County, Pa., a corporation of Pennsylvania. Republished by registrant.

LK

FOR CORKBOARD INSULATION.
Claims use since on or about February 1931.

Reg. No. 425,811. Registered Dec. 3, 1946. KINKEAD INDUSTRIES INCORPORATED, Chicago, Ill., a corporation of Illinois. Republished by registrant.

kintrim

FOR METAL AND PLASTIC MOULDINGS FOR USE AS CONSTRUCTION MATERIAL.
Claims use since Oct. 15, 1945.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 363,056. Registered Dec. 13, 1938. COLUMBIAN ENAMELING & STAMPING CO., INC., Terre Haute, Ind., a corporation of Indiana. Republished by registrant.

The words "Made" and "Terre Haute, Indiana" are disclaimed. The drawing is lined for red and blue.
FOR ENAMELED WARE—NAMELY, REFRIGERATOR PANS, BASKET COOKERS, VEGETABLE COOKERS, MACARONI COOKERS, DISH PANS, CEREAL COOKERS, BROWNING PANS, OPEN SAUCE PANS, COVERED SAUCE PANS, COVERED CASSEROLES AND ROASTERS.
Claims use since June 25, 1937.

Reg. No. 389,070. Registered July 22, 1941. ARMSTRONG CORK COMPANY, Lancaster, Pa., a corporation of Pennsylvania. Republished by registrant.

TEM-CLIPS

The word "Clips" is disclaimed.
FOR METAL CLIPS FOR THE ERECTION OF INSULATING FIBREBOARD.
Claims use since Jan. 21, 1939.

Reg. No. 399,805. Registered Feb. 2, 1943. HILL-SHAW COMPANY, Chicago, Ill. Republished by Hill-Shaw Company, Chicago, Ill., a corporation of Delaware.

Kitchen Kween

FOR GLASS COFFEE BREWERS.
Claims use since May 1, 1941.

Reg. No. 416,840. Registered Oct. 2, 1945. FEDERAL ELECTRIC COMPANY, INC., Chicago, Ill., a corporation of New York. Republished by registrant.

FEDELCO FEDRALITE

FOR PLASTIC PIPE AND TUBING.
Claims use since Oct. 15, 1944.

Reg. No. 417,470. Registered Oct. 30, 1945. HILL-SHAW COMPANY, Chicago, Ill. Republished by Hill-Shaw Company, Chicago, Ill., a corporation of Delaware.

Vaculator

FOR FILTERS OF CLOTH AND CLOTH FILTER HOLDERS AND FILTERS MADE OF PORCELAIN FOR GLASS COFFEE BREWERS.
Claims use since about September 1930 on cloth filters and cloth filter holders; since about March 1939 on filters made of porcelain.

Reg. No. 424,430. Registered Oct. 8, 1946. MADSEN IRON WORKS, Huntington Park, Calif., a limited partnership. Republished by registrant.

Royal Crown

FOR SELF-ALIGNING PUMP VALVES AND PARTS THEREOF—NAMELY, CAGE, VALVE, AND SEAT, GENERALLY USED IN POWER DRIVEN PUMPS.
Claims use since February 1944.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

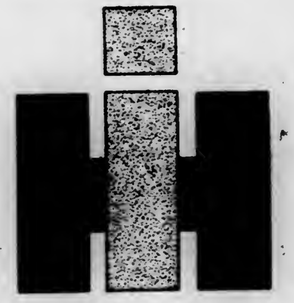
Reg. No. 293,368. Registered Apr. 19, 1932. BURGESS-PARR COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant, present location Freeport, Ill.

ILLIUM

FOR METAL ALLOY CASTINGS.
Claims use since Dec. 9, 1931.

Reg. No. 411,515. Registered Feb. 6, 1945. AMPCO METAL, INC., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

AMPCO-TRODE



FOR METALLIC WELDING RODS AND ARC WELDING ELECTRODES.
Claims use since March 15, 1941.

Reg. No. 415,617. Registered Aug. 14, 1945. AMPCO METAL, INC., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

AMPCOLOY

FOR INGOTS, CASTINGS, FORGINGS, AND UNFINISHED MACHINE PARTS OF ALLOY BRONZE.
Claims use since about June 15, 1938.

Reg. No. 420,804. Registered May 7, 1946. INTERNATIONAL HARVESTER COMPANY, Chicago, Ill., a corporation of New Jersey. Republished by registrant.

FOR FERROUS CASTINGS AND FORGINGS.
Claims use since on or about Aug. 9, 1944.

Reg. No. 423,957. Registered Sept. 17, 1946. AMPCO METAL, INC., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

AMPCO

FOR WROUGHT BRONZE SHAPES; FORGINGS; INGOTS; CASTINGS; ROLLED AND EXTRUDED BAR STOCK; AND UNFINISHED MACHINE PARTS—NAMELY, WEAR RESISTANT MACHINE ELEMENTS, CORROSION RESISTANT MACHINE ELEMENTS, AND ELECTRICALLY CONDUCTIVE MACHINE ELEMENTS.
Claims use since June 2, 1914, on some items; and since May 1, 1939, on others.

Reg. No. 425,701. Registered Dec. 3, 1946. THE ELECTRIC RAILWAY IMPROVEMENT COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

CADWELD

FOR METALS, METAL COMPOUNDS AND ALLOYS FOR USE IN THE PRODUCTION OF METAL BY EXOTHERMIC REACTION AND IN THE PROCESS OF WELDING METALS.
Claims use since Feb. 7, 1940.

CLASS 15

OILS AND GREASES

Reg. No. 351,743. Registered Nov. 9, 1937. CANDY & COMPANY, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

CANDI-LITE

The word "Lite" is disclaimed.
FOR CANDLES.
Claims use since Mar. 1, 1935.

Reg. No. 384,121. Registered Jan. 7, 1941. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

PENN-TONE

The word "Penn" is disclaimed.
FOR LUBRICATING OILS.
Claims use since on or about Oct. 1, 1931.

Reg. No. 384,417. Registered Jan. 21, 1941. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

PURE-PEP

The word "Pure" is disclaimed.
FOR MOTOR FUEL OILS.
Claims use since on or about July 1, 1939.

Reg. No. 403,920. Registered Oct. 26, 1943. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

650-Z

The numeral "650" is disclaimed.
FOR LUBRICATING OIL.
Claims use since on or about Jan. 1, 1923.

Reg. No. 404,975. Registered Jan. 4, 1944. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

DARK PURO VALVE

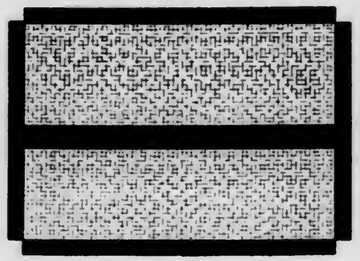
The words "Dark" and "Valve" are disclaimed.
FOR LUBRICATING OIL.
Claims use since on or about Nov. 1, 1926.

Reg. No. 425,399. Registered Nov. 19, 1946. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

MEDAL VALVE

The word "Valve" is disclaimed.
FOR LUBRICATING OILS.
Claims use since on or about Nov. 1, 1926.

CLASS 16



PAINTS AND PAINTERS' MATERIALS

Reg. No. 277,758. Registered Nov. 25, 1930. AMERICAN MINERAL SPIRITS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

TEXTILE

FOR NAPHTHA OF A COMPARATIVELY HIGH BAUMÉ GRAVITY FOR USE AS A DILUENT AND CARRYING VEHICLE IN THE MANUFACTURE OF LACQUERS AND AS A PARTIAL SUBSTITUTE FOR BENZOL (A COAL TAR PRODUCT) IN THE MANUFACTURE OF LACQUERS.
Claims use since April 1928.

Reg. No. 333,368. Registered Mar. 17, 1936. S. C. JOHNSON & SON, Racine, Wis. Republished by S. C. Johnson & Son, Inc., Racine, Wis., a corporation of Wisconsin.

The mark is lined for the color yellow.
FOR WAX FOR COATING AND POLISHING WOOD, METAL, AND OTHER SURFACES.
Claims use since Jan. 21, 1931.

Reg. No. 419,164. Registered Feb. 5, 1946. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

SKYLAC

FOR SYNTHETIC RESIN COATING COMPOSITIONS IN THE NATURE OF LACQUERS AND ENAMELS FOR THE TREATMENT OF METAL AND WOOD SURFACES, AND TEXTILES INCLUDING THE INTERIOR AND EXTERIOR SURFACES OF AIRCRAFT AND OTHER VEHICLES.
Claims use since about May 11, 1945.

Reg. No. 419,998. Registered Mar. 19, 1946. ACME CHEMICAL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

MISTO SUB-SEAL

The word "Sub-Seal" is disclaimed.
FOR PENETRATING FLOOR VARNISH CONTAINING GUMS, ROSINS, AND OILS.
Claims use since Mar. 15, 1936.

Reg. No. 424,340. Registered Oct. 1, 1946. FEDERAL ELECTRIC COMPANY, INC. OF TEXAS, Chicago, Ill., a corporation of Texas. Republished by registrant.

Fedelco

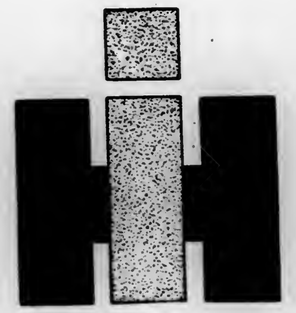
FOR LIQUID PLASTIC SURFACING MATERIAL IN THE NATURE OF A LIQUID PLASTIC COATING FOR USE AS A PROTECTIVE COVERING AND AS A RESISTOR TO CORROSION WHICH MAY BE APPLIED BY BRUSHING OR SPRAYING.
Claims use since July 10, 1945.

CLASS 19

VEHICLES

Reg. No. 169,994. Registered July 10, 1923. COLBY STEEL AND ENGINEERING CO., Seattle, Wash. Republished by Colby Steel and Engineering Co., Seattle Wash., a corporation of Washington.

MODERN-METHOD



FOR INDUSTRIAL TRUCKS AND TRAILERS OF THE CLASS USED AROUND WAREHOUSES, ETC., AND ARE ADAPTED FOR BEING DRAWN BY HAND OR BEHIND SMALL INDUSTRIAL TRACTORS.
Claims use since Nov. 20, 1920.

Reg. No. 385,817. Registered Mar. 18, 1941. LINCOLN ENGINEERING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

SERVMOBILE

FOR UTILITY HAND CART.
Claims use since Sept. 10, 1940.

Reg. No. 428,377. Registered Mar. 25, 1947. INTERNATIONAL HARVESTER COMPANY, Chicago, Ill., a corporation of New Jersey. Republished by registrant.

FOR AUTOMOTIVE TRUCKS, FARM WAGONS, TRACTOR TRAILERS, AND STRUCTURAL PARTS THEREOF.
Claims use since on or about Aug. 28, 1944.

Reg. No. 429,596. Registered May 6, 1947. THE FLOUR CITY ORNAMENTAL IRON COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

AlumaCraft

The word "Craft" is disclaimed.
FOR BOATS—NAMELY, SMALL PLEASURE CRAFT INCLUDING ROW BOATS; AND OARS.
Claims use since Apr. 12, 1946.

Reg. No. 430,305. Registered June 10, 1947. COMET MANUFACTURING CO., INC., Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

COMET

FOR MOTOR SCOOTERS.
Claims use since May 17, 1946.

CLASS 20

LINOLEUM AND OILED CLOTH

Reg. No. 414,804. Registered June 26, 1945. ARMSTRONG CORK COMPANY, Manheim Township, Lancaster County, Pa., a corporation of Pennsylvania. Republished by registrant.

Quaker

FOR DECORATED HARD SURFACE FLOOR AND WALL COVERINGS OF THE FELT BASE TYPE.
Claims use since Mar. 17, 1927, for floor coverings of the felt base type; and since Jan. 3, 1945, for wall coverings of the felt base type.

Reg. No. 430,803. Registered June 24, 1947. ARMSTRONG CORK COMPANY, Manheim Township, Lancaster County, Pa., a corporation of Pennsylvania. Republished by registrant.

Corlon

FOR HARD SURFACED FLOOR COVERING HAVING A SYNTHETIC RESINOUS BINDER.
Claims use since June 21, 1946.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 243,032. Registered June 12, 1928. POWER-PLUS BATTERY COMPANY, St. Louis, Mo., a partnership. Republished by registrant.

POWER-PLUS

The word "Power" is disclaimed.
FOR ELECTRIC STORAGE BATTERIES.
Claims use since about June 20, 1920.

Reg. No. 267,132. Registered Feb. 11, 1930. THE AUTOCALL COMPANY, Shelby, Ohio, a corporation of Ohio. Republished by registrant.

"Xylotone"

FOR APPARATUS AND EQUIPMENT FOR USE IN PAGING SERVICE, SUCH APPARATUS AND EQUIPMENT CONSISTING OF ELECTRICALLY OPERATED OR CONTROLLED BELLS, GONGS AND BUZZERS AND COMPONENTS OF APPARATUS AS AFORESAID.
Claims use since Aug. 27, 1929.

Reg. No. 352,394. Registered Nov. 30, 1937. THE EDWIN F. GUTH COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

OPTILUX

FOR ELECTRIC LIGHTING FIXTURES FOR HOUSEHOLD AND COMMERCIAL INSTALLATIONS.
Claims use since May 26, 1937.

Reg. No. 362,223. Registered Nov. 15, 1938. THE EDWIN F. GUTH COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

Excelux

FOR ELECTRIC LIGHTING FIXTURES FOR HOUSEHOLD AND COMMERCIAL INSTALLATIONS.
Claims use since Mar. 30, 1938.

Reg. No. 373,583. Registered Dec. 12, 1939. DYNAMATIC CORPORATION, Kenosha, Wis., a corporation of Delaware. Republished by registrant.

AJUSTO-SPEDE

The word "Spede" is disclaimed.
FOR ELECTRIC MOTOR-CLUTCHES, INCLUDING MOTORS AND CONTROLS THEREFOR.
Claims use since May 10, 1939.

Reg. No. 382,463. Registered Oct. 29, 1940. ARMSTRONG CORK COMPANY, Lancaster, Pa., a corporation of Pennsylvania. Republished by registrant, present location Manheim Township, Lancaster County, Pa.

A

FOR ELECTRICAL INSULATORS OF GLASS.
Claims use since Feb. 22, 1940.

Reg. No. 407,485. Registered June 6, 1944. THE EDWIN F. GUTH COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

LIGHTRONICS

FOR ELECTRIC LIGHTING FIXTURES FOR FLUORESCENT LAMPS.
Claims use since Nov. 8, 1943.

Reg. No. 409,713. Registered Oct. 17, 1944. DYNAMATIC CORPORATION, Kenosha, Wis., a corporation of Delaware. Republished by registrant.

DYNASPEDE

FOR ELECTRIC DRIVES EACH COMPOSED OF AN ELECTRIC MOTOR, AN EDDY-CURRENT SLIP COUPLING DRIVEN THEREBY AND AN ELECTRONIC CONTROL FOR CONTROLLING THE SLIP SPEED OF THE COUPLING.
Claims use since Apr. 11, 1944.

Reg. No. 412,044. Registered Feb. 13, 1945. SMALL MOTORS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

BANTAM

FOR ELECTRICALLY OPERATED MOTORS HAVING ATTACHMENTS FOR GRINDING, POLISHING, CARVING, OR DRILLING.
Claims use since May 10, 1941.

Reg. No. 416,009. Registered Aug. 21, 1945. HILL-SHAW COMPANY, Chicago, Ill. Republished by Hill-Shaw Company, Chicago, Ill., a corporation of Delaware.

Vaculator

FOR ELECTRIC HOT PLATES OR STOVES USED PRIMARILY FOR BREWING COFFEE IN HOMES, RESTAURANTS, LUNCH ROOMS AND HOTELS.
Claims use since about 1932.

Reg. No. 419,309. Registered Feb. 12, 1946. DYNAMATIC CORPORATION, Kenosha, Wis., a corporation of Delaware. Republished by registrant.

DYNAMATIC

FOR ELECTRO-MAGNETIC CLUTCHES OR COUPLINGS FOR USE AS ELECTRIC VARIABLE-SPEED POWER-TRANSMISSIONS ON POWER BOATS AND IN INDUSTRIAL MACHINERY—NAMELY, COMPRESSORS, REFRIGERATORS; AND FANS; ELECTRIC CLUTCHES; ELECTRIC BRAKES; AND VOLTAGE CONTROLS.
Claims use since July 18, 1939 on electro-magnetic clutches or couplings for use as electric variable speed power-transmissions on power boats; and since other dates on the other items.

Reg. No. 426,445. Registered Dec. 24, 1946. BREUER ELECTRIC MFG. CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

TORNADO

FOR ELECTRIC MARKERS AND ETCHERS FOR CUTTING OR ETCHING INDICIA ON GLASS, METAL, WOOD, PORCELAIN OR PLASTICS.
Claims use since January 1942.

Reg. No. 426,446. Registered Dec. 24, 1946. BREUER ELECTRIC MFG. CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

TORNADO

FOR ELECTRIC DUST COLLECTORS FOR WOOD WORKING MACHINES.
Claims use since April 1937.

Reg. No. 426,942. Registered Jan. 21, 1947. AMPCO METAL, INC., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

AMPCO

FOR ELECTRIC TERMINALS AND CONTACTS; ELECTRIC TROLLEY SHOES; ELECTRIC SWITCH CONTACTS; ELECTRIC RESISTANCE AND FLASH WELDING ELECTRODES; AND ELECTRODE HOLDERS.
Claims use since prior to February 1919.

Reg. No. 428,384. Registered Mar. 25, 1947. AMPCO METAL, INC., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

AMPCOLOY

FOR ELECTRIC TERMINALS AND CONTACTS OTHER THAN THOSE USED IN ELECTRICAL STARTING, IGNITION AND LIGHTING SYSTEMS FOR INTERNAL COMBUSTION ENGINES, TROLLEY SHOES, SWITCH CONTACTS OTHER THAN THOSE USED IN ELECTRICAL STARTING, IGNITION AND LIGHTING SYSTEMS FOR INTERNAL COMBUSTION ENGINES, ELECTRIC RESISTANCE AND FLASH WELDING ELECTRODES, AND ELECTRODE HOLDERS.
Claims use since May 1938.

Reg. No. 429,008. Registered Apr. 15, 1947. THE BROWN-BROCKMEYER COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

POWER POISE

The word "Power" is disclaimed.
FOR ELECTRICAL MOTORS.
Claims use since Dec. 1, 1945.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 50,916. Registered Apr. 3, 1906. THE HORTON MANUFACTURING COMPANY, Bristol, Conn., a corporation of Connecticut. Republished by registrant.

BRISTOL

FOR STEEL FISHING-RODS.
Claims use since 1889.

Reg. No. 117,560. Registered July 17, 1917. THE HORTON MANUFACTURING COMPANY, Bristol, Conn., a corporation of Connecticut. Republished by registrant.

MEEK

FOR REELS FOR FISHING-RODS.
Claims use since Mar. 10, 1883.

Reg. No. 426,581. Registered Dec. 31, 1946. KRUSE & CONNOR, Chicago, Ill., a firm. Republished by registrant.

THE BIG ROCK

FOR COIN CONTROLLED AMUSEMENT GAME APPARATUS.
Claims use since June 15, 1946.

Reg. No. 428,558. Registered Mar. 25, 1947. CINDERELLA MANUFACTURING COMPANY, Jackson, Mich., a corporation of Michigan. Republished by registrant.

TECH

FOR TOY CONSTRUCTING AND ERECTING SETS.
Claims use since Aug. 23, 1946.

Reg. No. 428,917. Registered Apr. 8, 1947. HENRY HOTZE & SONS COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

JAY-KAY

FOR GOLF BAGS.
Claims use since 1933.

Reg. No. 430,723. Registered June 24, 1947. THE WORTHINGTON BALL COMPANY, Elyria, Ohio, a corporation of Ohio. Republished by registrant.

ATOMIC

FOR GOLF BALLS.
Claims use since Aug. 7, 1945.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 177,012. Registered Dec. 11, 1923. COLBY STEEL AND ENGINEERING CO., Seattle, Wash. Republished by Colby Steel and Engineering Co., Seattle, Wash., a corporation of Washington.

MODERN-METHOD

FOR CRANES.
Claims use since Nov. 20, 1920.

Reg. No. 359,028. Registered Aug. 2, 1938. ARTOS ENGINEERING COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

ARTOS

FOR MACHINES FOR LABELING, MARKING, FEEDING, CUTTING, STRIPPING, FOLDING, STRAIGHTENING, BENDING, COILING, AND/OR TIPPING MATERIALS HAVING ELONGATED SHAPE SUCH AS WIRE, CABLE, CORD, GIMP, BRAID, BARS, STRIPS, TUBING, BANDS, STRAPS, TAPE, WELTING OR THE LIKE, AND FORMED OF SUBSTANCES SUCH AS METAL, WOOD, PAPER, CLOTH, INSULATION, RUBBER, LEATHER, GAUZE, LACE, CELLULOSE, OR THE LIKE.

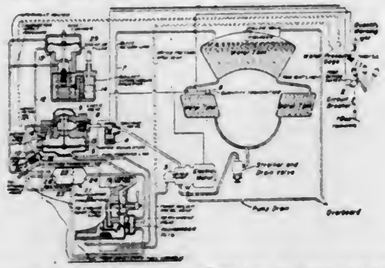
5 Claims. (Cl. 224—36)

1. A bicycle basket support, comprising an inverted generally U-shaped wire bracket providing two laterally spaced upright members, a cross-member secured to the upright members spaced downwardly from their upper ends, the upper ends of said upright members above the cross-member being bent inwardly toward each other to define attaching lugs in a substantially vertical plane for connection with a bicycle basket, means connected to the cross-member for detachably securing the bracket to a bicycle handle bar, means connected with the lower ends of the upright members of said bracket for detachably securing the bracket in rigid relation to a bicycle front fork, the bracket itself serving to locate the two fastening means in a predetermined vertically spaced relationship for correct application to a bicycle, and a fastener clip secured on the upper rim portion of a basket and formed to receive the aforesaid attaching lugs for demountably supporting a bicycle basket on said bracket, the cross-member serving to limit downward movement of the fastener clip on said attaching lugs, whereby to support the basket to which the clip is secured.

2,439,377
UTILIZATION OF TALL OIL
Martin K. Bare and Warren Stubblebine, Manheim Township, Lancaster County, Pa., assignors to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania
No Drawing. Application July 31, 1943, Serial No. 496,965
8 Claims. (Cl. 106—123)

1. In a method of utilizing tall oil to form a siccative oil-resin-tall oil gel, the step of mechanically oxidizing a siccative oil in the presence of tall oil and a resin, said tall oil being present in an amount equal to at least 10% by weight of the total weight of these gel ingredients.



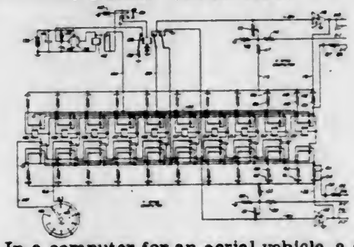
2,439,378
PRINTING INK
Otto P. Berberich, Jersey City, N. J., assignor to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application April 10, 1945, Serial No. 587,621
4 Claims. (Cl. 106—30)

1. A press-stable news ink having improved smudge-resistance and showing reduced strike-through, comprising pigment dispersed in a vehicle consisting essentially of 20% to 40% of Utah coal resin, from 1 to 2 times its weight of a news ink oil, and from 20% to 50% of kerosene, the proportions of the ingredients being such as to yield an ink with a viscosity of from about 1 to 20 poises at 30° C.

2,439,379
WATER INJECTION SYSTEM FOR AIRCRAFT
Mendel Bergman, United States Navy
Application May 8, 1946, Serial No. 668,051
7 Claims. (Cl. 123—25)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an internal combustion engine carburetor having a water injection system wherein fuel from the carburetor passes through a fuel transfer line to a double banjo or T fitting to mix with water passing through a water transfer line from the water injection system and then pass via the fitting through a mixture transfer line to the intake of the engine, and wherein the fuel, being lighter, tends to replace the water in the water transfer line and thus momentarily cause an overrich fuel mixture to enter the mixture transfer line and cause the engine to momentarily lose power when the water injection system

is first actuated; means for maintaining water in the water transfer line and preventing the fuel



from replacing it while the water injection system is unactuated.

2,439,380
PRINTING INKS
Everett F. Carman, Montclair, and Otto P. Berberich, Jersey City, N. J., assignors to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application April 10, 1945, Serial No. 587,620
4 Claims. (Cl. 106—30)

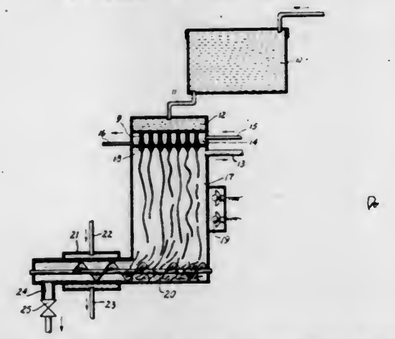
1. A press-stable news ink having improved smudge-resistance and showing reduced strike-through, comprising pigment dispersed in a vehicle consisting essentially of 20% to 40% of limed rosin containing 6% to 8% of calcium calculated as calcium hyroxide, a news ink oil from 1 to 2 times the weight of the rosin, and from 20 to 50% of kerosene, the proportions of the ingredients being such as to yield an ink with a viscosity of from about 1 to 20 poises at 30° C.

2,439,381
COMPUTING BOMB SIGHT
Sidney Darlington, New York, N. Y., and Charles H. Townes, Mendham, and Dean E. Wooldridge, Chatham, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 17, 1943, Serial No. 495,130
7 Claims. (Cl. 33—46.5)

1. In a computer for an aerial vehicle, a source of voltage varying with the component of air speed of said vehicle along an arbitrary axis, a second source of voltage varying with the horizontal displacement of said vehicle along said axis, an amplifier having an input and an output circuit, means for connecting said first source of voltage to the input circuit of said amplifier, means including a series capacitor for connecting said second source of voltage to the input circuit of said amplifier, and a feedback path from the output circuit to the input circuit of said amplifier including capacitor means varied in capacity with the displacement of said vehicle.

2,439,382
FIELD JACKET HOOD
Joseph De Grazia, Washington, D. C.
Application June 1, 1945, Serial No. 597,055
5 Claims. (Cl. 2—84)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

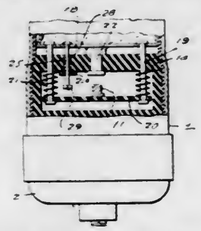
1. A helmet comprising a head portion and a neck encircling portion having overlapping front flaps and having means adapted to be secured to a coat having shoulder straps, shoulder strap buttons, a fly front and closure means for said fly front including a top button, said first-named means comprising buttonholes at the shoulder point and at each side of the front of the neck encircling portion, said buttonholes at the front adapted to be brought into alignment with each other and with said top button for securing said buttonholes to said top button.



2,439,383
SURGICAL STITCHING INSTRUMENT
Lester H. Erickson, Los Angeles, Calif.
Application July 19, 1946, Serial No. 684,906
2 Claims. (Cl. 128—340)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A surgical stitching instrument comprising a stem, said stem having a generally cylindrical opening extending therethrough adjacent one end thereof adapted to receive the shank of a needle, said stem having a longitudinal slit formed in said end in a plane including the axis of said stem and the axis of said cylindrical opening to render said end bifurcated into a pair of prongs for gripping said needle, one of said prongs having a screw threaded opening therethrough transversely of said slit, the other of said prongs having an opening therethrough coaxial with said screw threaded opening and of larger diameter, a needle clamping lever having an eye portion and a screw portion, said screw portion passing through said last mentioned opening in one of said prongs and engaging said screw threaded opening in the other of said prongs, said stem having at its end opposite said slit an enlarged

cylindrical portion, a generally tubular handle adapted at one end for frictional engagement with said enlarged cylindrical portion of said stem and having at its other a removable cap closing a chamber adapted for the storage of spools of thread, said handle having a second chamber therein adjacent said stem for retaining a spool of thread rotatably therein, an active spool of thread in said second chamber, said second chamber having a generally J-shaped guide slot in the wall thereof adapted to guide thread from said active spool toward said needle, and a brake mechanism for said spool located substantially entirely within said handle comprising a manually operable brake member reciprocably mounted in said stem and adapted to engage said active spool, and spring means biasing said brake member to prevent rotation of said active spool.

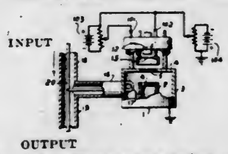


2,439,384
SOLID CORN SYRUP MANUFACTURE
Walter R. Fetzer, Clayton, Mo., assignor to Union Starch & Refining Company, Columbus, Ind., a corporation of Indiana
Application January 27, 1942, Serial No. 428,344
16 Claims. (Cl. 127—58)

16. The method of producing corn syrup solids which comprises heating liquid corn syrup of a commercial Baumé of from 43° to 46° under greater than atmospheric pressure to a temperature of from 232° to 350° F. and extruding said heated liquid corn syrup through a nozzle into the presence of a vacuum of from 28 to 29½ inches so that the corn syrup flash boils into a continuous expanded rope-like structure of dehydrated corn syrup having intercommunicating cells and having a moisture content of from one to six per cent.

2,439,385
ELECTRIC SOCKET
Morris Goldberg, Pittsburgh, Pa.
Application April 10, 1945, Serial No. 587,551
3 Claims. (Cl. 200—51.09)

1. In an electric socket, the combination, which comprises a sleeve forming a casing with an insulating plug forming a base in one end and a floating threaded shell adapted to receive an electric cord screw plug in the other, a transverse insulating partition in said casing between the base and shell, spaced pins extending from the inner end of the shell through and slidable in said partition, a cross-bar carried by the ends of the pins extending through the partition and on the side thereof opposite to the shell, springs on the pins urging the cross-bar away from the partition and thereby holding the shell inward, a centrally disposed contact extending through said partition with a head on each side thereof, a contact on the cross-bar positioned to contact a head of the said contact centrally disposed in the partition, a contact rod connected to the inner end of the shell extending through and slidable in said partition spaced from said centrally disposed contact, a contact plate on the surface of said partition positioned to be contacted by said contact rod,

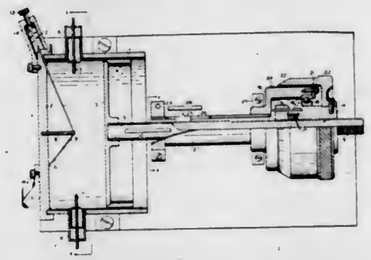


and connections from a cord extending into the end of the socket in which the base is positioned to said contact plate and contact on the cross-bar, said shell having a centrally disposed opening wherein a centrally positioned contact projecting from a threaded electric plug contacts the centrally disposed contact of the partition and draws the shell and cross-bar carried thereby outward closing the contact on the partition, cross-bar and contact rod.

2,439,386
PREPARATION OF QUINAZOLONES
Alfred Guenther, Riegelsville, Pa., and Jack F. Morgan, Phillipsburg, N. J., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application April 7, 1945, Serial No. 587,212
11 Claims. (Cl. 260—251)

1. The process of preparing substituted 4-quinazolones which comprises heating an N-acyl-o-amino cyclic carboxylic acid selected from the class consisting of aromatic and heterocyclic carboxylic acids with a primary amine selected from the class consisting of primary aliphatic, aromatic and araliphatic amines, the aromatic amine when containing a condensed ring system bearing the amino group in the β-position thereof, in the presence of a phosphorus chloride selected from the class consisting of phosphorus trichloride and phosphorus oxychloride.

9. The process of preparing 2-methyl-3-phenyl-6-chloro-4-quinazolone which comprises refluxing N-acetyl-5-chloro anthranilic acid and aniline in toluene in the presence of phosphorus trichloride.

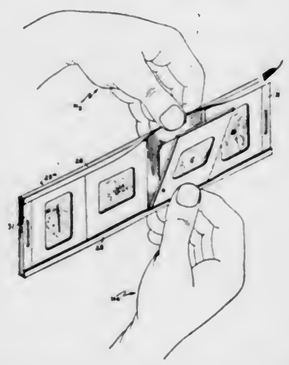


2,439,387
ELECTRONIC TUNING CONTROL
William W. Hansen, Garden City, and Russell H. Varian, Bellmore, N. Y., assignors to The Sperry Corporation, a corporation of Delaware
Application November 28, 1941, Serial No. 420,770
11 Claims. (Cl. 179—171.5)

9. High frequency apparatus for controlling the flow of high frequency energy along a high

frequency energy transmission line means in accordance with control signals, comprising a second high frequency energy transmission line means connected in shunt with said first transmission line means, a cavity resonator coupled to said second transmission line means and comprising a pair of apertured electron-permeable walls, means including a cathode aligned with said apertured walls for projecting an electron stream therethrough, a control grid interposed between said cathode and said walls, and means for applying said control signals to said control grid, whereby the characteristics of said cavity resonator are varied in accordance with said control signals, producing a corresponding variation of the impedance presented by said cavity resonator and said second transmission line means to said first transmission line means, and thereby correspondingly controlling the flow of energy through said first transmission line means.

2,439,388
RESONATOR WAVE METER
William W. Hansen, Garden City, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application December 12, 1941, Serial No. 422,715
12 Claims. (Cl. 250—39)

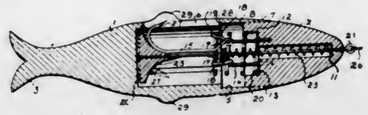


5. A resonator wavemeter of the variable volume, cavity, cylinder type having damping means therein consisting of wall connecting tautly positioned resistance wires symmetrically positioned within the same to suppress undesired modes of oscillation therein.

2,439,389
PULSE GENERATOR
Luther W. Hussey, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 8, 1944, Serial No. 548,613
4 Claims. (Cl. 171—97)

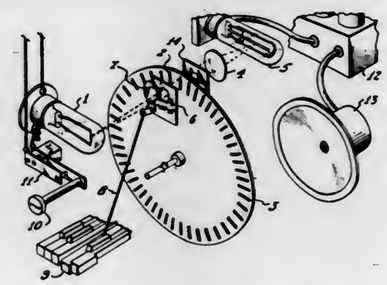
3. A recurrent impulse generator comprising a first inductor, a storage capacitor, a second inductor having a magnetic core with a high permeability at low magnetizing forces and readily saturable at higher magnetizing forces, a load circuit, circuit connections including recurrent, intermittently operated means for supplying current from said source to said first inductor and for interrupting said flow of currrent, circuit connections for charging said storage capacitor by the surge voltage developed upon said interruption of said flow of current, circuit connections for discharging said storage capacitor to the load circuit through said second inductor upon the saturation of said core, and a blocking capacitor connected in series with said second inductor to prevent the flow of direct current therethrough and forming a series circuit with both of said inductors and having such a capacity that the circulating current in said series circuit at each instant of establishment of said flow of current from said source will be of such magnitude as to magnetize said core to a value substantially greater than saturation and in the same direction as the flow of current during the discharge of said storage capacitor.

2,439,390
SLIDE MOUNTING
Theodore M. Jablon, Elmhurst, Long Island, N. Y.
Application January 29, 1945, Serial No. 574,991
17 Claims. (Cl. 40—152)



1. A slide mounting comprising a sheath of relatively thin and resiliently flexible filmlike material having a longitudinal body portion provided with a plurality of picture openings spaced from one another a distance substantially equal to the width of a slide, and having longitudinal edge portions providing substantially flat overhangs extending towards each other to constitute slide-retaining grooves, and stop means at each end of the body portion for maintaining between them a plurality of individual slides edgewise adjoining one another and confined in place within said sheath and in substantial registry with said openings by said slide retaining grooves and said stop means together with the edgewise adjoining relationship of the individual slides, said sheath being sufficiently deformable to allow for a resilient outward flexure of a portion of the length of an overhang whereby a slide may be inserted into or released from the sheath across said edge portions at the place of such flexure.

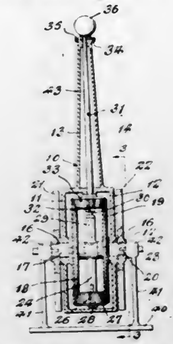
2,439,391
ARTIFICIAL MINNOW
Frederic H. Jobson, Jeffersonville, Ga.
Application November 30, 1944, Serial No. 565,856
2 Claims. (Cl. 43—35)



1. An artificial fish lure, comprising a hollow, slotted body formed to resemble a bait, a bore in

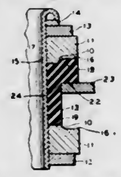
the forward end of said body, staples in said bore, pivoted hooks carried by the staples, a spring seated in the bore and encompassing the staples, said spring being adapted to normally hold the hooks in the body, a wedging member movable in the body and having a curved camming face engaging the hooks, a leader carrying the wedging

member, a stop collar on said leader, a spring about the leader contacting the collar for normally urging the wedging member toward the tail of the bait in opposition to the force of which the wedging member moves under the draw of the leader to move the hooks out through the slots into active position.



2,439,392
GENERATION OF TONES IN PHOTOELECTRIC MUSICAL INSTRUMENTS
Edward M. Jones, Cincinnati, Ohio, assignor to The Baldwin Company, Cincinnati, Ohio, a corporation of Ohio
Application August 5, 1946, Serial No. 688,576
15 Claims. (Cl. 250—41.5)

1. In a photoelectric instrument, interrupting means for imparting to a beam of light variations at a desired fundamental frequency and a wave form pattern for imparting thereto variations corresponding generally to harmonics of the fundamental, said wave form pattern having progressive variations thereon for producing changes in said last mentioned variations corresponding to minor shifts in the frequencies of said harmonics.



2,439,393
SYNCHRONIZED CONTROL UNIT
Ralph W. Kerr, Bowman, N. Dak.
Application August 3, 1945, Serial No. 608,627
2 Claims. (Cl. 74—471)

1. A control unit for remotely located instruments comprising an oscillatable housing, a hand lever for oscillating said housing, a pair of bevel gears within the housing, said gears each having a hub including an axial opening, said hub being of a length extending exteriorly of the housing, a disk fixed to each extended hub portion, a shaft journalled through the aligned openings of said gears, each disk having an arm for connection to an instrument to be controlled, an operating shaft journalled within said hand lever and a bevel

gear on said shaft in mesh with said first named gears.

2,439,394
GROMMET INSULATING BUSHING UNIT
Samuel J. Lanzalotti, Williamstown, and Max Skobel, Eatontown, N. J., assignors to the United States of America as represented by the Secretary of War
Application July 4, 1945, Serial No. 603,245
1 Claim. (Cl. 174—153)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

In a bushing unit for passing an electrical lead through an opening in a plate of conducting material and insulating said lead from said plate, the combination of a unitary sleeve of elastic insulating material, said sleeve comprising a tubular body having an outside diameter to allow it to be slidably inserted into said opening and to make a snug fit therein and a shoulder extending radially outwardly from said body at one end thereof to allow it to abut one surface of said plate, the other end of said body being of greater longitudinal dimension than the longitudinal dimension of said shoulder so that, upon longitudinal compression of the sleeve, the unshouldered end of the body may be expanded radially outwardly so as to be of substantially the same size and configuration as the said shoulder and so as to abut the other surface of said plate, two tubular bushings of rigid insulating material coaxial with said sleeve and positioned at opposite ends respectively of said sleeve and of greater outside diameter than the inside diameter of the opening in the plate so that said bushings may not pass through said openings, two annular eyelet terminals of conducting material coaxial with said sleeve and bushings and abutting the outer surfaces respectively of said bushings, the inside diameters of said sleeve, bushings and terminals being substantially alike, a grommet-type post extending through said sleeve, bushings and eyelets and being of a length to press said terminals toward each other against

said bushings and to press said bushings toward each other and thereby compress said sleeve longitudinally so as to expand the unshouldered end of the body radially outwardly to substantially the size and configuration of the shoulder and to press said expanded portion against one surface of said plate and to press the shoulder against the other surface thereof so as to tightly grip said plate therebetween and to insulate the post and terminals from said plate and to act as a vibration isolator.

2,439,395

FIRE-RESISTANT COATING COMPOSITION

Martin Leatherman, Hyattsville, Md.

No Drawing. Application June 30, 1945, Serial No. 602,647
3 Claims. (Cl. 260—30.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

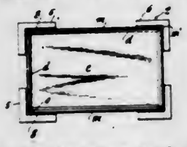
1. A composition for rendering fabric rot- and fire-resistant, comprising the following materials in substantially the proportions stated: 15 lbs. vinyl acetate vinyl chloride copolymer, 5 lbs. n-butyl methacrylate polymer, 10 lbs. tricresyl phosphate, 5.8 lbs. zinc carbonate, 27 lbs. acetone, 27 lbs. of a solvent consisting mainly of aromatic compounds having a specific gravity of about 0.858 and a boiling range from 265° F. to 375° F., 8.7 lbs. mineral spirits, 4.2 lbs. inert pigment, and ½ lb. pentachlorphenol.

2,439,396

FIRE-RESISTANT COATING COMPOSITION

Martin Leatherman, Hyattsville, Md.

No Drawing. Original application June 20, 1942, Serial No. 447,871. Divided and this application June 30, 1945, Serial No. 602,649
5 Claims. (Cl. 260—30.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



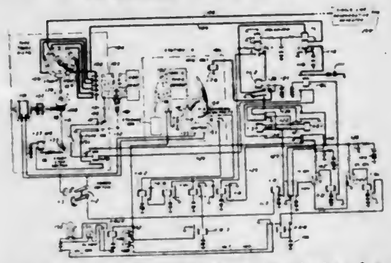
5. A fire-resistant composition for treating yarn, comprising the following materials in substantially the proportions stated: 10 lbs. of a material from the group consisting of polyvinyl chloride and vinyl chloride-vinyl acetate copolymer, 30 lbs. acetone, 6 lbs. zinc carbonate, 2.1 lbs. chromium oxide, 1.2 lbs. Venetian red (ferric oxide), 1 lb. lead chromate, 9.3 lbs. mineral spirits, and ½ lb. zinc naphthenate.

2,439,397

APPARATUS AND METHOD FOR FLANGING METAL-CLAD FIBROUS BASE PANELS

Glenn H. Norquist, Jamestown, N. Y.

Application November 1, 1944, Serial No. 561,389
15 Claims. (Cl. 153—23)



1. A machine for flanging and ribbing metal clad panels of the type which comprises a base sheet bonded to a metal sheet, a corner of the base sheet being notched to define the ends of the flanges to be formed with the exposed corner metal having preformed fold defining lines therein, said machine including a die block having a pair of angularly extending wing sections, said wing sections presenting downwardly inclined flange forming faces meeting in a corner shaped to conform to the contour of the adjacent flanges and corner of the completed flanged panel to be formed, said wing sections presenting a substantially vertical riser face extending downwardly from the lower edge of each of said flange forming faces, and pressure means including a pressure block having its marginal edges confined within the main center section of the panel operative to drive said panel flanges into shaping contact with the forming faces of said die block whereby said die block operates to shape said flanges and bend the corner metal inwardly to form a corner reinforcing rib wedged between the adjacent ends of the formed panel flanges.

2,439,398

TELEGRAPH SYSTEM PROVIDED WITH CHANNEL ASSURANCE AND TRANSMISSION REGULATION

Edward Praixner, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application February 25, 1944, Serial No. 523,816
33 Claims. (Cl. 178—2)

1. A channel of impulse transmission having two stations intertransmissably related thereto, each having sending means capable of impressing impulses upon said channel and means capable of receiving impulses transmitted by the sending means at the far station in combination with means operable, when neither of said sending means is so impressing impulses upon said channel, repeatedly to send test signals back and forth over said channel at frequent intervals, and means operable by failure of a test signal to arrive to indicate the defective condition of the channel.

2,439,399

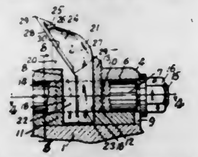
PROCESS FOR THE PREPARATION OF ACETYL PEROXIDE

Edward S. Shanley, Kenmore, and Harlow G. Hyatt, Buffalo, N. Y., assignors to Buffalo Electro-Chemical Company, Inc., Tonawanda, N. Y.

No Drawing. Application May 12, 1944, Serial No. 535,392
5 Claims. (Cl. 260—610)

2. The method of making acetyl peroxide which comprises reacting acetic anhydride and hydrogen peroxide in the presence of an ester of phthalic acid.

2,439,400



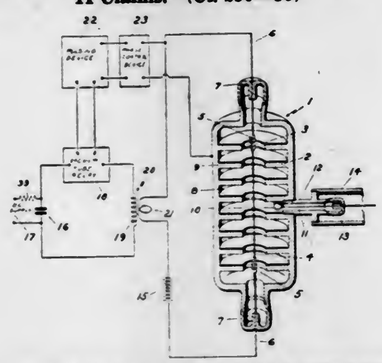
CUTTER CHAIN

Leon E. Simmons, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania

Application August 6, 1943, Serial No. 497,629
10 Claims. (Cl. 262—33)

1. In a cutter chain, a chain block, a bit clamp including relatively movable clamping jaws

mounted on said block between which a cutter bit is receivable, said block having a bore extending longitudinally thereof and a slot extending longitudinally along the bottom wall of said bore, and an adjusting member arranged in said bore for adjusting said clamp, said jaws respectively having inner portions extending longitudinally of and lying beneath said adjusting member in



said slot, and said adjusting member having surfaces respectively overlying said jaw portions for holding the latter in said slot, and said inner portion of one of said jaws, upon adjustment by said member, having sliding guided engagement with said slot and the overlying surface on said adjusting member having sliding movement relative to said inner portion of said other jaw while maintaining said latter portion in said slot.

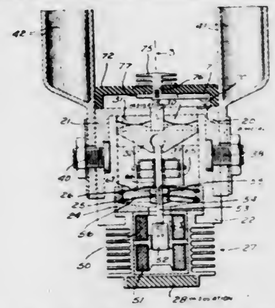
2,439,401

MAGNETRON OSCILLATOR OF THE RESONANT CAVITY TYPE

Charles G. Smith, Medford, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware

Application September 10, 1942, Serial No. 457,809
11 Claims. (Cl. 250—36)

1. An electronic device adapted to cause movement of electrons in curvilinear paths under the influence of a magnetic field, said device comprising an elongated cathode, a plurality of helical anode elements arranged about said cathode substantially concentric therewith, and means for establishing a magnetic field having its lines of force enclosing said cathode and having components of said field lying at right angles to the longitudinal axis of said cathode.



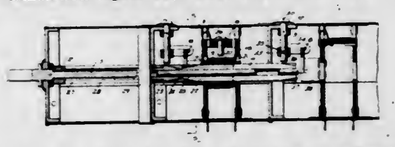
2,439,402

COMBINED ELECTROMAGNETIC AND THERMAL CIRCUIT BREAKER

William E. Stilwell, Jr., Cincinnati, Ohio, assignor to John B. Pierce Foundation, New York, N. Y., a corporation of New York

Application December 5, 1942, Serial No. 467,919
5 Claims. (Cl. 200—88)

1. A circuit breaker comprising, in combination, switch means comprising spaced load-circuit contacts, a bridging contact for cooperation therewith in opening or closing said load-circuit, solenoid means for initiating movement of said bridging contact into open circuit position, an electric circuit for energizing said solenoid means, and a fixed contact and a movable contact in said solenoid energizing circuit, said movable contact including a bi-metallic element in surface en-



gagement with an element of said switch means and movable toward said fixed contact upon rise in temperature of said switch means element whereby elevated temperature engendered in said switch means element by a predetermined overload condition causes said movable contact to engage with said fixed contact to energize the said solenoid coil and open the load circuit.

2,439,403

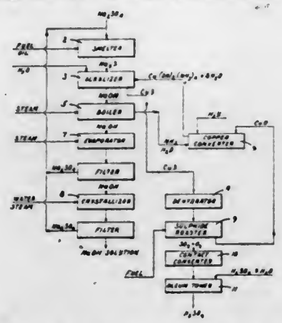
VARIABLE INDUCTIVE TUNER

Charles J. H. Victoreen, Dayton, Ohio

Application January 8, 1944, Serial No. 517,517
2 Claims. (Cl. 171—242)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an adjustable inductance device having a casing, a plurality of frames adjustably carried by the casing, coil means carried by each frame, a core for each coil means, and means carried by the casing for supporting and for simultaneously moving all the cores with respect to the frames: means for adjusting the position of an individual frame with respect to its core comprising a screw carried by the casing, a nut on the screw, a linkage having one end connected to the nut and the other end to the frame, so that rotation of the screw changes the position of such individual frame with respect to its core.

2,439,404



PRODUCTION OF ALKALI METAL AND ALKALINE EARTH METAL HYDROXIDES

Dan B. Wicker, Dunbar, W. Va., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware

Application November 10, 1945, Serial No. 627,914
9 Claims. (Cl. 23—184)

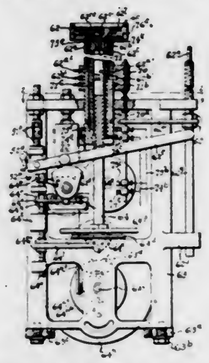
8. A cyclic process for obtaining hydroxides of metals of the group consisting of alkali metals and alkaline earth metals, from the sulfides of the corresponding alkali metals and of the alkaline earth

metals, which comprises reacting the selected sulfide with the aqueous ammonium complex of a metal hydroxide to form a solution of the alkali metal or alkaline earth metal hydroxide and convert the metal of the aqueous ammonium complex to its sulfide, then separating the metal sulfide, subjecting the residue to a boil-off to vaporize

ammonia and water therefrom and condensing the vapors, oxidizing the metal sulfide to the metal oxide, reacting the metal oxide with the recovered aqueous ammonia to re-form the aqueous ammonium complex of the metal hydroxide, and recycling the latter for reaction with fresh alkali metal or alkaline earth metal sulfide.

2,439,405
PULSE COUNTING RELAY SYSTEM
Conrad H. Zierdt, Jr., Pittsburgh, Pa.
Application January 14, 1946, Serial No. 641,155
4 Claims. (Cl. 175—320)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In combination with a source of electrical pulses and an electrically operable device, a relay, a capacitor, a make contact on said relay, means connecting said capacitor and said relay in series with said pulse source, means including said make contact connecting said capacitor and said electrically operable device in series with said pulse source, means for maintaining said contact operated for at least a predetermined time following an initial pulse to said relay, and means for discharging said capacitor following said initial pulse, said capacitor preventing energization of said electrically operable device by said initial pulse and permitting energization of said device in response to a second pulse occurring while said contact is operated.

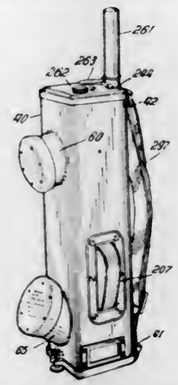


2,439,406
GAUGING-DEVICE ACTUATED LIGHT-BEAM RESPONSIVE SELECTING APPARATUS
Eugene F. Martinec, Cleveland, Ohio
Application March 15, 1943, Serial No. 479,241
31 Claims. (Cl. 209—88)

20. A gauging device comprising a photocell element, a light element positioned to provide a light beam to the cell element, a plurality of selecting circuits controlled by the cell element, control means operated by each circuit, a movable selecting means adapted to select different circuits, a gauging element including a movable member positioned to be affected by the element being gauged and a second movable member con-

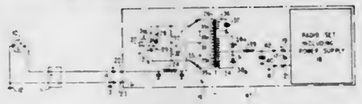
nected with said first member to be positioned thereby, means movable with the selecting means adapted by its movement to cooperate with said second member to control the light beam, means controlled by the cell to control said selecting means, and means for shifting the selecting means.

2,439,407
DINNERWARE FINISHING APPARATUS
William J. Miller, Pittsburgh, Pa., assignor to Miller Pottery Engineering Company, Swissvale, Pa., a corporation of Pennsylvania
Original application March 29, 1935, Serial No. 13,683. Divided and this application September 19, 1945, Serial No. 617,221
30 Claims. (Cl. 25—22)



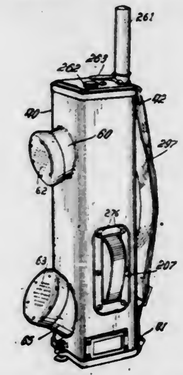
1. In a pottery finishing machine, the combination of ware finishing apparatus comprising a carriage assembly provided with a turret having a plurality of transfer chucks rotatably mounted thereon, another turret mounted in adjacency to the carriage assembly and having swabbing pads and edge-finishing tools, a system of cams and levers for imparting horizontal, vertical and angular motion to the first-named turret to move the ware within operative adjacency of said pads and tools, means for reciprocating and rotating the chucks to finish the ware, and a series of supply ducts terminating in the swabbing pads for conveying a fluid medium thereto.

2,439,408
PORTABLE RADIO TRANSMITTING AND RECEIVING SET
Donald H. Mitchell, Chicago, Ill., assignor to Motorola, Inc., a corporation of Illinois
Application February 20, 1942, Serial No. 431,722
18 Claims. (Cl. 250—13)



1. A self-contained combination radio receiver and transmitter set adapted to be held in one hand by the operator therefor, and in but one position for both receiving and transmitting in-

cluding a housing member, microphone and earphone means relatively arranged on said housing so as to be simultaneously in position near the mouth and an ear, respectively, of the operator when the set is in said one position, means for supplying all of the energy to said set, combination transmitter and receiver circuit means, with said energy supply means and circuit means

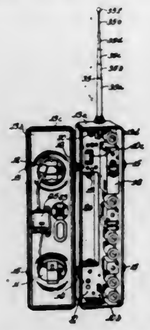


being carried within said housing member, an antenna operatively connected with said circuit means and extending outwardly from said housing member, and switch means for changing the operation of said set as a receiver or transmitter having an actuating portion projecting from said housing and positioned thereon so as to be manipulated by the hand of the operator supporting said set.

2,439,409
SYSTEM FOR PROVIDING AN ENERGIZING DIRECT CURRENT
Donald H. Mitchell, Chicago, Ill., assignor to Motorola, Inc., a corporation of Illinois
Application February 6, 1943, Serial No. 474,950
2 Claims. (Cl. 320—25)

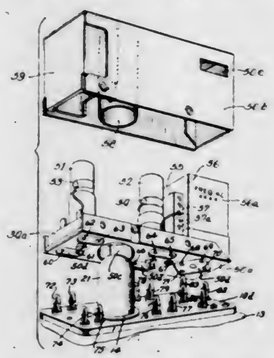
1. In an electrical system which includes a chargeable battery adapted to be charged by direct current of a predetermined polarity, apparatus for supplying charging current of said predetermined polarity to said battery from a low voltage direct-current source of any polarity, comprising means for interrupting the flow of current from said source to provide a pulsating direct current, a transformer for converting said pulsating direct current into alternating current, said transformer including primary, secondary and tertiary windings, said primary winding being connected to said interrupting means and to said current source, said secondary winding having a center tap to provide two secondary portions, a pair of rectifiers connected across said secondary portions, means for connecting said rectifiers to said battery in such manner that the rectified current is of the predetermined polarity for charging said battery and that said battery is prevented from discharging through said system, and a condenser connected to said tertiary winding of such value to provide a closed circuit resonant at the frequency of said alternating current so that the current flowing through said primary winding is substantially zero when said current source is interrupted.

2,439,410
COMBINED RADIO TRANSMITTER AND RECEIVER
Donald H. Mitchell, Chicago, Ill., assignor to Motorola, Inc., a corporation of Illinois
Original application February 20, 1942, Serial No. 431,722. Divided and this application March 31, 1943, Serial No. 481,196
6 Claims. (Cl. 200—16)



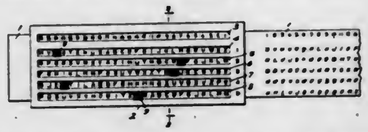
1. An electrical slide switch comprising, a flat longitudinally extending stationary insulating member, a second flat longitudinally extending insulating member linearly movable relative to said first insulating member, first group of contacts spaced longitudinally of said first insulating member, a second group of contacts on said second insulating member cooperating with said first contacts, said first insulating member having apertures therein corresponding to said second group of contacts but laterally spaced therefrom, each of said second group of contacts being inserted through a corresponding slot in said first insulating member and extended laterally away from such corresponding slot for engagement with a corresponding one of said first group of contacts, said other group of contacts slidably supporting said second insulating member on said first insulating member for movement relative thereto.

2,439,411
PORTABLE TWO-WAY WAVE-SIGNAL SPACE-COMMUNICATION SET
Donald H. Mitchell, Chicago, Ill., assignor to Motorola, Inc., a corporation of Illinois
Application July 1, 1944, Serial No. 543,167
10 Claims. (Cl. 250—13)



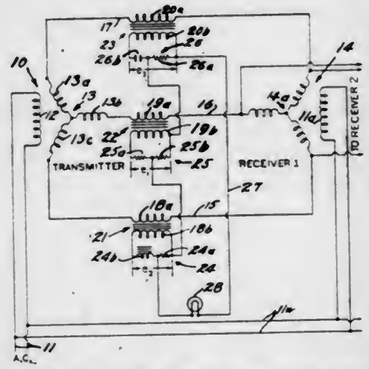
1. A self-contained portable two-way wave-signal space-communication set comprising, an elongated unitary chassis including transmitting and receiving circuit means and a compartment for receiving power supply means for energizing said transmitting and receiving circuit means, signal-transmitting and signal-reproducing devices, an elongated housing enclosing said chassis and said devices and being longitudinally divided into base and cover portions, said chassis being positioned in said housing so that when said base and cover portions thereof are open said power supply means and normally replaceable

elements of said circuit means are exposed for replacement, said compartment being proportioned to receive either non-renewable battery



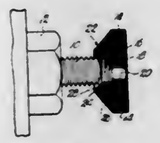
means or a self-contained power converter supply unit and including disengageable connectors for making electrical connections thereto.

2,439,412
MULTISTAGE PLUG-IN FREQUENCY-DETERMINING UNIT
Donald H. Mitchell, Chicago, Ill., assignor to Motorola, Inc., a corporation of Illinois
Application August 4, 1944, Serial No. 548,103
6 Claims. (Cl. 250—14)



4. A multi-stage plug-in frequency-determining unit for a wave-signal translating apparatus including a circuit connector device having a signal translating vacuum tube mounted thereon and terminals on either side of said vacuum tube connected to the input and output circuits thereof comprising, a chassis member having an opening therein arranged to receive and surround said tube, circuit connector means carried by said member and complementary to said terminals of said device for detachably engaging the same, input and output frequency-determining elements adapted to be connected to said input and output circuits through said circuit connector means, said frequency-determining elements being supported by said member on opposite sides of said opening and arranged so that connection can be made to the proper circuit connector means by short leads, and a cover portion positioned on said chassis member and serving as an electrical shield for said frequency-determining elements.

2,439,413
CRYPTOGRAPHIC SLIDE RULE
Robert M. Mitchell, United States Army
Application October 21, 1943, Serial No. 507,110
6 Claims. (Cl. 35—2)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

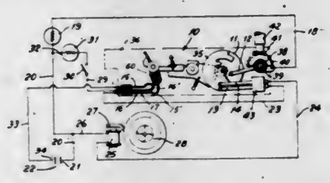


1. A device for enciphering or deciphering secret messages comprising, a rule having a section provided with a plurality of rows of characters arranged in a definite order to form a plain text no character being repeated in the same row, and a second section having a plurality of rows of cipher text formed by arranging the plain text rows in reverse order, and a slider mounted on the rule for movement longitudinally thereof, said slider having slots therein aligned with said rows.

2,439,414
SELF-SYNCHRONOUS SIGNALLING SYSTEM
George Agins, Brooklyn, N. Y., assignor to Arma Corporation, Brooklyn, N. Y., a corporation of New York
Application January 26, 1946, Serial No. 643,778
11 Claims. (Cl. 177—311)

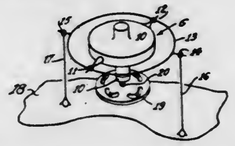
1. In an electrical self-synchronous transmission system wherein an electromechamical transmitter is connected by at least two wires to and drives at least one similar electromagnetic receiver and wherein lag between transmitter and receiver causes currents to flow in the said wires which are in multi-space-phase relation, the combination of phase controlling electrical means including non-inductive resistances interposed in said wires between said transmitter and receiver responsive to said space-phased currents for producing corresponding time-phased currents, means severally connected to said non-inductive resistances for adding said time-phased electric currents vectorially, whereby a current is produced in said second means only when there is lag in the transmission and is substantially unaffected in magnitude by the magnitude of the angle being transmitted, and means connected to said second means for indicating the existence of said current as a warning signal of said lag.

2,439,415
LOCK NUT
Samuel Bloomfield, Wichita, Kans., assignor, by direct and mesne assignments, to C. Earl Hovey, Kansas City, Mo., as trustee
Application July 29, 1944, Serial No. 547,205
1 Claim. (Cl. 151—15)



A lock nut for threaded bolts or the like having nuts thereon, comprising a homogeneous body of impressionable material provided with a bore for receiving the bolt or the like; a continuous annular ridge on one end of the body having a diameter greater than the diameter of the said bore, the said end of the body being composed of an inner and an outer annular converging face, meeting at the apex of the ridge, the outer face being wider than the inner face, whereby to provide a space between the nut on the bolt and the lock nut around the said ridge, said inner face merging at its innermost end with said bore, said ridge being thin at its peak to present a line contact concentric with the bolt and the nut thereon; and internal screw threads provided in the bore and along a portion of its length extending inwardly from the said end of the body, the remaining portion of the bore being unthreaded and having a diameter less than the diameter of the threaded portion of the bore.

2,439,416
DEHYDRATION PROCESS
Joseph E. Bludworth, Max O. Robeson, and Harry A. Truby, Jr., Corpus Christi, Tex., assignors to Celanese Corporation of America, a corporation of Delaware
Application April 24, 1945, Serial No. 590,092
6 Claims. (Cl. 260—547)

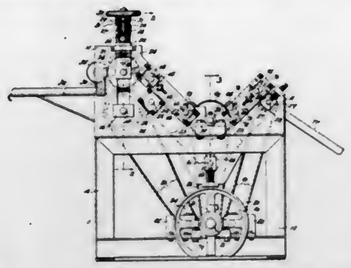


1. Process for the production of propionic acid anhydride, which comprises subjecting propionic acid in a mixture of propionic acid and benzene to catalytic pyrogenic dehydration in the vapor phase at a temperature no greater than 1100° F.

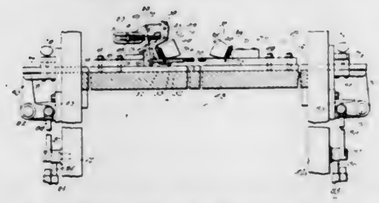
2,439,417
PHOTOFLASH SYNCHRONIZING DEVICE FOR CAMERAS
William Castedello, Stamford, Conn., assignor to The Kalart Company Inc., Stamford, Conn.
Application August 6, 1946, Serial No. 688,741
11 Claims. (Cl. 95—11.5)

1. A synchronizing device of the type described comprising a shaped contact member movably mounted, a contact arm for slidably engaging said contact member and connected in circuit with a flash lamp and a source of current, a second contact arm for slidably engaging said contact member and connected in circuit with a shutter solenoid and the source of current, a third contact arm for slidably engaging said contact member, a pair of yieldable contacts, one of said contacts electrically connected with the third contact arm, the second contact connected in circuit with the source of current, a movable element coacting with the yieldable contacts, said element constructed and positioned to control engagement between said yieldable contacts by the element position, and means for moving said contact member and said element at a predetermined ratio of movement for placing the contact member in engagement with the contact arms at a predetermined sequence and for opening and closing said yieldable contacts at preselected intervals, thereby causing the solenoid and the flash lamp circuits to be energized at a predetermined time relationship to each other.

2,439,418
GYROSCOPE STABILIZING MECHANISM
Charles T. Davenport, Brooklyn, N. Y., assignor to Arma Corporation, Brooklyn, N. Y., a corporation of New York
Application July 27, 1944, Serial No. 546,894
6 Claims. (Cl. 74—5)



1. An harmonic stabilizing system for vertical axis gyroscopes, comprising at least one eccentric guide displaced from and lying in a plane normal to the gyroscope axis with its center portion displaced further from said axis than its end portions, means for uniformly rotating said guide bodily about said axis in said plane, and a mass normally positioned by centrifugal force in the center portion of said guide, said guide having substantially parallel walls defining a path therebetween of sufficient width to accommodate said mass and to permit synchronous oscillation of said mass to either side of the guide along said path in response to the centrifugal force and gravity during a tilt of said gyroscope to create an erecting couple in the righting plane of said gyroscope.

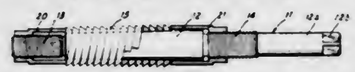


2,439,419
FUR PELT OR SKIN STRETCHING APPARATUS
Carl H. Donner, Summit, N. J., assignor to The Chapal Donner Corporation, Newark, N. J., a corporation of New Jersey
Application July 1, 1946, Serial No. 680,598
16 Claims. (Cl. 69—24)

1. In apparatus of the kind described, a pair of rotated initial stretcher rolls each having axially spaced annular stretcher flanges projecting from their peripheries, the stretcher flanges of one said roll being in staggered and intervening relation to those of the other roll, a rotated ironing and smoothing means having longitudinally reciprocated ironer members mounted around the periphery thereof, and a driven carrier means adapted to receive work discharged

from said initial stretcher rolls and to carry the same into operative engagement with said ironing and smoothing means and thence for discharge from the apparatus.

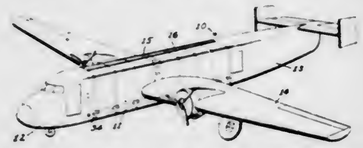
2,439,420
SHEET REGISTERING MECHANISM FOR PRINTING MACHINES
William K. Eckhard, Newark, N. J., and Edwin W. Goodwin, New Rochelle, N. Y., assignors to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application November 17, 1942, Serial No. 465,898
10 Claims. (Cl. 271—59)



1. In a registering mechanism for side guiding a sheet in a printing machine to laterally position this sheet for side register as it is supported on and moves along a feed plane towards printing position, a roller located in the path of movement of the sheet and freely rotatable about an axis which is obliquely and transversely disposed relative to the feed plane and having a peripheral surface which engages the top surface of the sheet, and also having an annular flange provided with an annular peripheral surface which rotates concentrically about the roller axis and engages an edge of the supported sheet in substantially perpendicular relation to the feed plane to thereby determine the lateral position of the sheet on the said plane, the oblique and transverse disposition of the roller axis causing the annular peripheral surface to present an effective arc to the edge of the supported sheet in the plane thereof of greater radius than the actual radius of the same surface at the sheet-engaging point in a plane perpendicular to the roller axis.

3. In a registering mechanism for side guiding a sheet in a printing machine to laterally position the sheet for side register as it is supported on and moves along a feed plane towards printing position, a non-yieldable guide member located to engage a lateral edge of a sheet as it moves along the feed plane, a rotatably-supported roller, means for suspending the roller from an axis which is remote from the roller for sensitive swinging movement about the said axis towards and away from the guide member to engage the opposite edge of the sheet, and means for biasing the roller for yielding swinging movement towards the guide member to thereby force one edge of the sheet against the guide member to determine the latral position of the sheet on the feed plane.

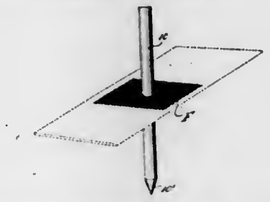
2,439,421
PROCESS FOR THE PRODUCTION OF DIALKYLATED POLYHYDRIC PHENOLS
Edwin R. Erickson, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia
No Drawing. Application August 4, 1944, Serial No. 548,136
9 Claims. (Cl. 260—625)



1. In a process for the production of disubstituted polyhydric phenols the improvement which comprises maintaining at a reacting temperature and in contact with one another for a substantial period of time about two molar proportions of a halogen compound in which the halogen is aliphatically bound with about one molar proportion of a polyhydric phenol and about two molar proportions of anhydrous zinc chloride in an alcohol containing from 1 to 3 carbon atoms.

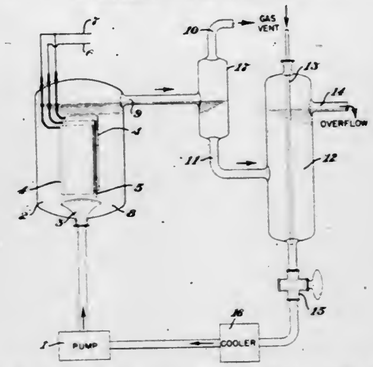
2,439,422
SHEARING TOOL
Ralph Gordon Fear, Reseda, Calif.
Application October 25, 1943, Serial No. 507,533
9 Claims. (Cl. 29—95.1)

1. In a tool for cutting material from an article, which tool is adapted for reception in an actuating device, the combination of: a tool body having an arbor, a portion of which is tapered, and having a shank for reception in such actuating device; a helical cutting member in the form of a thread removably secured around said arbor, said member having a cutting edge formed at an angle of less than about 20 degrees with the plane normal to the axis of said tool body, whereby said cutting edge removes material from such article by shear; and a spacing member removably wound around said arbor between adjacent turns of said cutting member.



2,439,423
LOCKING AND SAFETY SIGNAL COMBINATION FOR CARGO AIRPLANES
Harlan D. Fowler, San Diego, Calif.
Application December 21, 1942, Serial No. 469,620
8 Claims. (Cl. 244—118)

1. A lock for engaging a part of a device to releasably secure the latter upon a platform comprising: a threaded part carried by said platform, a jackshaft threadedly engaging said part and rotatably mounted therein adjacent said platform, a clamping head rigidly secured upon said shaft above said part, and means to rotate said jackshaft whereby said clamping head may be simultaneously turned and drawn into locking position, or turned oppositely and raised into releasing position.



5. An airplane cargo container combination comprising a fuselage having streamlined nose and tail portions and a streamlined platform therebetween having a flat deck, a plurality of removable cargo containers on the deck having a form and volume adapted to fill the space on the platform between the nose and tail portions, locking members on the containers adjacent the outside lower edges thereof, rotatable locking shafts extending vertically through the deck at locations immediately adjacent said locking members when in place on the deck, elements attached to said shafts and extendable by rotation of said shafts, said elements being located above the deck and having a length sufficient to overlie the next adjacent locking member and having a lateral extension into potential engaging position with said locking members and a vertical extension toward and away from said locking members for tightening and releasing said containers and a support for each shaft, and a common longitudinally extending shaft on each side of the platform attached to the respective vertically extending shafts having a control therefor located in said nose portion.

2,439,424
METHOD OF PRODUCING COMPRESSED WIRE UNITS
Alfred M. Goodloe, Montclair, and Otto H. York, Maplewood, N. J., assignors to Metal Textile Corporation, West Orange, N. J., a corporation of Delaware
Application January 16, 1945, Serial No. 573,096
1 Claim. (Cl. 140—71)

The method of producing a perforate compressed wire mesh body of the kind and for the purposes described comprising piercing a flat extend of knitted wire mesh fabric by a mandrel sized to determine the internal dimension of the body so that said mandrel extends substantially centrally through the fabric and perpendicular to the plane thereof, disposing the mandrel to extend axially through and in spaced relation to the sides of the cavity of a mold sized to determine the external dimension of the body, then folding the fabric about the mandrel to provide contiguous laterally lapping folds and plies substantially parallel to the mandrel axis, such folded formation being disposed in the mold cavity within the space between the mandrel and the cavity sides, and then axially compressing said folded formation within the mold cavity between the sides thereof and said mandrel, under pressure of selected magnitude, whereby to longitudinally collapse the fabric folds and plies upon themselves so that the same and the wires thereof are interentangled and interlocked to thereby consolidate the same into a substantially dense self form sustaining perforate body mass.

2,439,425
PROCESS FOR PREPARING DIALKYL ESTERS OF DICARBOXYLIC ACIDS
William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application April 1, 1946, Serial No. 658,742
8 Claims. (Cl. 204—72)

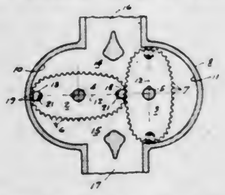
1. A process for preparing dialkyl esters of dicarboxylic acids of the empirical formula

$$(CH_2)_{2n}(COOH)_2$$

in which n is any integer, which comprises subjecting a methanol solution of a monoalkyl ester of a dibasic acid of the empirical formula $(CH_2)_n(COOH)_2$, and a trimethylamine salt of the said ester, to electrolysis and thereafter separating the resultant dialkyl ester of a dicarboxylic acid of the empirical formula

$$(CH_2)_{2n}(COOH)_2$$

from the electrolysis product.



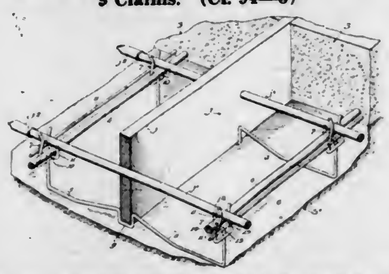
2,439,426
CONVERSION OF SATURATED ALIPHATIC CARBOXYLIC AMIDES TO NITRILES
William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 27, 1946, Serial No. 686,724
7 Claims. (Cl. 260—465.2)

1. A process for the synthesis of nitriles which comprises passing an amide of a carboxyalkane having from 2 to 20 carbon atoms per molecule, with carbon monoxide and steam, over a water-gas reaction catalyst at a temperature of about 200° to 475° C., and thereafter separating from the reaction mixture the nitrile produced by the ensuing reaction.

2,439,427
REPLACEABLE TOOTH STRUCTURE
Francis W. Guibert, Los Angeles, and Frederic B. Fuller, Whittier, Calif.; said Fuller assignor to said Guibert
Application April 20, 1943, Serial No. 483,758
2 Claims. (Cl. 74—460)

1. In a structure adapted to be subjected to fluid under pressure: a rotor having mutually perpendicular major and minor axes of symmetry and provided with teeth, each of which extend across the periphery of the rotor, and which are adapted to interengage with similar teeth on another rotor; a pair of inserts respectively at

opposite ends of the major axis and each insert, including one or more teeth that serve to complete the required number of teeth on the periphery of the rotor; said rotor having parallel sided recesses opening into the periphey for the accommodation of said inserts, said inserts having sides co-operating with the recesses, each of said inserts also



having an inner surface seating on the bottom of the respective recess, the depth of the recess determining the position of the teeth on the insert with relation to the other teeth on the rotor; and means co-operating with the bottom of the recesses for fastening said inserts tightly within the respective recesses.

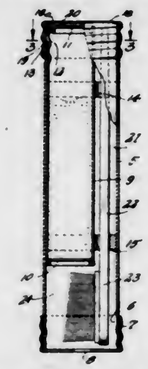
2,439,428

COMBINED BAR SUPPORT AND SPACER

Bror Hillberg, Chicago, Ill., assignor to Superior Concrete Accessories, Chicago, Ill., a partnership

Application May 16, 1945, Serial No. 594,116
9 Claims. (Cl. 94—8)

1. In combination with parallel substantially horizontal bars, a combined bar support and spacer comprising a plurality of parallel substantially horizontal wire formed crossrods corresponding in number to, positioned respectively beneath, and disposed in parallel relation with, said bars and having the ends thereof bent upwards and arranged so that their upper extremities underlie and support the ends of the bars, separately formed U-shaped, small sized, wire formed chairs having the central portions of their cross pieces welded to certain side portions of the upwardly extending ends of the crossrods and the upper ends of the side pieces thereof shaped to form the sides of open top restricted entrance variety pockets for the ends of the bars, and a spacer rod extending at right angles to the crossrods and serving to hold the latter against relative lateral displacement.



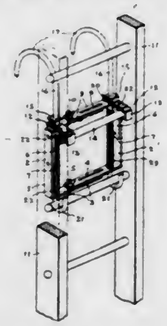
2,439,429

COMBINED DENTAL POWDER DISPENSER AND BRUSH HOLDER

Frank J. Hofmann, New York, N. Y.

Application August 25, 1945, Serial No. 612,656
1 Claim. (Cl. 132—84)

In combination, a cylindrical outer case, a closure for the lower end of said case, the upper end of the case having screw threads and a dispensing opening, a closure cap threaded on said screw threads and provided with a dispensing opening which may be moved into registration and out of registration with the first-named dispensing opening by turning said closure cap on said screw threads, a dentifrice powder container disposed in the outer case and provided with a dispensing opening registered with the first named dispensing opening, said container having an open upper



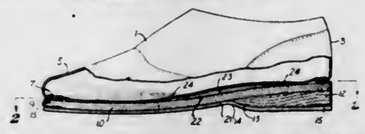
end closed by said closure cap and being considerably smaller than the outer case, clips enclosing said container partly and securing the same within the outer case in eccentric position therein, the container also being shorter than the outer case, and a tooth brush having its brush head disposed between the lower ends of the outer case and the container and its handle between the adjacent sides of the outer case and container and withdrawable through the lower end of the outer case.

2,439,430

HOOK ATTACHMENT FOR LADDERS

George K. Hurd, Toronto, Ontario, Canada

Application May 20, 1946, Serial No. 671,016
4 Claims. (Cl. 228—51)



1. In a hook attachment for ladders, a pair of U-shaped frame members having their open ends overlapping and slidably adjustable, means for slidably connecting and locking the overlapping portions of said frame members to form a rigid frame to fit between the side rails of a ladder, a pair of hook bars mounted one on each of said frame members to engage a ladder rung, an anchor hook member slidably mounted in each of said frames having a hook end to engage and interlock with an adjacent ladder rung, and spring means for holding said anchor hook members in an extended position.

2,439,431

SHANK REINFORCED SHOE CONSTRUCTION

Melville Kaufmann, Los Angeles, Calif.

Application September 5, 1944, Serial No. 552,725
4 Claims. (Cl. 36—8.5)

1. In a casual shoe construction, an upper, the lower edges of which are turned inwardly and secured to the outer surface of an insole, a midsole comprising a sole portion of relatively thick cushioning material and a heel lift with a lower face tapered to form an arched surface, said heel lift being formed to provide a longitudinally longer area of support for the outer portion of the heel than the inner, said midsole being shaped to extend completely over the lower surface of said insole, a stiff supporting element positioned between the insole and midsole unit to distribute pressure on the shoe between the tread and heel and thereby relieve stress on the arched portion, a covering of relatively thin material turned in about and covering the edges of the midsole, means securing the upper surface of said midsole and said thin covering to the insole, an outsole coextensive with the area of the midsole, said outsole being attached to said midsole unit and conforming to the arch therein.

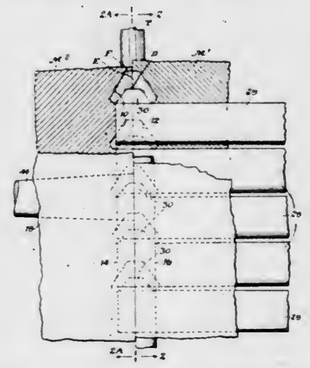
2,439,432

AMMONIATION OF FERTILIZERS

Frank G. Keenen, Swarthmore, Pa., and Ralph L. Dodge, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application September 27, 1943, Serial No. 504,066
1 Claim. (Cl. 71—43)

The process for producing fertilizer which consists essentially in mixing an acid superphosphate substantially simultaneously with calcium cyanamide, which reacts exothermally therewith, and with ammonium bicarbonate, which reacts endothermally therewith, in the proportions such as that there are added from 4 to 16 parts by weight of calcium cyanamide per 100 parts of super-phosphate, and 1.5 to 3 parts by weight of ammonium bicarbonate per part of calcium cyanamide, whereby the heat absorbed during the endothermic reaction with ammonium bicarbonate is substantially compensated by the heat given off during the exothermic reaction of the super-phosphate with the calcium cyanamide, and reversion of the phosphate to compounds which are substantially unavailable as fertilizers is prevented.



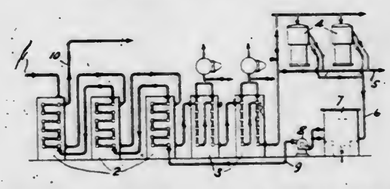
2,439,433

MOLD FOR SLIDE FASTENERS

Joseph N. Kuzmick, Clifton, N. J., assignor to Conmar Products Corporation, Newark, N. J., a corporation of New Jersey

Application May 3, 1944, Serial No. 533,989
11 Claims. (Cl. 18—42)

8. A mold for molding a plurality of slide fastener elements directly on the edge of a tape, each of said elements having a pocketed head with a sloping front wall, said mold comprising a cover die and an ejector die reciprocable toward and away from the cover die with the tape therebetween, said die portions having cavities defining a plurality of slide fastener elements spaced along the edge of the tape, a plurality of cores for defining the pockets in the heads, each core being carried on the longitudinal edge of a flat core bar near one end of the core bar, said core bars being slidably received in the ejector die for movement in the direction of movement of said die, said core bars when viewed in section



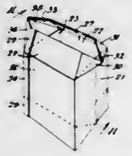
being tilted at an angle approximately the same as the angle of the front wall of the element head, said cover die having a sprue-hole leading to gate passages at the parting plane, said gate passages terminating in gates extending upwardly along and transversely of the core bars and leading into the bottom edges of the front walls of the element heads, and means connecting said core bars for movement in unison, whereby on opening of the die the cores may be moved to a position intermediate the cover and ejector dies, thereby separating the elements from the ejector die.

2,439,434

METHOD AND APPARATUS FOR DEWAXING OILS

Hans Olof Lindgren, Smedslatten, Sweden, assignor to Aktiebolaget Separator-Nobel, Stockholm, Sweden, a corporation of Sweden

Application April 26, 1946, Serial No. 665,238
In Sweden October 8, 1945
13 Claims. (Cl. 196—18)

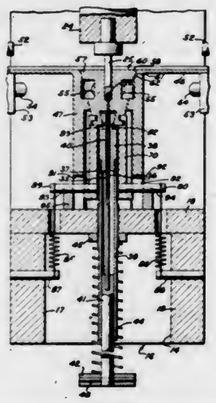


1. In the process of dewaxing mineral oils, tars, distillation and transformation products thereof and similar products, in which the wax-bearing oil is chilled in countercurrent heat exchange relation to a flowing heat absorbing liquid and in which wax and substantially wax-free oil are separated from the chilled wax-bearing oil and in which the separated dewaxed oil is utilized as the

heat absorbing liquid, the improvement which comprises maintaining throughout the heat exchange system a predetermined temperature differential between the heat-absorbing dewaxed oil and the wax-bearing oil by chilling with a chilling medium the dewaxed oil in the course of its flow in heat exchange relation with the wax-bearing oil.

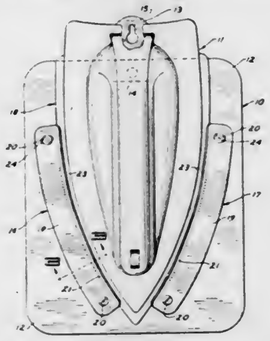
12. In an oil dewaxing plant having a device for chilling the wax-bearing oil to a temperature at which the wax precipitates in a form suitable for separation of the wax from the oil, a separator connected to the outlet of said device and operable to separate the chilled product therefrom into wax and dewaxed oil, and a heat exchanger having a duct connected to the inlet of the chilling device for delivering the wax-bearing oil thereto, the exchanger also being connected to the dewaxed oil outlet of the separator, the improvement which comprises two additional ducts in substantially concentric relation to said wax-bearing oil duct, the three ducts defining a central passage, an intermediate annular passage and an outer annular passage, said intermediate passage being connected to flow the dewaxed oil from the separator in countercurrent relation to the wax-bearing oil in one of said central and outer passages, and inlet and outlet connections to the other of said central and outer passages for flowing therethrough a cooling medium in countercurrent relation to the dewaxed oil flow in the intermediate passage.

2,439,435
MOISTUREPROOF PACKAGING
Ralph R. Richardson, Chicago, Walter T. Ritter, River Forest, and Robert O. Ragan, Oak Park, Ill., assignors to Chicago Carton Company, Chicago, Ill., a corporation of Delaware
Application July 7, 1944, Serial No. 543,826
2 Claims. (Cl. 229—37)



1. A package comprising a moistureproof paper board rectangular tubular side wall structure, and an end closure embodying an insert element extending substantially across an end of the tubular structure, end portions of one pair of relatively opposed side walls being folded inwardly over said element substantially into face-to-face contact therewith and adhesively secured thereto, end portions of the other pair of side walls being folded outwardly and having portions thereof refolded upon themselves in continuation of the inward folding of said end portions of the first pair of side walls, said insert element having end portions extending between the said outwardly extending and refolded end portions, said last mentioned end portions and said insert end extensions being also folded downwardly substantially into face-to-face contact with the outside of said other pair of side walls, said inwardly folded and refolded portions having their free ends spaced from each other so as to cooperate with said insert element to form a channel extending continuously across the end of the box and downwardly substantially to the ends of said downwardly folded portions, and a filler of water-insoluble adhesive material in said channel.

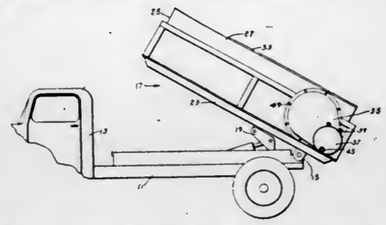
2,439,436
HAIRPIN
William H. Rothe, Irvington, N. J.
Application August 20, 1945, Serial No. 611,511
2 Claims. (Cl. 132—50)



2. A hairpin made of flat spring strip material doubled upon itself to provide opposed bottom and top sections joined by an end loop of substantial radius and substantial length having convergent leg portions terminating in transversely aligned and opposed mutually abutting stop bends, said bottom section having a downwardly bowed arcuate hump of substantial length extending from one said stop bend, said top section having an upwardly bowed arcuate hump of corresponding length extending from the other stop bend and opposed to said hump of the bottom section, said humps respectively terminating in opposed transversely aligned and mutually abutting additional stop bends, said end loop and opposed humps being adapted to provide enclosed adjoining hair receiving spaces of substantial capacity at the closed end portion of the hairpin, said bottom section terminating beyond its hump in a shallowly curved up-bowed free end portion, and said top section terminating beyond its hump in a free end portion provided with a plurality of keeper humps disposed to oppose the up-bowed bottom section free end portion whereby to provide a plurality of keeper humps adapted to define and enclose a plurality of additional relatively small hair receiving spaces adjacent the open end of the hairpin, each said keeper hump comprising an inner relatively long ascending side and an outer relatively short and relatively steeply pitched divergent descending side.

2,439,437
APPARATUS FOR FORMING GLASS BEADS ON METALLIC ELEMENTS
John S. Stull, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application July 14, 1944, Serial No. 544,918
3 Claims. (Cl. 49—66)

1. In an apparatus for accurately forming a glass spacer element on the output lead of an electronic tube, means for supporting the output lead, means operable to move said supporting means, means surrounding said supporting means to guide it in its movement, a tubular member surrounding said guiding means and reciprocable with respect thereto, a support member surrounding said reciprocable tubular member, a plurality of die members having cam surfaces to engage the support member and supported jointly by said support member and by said tubular member, a cam member on said guiding means, other cam surfaces on the die members for cooperating with the cam member on the guiding means to effect the opening of said die members when the tubular member is moved in one direction, and cam surfaces on the support member for cooperation with the first mentioned cam surfaces on the die members to effect the closing of the die members when the tubular member is moved in the opposite direction.



2,439,438
HOLDER FOR PRESSING IRONS
Leslie Thomson, Minneapolis, Minn.
Application May 6, 1946, Serial No. 667,627
2 Claims. (Cl. 248—117.2)

1. In a pressing iron holder of the character described, a plate of heat resisting material adapted to be hung in an upright position from a support, retaining means for the iron comprising downwardly converging members attached to the forward face of the plate and projecting angularly forward therefrom for laterally engaging the iron and holding it in a point down position on the plate, and said members being pivotally attached at lower ends to the plate and relatively swingable at upper ends about said pivots to vary the spacing between the members and fit them to irons of different widths.

2,439,439
SIDE DUMP TRUCK BODY
Ralph Abraham, Memphis, Tenn., assignor to Seth E. Giem River Unit, Memphis, Tenn., a partnership
Application September 19, 1946, Serial No. 697,965
6 Claims. (Cl. 298—18)

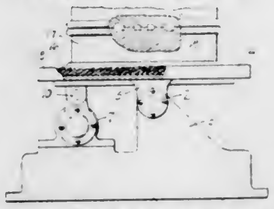
6. A dump truck body having a bottom, front, side and rear walls, and a partial closure top extending forwardly from said rear wall; one said side wall having a discharge opening therethrough adjacent its rear end; said rear wall extending from the rear of said opening forwardly at an angle in excess of thirty degrees across said body to the opposite said side wall, a discharge chute surrounding said opening and extending laterally away from said wall therearound, and a manually

operable closure gate for the outer end of said chute.

2,439,440
METHOD OF MAKING DISINFECTANT HYDRAULIC CEMENT
Charles Rhodimer Amberg and William John Knapp, Alfred, N. Y., assignors to North American Cement Corporation, Catskill, N. Y., a corporation of Delaware
No Drawing. Application October 7, 1942, Serial No. 461,228
2 Claims. (Cl. 106—15)

1. The method of making a disinfectant cement for forming concrete structures without materially adversely affecting the set-up and strength of said concrete which comprises mixing between about 0.1% and about 3% of pentachlorophenol with cement clinkers prior to the grinding, using said pentachlorophenol as a grinding aid, and leaving the pentachlorophenol in the cement to act as a plasticizer and disinfecting agent in the final cement.

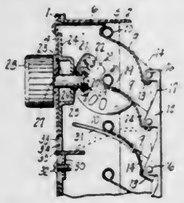
2,439,441
DISINFECTANT HYDRAULIC CEMENT AND METHOD OF MAKING THE SAME
Charles Rhodimer Amberg and William John Knapp, Alfred, N. Y., assignors to North American Cement Corporation, Catskill, N. Y., a corporation of Delaware
No Drawing. Application February 8, 1943, Serial No. 475,166
2 Claims. (Cl. 106—15)



1. The method of making a disinfecting cement forming strong structural materials, such as concrete, stucco, plaster and the like, which comprises mixing a disinfectant agent composed of a polyhalogenated phenol and a copper compound with the cement clinkers prior to their grinding, using said disinfectant agent as a grinding aid, and leaving said agent in the cement to act jointly as a plasticizer in the final cement.

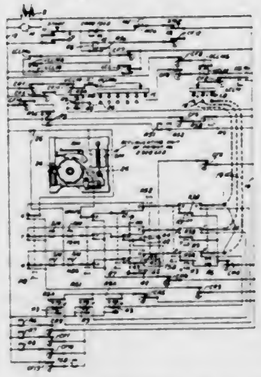
2,439,442
PROCESS OF MAKING HYDROPHILIC CARBON BLACK
Fred H. Amon, Weston, and Fred S. Thornhill, Hyde Park, Mass., assignors to Godfrey L. Cabot, Inc., Boston, Mass., a corporation of Massachusetts
No Drawing. Application February 6, 1943, Serial No. 475,050
2 Claims. (Cl. 23—209.1)

1. A process for the production of paste of hydrophilic carbon black, which comprises the steps of combining granular carbon black with sodium hypochlorite in proportions of about 100 grammes carbon black to 300 cc. of water and 300 cc. of 10% NaOCl until exothermic reaction



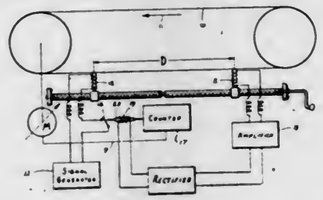
takes place, thereby forming a sludge of 8–9 pH, acidifying the sludge to bring its pH to about 2, filtering the acid sludge, washing until black begins to disperse in the wash water, and partially drying at a temperature not substantially over 100° C.

2,439,443
CASTING APPARATUS FOR VIBRATING MOLDS
Irving E. Aske, Muskegon, Mich.
Application March 3, 1944, Serial No. 524,852
2 Claims. (Cl. 22—57)



1. In a casting apparatus, a mold, a rockingly mounted table provided with a bed of granular material upon which said mold is supported, and means for rocking said table, said table having a peripheral rim for retaining the granular material thereon, said mold being supported by the granular material within and in spaced relation from said rim and being displaceable both horizontally and vertically relative to the plane of the table and being loosely supported on said granular material to facilitate during oscillation of the table displacement of the mold both horizontally and vertically relative to the plane of the table, and movement of the mold in an orbital path, and a downward acceleration to the mold not substantially greater than the acceleration of gravity.

2,439,444
VALVE MECHANISM FOR REGISTERS AND THE LIKE
Kenneth L. Babcock, Muskegon, and Robert L. Leigh, Grand Rapids, Mich., assignors to Air Control Products, Inc., Coopersville, Mich., a corporation of Michigan
Application May 19, 1945, Serial No. 594,780
7 Claims. (Cl. 98—110)

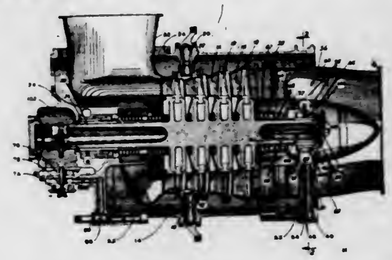


1. In a structure of the class described, the combination with a supporting frame comprising a top member and side members, the top member having a downturned flange of forwardly curved section spaced forwardly relative to the rear edges of the side members, of a grille provided with a vertically disposed bar portion, a support member secured to the rear side of said bar portion of said grille, said support and bar portion having registering vertical slots, a plurality of louver-like valve members of rearwardly curved section having their upper edges rolled to provide beads and extended at their ends to constitute pintles engaging said frame side members, the lower edges of said valve members having angularly disposed flanges overlapping and engaging the rear sides of adjacent valve members below the pivot axes thereof when the valve members are closed, the bead of the upper valve member engaging the said flange on said top frame member, pivot ears disposed on the rear sides of said valve members adjacent their lower edges, a connecting link for said valve members pivotally connected to said ears, a segmental rack secured to one of said valve members concentric with its axis, said rack being of concavo-convex section and having a series of holes in the curved portion thereof, a coacting gear having angularly disposed teeth engaging said holes in said rack, a spindle for said gear mounted on said grille and support and provided with a finger piece at its outer end, a spring arranged between said support and said gear and acting to yieldingly urge the teeth of said gear into engagement with the inner ends of said holes in said rack, an adjustable stop provided with a lug projecting into said slots in said support and bar, a screw arranged through said slots and having threaded engagement with said stop for adjustably supporting the same, and an arm on one of said valve members coacting with said stop on said grille.

2,439,445
COMBINATIONAL CODE ENTRY CONTROLLING MEANS FOR ACCUMULATORS
Horace S. Beattie, Poughkeepsie, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application December 9, 1944, Serial No. 567,435
10 Claims. (Cl. 235—61.6)

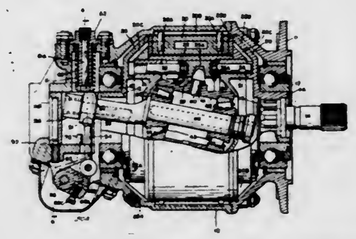
1. In a machine controlled by a card having holes arranged at index point positions according to a 4-hole code, representing digit entries 1, 2, and two other digit entries, which entries singly or in combination represent all digits 1–9 of the decimal system, means for sensing said index point positions to ascertain the presence of digit representing holes, an accumulator unit of the type wherein the digit entry in an accumulator element is initiated by an impulse transmitted to a start magnet, and is terminated by an impulse transmitted to a stop magnet, cyclically operable impulse transmitting means for transmitting successive impulses to said stop magnet timed to occur at three different times, one to terminate either the 2 or 1 digit entry whenever the entry has been previously initiated by the sensing of the corresponding 2 or 1 hole, and the remaining two impulses to terminate the two other digit entries, and means under control of said sensing means to transmit an impulse to said start magnet to initiate a digit entry corresponding to the digit representing hole sensed.

2,439,446
CONTROL CIRCUIT FOR SIGNAL RECORDING AND REPRODUCING SYSTEMS
Semi Joseph Begun, Cleveland Heights, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio
Application November 29, 1944, Serial No. 565,736
2 Claims. (Cl. 234—1.5)



1. A control system comprising, a record member, means for moving said record member, normally closed signal recording circuit means including recording head means, signal reproducing circuit means including reproducing head means spaced apart from said recording head means along the path of motion of said record member, circuit opening means in said normally closed signal recording circuit means, electrical circuit means interconnecting said signal reproducing circuit means with said circuit opening means for opening said circuit only while said signal reproducing means reproduces a signal recorded on said record member, and means for moving at least one of said head means with respect to the other head means for altering the time delay between the recording and the reproducing of a given signal on said record member.

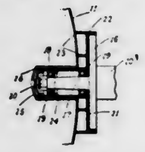
2. A control system comprising, a record member, means for moving said record member, normally closed signal recording circuit means including recording head means, signal reproducing circuit means including reproducing head means spaced apart from said recording head means along the path of motion of said record member, circuit opening means in said normally closed signal recording means, electrical circuit means interconnecting said signal reproducing circuit means with said circuit opening means for opening said circuit only while said signal reproducing means reproduces a signal recorded on said record member, and means for changing the rate of motion of said record member for altering the time delay between the recording and the reproducing of a given signal on said record member.



2,439,447
TURBINE BEARING CONSTRUCTION
Richard S. Buck, Glastonbury, and Walter A. Ledwith, Hartford, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application January 28, 1944, Serial No. 520,065
14 Claims. (Cl. 308—77)

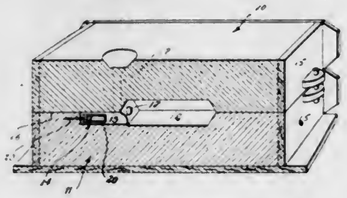
2. A bearing construction including a housing member, a rotor, a bearing for said rotor, a mounting member for said bearing located within the housing member, removable pins extending inwardly from said housing member and engaging and supporting said mounting member, said pins

being slidable in one of said members to provide for relative expansion between said members, and means for supplying fluid to said bearing through one of said pins, said one pin having a longitudinal passage therein for the fluid.



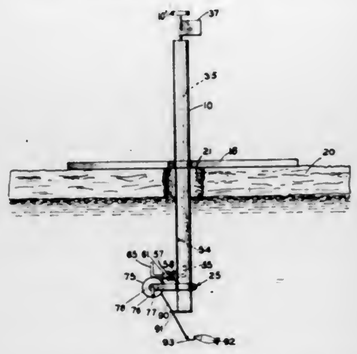
2,439,448
FLUID PUMP
Cecil C. Buckner, Grosse Pointe Park, Mich.
Application November 12, 1943, Serial No. 509,959
5 Claims. (Cl. 103—162)

1. A fluid pump consisting of a substantially cylindrical casing provided with centrally located inlet and outlet ports diametrically opposite each other, a non-rotatable valve ring within said casing and having inlet and outlet ports in its periphery registering with the casing ports, said valve ring enclosing two passages extending through said ring from edge to edge and separated by helically arranged walls so that the beginning of one passage lies opposite the ending of the other longitudinally of the ring, each passage communicating with one of the peripheral ports, a rotor within said casing and valve ring and carrying a plurality of pairs of pump cylinders, each pair having its members in axial alignment and parallel with the axes of said rotor and valve ring, and its outer ends in communication with the passage ends in said valve ring, said pairs arranged as a cylindrical assembly, a piston in each of said pump cylinders, a rotatable cage within said assembly and carrying a plurality of projecting pins each of which is adapted to coact with the pistons of a pair of pump cylinders whereby to oscillate the same, a shaft about which said cage is rotatable, said shaft having a portion projecting from one end of said rotor and adapted to be movable from a position wherein its axis coincides with the axis of the rotor to a position wherein the axis of said shaft is at an angle to the axis of said



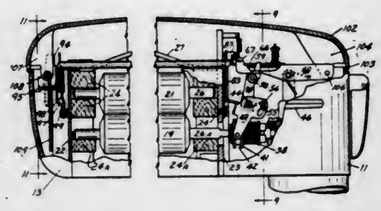
rotor, means for determining the position of said shaft and thereby the amount of oscillation of said pistons, said means consisting of a plunger actuable by fluid pressure from the pump outlet to move said shaft toward rotor-concentric position and adjustable spring means arranged to oppose the action of said plunger, and means to rotate the rotor.

2,439,449
CULTIVATOR DISC SUPPORTING ASSEMBLY
Joseph Caffese, Stockton, Calif.
Application July 27, 1943, Serial No. 496,293
1 Claim. (Cl. 308—19)



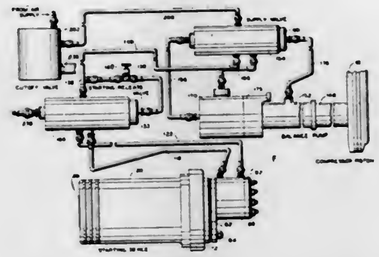
A cultivator disc supporting assembly including in combination with a disc having a central bore, a fixed leg, an enlarged circular head on the end of the leg, a spindle projecting centrally from the head, a rotary housing journaled on the spindle and held against axial displacement, said housing projecting through the bore of the disc with a close running fit, a circular back plate formed with said rotary housing and having forwardly projecting, annular and radially spaced flanges which abut against the back of the disc, another annular flange on said back plate projecting rearwardly and closely overhanging the periphery of said circular head, a disc securing sleeve closely surrounding the rotary housing and abutting against the front of the disc, and a hub threaded into the outer end of the rotary housing and including a portion engaging the outer end of said sleeve in retaining relation thereto and to said disc.

2,439,450
CASTING APPARATUS COMPENSATING FOR SHRINKAGE OF THE CAST MATERIAL
Phillip Campbell, Whittier, and William H. Maxwell, Newport Beach, Calif.
Application April 14, 1943, Serial No. 482,990
14 Claims. (Cl. 22—1)



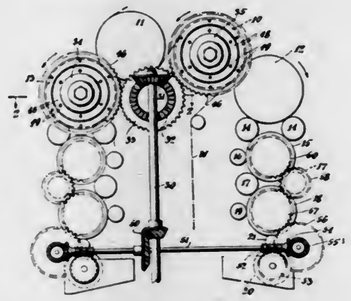
1. In combination with a mold having a casting cavity and a second cavity communicating therewith for the reception of the material to be cast, a body in the second cavity, a charge in the body which generates pressure when subjected to the heat conducted through the body from said material, and a part projected from the body by the charge and into the material to compensate for volumetric shrinkage of the material in the casting cavity.

2,439,451
FISHING TACKLE
George C. Clark, Pontiac, Mich.
Application February 15, 1946, Serial No. 647,885
6 Claims. (Cl. 43—17)



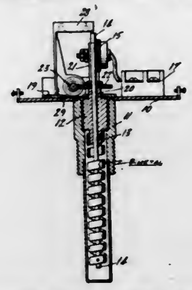
1. In a fishing tackle for ice fishing, the combination of a fluid-tight sleeve, a trigger rod movable in said sleeve, a signal flag carried by said trigger rod, a trigger, a packing gland through which said trigger extends into said sleeve, and means actuated by a striking fish for releasing said trigger to expose said flag.

2,439,452
WRINGER
Fred A. Conterman, Jamestown, N. Y., assignor to Jamestown Metal Equipment Company, Inc., Jamestown, N. Y., a corporation of New York
Application July 24, 1943, Serial No. 496,057
12 Claims. (Cl. 68—253)



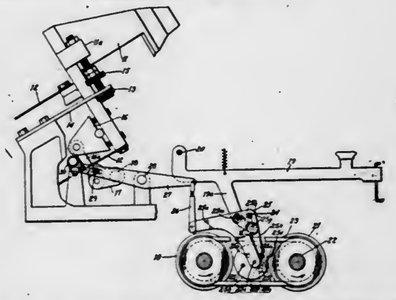
2. In a wringer structure having a frame, a pair of cooperating rolls mounted in said frame, a housing mounting said frame and enclosing a clutch and drive means operatively associated with said rolls, pressure means for said rolls, a cover for said frame and housing, said cover in closed position applying said pressure means to said rolls, a latch mechanism comprising an operable member associated with one end of said cover, said member serving to define a path of movement of said cover when moved under impulse of said pressure means into an open position, operable means securing said member in cover closed position, manual means adjacent said rolls having operative association with and adapted to actuate the member securing means to release said member for movement into cover open position, said member securing means including an oscillatable member having a lost motion connection with said clutch.

2,439,453
STARTING SYSTEM FOR FREE-PISTON UNITS
Kenneth C. Cooper, Portland, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,875
8 Claims. (Cl. 60—14)



1. In a starting system for free-piston units, each unit having at least one piston, and means for moving said piston in one direction into starting position, said starting system including a source of gas under pressure, a valve for admitting gas from the source to said moving means, means for admitting gas under pressure to the unit for moving the piston in the opposite direction for starting the unit, and means responsive to the position of the piston and operative when the piston reaches starting position for moving said valve to supply gas from said source to said gas-admitting means.

2,439,454
ROTARY PRINTING PRESS
Curtis S. Crafts, Oak Park, Ill., assignor to The Goss Printing Press Company, Chicago, Ill., a corporation of Illinois
Application November 28, 1944, Serial No. 565,449
2 Claims. (Cl. 101—216)



1. In a high speed rotary printing press having a rotary printing couple including plate and impression cylinders, and ink distributing drums to rotate with the cylinders, the combination of driving means for the cylinders and drums including a main drive shaft, resilient means for driving the cylinders from the main drive shaft, gearing interconnecting the cylinders for driving one from the other and separate driving means for driving the ink distributing drums from the main drive shaft.

2,439,455
THERMOSTATIC DEVICE
Ralph W. De Lancey, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a corporation of Connecticut
Application June 22, 1945, Serial No. 601,014
1 Claim. (Cl. 200—139)

A temperature responsive circuit controller comprising a supporting plate, a mounting bushing secured rearwardly of the plate, an arbor mounted in the bushing, a thermal motor carried by the arbor and including a shaft extending through the arbor and movable about its axis, a contact arm carried by the shaft, a fixed contact cooperable with the arm, a worm wheel carried by the arbor, the supporting plate having a forwardly extending bracket, apertured to one side of the shaft axis, a subframe secured to the plate and having a front opening in line with the aperture and a rear aligned aperture smaller than the other apertures, a worm insertable through the larger apertures and having an end portion receivable in the smaller aperture, the worm being in mesh with the worm wheel, and a spring anchoring the worm in place, the worm being rotatable to vary the tension applied to the thermal motor.

2,439,456
POWER OPERATED CASE SHIFT MECHANISM FOR TYPEWRITING MACHINES
Ronald D. Dodge, Poughkeepsie, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application November 10, 1944, Serial No. 562,789
9 Claims. (Cl. 197—74)

8. In combination with a shift mechanism having a part mounted for movement between two case shift positions, a pair of separate power actuating members; means connected to said part and engageable with both of said members for operation by one or the other of said members according to the position of said part and

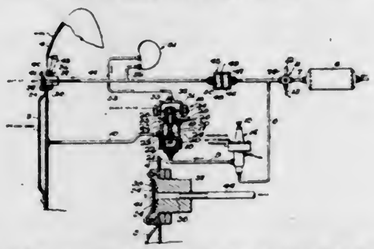
including a coupling element and means to engage the coupling element with said members; and means for rendering the engaging means effective in either position of said part, including a key movable in one direction to cause the coupling element to engage one actuating member in one position of the case shiftable part and movable in another direction to cause the coupling element to engage the other actuating member in the other position of the case shiftable part.

2,439,457

ALKYLATION OF BENZENE BY LONG CHAIN POLYMERIC OLEFINS USING SULFURIC ACID CATALYST

John Joseph Donleavy, Montclair, N. J., and Manuel Mannheim Balzer, Flushing, N. Y., assignors to Allied Chemical & Dye Corporation, a corporation of New York

No Drawing. Application February 28, 1947, Serial No. 731,728
7 Claims. (Cl. 260—671)



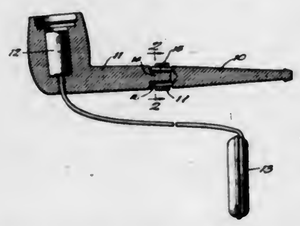
1. In the manufacture of long chain alkyl aromatic compounds by condensation of olefinic reagent comprising a scission-susceptible olefin containing between 8 and 20 carbon atoms with benzene, the improvement which comprises adding the olefinic reagent in a period between about ten minutes and one hour to a dispersion of benzene in a sulfuric acid condensing agent at a temperature between about 5° C. and about 40° C. in amount corresponding to between about ½ and about 2 mols of benzene and at least 2 mols of sulfuric acid per mol of olefin.

2,439,458

FLUID PRESSURE CONTROL MECHANISM FOR AIRPLANE DEICERS

Wilfred A. Eaton, Elyria, Ohio, assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio, a corporation of Delaware

Application April 30, 1943, Serial No. 485,227
9 Claims. (Cl. 244—134)



1. The combination with an airfoil having an inflatable device associated therewith for breaking formations of ice thereon, of an orifice positioned adjacent said airfoil and adapted to be restricted by the formation of ice adjacent thereto, a source of fluid pressure, a connection between said source and orifice, means associated with said connection for normally supplying fluid to said connection and orifice at a limited pressure and for increasing said pressure on restriction of said orifice by the formation of ice adjacent thereto and for finally further increasing said pressure to a value sufficient to remove the ice adjacent the orifice, a connection between said source and device, and means associated with said last named connection and operable in response to the initial increase in pressure in said first named connection due to the restriction of said orifice for supplying fluid from said source to said device.

2,439,459

SOUND PICKUP UNIT

William C. Eddy, Michigan City, Ind., assignor to Television Associates, Inc., Chicago, Ill., a corporation of Illinois

Application August 6, 1945, Serial No. 609,173
2 Claims. (Cl. 181—28)

1. A sound pickup unit comprising an elongated two part body whose parts are formed of hard vibration- transmitting material, a sound responsive device carried by one of the parts to set up vibrations therein in response to sounds which are picked up, the other part being relatively long and thin and terminating in a bit to be gripped between the teeth of a user, the parts being formed with interfitting joint portions, compressible material between the joint portions, and adjustable means to vary the compression of the material.

2,439,460

PREPARATION FOR TREATING LAUNDERABLE FABRIC ARTICLES

Herman Engler, New York, N. Y., assignor to Paul Koletzko and C. Alfred Hands, both of New York, N. Y.

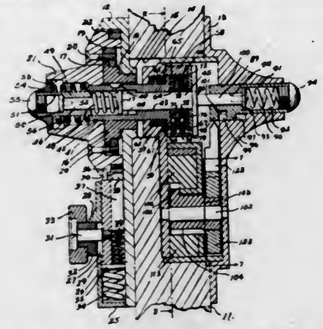
No Drawing. Original application August 16, 1944, Serial No. 549,812. Divided and this application July 18, 1946, Serial No. 684,551
1 Claim. (Cl. 106—208)

A preparation useful in laundering, comprising substantially the following proportions by weight of the named ingredients:

	Pounds
Water	20
Gum karaya	¼
Glycerine	3
Sodium borate	½
Emulsified solution	1

said emulsified solution being composed of:

	Pounds
Gum karaya	⅛
Pectin	⅛
Glycerine	1
Water	2



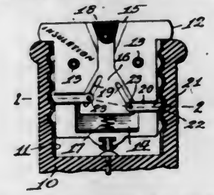
2,439,461

COMBINATION LOCK

Albert M. Finck, Bellevue, Ky.

Application December 6, 1946, Serial No. 714,512
8 Claims. (Cl. 70—133)

1. In a lock, a sliding bolt, means biasing said bolt to a projecting position, retracting means for said bolt, a rotatable member carried by said retracting means, a swingable dog adapted to interlock with said rotatable member, said swingable dog and said rotatable member being formed at their interlocking portions so that the biasing means is effective to cause the rotatable member to move out of interlocking engagement with the dog unless the dog is restrained, a movable member, a lug element carried by said movable member, and means biasing said movable member to a



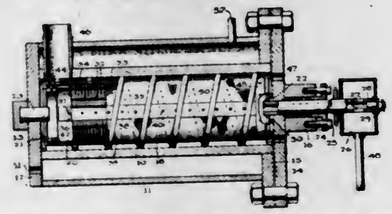
position wherein said lug element is in restraining relation to said dog.

2,439,462

ELECTRIC PLUG AND SOCKET LATCH

Louis Frank, Fellows, Calif.

Application September 20, 1943, Serial No. 503,043
3 Claims. (Cl. 173—360)



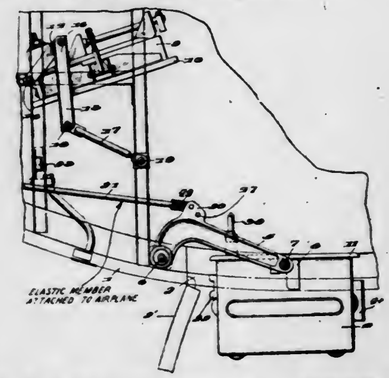
1. The combination with an internally threaded electric socket of an electric contact plug adapted to be positioned in said socket, a member arranged for movement lengthwise within said plug, latching dogs arranged for radial movement at right angles to the axis thereof in said plug, said longitudinally movable member being provided with oppositely inclined slots, pins carried by the inner ends of said latching dogs which pins pass through said inclined slots and the outer end of which longitudinally movable member extends to and lies substantially flush with the outer face of said plug.

2,439,463

OIL-WAX SEPARATOR

Adam H. Gebauer, Short Hills, N. J., assignor to Tide Water Associated Oil Company, Bayonne, N. J., a corporation of Delaware

Application December 18, 1943, Serial No. 514,764
4 Claims. (Cl. 210—201)

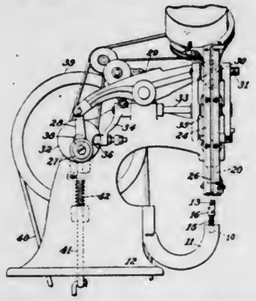


1. A pressure filter adapted for the rapid separation of wax in plastic condition from wax-oil mixtures comprising a filter body provided with an inlet for the material to be filtered and a restricted outlet for the solids separating therefrom, a jacket surrounding said body for circulation of heat transfer medium, a rotary filter element having diverging passages for passage of filtrate through the filter element disposed within and spaced from the filter body to provide an annular space into which the material is fed under pressure and in which the solids collect as they are filtered out, said element being provided with an outlet for the liquid filtrate, means for rotating said element, and means including a member between the filter element and the body closely spaced from said filter element operative on the rotation of said element for cleaning the latter of solids tending to form thereon and for conveying the same to the outlet therefor, said solids outlet being so restricted as to restrict the flow of solids therethrough and form a seal of solids adjacent the solids outlet of a desired consistency and depth to prevent blow-by and permit rapid filtration in continuous operation of the filter.

2,439,464

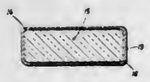
BATTERY CONTAINER FOR AIRPLANES

Paul F. Good, Baltimore, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland



Application January 3, 1947, Serial No. 720,093
6 Claims. (Cl. 136—171)

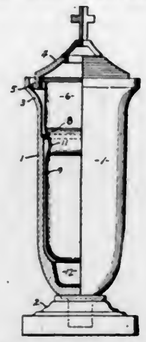
6. A battery installation for an airplane fuselage having a battery access opening formed therein, including a battery, a battery box and cover separately mounted in the fuselage and so positioned that the cover engages the box and forms a gas-tight container for said battery, a locater and stop bracket mounted on said box and said fuselage to position the box in the cover-engaging position within the fuselage, said battery box being pivotally supported on the upper ends of a pair of levers, the lower end thereof being pivoted to the airplane fuselage, the pivot points being so located that when the box is in the cover-engaging position within the fuselage, the center of gravity is above the pivot points of said levers on said fuselage and between said last mentioned pivot points and said locater and stop so that the box must be moved in an arc upwardly about the pivot points of the levers from the operative position over the pivot points and downwardly until the levers extend the battery box through said opening in the bottom of the fuselage, said cover being movably supported



on a linkage mechanism so constructed and arranged that the box cover moves from a box-engaging position, initially vertically and subsequently tilts to the open position, said battery having terminals extending upwardly into the cover, receptacles mounted on said cover to engage said terminals, the opening movement of the cover electrically disconnecting said terminals and releasing said battery box for movement out of said fuselage.

2,439,465
EYELETING MACHINE
Sylvester L. Gookin, Quincy, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application September 4, 1944, Serial No. 552,591
9 Claims. (Cl. 153—1)

1. An eyeleting machine comprising an anvil having an upsetting shoulder and a pilot projecting therefrom, an eyelet-setting tool arranged to co-operate with said anvil, and a sleeve surrounding and bearing on said anvil behind said shoulder, the sleeve being rotatable about the axis of said pilot and movable axially and having a finger in the path of the margin of said tool arranged to wrap a terminal portion of a wire element around said pilot in the form of an eye.



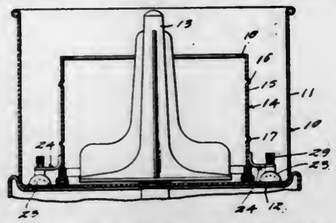
2,439,466
PIEZOELECTRIC CRYSTAL ELEMENT AND METHOD OF FABRICATING SAME
Charles K. Gravley, Cleveland Heights, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio
Application October 20, 1944, Serial No. 559,524
15 Claims. (Cl. 171—327)

1. In the process of fabricating a piezoelectric crystal element, the steps of rounding the edges and corners of said element, subsequently covering said element with a coating of hardenable liquid material, and causing said liquid coating to become hard to form a moisture-proof coating.

2,439,467
CANDLE LAMP
Oscar D. Guilfoil, Jr., Syracuse, N. Y.
Application May 25, 1944, Serial No. 537,247
1 Claim. (Cl. 240—13)

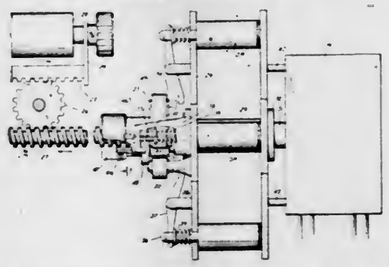
In a candle lamp, an outer receptacle of transparent material and closed at its lower end, a candle unit placeable in the receptacle through the upper end thereof, and means for suspending the unit within the receptacle with the portion of the unit below the suspending means spaced from the inner wall and the bottom of

the receptacle forming an air space, the suspending means including an annular gasket on the inner wall of the receptacle, the unit having a conical peripheral surface for coacting inclined plane fashion with the gasket when the unit is fully in the receptacle.



2,439,468
SCREENED PUMP
Roy H. Hopkins, Alice, Tex.
Application February 20, 1946, Serial No. 648,984
2 Claims. (Cl. 103—179)

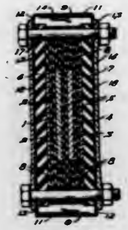
1. A screened pump comprising, in combination, a perforated cylindrical shell and a pair of collars in the ends thereof, a cylindrical liner concentrically positioned in said shell in spaced relation therefrom, said collars connecting said liner and said shell to provide an annular chamber, a pump plunger and valve mechanism inside said liner, a screening element mounted in one of said collars, and passage means connecting said chamber with said liner through the medium of said element.



2,439,469
AUXILIARY TUB ATTACHMENT FOR WASHING MACHINES
Harry F. Husted, Shavertown, Pa.
Application July 12, 1945, Serial No. 604,619
5 Claims. (Cl. 68—4)

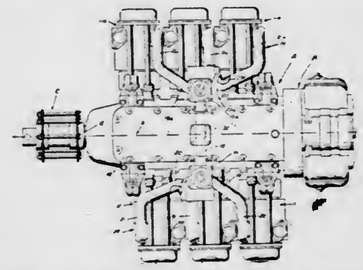
1. In combination with a main wash tub of a washing machine above whose bottom projects an agitator centrally, a tubular shell placed upon the bottom of the main tub so as to surround the agitator and provide between the tubular shell and the shell of the main tub an annular space, whereby the bottom of the main tub forms a bottom for the tubular shell, an annular hollow com-

pressible bead carried by the lower edge of the tubular shell resting upon the bottom of the main tub, and means frictionally engaging the bottom of said main tub in said annular channel securing a tight hold upon said bottom and engaging said tubular shell to compress the bead in fluid tight sealing relation upon the bottom of the main tub.



2,439,470
VARIABLE SPACING MECHANISM FOR TYPEWRITING MACHINES
Carlton T. Jackson, Rochester, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application November 14, 1944, Serial No. 563,349
19 Claims. (Cl. 197—84)

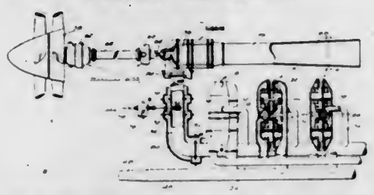
6. In combination with the carriage of a typewriting machine, variable spacing mechanism for said carriage including a rotary member having a plurality of stop elements each settable to a position limiting rotation of said member; stop means cooperating with a set stop element to arrest said rotary member after an extent of rotation determined by the angular position of the set stop element, one of said stop elements normally preventing rotation of said rotary member; means to restore the set stop element to release said rotary member for rotation, means operative with the restoration of the set stop element to selectively set another stop element, and means for rotating the rotary member upon the restoration of the set stop element.



2,439,471
CONDUCTOR ARRANGEMENT FOR CURRENT DISTRIBUTION
John G. Jackson, Detroit, Mich., assignor to Square D Company, Detroit, Mich., a corporation of Michigan
Application August 27, 1942, Serial No. 456,330
12 Claims. (Cl. 174—68)

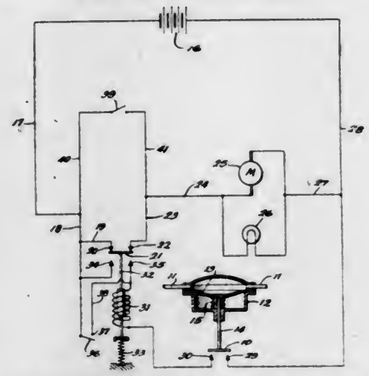
10. A duct enclosed conductor arrangement for current distribution comprising a plurality of conductors arranged in side by side relation, insulated from each other by thin insulation disposed therebetween and with which they are in intimate contact, conductors at the opposite sides of the group being electrically common and each of different polarity from the conductor immediately

adjacent thereto, and insulating plates disposed against the outer sides of said outside conductors and in intimate contact therewith, and top and bottom closures for the duct engaging the edges of the insulating plates to complete the duct enclosure with the insulating plates forming the outer side walls of the duct.



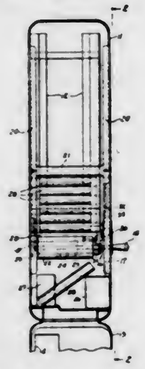
2,439,472
INDUCTION SYSTEM FOR MULTICYLINDER OPPOSED PISTON ENGINES
Thomas Jackson, North Muskegon, Mich., assignor to Continental Motors Corporation, Muskegon, Mich., a corporation of Virginia
Application May 8, 1945, Serial No. 592,590
16 Claims. (Cl. 123—56)

5. A fuel induction system for a horizontally opposed cylinder engine comprising a fuel mixing and forming means located substantially beneath said engine, a fuel mixture distributing chamber, a primary fuel mixture riser openingly connecting said means with said chamber, and secondary fuel mixing conducting means connecting said chamber with the engine cylinders and comprising a manifold assembly provided with conducting means extending horizontally outwardly with respect to the vertical longitudinal central axial plane of the engine and terminating in separate upwardly extending conducting conduit portions connected with cylinder intake ports on the underside of said engine cylinders, said induction system comprising substantially similar manifold fuel conducting means respectively associated with both banks of engine cylinders, said manifold fuel conducting means separated by the engine crankcase, and conduit means connecting said manifold fuel conducting means and extending transversely through the interior of said crankcase, a fuel mixing and forming device connected with each of said manifold fuel conducting



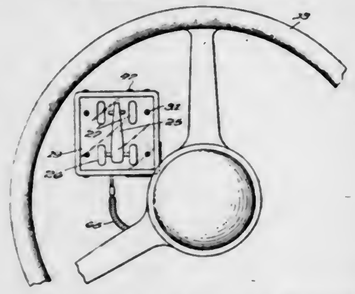
means and separate risers connecting said devices with the fuel distributing chamber of each manifold fuel conducting means, said risers lying adjacent the side of said engine crankcase.

2,439,473
PRESSURIZED PROTECTIVE CONDUIT FOR HOT GAS POWER PLANTS
Andrew Kalitinsky, Eagleville, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application May 11, 1943, Serial No. 486,614
7 Claims. (Cl. 60—44)



1. A power plant comprising a free-piston engine-and-compressor unit, in which the gas compressed by the compressor part of the unit scavenges the engine, said unit including a scavenge manifold for delivering compressed air from the compressor part directly to the engine, a receiver to which exhaust gas from the engine part of said unit is directed, a duct connecting said unit to said receiver, a shell around said duct to which a part of the compressed gas from the compressor part of the unit is supplied, and a branch connection from said manifold to said shell for conducting gas from the manifold to said shell, said gas being normally at a pressure higher than the pressure of the gas in the duct, thereby maintaining within said shell a volume of gas which surrounds the duct and has a pressure higher than that of the gas in the duct.

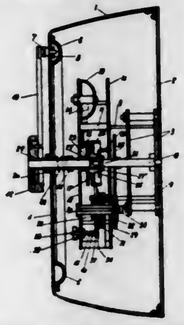
2,439,474
BRAKE PRESSURE RESPONSIVE SIGNAL SYSTEM
Jeremiah D. Kennelly, Oak Park, Ill.
Application June 10, 1946, Serial No. 675,549
3 Claims. (Cl. 177—311)



1. In combination with the air brake line of a vehicle equipped with an electric warning signal, means actuated by a change in pressure in said line, due at least to a partial application of brakes, for closing the circuit of said signal, means for maintaining said circuit closed even when the normal pressure in said line is restored, and manual means effective only after the normal pressure in said line is restored for opening said signal circuit and conditioning said apparatus for automatic operation again by said pressure change.

2,439,475
ARTICLE GAUGING DISPENSING DEVICE
George A. Kruse, East Orwell, Ohio, assignor to The Hospital Specialty Company, a corporation of Ohio
Application June 19, 1947, Serial No. 755,578
6 Claims. (Cl. 312—48)

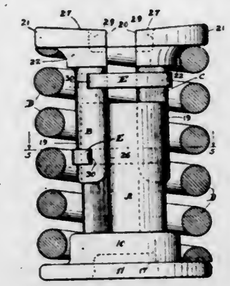
6. In an article dispensing machine having an article-advancing member, an article gauging device comprising an arm member, an article engaging member extending from said arm member in substantially the plane of said arm member and being movable relative to said article-advancing member, a finger member extending from said arm member in a plane at an angle to the plane of said arm member and movable therewith, said finger member being adapted to control movement of said article-advancing member, and a leaf spring carried by said machine and connected to said arm member, said leaf spring providing a hinge for movement of said arm member and a bias for urging said arm member in one direction relative to said article-advancing member.



2,439,476
INDICATOR
Guy O. Leggett and Carl Nathan, Chicago, Ill.
Application February 11, 1946, Serial No. 646,824
5 Claims. (Cl. 116—31)

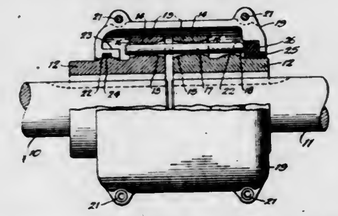
1. Mechanism for operating an indicator for the steerable wheels of an automotive vehicle com-

prising a support, a lever pivoted between its ends on the support, an abutment having an inclined face engageable with one end of the lever and movable to rock the latter about its pivot, a member connected to the other end of the lever and movable therewith, a pointer spindle rotatably carried by the support, means operatively connecting the member to said spindle whereby movement of the member rotates the spindle, and means responsive to operation of the steerable wheels of the vehicle for moving said abutment.



2,439,477
SOUND WARNING DEVICE
Bernard Louis Joseph Fernand Le Roux, Paris, France
Application August 8, 1945, Serial No. 609,627
In France July 1, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires July 1, 1964
5 Claims. (Cl. 161—23)

1. Time warning device comprising, in combination, an actuating clockwork mechanism, a bell-ringing mechanism normally in a locked position, a hand rotatable in front of a graduated dial, push studs movably mounted in a circular groove on said dial and provided with a head projecting in front of said dial sufficiently to push the said hand outwardly as it rotates over one of said push studs thereby drawing away with it part of the bell-ringing mechanism and thus unlocking it, spring means for returning the said part of the bell-ringing mechanism into its locked position, a knob integral with the said hand for winding up the whole mechanism whereby the said hand is brought in front of the zero of the graduated scale at the end of the winding operation.



2,439,478
FRICTION SHOCK ABSORBER
Henry B. Loewer, Kenmore, N. Y., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application October 8, 1945, Serial No. 621,132
8 Claims. (Cl. 267—9)

1. In a friction shock absorber, the combination with a friction post having longitudinally extending, flat friction surfaces at opposite sides thereof; of longitudinally extending guide flanges at opposite sides of said post, each guide flange overhanging the corresponding friction surface and having an inner, laterally extending surface disposed at an acute angle to the corresponding friction surface and forming with the latter a guideway of V-shaped, transverse section; and a pair of lengthwise movable friction shoes at opposite sides of said post, each shoe being of triangular, transverse section and slidably fitting the V-shaped guideway at the corresponding side of the post, each of said shoes

having a lengthwise extending friction surface on the inner side thereof engaging the corresponding friction surface of the post.

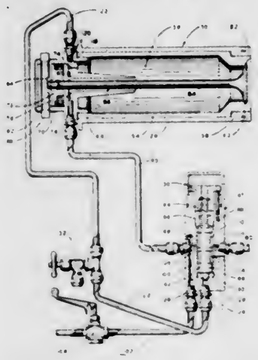
2,439,479
UNIVERSAL COUPLING
Arthur Mackmann, Chicago, Ill.
Application November 16, 1942, Serial No. 465,645
5 Claims. (Cl. 64—10)

5. A universal coupling comprising driving and driven flange members in facing and substantially coaxial relationship, the flange members being formed with normally alined openings of substantially circular section having a central portion of minimum diameter and flaring outwardly in opposite directions therefrom, and U-shaped connecting members having substantially rigid cylindrical legs extending through the openings and of smaller diameter than the minimum diameter of the openings, the legs initially being slightly out of parallel to engage the sides of the openings the portions of minimum diameter being of such length relative to their diameter that the legs may tilt therein to engage the flaring portions without bending the legs.

2,439,480
LIGHT SOCKET
Walter Majusick, Dayton, Ohio, assignor of one-half to Everett O. Miller, Dayton, Ohio
Application March 9, 1944, Serial No. 525,649
3 Claims. (Cl. 173—358)

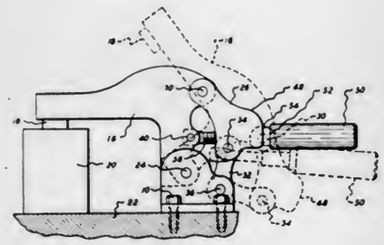
1. A light socket comprising, a substantially L-shaped body member forming thereby a thick portion with a ledge portion extending therefrom, a smooth walled hole in said body member to receive the threaded base of a light bulb, said hole being positioned in said body member with a portion thereof in said ledge portion, a spring leaf contact member secured to said thick portion and projecting over said hole to engage the cen-

tral contact of a light bulb, and a second spring leaf contact member secured to said ledge portion



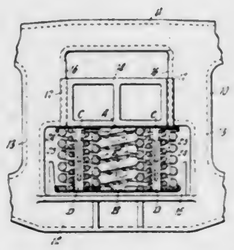
and having one end thereof projecting into said hole for engagement with threads on a light bulb.

2,439,481
PRESSURE-SENSITIVE ADHESIVE SHEET MATERIAL
John B. Martin, Glen Ellyn, Ill., assignor to The Kendall Company, Boston, Mass., a corporation of Massachusetts
No Drawing. Application July 3, 1944, Serial No. 543,418
12 Claims. (Cl. 117—68.5)



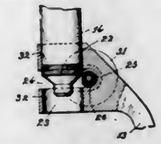
1. A pressure-sensitive adhesive sheet material comprising a flexible sheet backing, an exposed coating of a normally tacky pressure-sensitive polybutene adhesive adherently affixed to one side of said backing and a substance, selected from the group consisting of water-insoluble metallic salts and amides of a saturated fatty acid selected from the group consisting of stearic and palmitic acids, repellent to said polybutene adhesive adherently affixed to the other side of said backing in a thin continuous dry film.

2,439,482
STARTING SYSTEM FOR FREE PISTON ENGINES
Donald E. Meitzler, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application July 23, 1943, Serial No. 495,927
11 Claims. (Cl. 60—14)



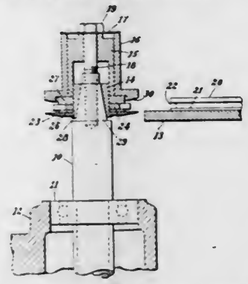
5. An accumulator device having a storage chamber, a valve closing a port for said chamber, and means for holding said valve closed against the pressure in said chamber, in combination with a control valve normally directing gas to said chamber, and a connection from said chamber to said control valve for operating said control valve to cut off the supply of gas to the chamber and to release the valve-holding means.

2,439,483
COMBINATION TOGGLE AND CAM CLAMP
Henry H. Merriman, Jackson, Mich., assignor to Harry D. Boardman, Jackson, Mich., as trustee
Application September 9, 1944, Serial No. 553,304
4 Claims. (Cl. 144—290)



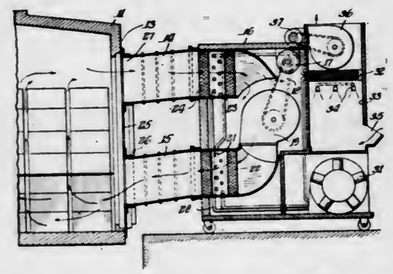
4. A clamping device comprising a clamping member, a fixed part supporting said clamping member for pivotal movement, a toggle joint connected at one end to said fixed part and at the other end to said clamping member, a cam surface upon said toggle joint, operating means associated with said toggle joint to move said clamping member in a clamping direction and in a releasing direction, and an adjustable follower associated with said operating means and engageable with said cam surface.

2,439,484
FRICTION SHOCK ABSORBER
Henry A. Miner, Evanston, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application January 1, 1944, Serial No. 516,645
7 Claims. (Cl. 267—9)



1. In a shock absorber for railway car trucks, the combination with a top spring plate; of a bottom spring plate having a lengthwise split, tubular spring sleeve projecting therefrom, said sleeve being an integral continuation of said plate; a friction post projecting directly from the other plate, said post being slidable within said sleeve in frictional contact with the interior walls thereof, said post being integral with said plate; and spring means interposed between said top and bottom spring plates and bearing directly thereon, said spring means including a coil spring surrounding said post and sleeve.

2,439,485
ADJUSTMENT MECHANISM FOR MICROSCOPES
Harold M. Porter, Hagerstown, Md., assignor to The Mitchel-Tyler Company, Hagerstown, Md., a corporation of Maryland
Application April 17, 1946, Serial No. 662,823
8 Claims. (Cl. 88—39)



7. In a microscope, a supporting member including a head having a vertical bore, a barrel slidable in said bore, said head having a slot extending from one edge across said bore, said slot having the outer end open and the inner end closed to provide a semi-cylindrical bearing, a friction pinion in said bearing, said pinion having cylindrical end portions fitting said bearing and an annular contracted portion intermediate said end portions to engage said barrel, and means for actuating said pinion, the width of said slot being at least equal to the diameter of said pinion whereby the pinion may be placed in position through the open end of said slot prior to inserting the barrel in the bore, and said barrel locking said pinion in said bearing after being inserted in assembled position.

2,439,486
ROTARY CUTTERHEAD
Eugene J. Ray, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application July 27, 1946, Serial No. 686,761
2 Claims. (Cl. 12—17)

2. A rotary cutter-head comprising an inner clamping member and an outer clamping member telescopically related to each other and concentrically related to the rotational axis of the assemblage, the inner clamping member having a peripheral flange confronting the outer clamping member, a plurality of annular work-engaging disks lying face to face and surrounding said inner clamping member between said flange and the outer clamping member, pressure-applying means including a screw extending through said outer clamping member and having a head for forcing the latter and said disks positively against said flange, a sleeve surrounding and telescopically related to said outer clamping member, said sleeve and one of said disks having confronting end faces adapted to engage opposite faces of the margin of a sole inserted between them, and a leaf-spring arranged to maintain said sleeve normally in contact with one of said disks, a portion of said spring lying between the head of said screw and said outer clamping member and constituting an element of said pressure-applying means, one of said disks having cutting edges arranged to cut the perimeter of a sole lying between said confronting faces.

2,439,487
METHOD OF PRECOOLING THE LADING OF REFRIGERATOR CARS COMPRISING THE REVERSAL OF AIR FLOW
Frank J. Reilly, Daytona Beach, Fla., assignor of one-third to Clarence J. Loftus, Chicago, Ill.
Application March 16, 1945, Serial No. 583,097
2 Claims. (Cl. 98—6)

1. A method of precooling a load within the usual side-door refrigerator car having side doors midway the ends thereof to a predetermined and substantially uniform temperature throughout the load during the initial precooling period without over-cooling any appreciable part of the load, comprising through lading loading of the car with crates of perishable products and arranging said crates substantially the entire length of the car in the upper part thereof so as to provide for a relatively shallow air chamber as compared with the depth of the load extending across the car in the lower part of the load near the floor adjacent to the door opening, said chamber being further arranged in a substantial line with said side door openings, and arranging said crates to provide a multiplicity of vertical air passages in open communication with said air chamber extending throughout the load and around the crates, cooling the air at substantially less than that of the perishable load by forcibly and rapidly driving streams of air so cooled through the side door into said chamber, thence through the multiplicity of air passages formed in the load and forcibly drawing the air out of the car, and intermittently reversing during the precooling operation the direction of travel of the streams of precooled air through the load and the multiplicity of air passages whereby the pattern of the precooled air distribution is intermittently changed, so that those portions of the load not being effectively contacted in one direction will be contacted to a greater degree upon the reversal of the air current.

2,439,488
WASH CHECK COLLAR
George E. Roberts, Martinsville, Mo.
Application January 25, 1946, Serial No. 643,312
2 Claims. (Cl. 61—16)

1. The combination with a culvert, of a wash check collar surrounding said culvert and attached thereto, said collar comprising a pair of

semi-circular shaped frame sections arranged so that the edge face of one of said sections is in confronting meeting relation with the edge face of the other of said sections, a semi-circular

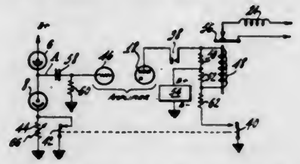
shaped strip of metal screening projecting from each of said sections and carried thereby, and means for securing the thus assembled sections together.

2,439,489

PREPARATION OF SILVER FOIL

Fritz Rosenthal, Bellmawr, N. J., assignor to Radio Corporation of America, a corporation of Delaware

No Drawing. Application June 26, 1944, Serial No. 542,250
3 Claims. (Cl. 204—12)



1. The method of making silver foil having a thickness of 0.00010 to 0.00015 of an inch, which consists in chemically depositing silver upon a polished resinous plastic sheet ranging from 0.010 to 0.020 in thickness, electrodepositing silver upon the chemically deposited layer, rinsing the sheet, and stripping the silver foil from the plastic sheet.

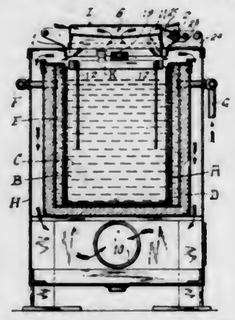
2,439,490

CHECK CIRCUIT FOR INSPECTION APPARATUS

Roger E. Schell, West Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application November 27, 1946, Serial No. 712,561
10 Claims. (Cl. 250—41.5)

1. In combination with an electrical impulse responsive circuit, means connected to said circuit for actuation on occurrence of a predetermined condition in said circuit, means for causing the occurrence of said condition at predetermined time intervals for predetermined lengths of time, a balancing circuit connected to said actuated means in opposition to said first circuit, means for both closing simultaneously said first circuit and said balancing circuit slightly in advance of the beginning of each of said predetermined lengths of time and keeping said balancing circuit closed throughout said predetermined lengths of time, and means for causing a condition in said impulse responsive circuit equivalent to said predetermined condition at the same time said impulse responsive and said balancing circuits are simultaneously closed.



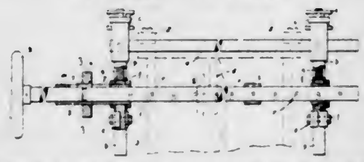
2,439,491

ENCLOSED ELECTROPLATING TANK

Charles Schiffl, Montclair, N. J.

Application June 2, 1942, Serial No. 445,423
3 Claims. (Cl. 204—277)

1. An electroplating tank comprising a container for an electrolyte having an open top, a casing completely enclosing said container and having a top wall provided with an opening above said container for access to the latter, a removable cover for said opening having top, side and end walls and a partition beneath said top wall of the cover formed with portions extending from the side walls that converge downwardly toward and meet above the open top of the container so that moisture rising from the electrolyte in



said container will impinge on said converging portions, perforations in said converging portions closely adjacent the meeting line of said portions and perforations in the side walls of said cover above said partition, and means for drawing air through said perforations and transversely of the open top of said container for cooling said converging portions to cause condensation of moisture thereon and to withdraw some of the gases that rise from said electrolyte.

2,439,492

BORING APPARATUS

John Gilbert Sharratt and Albert Gordon Sharratt, West Bromwich, England

Application November 23, 1945, Serial No. 630,454
In Great Britain July 26, 1944
4 Claims. (Cl. 77—2)

1. Boring apparatus comprising in combination a pair of horizontal bars adapted to be clamped to an engine body or other work piece, a pair of depending brackets adjustably carried by the bars in the regions of the ends of the bars, the brackets being formed near their upper ends with holes through which the bars pass, a slide on each bracket, said horizontal bars, brackets and slides forming a substantially rigid frame a rotatable boring bar carried by the slides, and a screw and nut device in association with one of the slides for imparting axial movements to the boring bar.

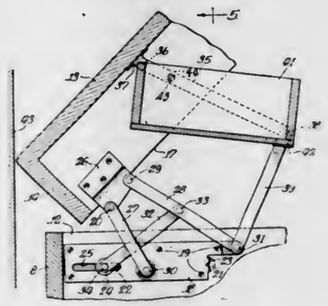
2,439,493

DOUBLE BOOT

William H. Smith, Warwick, R. I., assignor to Maurice C. Smith Co., Inc., Providence, R. I., a corporation of Rhode Island

Application July 14, 1945, Serial No. 605,005
1 Claim. (Cl. 36—10)

An article of the character referred to comprising an inner boot shaped to fit into an outer boot having a leg portion, the inner boot having a flexible sole and upper so that it can readily be inserted in the outer boot, the upper being formed of sheep shearling with the wool on the inside and having a vertical slit in its front portion extending from the top of the upper to a point approximately midway between the top and sole to permit the upper freely to fall open when the



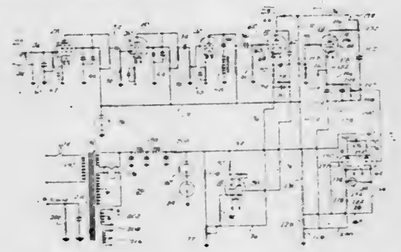
inner boot is worn alone, and the inner boot having a portion foldable into a cuff adapted to be disposed over the upper edge of the outer boot so that the wool side of the cuff is outside, the outer boot being stiff enough to serve for supporting the leg portion of the inner boot and preventing it from working down within the outer boot when the boots are telescoped for use in outdoor wear.

2,439,494

LID AND TRAY SUPPORTING HINGE

Roy A. Stone, Rockford, Ill., assignor to National Lock Co., Rockford, Ill., a corporation of Delaware

Application March 17, 1944, Serial No. 526,975
4 Claims. (Cl. 16—166)



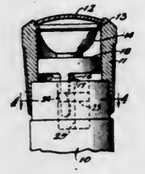
4. A hinge, comprising a body plate adapted to be attached to an end wall of a chest and provided with a slot and an ear, a boss slidable in said slot, a tractile spring connecting said boss and said ear and urging the boss toward the ear, a lid plate, a plurality of links each pivoted at one end to said lid plate and at the other end to said body plate, and a link connecting an intermediate portion of one of the aforesaid links with said boss.

2,439,495

HEARTBEAT RATE INDICATING APPARATUS

Ralph E. Sturm, Milton, Wis., assignor to The Burdick Corporation, Milton, Wis., a corporation of Delaware

Application July 14, 1942, Serial No. 450,890
27 Claims. (Cl. 128—2.05)



1. Apparatus for indicating the rate at which a heart is beating, including in combination, a condenser, means for normally charging said condenser, means including a first gas tube rendered conductive in response to an electric voltage generated by the heart and a second gas tube rendered conductive by said first tube and so connected in circuit with said condenser that said condenser is substantially completely discharged through said second tube each time the heart beats, and indicating means controlled in response to the frequency of discharge of said condenser.

2,439,496

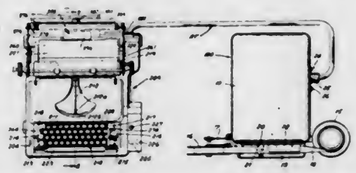
FLASHLIGHT

Daniel Szantay, Chicago, Ill.

Application February 18, 1946, Serial No. 648,510
5 Claims. (Cl. 240—10.68)

1. A flashlight comprising a tubular body adapted to hold a battery, a cap fitting rotatably on the body, a lamp mounted in the cap in a position to engage the center terminal of a battery in the body, a resilient contact strip in the cap connected to the lamp and extending into the body and resiliently biased into engagement with the side of the battery, and an insulating flap extending inward from the side of the body to move the strip away from the battery when the cap is turned to one position.

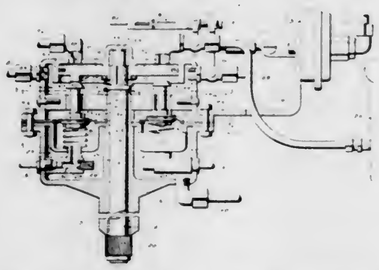
2,439,497



CARRIAGE SPACING MEANS FOR SIGNAL-CONTROLLED PRINTING APPARATUS

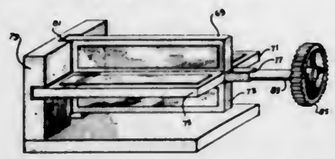
Henry L. Tholstrup, Rochester, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York

Application May 12, 1945, Serial No. 593,367
13 Claims. (Cl. 197—20).



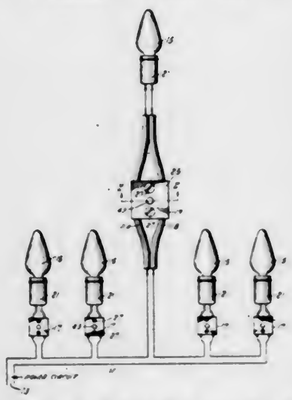
9. Signal-controlled printing apparatus comprising signal-producing means operable to produce a continuous chain of successive signals

representing, respectively, predetermined character and functional data; printing means including a carriage for holding a work copy in printing position, a plurality of character type elements, character actuating means responsive to the producing of each character-representing signal to effect printing from the character type element represented by such signal and to effect spacing of said carriage, and space actuating means operable, when actuated, to space said carriage the equivalent of one character space; a control device adjustable to either of two operating conditions and normally occupying one of said operating conditions, and said device being



operable to maintain continuous operation of said signal-producing means when in its said normal operating condition, and being operable to stop operation of said signal-producing means when adjusted to the other of its said operating conditions; and means responsive to spacing movements of said carriage and operable upon said carriage occupying each of a plurality of predetermined character space positions to adjust said control device to its said other operating condition and to actuate said spacing means, and being operable upon the spacing of said carriage from each of said predetermined character space positions to adjust said control device back to its said normal operating condition.

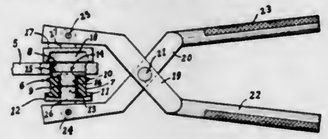
2,439,498
FUEL INJECTING PUMP
Russell Bruce Wallace, Plymouth, Mich.
Application April 26, 1944, Serial No. 532,830
12 Claims. (Cl. 103—38)



1. A pump comprising a cylinder, a piston slidable axially in said cylinder and also rotatable therein, means whereby said piston may be rotated, a pump-actuating element at one side of said piston and biased toward the latter, means for limiting the movement of said pump-actuating element toward said piston, means on said one side of said piston and cooperable with said pump-actuating element for forcing it away from said piston during part of each revolution of said piston, and means for admitting a controlling fluid to and exhausting it from said cylinder to axially shift said piston and vary the stroke imparted to said pump-actuating element.

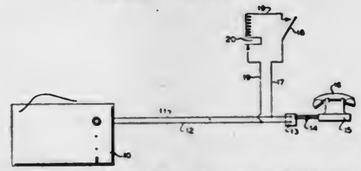
2,439,499
PIEZOELECTRIC MOTOR
Alfred L. W. Williams and Walter J. Brown, Cleveland Heights, Ohio, assignors to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio
Application August 20, 1942, Serial No. 455,416
27 Claims. (Cl. 171—327)

1. A device for translating electrical potentials into gyratory mechanical motion, comprising a plurality of juxtaposed piezoelectric crystal elements each having an identifying face fixed substantially in parallel to a common reference axis, the faces being angularly spaced apart around the axis, each element having a mechanical axis effectively in parallel to its identifying face and an electrical axis effectively normal to said face, each identifying face being provided with an electrode; the said mechanical axes being so correlated to the reference axis and the elements being so interconnected for conjoint movement that one portion of the device may be caused to gyrate around the reference axis upon the application of cyclically varying potentials to the electrodes in succession while the opposite portion of the device along the reference axis is restrained against movement with respect to said axis.



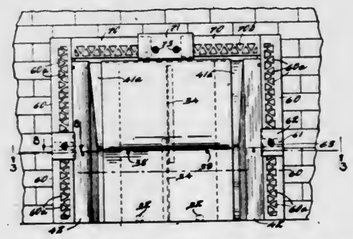
2,439,500
BRIDGING SWITCH FOR TESTING SERIES LIGHT CIRCUITS
Richard T. Wood, Memphis, Tenn.
Application December 16, 1946, Serial No. 716,504
2 Claims. (Cl. 200—159)

1. A switch for a lighting circuit, employing insulated wires, said switch including mating halves of insulating material forming a substantially cubical insulating housing having parallel channelways therethrough along the mating surfaces of said halves for the reception of said insulated wires, spaced U-shaped contacts embedded in one of said halves, said contacts having sharpened points respectively extending into said channelways to a depth penetrating the insulation of said wires, and into electrical contact



therewith, and oppositely terminating, beyond the mating surface of said half, in contact seats, said half being chambered between said contacts to form a well, the other said half being interiorly chambered between said channelways and around said seats, and having an entrance opening into the top of said chamber, a member adapted to bridge between said seats disposed in said chamber, a spring in said well urging said bridge away from contact with said seats, and a button oppositely bearing on said member and extending through said entrance opening to an accessible position beyond said housing.

2,439,501
MEANS FOR ASSEMBLING RESILIENT GROMMETS TO GEAR SHIFT SELECTOR ARMS
Herman J. Yelkin, Long Beach, Calif.
Application September 4, 1946, Serial No. 694,724
2 Claims. (Cl. 218—25)

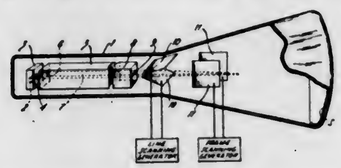


1. A means for assembling a resilient grommet collar to the gear shift selector arm of an automobile transmission mechanism, wherein the grommet comprises a rubber collar adapted to fit snugly in an opening of the gear shift selector arm, said collar being lined with a metallic tubular bushing and having external flanges of different diameters on the respective ends thereof, the flange of smaller diameter being of slightly greater diameter than that of the opening in the gear shift selector arm, comprising a presser disk having a center pin of a length substantially less than the length of the grommet and of a diameter to be snugly received in one end of the bushing of the grommet, a guide member consisting of a disk of slightly less diameter than that of the opening in the selector arm and having a center pin of a diameter to be snugly received in the other end of the bushing of the grommet and to contact the center pin of the first named presser disk within the bushing when the presser disk and the disk of the guide member are engaged with opposite sides of the grommet collar, a second presser member having a recess of a size to receive the disk of the guide member and the grommet flange of smaller diameter, and means for forcing the presser members together with the recess of the second named presser member axially aligned with the opening of the selector arm.

2,439,502
AUTOMATIC FIRE ALARM SYSTEM
Thomas J. Tate, Talladega, Ala.
Application February 21, 1947, Serial No. 730,069
1 Claim. (Cl. 179—5)

An automatic fire alarm system which, in combination with an electrical telephone system having a central station with signalling means thereat and conductors extending to a telephone receiver at a location remote from said central station and through which conductors electrical energy is adapted to be supplied for actuating said signalling means at said central station from said receiver, consists of a blinker element, a normally open thermostatically operated switch constructed to close by rise in temperature, and a circuit completing loop circuit connected to said conductors and incorporating in series in said loop said blinker element and said thermostatically operated switch, said loop being energized upon the closing of said thermostat from said telephone system.

2,439,503
AIR-HEATING DEVICE FOR FIREPLACES
Albert B. Austin, Minneapolis, Minn.
Application November 12, 1943, Serial No. 509,975
12 Claims. (Cl. 126—121)



1. A device for heating a room from an open front fireplace having rear and side walls having in combination, a plate extending substantially vertically along and spaced from the rear wall of a fireplace, said plate having a top portion extending toward and engaging said rear wall, plates extending substantially vertically along and spaced from the side walls of said fireplace respectively and having top portions extending toward and engaging said side walls, said side plates having portions respectively overlapping the ends of said first mentioned plate whereby all of said plates form a chamber between the same and the walls of said fireplace, and said side plates may be movable toward and from each other to suit fireplaces of different widths, a partition extending from said last mentioned plates intermediate their heights to the side walls respectively, thus forming upper and lower passages, said passages being open at the front of the fireplace and communicating in said chamber at their rear ends and means for holding said plates in position.

2,439,504
FLAT BEAM CATHODE-RAY TUBE AND CIRCUIT
Leonard Francis Broadway, Ickenham, England, assignor to Electric & Musical Industries Limited, Hayes, England, a company of Great Britain
Application March 6, 1945, Serial No. 581,281
In Great Britain March 9, 1944
7 Claims. (Cl. 250—158)

1. A circuit arrangement embodying a cathode ray tube having means for producing a thin flat electron beam rectangular in cross-section, means for causing said flat beam to converge in width to form a small spot on the screen of the tube deflecting means for deflecting said spot relatively to said screen in one direction and

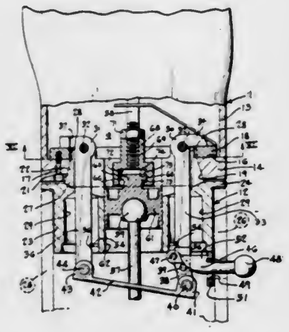
deflecting means for deflecting said spot relatively to said screen in a co-ordinate direction, deflection in said one direction occurring at a more rapid rate than the deflection in the other direction, wherein the deflecting means for deflecting the spot at said more rapid rate are dis-

posed at a position where the beam is rectangular in cross-section to embrace the longer sides of the beam cross-section and placed closed together than would otherwise be possible, whereby the sensitivity of deflection at said more rapid rate is increased.

2,439,505
POLYFLUORINATED ACRYLONITRILES
David W. Chaney, Nether Providence Township, Delaware County, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 28, 1946, Serial No. 680,054
7 Claims. (Cl. 260—464)

1. Fluorinated acrylonitrile derivatives having the formula

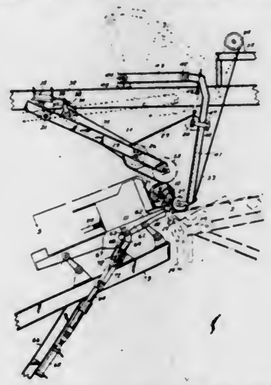
$$CF_2=CXCN$$



where X is selected from the group consisting of chlorine and fluorine.

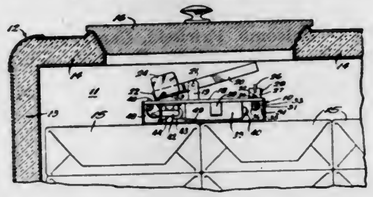
2,439,506
APPARATUS FOR MOLDING ARTICLES OF WAX
Rodney E. Christian, Royal Oak, Mich., assignor to Kerr Manufacturing Co., a corporation of Michigan
Application May 28, 1945, Serial No. 596,180
3 Claims. (Cl. 18—30)

1. In a molding machine for plastic material which is plastic only within narrow temperature limits, the combination with a frame, of a mold formed in separable sections positioned on said frame, means for supplying molding material heated to plasticity and under pressure, said means including a nozzle movably mounted on said frame into and out of coupling engagement with said mold, a valve normally closing said nozzle, a fluid motor for opening and closing said mold, a second fluid motor for operating said nozzle and valve including a resiliently yieldable connection between the movable element of said motor and said nozzle to effect the coupling of the latter with said mold, a tappet operated by said motor subsequent to the coupling of said nozzle for opening said valve, resilient means operating upon the withdrawal of said tappet for closing said valve in advance of the uncoupling of said nozzle, and controlling means for said motors adapted to close said mold in advance of the coupling of said nozzle and to open said mold subsequent to the uncoupling of said nozzle.



2,439,507
ARTIFICIAL BODY MEMBERS
Frank V. Eberle, Newark, and Harry Hansen, Lyndhurst, N. J.
Application April 27, 1946, Serial No. 665,543
16 Claims. (Cl. 3—12)

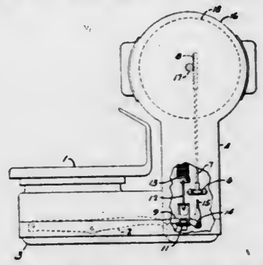
1. In an artificial body structure, a wrist member, a hand member, a frusto-conical projection on one of said members, the other of said members having a mating frusto-conical opening adapted to closely receive said projection, and means carried by one of said members and movable between a first position where it urges the mating frusto-conical surfaces into mating relation with sufficient frictional engagement to prevent relative rotation of said surfaces and a second position where it releases said surfaces from mating relation sufficiently to permit relative rotation thereof.



2,439,508
LOG TURNING APPARATUS
Miles Lowell Edwards and Donald K. MacBain, Longview, and Lester M. Johnson, Everett, Wash., assignors to Weyerhaeuser Timber Company, Longview, Wash., a corporation of Washington
Application July 14, 1942, Serial No. 450,838
8 Claims. (Cl. 144—208)

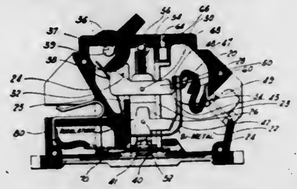
1. In a log turning apparatus, support means for loosely holding a log in a generally horizontal position, stops extending along one side of said log for limiting movement of said log laterally in one direction upon said support means, a chain, a pivoted arm having a roller thereon for urging said chain against the side of a log opposite said support, a second pivoted arm having a roller thereon for urging said chain against the side of said log opposite said stops, said chain between said two rollers engaging the surface of

said log for holding said log on said support means against forces created by the action of a log treating mechanism acting on said log, and means for driving said chain so as to rotate said log.



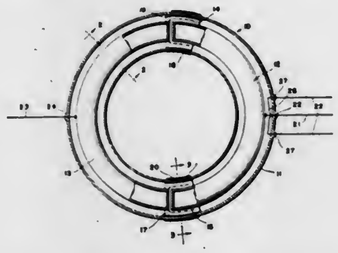
2,439,509
ALARM SWITCH
William C. Eddy, Michigan City, Ind., assignor to Television Associates, Inc., Chicago, Ill., a corporation of Illinois
Application February 11, 1946, Serial No. 646,752
3 Claims. (Cl. 200—142)

1. A switch adapted to be placed in a refrigerating apparatus for giving an alarm upon rise in temperature in the refrigerating apparatus to a predetermined value comprising, electrical contacts for controlling the alarm, a pivoted lever for normally closing the contacts to give the alarm, and a cup carried by the lever and provided with an opening therein to receive frozen material for holding the contacts open, the arrangement being such that upon rise in temperature in the refrigerating apparatus to the predetermined value, the frozen material will melt and drain through the opening to permit closing of the contacts.



2,439,510
CONNECTING MEANS
Blair H. Gaul, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a corporation of New Jersey
Application March 29, 1946, Serial No. 658,356
4 Claims. (74—579)

1. Connecting means for transmitting power between two levers movable in nonparallel planes comprising a longitudinally extending link, said link being shaped so that one end thereof lies substantially in the plane of movement of one of said levers and the other end of said link lies substantially in the plane of movement of the



other of said levers, said link having an aperture near each of its ends, a ball located in each of said apertures, means for nonrigidly retaining each of said balls in its aperture and means on each of said levers for grasping one of said balls.

2,439,511
LATCHING OR TRIPPING MECHANISM OF CIRCUIT BREAKERS
Floyd S. Green, St. Louis, Mo., assignor to Frank Adam Electric Company, St. Louis, Mo., a corporation of Missouri
Application April 10, 1944, Serial No. 530,390
3 Claims. (Cl. 200—88)

2. In a circuit breaker of the enclosed type, an enclosing housing, a contact carrier positioned for longitudinal sliding movement therein, a pair of co-operating make and break contacts, one of said contacts being carried on said contact carrier, a transverse bar pivotally secured to said contact carrier, a manual operating means adapted to actuate one end of said bar, a latch member adapted to engage the other end of said bar to prevent rotational movement thereof under normal operating conditions, a flexible support supported on the contact carrier and extending along the side thereof, parallel to the side of the contact carrier, said support having the latch member mounted on its free end, a bimetallic strip carried by the contact carrier and extending parallel to said support, the free end of said bimetallic strip being adapted to actuate the latch member and remove it from the end of the transverse bar when the current through the bimetallic strip exceeds a predetermined value, a magnetic element, adapted to co-operate with said latch member and cause it to be displaced from the end of the transverse bar without interference from the thermal element when the current through the circuit breaker exceeds a predetermined value, displacement of the latch member from the end of the transverse bar resulting in movement of the contacts of the circuit breaker to the open circuit position.

2,439,512
ULTRA HIGH FREQUENCY POWER OSCILLATOR
Clyde E. Hallmark, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application December 29, 1944, Serial No. 570,256
16 Claims. (Cl. 250—27.5)

1. A high vacuum electron discharge device comprising an outer hollow member of conducting material, at least one pair of inner members of conducting material insulated from each other and disposed within said outer member, said inner members having substantially equal length, one of said inner members having an electron controlling extension at each end thereof surrounding a portion of the other one of said pair of inner members, and electron emitting means coextensive with said extensions, each of said extensions and the portions of said members coextensive with said extensions constituting a three-element vacuum tube with the intermediate sections of said members constituting transmission lines.

2,439,513
ADIPIC ACID PROCESS
Clement H. Hamblet and Ambrose McAlevy, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application November 30, 1945, Serial No. 632,081
3 Claims. (Cl. 260—533)

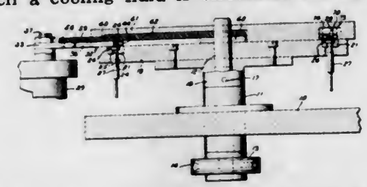
2. In a process for the preparation of adipic acid by the oxidation of cyclohexane, the steps which comprise oxidizing cyclohexane with air at a temperature between 50° and 175° C. and under a pressure between 50 and 500 p. s. i. until from 0.5 to 2 moles of oxygen react per mole of cyclohexane attacked, separating the unoxidized cyclohexane from the reaction mixture and oxidizing the cyclohexane-free reaction mixture with nitric acid at a temperature between 50° and 150° C. and at a pressure between 15 and 500 p. s. i. to adipic acid.

2,439,514
COMPOSITE STRUCTURES
Lee R. Herndon, Snyder, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 23, 1941, Serial No. 403,765
22 Claims. (Cl. 154—136)

1. The process of manufacturing reinforced rubber articles such as rubber tires and the like which comprises applying to an active hydrogen-containing fibrous reinforcing structure an active hydrogen-containing rubber and a cyanate taken from the group consisting of polyisocyanates, polyisothiocyanates, and mixed isocyanate-isothiocyanate compounds, associating the resulting structure with vulcanizable rubber, and subjecting the mass to a vulcanizing temperature.

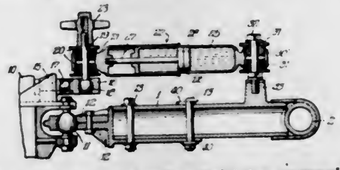
2,439,515
VALVE FOR STEP-BY-STEP SERVOMOTORS
Richard Harold Hodgson, Vancouver, British Columbia, Canada
Application February 6, 1946, Serial No. 645,818
8 Claims. (Cl. 121—46.5)

5. A remote control valve comprising a cylindrical casing having an inlet port and a final suction port, and three circumferentially arranged ports forming side and centre ports and adapted to serve selectively as flow and return ports, a plug within the casing, said plug having a port with one end in constant register with the inlet port and four flow openings communicating with the opposite end of said port, some of which are adapted for selective registration with some of the three circumferentially arranged ports of the casing, a second suction port or channel aligned with the four flow ports and in communication with the final suction port, said second suction port or channel having a width at the periphery of the plug substantially twice that of each of the four openings, and means for rocking the plug.



2,439,516
NAIL SEALING WASHER
Robert L. Holcomb, Fairfield, Conn., assignor of one-half to Sally O'B. Holcomb, Fairfield, Conn.
Application October 7, 1946, Serial No. 701,697
7 Claims. (Cl. 174—159)

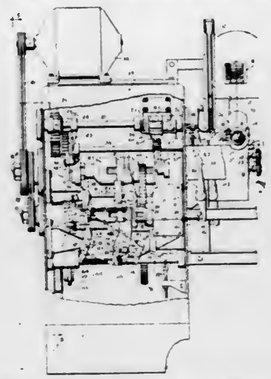
2. In a fastening device, a fastening element including a shank and a head at one end of said shank, and a resiliently deformable sealing washer on said shank to engage the underside of said head, said washer having an aperture receiving said shank, said washer having a thin web-like portion at its underside distorted by and extending down from the washer along the shank and thereby gripping the latter and preventing casual separation of the element and washer during handling and shipment whether or not the shank freely passes through the aperture.



2,439,517
INDUCTION HEATING APPARATUS
Joel R. Johnson, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application November 10, 1945, Serial No. 627,817
4 Claims. (Cl. 219—47)

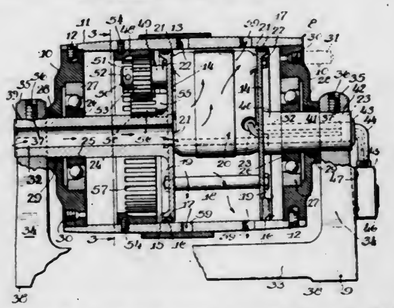
4. An electrical induction heating apparatus for heating work pieces comprising a rotatable carrier for supporting and conveying a series of work pieces to be heated in succession along a predetermined path, a stationary cover associated with said carrier having a substantially closed channel for the passage of said work pieces along said path, a stationary high frequency current heating loop in one portion of said channel between spaced portions of which the work pieces travel and effective to heat the same, a hollow loop secured to said stationary cover through which a cooling fluid is circulated arranged in

and extending throughout the greater portion of said channel between spaced portions of which the work pieces travel for cooling the same, a conduit connected to said stationary cover and communicating with said channel for introducing a non-oxidizing atmosphere into said channel to prevent oxidation of the heated work pieces during their cooling, and an extending plate attached to said heating loop and fitted in a transverse slot in said stationary cover for maintaining said cover stationary.



2,439,518
DRAW BAR
Clement B. Kasboske, Chicago, Ill., assignor to Martin Loeber, Chicago, Ill.
Application October 3, 1945, Serial No. 620,112
11 Claims. (Cl. 280—33.14)

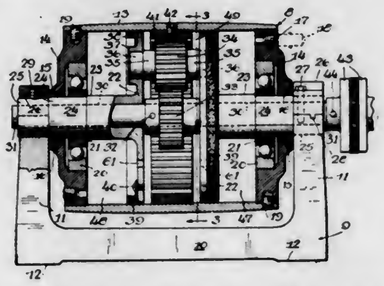
1. A draw bar for towing vehicles comprising, a tongue, means rigidly securing said tongue to the vehicle that is to be towed, means securing said tongue to the vehicle that is to do the towing, said latter means permitting limited movement of the tongue around both vertical and horizontal axes through the means, and means extending between said latter means and said tongue for resisting movement of said tongue around said axes.



2,439,519
MACHINE FOR WINDING BOBBINS
Brooks Marcellus, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Application March 23, 1944, Serial No. 527,702
18 Claims. (Cl. 242—32)

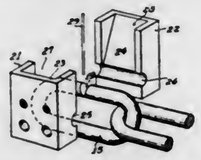
1. A bobbin winding machine having, in combination, a yarn traversing device and drive means therefor operative to impart movement to the device axially of the bobbin being wound, a cam shaft having cam means operative in the rotation of the shaft to effect return movement of the traversing device, said shaft having drive means including a clutch of the friction disk type with a shifting member, a spring for actuating said shifting member, means operable in the movement of the traversing device to energize said spring, a latch restraining said clutch shifting member against actuation by said spring, and

a controller operative mechanically in the movement of the traversing device at the end of the winding operation to disengage said latch and release the clutch to the action of said spring whereby to start the cam shaft.



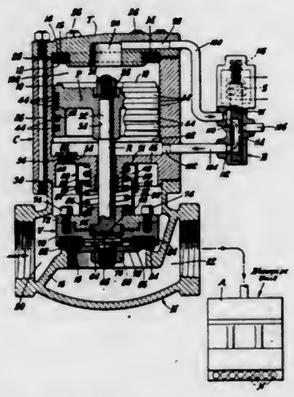
2,439,520
DRIVING MECHANISM
Frank Miller, Chicago, Ill.
Application January 8, 1945, Serial No. 571,911
1 Claim. (Cl. 74—421)

A compact driving unit comprising, a stator including, a base having two upright support arms, flanged elements provided with hollow stub shaft extensions rigidly secured to the said upright support arms, seal means secured to the peripheries of the flanges of the said flanged elements, motive power means confined between the said flanges and being secured thereto and provided with electrical connection means confined in one of the said hollow stub shaft extensions the terminus thereof secured to a source of electrical supply, a driving pinion co-extensive with the motor shaft passing thru a recess in the flange of one of said flanged elements, and an intermediate gear rotatably secured to the flange of one of said flanged elements and positioned in meshing relationship with the said driving pinion, the said driving pinion being eccentrically positioned with respect to the axis of said hollow stub shaft extensions; and a rotor including, a drum, drum flanges secured to each end of said drum, the said drum flanges provided with bearing means rotatably secured to the said hollow stub



shaft extensions, and further provided with seal means fitted over the said hollow stub shaft extensions, the said drum being rendered rotatably operative about the flanges of the said flanged elements, the said first-mentioned seal means in conjunction with the said second-mentioned seal means defining outer compartments adapted to retain a volume of lubricant, means on the said drum flanges providing access to the said outer compartments permitting lubricant under pressure to be packed and retained therein, the said flanged elements positioned so as to define an intermediate compartment for confining the said motive power means therein, annular gear means secured internally of said drum and positioned in meshing relationship with the said intermediate gear, and ventilating openings in the periphery of the said drum communicating with the said intermediate compartment establishing an air circulating path thru the other of the said hollow stub shaft extensions to effectuate cooling of the said motive power means.

2,439,521
REDUCING GEAR MECHANISM
Frank Miller, Chicago, Ill.
Application January 8, 1945, Serial No. 571,913
9 Claims. (Cl. 74—421)



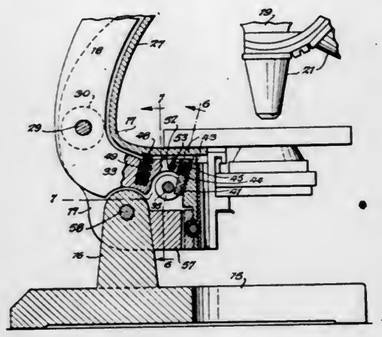
1. A compact reduction gear unit comprising, a stator including a base having two upright support arms, flanged elements provided with hollow stub shaft extensions rigidly secured to the said upright support arms, seal means secured to the peripheries of the flanges of the said flanged elements, and an intermediate gear rotatably secured between the inner faces of the said flanged elements and eccentrically positioned with respect to the axis of said hollow stub shaft extensions; and a rotor including, a drum, drum flanges secured to each end of said drum, the said drum flanges provided with bearing means rotatably secured to the said hollow stub shaft extensions, and further provided with seal means fitted over the said hollow stub shaft extensions, the said drum being rotatably operative about the flanges of the said flanged elements, the said first-mentioned seal means in conjunction with the said second-mentioned seal means defining outer compartments adapted to retain a volume of lubricant, means on the said drum flanges providing access to the said outer compartments permitting lubricant under pressure to be packed and retained therein, the said flanged elements positioned so as to define an intermediate lubricant retaining compartment, an annular gear secured within the said drum and positioned in enmeshing relationship with the said intermediate gear, a shaft rotatably confined within the said hollow stub shaft extensions, and a pinion secured to the said shaft in meshing engagement with the said intermediate gear, the said flanged elements provided with bores furnishing communicating passages for lubricant from the said outer compartments to the said intermediate compartment.

2,439,522
CHAIN AND METHOD OF MAKING THE SAME
Robert S. Miller, Portland, Oreg., assignor to Pacific Chain and Manufacturing Company, Portland, Oreg., a corporation of Oregon
Application November 22, 1941, Serial No. 420,090
16 Claims. (Cl. 59—35)

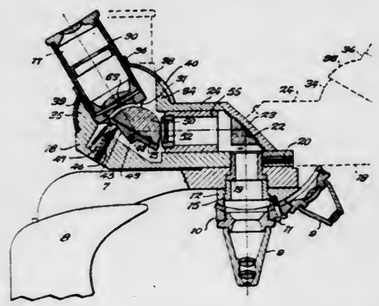
1. The method of making a chain link which comprises providing oppositely sloping surfaces on the ends of a substantially straight section of round bar steel, heating said bar to a degree to facilitate bending thereof, doubling back the opposite ends of said section toward each other and in a spaced relation with respect to the mid portion of said section in a manner to cause the sloping ends of said section to form a V therebetween, placing a mold around the adjacent ends of said section for confining a space therebetween corresponding in cross section substantially equal to the cross section of said bar section, introducing a metal electrode into said space so as to draw an arc and melt said electrode, and filling said space with said molten weld metal for homogeneously uniting said adjacent ends of said bar.

2,439,523
PISTON-OPERATED VALVE MECHANISM
Alfred J. Miller, Garwood, and Lloyd W. Young, Elizabeth, N. J., assignors to The Linde Air Products Company, a corporation of Ohio
Application July 15, 1944, Serial No. 545,062
5 Claims. (Cl. 137—139)

1. In a high-capacity oxygen supply valve mechanism, the combination comprising, a cylinder having an internal annular wall provided with a cylindrical flange having an internal recess, a bearing sleeve secured in said recess, a piston disposed in said cylinder on one side of said wall, a valve housing secured to said cylinder, said housing having an oxygen fluid inlet chamber opening to the other side of said wall, a valve in said chamber, a connecting rod secured at one end to said piston and at the other end to said valve, said rod having a sliding fit with said sleeve, said valve having an annular shoulder provided with a flange facing said first-named flange, a valve-closing compression spring disposed around said flanges, and a protective casing for said spring comprising telescoped parts one of which is held against one flange and the other against the other flange by said spring, and an annular filter secured to one of said parts and slidably engaging the other.



2,439,524
TUBULAR HAND GARDEN WEEDER
Earl E. Moore, Los Angeles, Calif.
Application May 2, 1945, Serial No. 591,480
7 Claims. (Cl. 97—63)

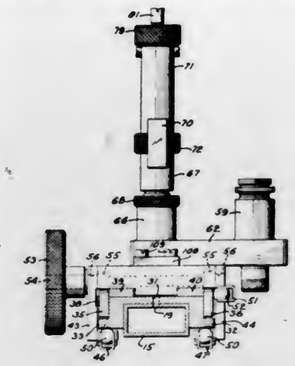


5. In a garden tool, a shank consisting of a single metal bar having its ends turned in opposite directions and at right angles to the length of the shank, a soil inserter at one of the ends of the shank and protruding beyond the longitudinal limits thereof, foot treadle means at the top of the inserter, and a removable plunger means within a central bore portion of the inserter with a foot treadle portion at the top thereof.

2,439,525
FINE ADJUSTMENT OF MICROSCOPE OBJECTIVE
Harvey N. Ott, Buffalo, N. Y.
Application March 30, 1944, Serial No. 528,686
9 Claims. (Cl. 88—39)

4. A microscope comprising a main frame having a stage mounted thereon, a body tube including an objective, an arm carrying said body tube and having a pivotal connection with said main frame which is slidable in a direction substantially parallel with said stage, a fine adjustment propelling mechanism acting on said arm for swinging the same about said pivotal connection, and cooperating parts on said arm and said frame including a groove and a pin slidable in said groove for imparting movement to said arm in a direction substantially parallel to said stage when the arm is swung about its pivotal connection, to reduce displacement of said objective in a direction other than perpendicular to said stage.

2,439,526
ADJUSTABLE MICROSCOPE EYEPIECE MOUNTING
Harvey N. Ott, Buffalo, N. Y.
Application April 14, 1944, Serial No. 531,001
2 Claims. (Cl. 88—39)



1. In an optical instrument having an eyepiece tube pivotally mounted on an eyepiece support at a side of the optical axis of the objective to swing to different positions about an axis and receiving light from the objective through the medium of reflectors, that improvement which includes pivoting one of the reflectors on an extension of the eyepiece tube in spaced relation to the pivotal axis about which said eyepiece tube swings, a cam arranged in fixed relation to said reflector, and a stationary part on said eyepiece support with which said cam cooperates to move said reflector when said eyepiece is moved to reflect light from the other reflector into said eyepiece.

2,439,527
WAVEMETER
Christian Paulson, Elmhurst, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 22, 1944, Serial No. 555,240
6 Claims. (Cl. 178—44)

5. In a wave meter, a section of a wave guide having a rectilinearly extending cavity, a base

block fixed to said section of wave guide, rails carried by said base block, a carriage supported by said rails for movement therealong and having surfaces at right angles one to another for

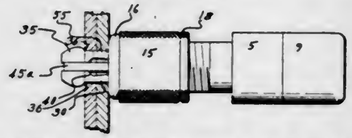
engaging one of said rails, and resiliently supported rollers positioned at right angles one to another and mounted on the carriage to bear against the base member and hold the carriage in intimate engagement with the rails.

2,439,528
AZINES AS OLEFIN POLYMERIZATION CATALYSTS
Milton J. Roedel, Talleyville, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 12, 1944, Serial No. 553,809
5 Claims. (Cl. 260—94)

4. In a process for the polymerization of a polymerizable monoolefin containing not more than 4 carbon atoms, the step which comprises carrying out the polymerization of said monoolefin under a pressure in excess of 4 atmospheres and at a temperature between 60° and 400° C., in the presence of 0.001 to 5%, based on the weight of monomer, of an azine catalyst having the formula $R_2C{=}N{-}N{=}CR_2$ in which one R of each R_2 group is a member of the class consisting of hydrogen, alkyl, alkaryl and aryl groups; the other R of the same R_2 group is a member of the class consisting of alkyl, alkaryl, and aryl groups, the formula of the azine having a symmetrical structure, there being present during the reaction no more than 1000 P. P. M. of oxygen.

2,439,529
HANGER FOR GARMENTS, WEARING APPAREL, ETC.
Andrew Stevenson, Los Angeles, Calif.
Application January 2, 1947, Serial No. 719,687
3 Claims. (Cl. 223—88)

1. As a new article of manufacture, a garment hanging unit comprising a coat hanging member having a central hanger arm for suspension of this member and coat shoulder supporting arms extending in opposite directions from said central arm, and inclined downwardly, vertically slotted extensions projecting inwardly from the outer ends of the shoulder arms, toward each other, and forming small platforms, and apparel supporting rails each including a head and a depending web, the latter detachably entering vertical slots of the extensions, and the head being of a cross section larger than the web to

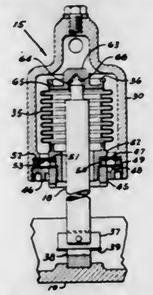


engage the tops of the platforms of the extensions.

2,439,530
CUSHION SPRING AND METHOD OF MAKING THE SAME
Clark A. Tea, Detroit, Mich.
Application June 22, 1944, Serial No. 541,489
5 Claims. (Cl. 155—179)

2. A spring comprising a strip having its side edges of opposite sinusoidal contours, said strip being bent transversely to its length at successive crests of the sinusoidal curves into a zigzag form.

2,439,531
SHEET METAL CLAMP
Frank C. Wallace, North Hollywood, Calif., assignor to Herman H. Helbush, Los Angeles, Calif.
Application November 27, 1944, Serial No. 565,316
5 Claims. (Cl. 85—5)

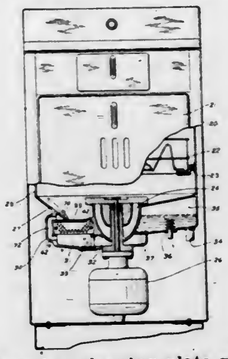


5. A sheet metal clamp comprising a body having a longitudinal bore, a sleeve threaded on the outer end of the body, said sleeve having an outer end wall providing a sheet engaging surface and presenting an axial opening, a plunger mounted to reciprocate in the bore of the body, said plunger carrying a retaining member projecting outwardly through said opening and having a lateral portion disposed in opposed relation to the work-engaging surface of the sleeve whereby to engage work therebetween, spreader means fixed to the body and disposed to engage and laterally move the retaining member upon movement of the plunger inwardly of the body, and spring means carried by the body and cooperating with the plunger to urge the latter inwardly of the body, said sleeve being axially adjustable relative to the body.

2,439,532
ANTHELMINTIC COMPOSITIONS
John A. Whiting and David V. Whitney, Jr., Kansas City, Mo., assignors to Armour and Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application December 23, 1943, Serial No. 515,371
5 Claims. (Cl. 167—53)

1. An anthelmintic composition for sheep comprising dried brewer's grain and an anthelmintic substance mixed with said grain.

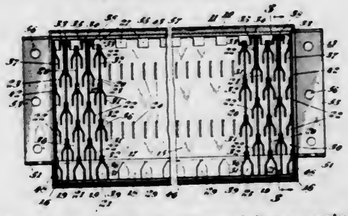
2,439,533
HYDRAULIC WEIGHING SCALE
Lawrence S. Williams, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a corporation of New Jersey
Application September 6, 1944, Serial No. 552,865
7 Claims. (Cl. 265—47)



1. In a device of the class described, in combination, a housing having a recess connected to a source of hydraulic pressure, an elastic bellows mounted in said recess, means for sealing the inner end of the bellows and transmitting force from said bellows, and a resilient mounting for supporting said bellows and sealing the space between said bellows and the mouth of said recess, said resilient means comprising a pair of spaced annular diaphragms, one of which is subjected to hydraulic pressure.

2,439,534
EXTRACTION OF HYDROCARBONS
Benjamin G. Wilkes, Jr., Wilkinsburg, Pa., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application April 7, 1945, Serial No. 587,221
6 Claims. (Cl. 196—14.35)

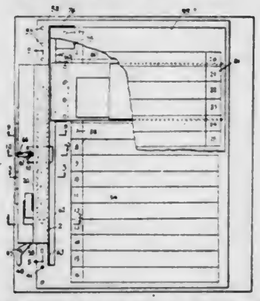
5. Process for separating a hydrocarbon mixture into portions respectively enriched in the chemically more unsaturated constituents and in the chemically less unsaturated or saturated constituents of such mixture, which comprises extracting the hydrocarbon mixture with an aliphatic cyano compound formed by reacting acrylonitrile with a compound selected from the class consisting of the mono- and polyethylene amines, and the monomethyl and monoethyl ethers of ethylene glycol, of diethylene glycol and of triethylene glycol.



2,439,535
FILTER
Ellsworth M. Wilson, Southport, Conn., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Application September 16, 1944, Serial No. 554,416
5 Claims. (Cl. 210—169)

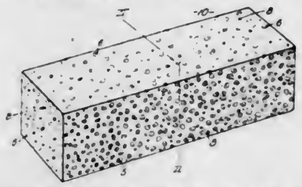
1. In an apparatus including a filter chamber, an inlet to said filter chamber and an outlet therefrom; filter means adapted to be removably positioned in said chamber between said inlet and outlet, said filtering means comprising an assembly of a removable side wall of said chamber, a plurality of substantially parallel filter rods uniformly spaced from each other in a lateral direction, rigidly attached to said wall and extending therefrom across said chamber transversely and

laterally thereof, a cleaning plate provided with a plurality of apertures through which said rods pass, slidably mounted on said rods; and means in said chamber walls releasably engaging said cleaning plate to normally position it adjacent said removable wall, whereby when said filter assembly has been removed from said chamber said cleaning plate may be moved lengthwise of said rods to remove debris therefrom.



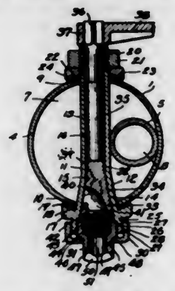
2,439,536
SEPARATOR
Eugene Porter Worthen, Braintree, Fenner Smith Barbour, Wollaston, and Stephen Roger Putnam, North Quincy, Mass., assignors, by mesne assignments, to Buena Vista Iron Company, a corporation of New Jersey
Original application May 27, 1942, Serial No. 444,676. Divided and this application June 7, 1944, Serial No. 539,214
1 Claim. (Cl. 183—111)

A vapor separator unit comprising a casing having a top wall, side walls, and a bottom drain plate and vertical division walls defining a plurality of narrow conduits each having a vapor inlet front end and a vapor discharge rear end, each said conduit comprising a plurality of comparatively narrow flat liquid-intercepting forewalls disposed in spaced vertical flat-wise approximate alignment with the center-line plane of said conduit, each of said forewalls having an unattached front edge directed toward said vapor inlet front end, the rear edges of each of said forewalls being attached alternately to opposed adjacent division walls by a connecting wall forming an angle with either face of its respective forewall greater than a right angle, having



a low angle of incidence to said division walls whereby liquid-intercepting pockets are formed vertically on said conduit walls, individual drain means for each first one of said pockets for discharging liquid entrained therein, and collectve drain means for all remaining of said pockets for discharging separately the liquid entrained therein, said collective drain means comprising front and rear walls forming a settling chamber enclosing the lower ends of said remaining of said pockets, drainage openings along the rear edge of said drain plate, and a drain pot adapted to receive the entrained liquid from said settling chamber and to discharge it therefrom.

2,439,537
BOOKKEEPING APPLIANCE
Joseph Zalkind, New York, N. Y.
Application May 12, 1945, Serial No. 593,347
9 Claims. (Cl. 282—29)

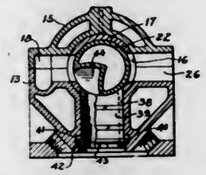


5. A bookkeeping appliance comprising a base adapted to support a relatively large master form; a housing pivotally supported at one end of the base; yieldable means to support the housing at an elevation above the base at a short distance therefrom; a pair of pulleys rotatively supported in the housing; an endless belt on the pulleys; a plurality of equally spaced pins on the endless belt arranged to engage the master form from above; means to manually rotate one of the pulleys for moving the belt in steps equal to the distance between the consecutive pins; a plate extending from the housing; pins extending upwards from the plate for supporting additional forms; and a guide bar adjustably supported on the plate for positioning an intermediate form.

2,439,538
DEODORIZING COMPOSITION OF MATTER FOR FOOD STORAGE COMPARTMENTS
C. J. Burgess, Liberty, Mo.
Application July 17, 1943, Serial No. 495,228
4 Claims. (Cl. 252—265)

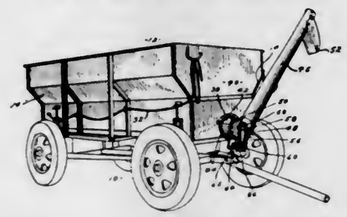
1. A composition of matter of the character described consisting of one part by weight of activated carbon, serving as an absorbing agent; four parts Portland cement, serving as a binder for the mass; two parts calcium carbonate, serving as a filler; two parts granular, calcined vermiculite, serving as means for forming a multiplicity of ramified interconnected cavities throughout the mass, there being a relatively greater concentration of activated carbon around the granules of calcined vermiculite than elsewhere in said mass.

2,439,539
VALVE FOR SPRAY BARS
William E. Cellwork, Kansas City, Mo., assignor to Standard Steel Works, Kansas City, Mo., a corporation of Missouri
Application December 18, 1944, Serial No. 568,610
3 Claims. (Cl. 137—21)



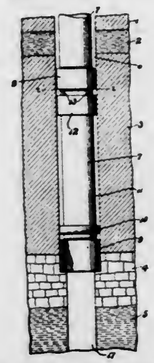
1. In an apparatus of the character described, a substantially cylindrical tubular member through which a liquid is to be circulated and having differential sized openings in opposite walls thereof, a valve housing extending through said openings and having a tapered valve chamber with the base thereof closing the larger of said openings, said valve housing having a bore coaxial with said chamber, an annular flange on the valve housing at the base of said chamber and encircling the larger of said openings and having curvature to conform with the curvature of the tubular member to seat the flange and prevent rotation of the valve housing in said openings, a washer sleeved on the housing and encircling the smaller of said openings, said washer also being curved to conform with the tubular member, gaskets between the washer and tubular member and between the tubular member and said flange and encircling the openings on the outer sides of said members, a nut having threaded connection with the valve housing and engaging the washer to draw said gaskets into sealing contact with the sides of the tubular member while the valve housing and washer are prevented from turning by said curved engagement with the tubular member to effect seals between the valve housing and the tubular member, a valve member having a tapered head in the tapered valve chamber and having a shank oscillatably mounted in the coaxial bore, and means having connection with the valve housing on the exterior side of said flange for retaining the valve member in the valve housing.

2,439,540
ROTARY VALVE FOR INTERNAL-COMBUSTION ENGINES
Edward Graney Grubbs, Los Angeles, Calif.
Application May 2, 1944, Serial No. 533,766
1 Claim. (Cl. 123—80)



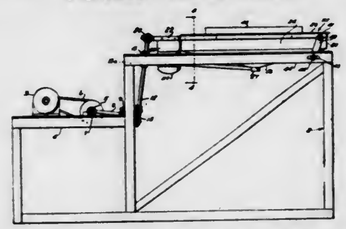
In a rotary valve gas engine having compression cylinders, pistons in said cylinders, means for sealing said valve against leakage due to compression of said pistons moving in said cylinders,

comprising a cylindrical member engaging said rotary valve and mounted for axial movement relative thereto and held in sealing engagement therewith through compression generated by movement of said pistons, said cylindrical sealing member having an external flange on its end away from said rotary valve, an extension of said compression cylinders, a three dimension bore in said extension including a ledge at its lower end, for the reception of said cylindrical sealing member, a compressible retaining ring adapted



to snap into the lower end of said extension and having a bevel surface on its lower edge to rest on said ledge to hold said cylindrical sealing member in said cylindrical extension when said parts are assembled in operative relation to seal said valve, which construction and assemblage of parts permits disassembling thereof by simply pressing downward on said cylindrical sealing member which will force and compress said compressible retaining ring past said ledge and thereby permit removal of said sealing member from the lower end of said extension.

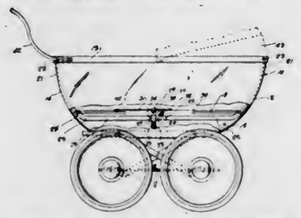
2,439,541
SELF-UNLOADING FEED WAGON
Marshall V. Hall, Hiawatha, Kans.
Application July 29, 1946, Serial No. 686,867
2 Claims. (Cl. 214—83.32)



1. A vehicle of the character described comprising a hollow body having a body of substantially inverted V-shaped cross sectional form and a pair of opposed end walls; a prime mover mounted on one of said ends of the body, the opposite end of the body having an outlet opening formed therein near the apex of the bottom wall thereof; an elongated screw conveyor extending between the ends of the body and having one end thereof passing through said outlet opening, the opposite end of the conveyor being operably joined to said prime mover, a hollow housing enclosing that part of the conveyor disposed exteriorly of said opposite end of the body, said housing being mounted on the opposite end of the body for rotation about the axis of said conveyor; a laterally extending pipe secured to said housing, said housing having an opening formed therein registering with said pipe; a second screw conveyor in said pipe having one end thereof overlapping said first mentioned conveyor; and structure operably interconnecting said conveyors.

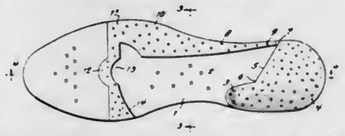
2,439,542
WATER DETECTOR FOR OIL WELLS
Raymond S. Hunt, Mount Pleasant, Mich.
Application April 4, 1945, Serial No. 586,511
4 Claims. (Cl. 166—1)

1. A structure as described comprising, a sleeve open at both ends through which a lowermost section of a casing of an oil well is adapted to be passed, said sleeve having a cavity formed between the inner and outer sides of the sleeve, water soluble dye partially filling said cavity, and a seal of material which dissolves slowly in water closing said cavity adjacent its upper end.



2,439,543
CITRUS JUICE SCREENER
William R. Ketchum, Maricopa County, Ariz.
Application October 16, 1944, Serial No. 558,907
3 Claims. (Cl. 210—149)

1. A screener for fruit juices including, in combination, a supporting base, an open top hopper having a rectangular upper portion open at one end and a funnel-like lower part leading to a juice discharge, screens horizontally extending and vertically disposed in the said upper part, the screen portions adjacent the open end of said hopper constituting a discharge, a transversely extending downwardly and outwardly slanting basket screen positioned on said hopper at its discharge end, a juice collecting box positioned below said basket screen connected with said hopper, mechanism on said base to provide a longitudinally horizontal and vertically ascending arcuate motion, including links pivotally attached to said hopper upper part near the closed end, depending therefrom and pivotally mounted on said base at their lower ends, and a jig bar, operably attached to the discharge end of said hopper at its upper end, pivotally supported on said frame at a desired distance therebelow, and attached to a crank at its lower end, together with motive mechanism for operating said crank at a predetermined speed, beating rolls loosely retained in



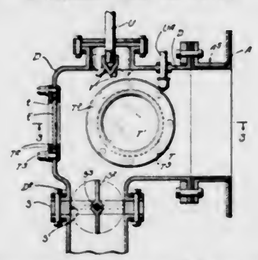
cavities in the lateral edges of said hopper above the upper screen therein, and adapted to bear thereon, and attain rotary motion by contact with the confining sides of said cavities.

2,439,544
BABY CARRIAGE
Samuel Kroll and Nathan J. Kroll, Chicago, Ill.
Application June 26, 1944, Serial No. 542,125
6 Claims. (Cl. 296—27)

6. A collapsible carriage comprising a flexible body having a substantially rigid rim, a footwell mounted in said body, stay members having corresponding end portions pivotally connected to said rim, guiding means provided by said footwell for said stay members, and ratchet means for releasably latching said stay members in position to hold said body in extended condition, said ratchet means comprising bar members arranged in pairs with the ratchet bearing ends of said bar members disposed in overlapping position and movable in opposite directions with respect to each other upon collapsing and extending of said flexible body

2,439,545
ARCH SUPPORT DEVICE
Jean Matlas, New York, N. Y.
Application November 29, 1945, Serial No. 631,517
4 Claims. (Cl. 36—71)

1. An arch support comprising a flat base having the outline of a foot, a raised portion thereon in the scaphoid area extending rearwardly along the inner edge of the heel to the rear thereof, said base having a relatively narrow and flat outer border wedge, the outer edge of said heel being lower than the inner edge, a flat metatarsal crossbar on said base having a central metatarsal excavation, a pad of displaceable deformable material on the central part of said base and resting on said outer wedge, said pad having a recess in the scaphoid area adjacent to said raised portion, said pad extending to the inner edge of said support, said pad being thickest at said inner edge and tapering to the outer edge of said support, the thick portion of said pad overlying said crossbar at said metatarsal excavation.

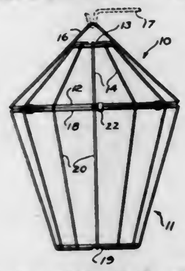


2,439,546
PISTON RING
Thurlow E. McFall, Sparta, Mich.
Application July 22, 1946, Serial No. 685,471
2 Claims. (Cl. 309—45)

1. A piston ring structure comprising, a spring member consisting of a single length of thin flat spring material having alternate inwardly and outwardly extending curved loops, with adjacent sides of the outwardly extending loops in closer proximity to each other than the sides of the inwardly extending loops, said spring member having a shape of substantially circular outline with the ends thereof in close proximity to each other, and a plurality of cylinder wall engaging members one for each of the inwardly extending

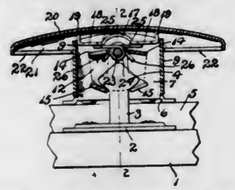
loops each of said cylinder engaging members comprising an intermediate vertical section of flat metal having substantially vertical edges and widened flanges extending outwardly from the upper and lower edges of said vertical sections, said vertical sections being disposed in and gripped by the sides of said inwardly extending loops and extending over and at their outer edges beyond said outwardly extending loops.

2,439,547
APPARATUS FOR PRODUCTION OF AMMONIUM SULPHATE
Carl Otto, Manhasset, N. Y., assignor to Fuel Refining Corporation, New York, N. Y., a corporation of Delaware
Application March 8, 1944, Serial No. 525,543
1 Claim. (Cl. 23—273)



Apparatus for producing sulphate of ammonia crystals from distillation gas comprising a saturator tank having a bath liquor overflow outlet opening intermediate its upper and lower ends, conduit means connected to a source of supply of distillation gas and extending into the portion of said tank below the overflow outlet opening for continuously passing distillation gas through said saturator and into scrubbing contact with said bath liquor, an overflow conduit comprising a pipe having one end connected to said tank and communicating with the tank interior through said opening, an outlet chamber member secured to the second end of said pipe and provided with one or more windows through which the interior of said pipe and tank may be inspected, and means for introducing fluid into said chamber member to prevent sulphate crystal deposits on its walls and windows.

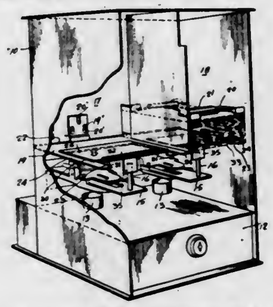
2,439,548
METHOD FOR MAKING SUPPORTS
Paul H. Planeta, Linden, N. J., assignor to Anthony Planeta, Linden, N. J.
Application September 14, 1943, Serial No. 502,269
5 Claims. (Cl. 140—71)



1. A method of making a wire cage supporting device consisting of the steps of positioning a

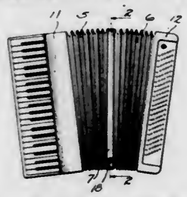
plurality of rod-like elements radially about a common center in a common plane with their ends at random distances from said center, electromagnetically and simultaneously adjusting the inner ends of said elements to lie in a circle of predetermined diameter, positioning of rim element of larger diameter than said circle over said rod-like elements and coaxial with the common center about which said rod-

like elements are positioned, whereby the inner ends of said rod-like elements extend within said rim element, securing said rim element to said rod-like elements, forming the portions of said rod-like elements outside the rim element to positions lying in vertical planes passing radially through said common center and securing a second rim element to the top ends of the rod-like elements.



2,439,549
CUPBOARD CATCH
Herbert Quigley and Herman Ter Meer, Grand Rapids, Mich., assignors to National Brass Company, Grand Rapids, Mich., a corporation of Michigan
Application January 8, 1945, Serial No. 571,728
7 Claims. (Cl. 292—52)

6. In a latch, a body, a pair of jaw members pivoted on said body and adapted to engage a keeper, spring means acting to move said jaws into engaging position, an actuating member pivoted on the body on an axis transverse to the axis of the jaw members and movable into engagement with said jaws to move them into inoperative position, and a manual member pivoted on said body and movable in either direction about its pivot to engage and move said actuating member in a direction to move the jaws into inoperative position.

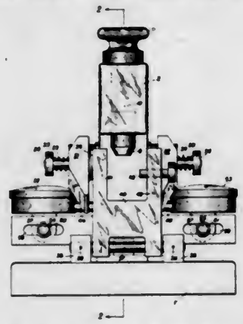


2,439,550
VENDING MACHINE
Percy C. Smith, Chicago, Ill., assignor to The Exhibit Supply Company, Chicago, Ill., a corporation of Illinois
Application May 11, 1945, Serial No. 593,206
4 Claims. (Cl. 312—55)

1. In a vending machine, the combination with a pusher-operating member including an upstanding stud, a partition spaced from and disposed above said pusher-operating member for supporting a stack of cards and having a cut-out portion providing opposite guide arms, of means for moving the bottom card of said stack of cards comprising a pusher having oppositely disposed parallel grooves receiving adjacent long edges of said guide arms, spaced plates depending from said pusher between which said stud is adapted

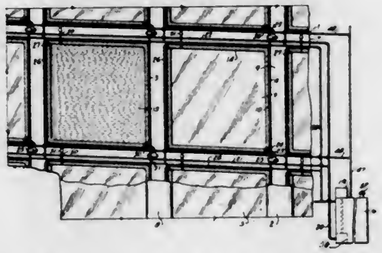
to move for alternately engaging said plates, for moving said pusher in opposite directions relative to said partition, said pusher having along one edge thereof a substantially elongated flat raised portion of a thickness adapted to permit engagement with an edge of only the bottom card of said stack of cards, for moving said bottom card from beneath said stack upon movement of said pusher in one direction.

2,439,551
ACCORDION WITH AMPLIFIER ATTACHMENT
Edward D. Teikowski, Milwaukee, Wis.
Application July 26, 1944, Serial No. 546,673
2 Claims. (Cl. 84—1.04)



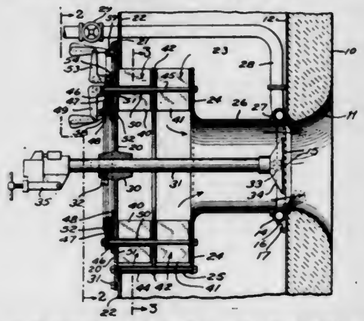
1. In an accordion comprising separate bellows sections and a substantially rigid floating frame substantially centrally thereof and to which adjacent ends of such sections are respectively connected, the combination with such frame, of a pickup device mounted on the floating frame, and electrical connections therefrom carried by said frame, whereby the musical tones from both ends of the accordion may be picked up and conduction of mechanical noises damped.

2,439,552
INDICATOR FOR PLAY OF GYRO ROTORS IN FRAMES
Russell W. Walters, Cleveland, Ohio, assignor, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application October 23, 1945, Serial No. 624,031
7 Claims. (Cl. 33—174)



1. A device for measuring and indicating the end play of a rotor in its suspension frame, a

supporting frame, a supporting means engaging the opposite sides of said suspension frame in the plane of rotation of said rotor for centering and clamping said suspension frame in said supporting means, clamping means for engaging the opposite sides of said suspension frame coincidental with the axis of said rotor, means for engaging in clamped relation the opposite side faces of said rotor, said rotor clamping means being

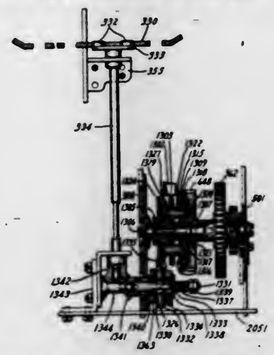


also slidable in a plane parallel with the axis of said rotor to determine the existence of end play of said rotor in said suspension frame and gauges including members engaging the side faces of said rotor and responsive to side movements of said rotor upon manual side pressure on said slidable rotor clamping means to visually indicate the end play of said rotor in said suspension frame.

2,439,553
SELECTIVELY CONTROLLED LIGHT SHIELDING LIQUID SYSTEM FOR MULTIPLE WINDOW CONSTRUCTION
Roy W. Winn, Kansas City, Mo.
Application September 7, 1945, Serial No. 614,923
2 Claims. (Cl. 88—57.5)

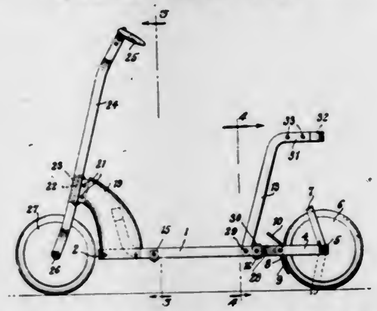
1. In a structure having a plurality of window openings, a hollow framework, spaced transparent panels arranged in pairs and mounted in said framework, each pair of panels closing one of said openings, means for sealing the edges of said pairs of panels to form chambers therebetween, a closed system for selectively supplying liquid to said chambers for rendering same opaque comprising, a storage container, opaque liquid in said container, a manifold pressure line leading from the container through the framework, a manifold return line in the framework communicating with the container, a manifold breather line in the framework communicating with the container, means arranged adjacent each window opening operative to effect communication between one of the pressure manifold lines and the return manifold line with the chamber between the panels while simultaneously terminating communication between the other manifold line and the chamber, means to prevent backflow from the chambers to the pressure manifold line, means communicating the upper end of the respective chambers with the return manifold line for returning excess liquid from the chambers to the liquid container, and means communicating the upper end of each chamber with the breather manifold line including a trap to prevent liquid from flowing from the chambers into said breather line, whereby one chamber may be filled with liquid while the other is being drained.

2,439,554
AIR REGISTER
Arleigh W. Anderson, Pasadena, Calif.
Application July 25, 1945, Serial No. 606,929
12 Claims. (Cl. 158—1.5)



1. In a burner having a throat and fuel supply means for introducing fuel to said throat for combustion, an air register supplying air for combustion to the fuel in said throat comprising a plurality of axially spaced sets of peripheral air doors for admitting air to the periphery of said register, said doors being mounted for rotation through approximately 180°, and means for adjusting said doors to obtain any desired angularity thereof, so as to control both the direction of rotation and the speed of air passing therethrough.

2,439,555
REVERSIBLE CYCLIC POWER TRANSMISSION MECHANISM
Harold T. Avery, Oakland, Calif., assignor to Marchant Calculating Machine Company, a corporation of California
Original application September 6, 1938, Serial No. 228,613. Divided and this application September 18, 1944, Serial No. 554,557
14 Claims. (Cl. 192—3.6)

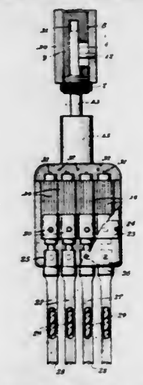


1. In a cyclically operable power transmission for releasably connecting a rotatable driving element with a cyclically operable rotatable driven element; the combination with means for selectively effecting a driving connection between said driving and driven elements comprising a control member selectively adjustable to an active position to cause said driving element to rotate said driven element, and to an inactive position to permit rotation of said driving element without transmission of driving movement to said driven element; of means for latching said control member in active position, a device responsive to movement of said member to active position and operable independently of said driven element for controlling movement of said latching means to latching position, means operating in timed

relationship with said driven element for releasing said control member from said latching means at a point in each cycle of operation of said driven element which is antecedent to the arrival of said

driven element at its full cycle position, and means for returning said control member to said inactive position upon release thereof from said latching means.

2,439,556
SCOOTER
Joseph C. Bancroft, New York, N. Y.
Application July 17, 1946, Serial No. 684,216
3 Claims. (Cl. 280—87.04)

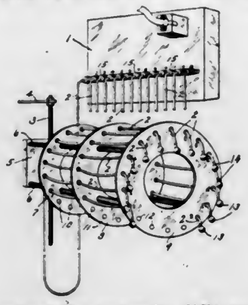


2. In a toy vehicle of the scooter type, a loop-shaped frame, a wheel supported within the rear of the frame, a platform supported within and having its edge spaced from the frame, the forward end of the frame forming a continuous curve, a sheet metal shield extending around said curved part of the frame and arising therefrom, a front fork pivotally supported at the forward end of the shield, a seat pivotally supported by the frame, stops on the frame for limiting the upward pivotal movement of the seat, supports on which the seat is carried, said supports when lowered, fitting between the frame and the platform, and the seat when in said lowered position, being located at the forward end of the platform behind the shield.

2,439,557
ROTARY PLOW
Lawrence C. Blackledge, Portland, Oreg.
Application July 29, 1943, Serial No. 496,580
10 Claims. (Cl. 97—219)

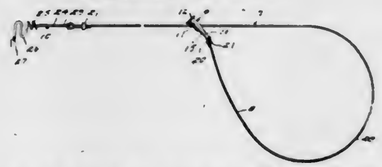
1. An integral blade for a cutter element of a rotary plow comprising a relatively thin annular disc characterized by alternately disposed and laterally and oppositely inclined cutting peripheral sections and a central portion forming a right helicoid.

2,439,558
ATTACHMENT FOR MORTISE MACHINES
Doyes N. Brown, Vallejo, Calif.
Application January 3, 1944, Serial No. 516,811
1 Claim. (Cl. 144—78)



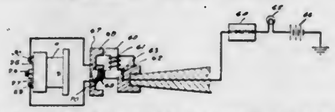
In a multiple bit attachment for a conventional single bit mortising machine, a housing arranged for operative connection to said machine; a plurality of spaced apart hollow chisel sockets in the bottom wall of said housing; a plurality of hollow chisels removably secured in said chisel sockets; a plurality of spaced apart driven gear elements journalled in said housing and disposed one in axial alignment with each of said chisel sockets and having their axes disposed substantially in a common plane; a bit receiving socket in each of said driven gear elements, a bit operatively associated with each of said hollow chisels and removably secured in said bit receiving socket; a pair of idler gears journalled in said housing, each meshing with one-half of said plurality of driven gear elements; a drive gear disposed between and meshing with said idler gears, said idler gears and said drive gear having their axes substantially in a common plane parallel to the plane of the axes of said driven gear elements and said idler gears being larger than said drive gear by an amount sufficient to permit meshing of said drive gear with said idler gears without interference with said driven gear elements; and a drive shaft extending from said drive gear out of said housing for operative connection to the machine.

2,439,559
ELECTROENCEPHALOGRAPH ELECTRODE COORDINATOR
Marvin A. Buffington, Cleveland, Ohio
Application March 7, 1947, Serial No. 733,249
11 Claims. (Cl. 128—2.1)



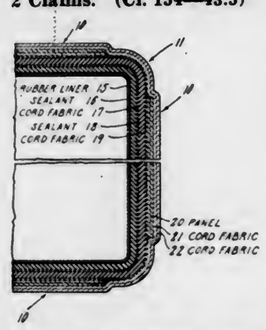
1. An electrode coordinator device of the class described, comprising a carrier shaft, a base member slidably and rotatably mounted on said shaft, a plurality of flat ring-like members,

means associated with said base member for supporting said ring-like members in spaced relation concentrically disposed and with their planes parallel to one another, and means adjustably cooperable with said shaft and said base mem-



ber for adjusting the same in different rotative and axial positions relative to said shaft, said ring-like members each having a plurality of circumferentially spaced openings, each of said openings being alined with a respective opening on each of the other of said ring-like members.

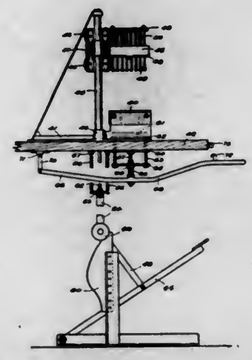
2,439,560
ANIMAL SNARE
Robert S. Connor, Little Marais, Minn.
Application May 29, 1946, Serial No. 672,997
6 Claims. (Cl. 43—87)



1. In a snare, an elongated flexible member, a lock having one end thereof connected to an end of the flexible member and provided with a tubular portion at its opposite end through which a portion of the flexible member loosely extends, said tubular portion being open at its ends and being of an internal diameter substantially greater than the diameter of the flexible member and less than the length of said tubular portion, said lock combining with a portion of the flexible member to form a loop or noose and being constructed and arranged whereby the tubular portion thereof will slide freely on the flexible member in a direction for restricting the size of the loop or noose, and means, forming a part of said tubular portion, to resist movement of the lock in the opposite direction relatively to the flexible member.

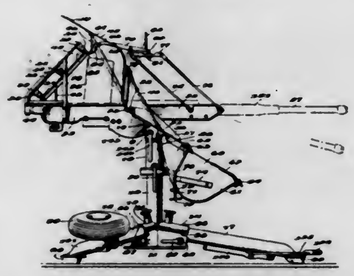
2,439,561
PRESSURE INDICATOR FOR PNEUMATIC TIRES
Peter Ames Cressey, McGregor, Tex.
Application August 8, 1944, Serial No. 548,554
2 Claims. (Cl. 177—311)

1. In an indicator signal system for pneumatic tires mounted on rotating wheels, a single circuit including a source of pulsating currents and a signal, the currents normally flowing in the circuit being incapable of operating the signal, means for increasing the current flowing through said circuit, said means comprising an inductor with a single winding arranged on the rotating wheel and a stationary single winding in close proximity thereto, one of said windings being included in the aforesaid single circuit, a switch controlled short circuit for the other winding and pressure responsive means connected with the pneumatic tire for controlling the short circuit.



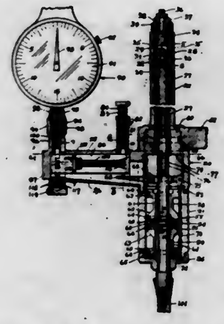
2,439,562
FUEL TANK
Marion M. Cunningham, South Bend, Ind., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application April 1, 1944, Serial No. 529,157
2 Claims. (Cl. 154—43.5)

2. A selfsealing, non-metallic fuel tank for use in airplanes in close proximity to the metal walls of the airplane, said tank having stiff walls and rounded flexible marginal edge portions where the walls join one another, each wall being formed of a puncture sealing layer and an outer protecting and reinforcing layer of textile material and having secured between and in contact with these layers a resilient shatter-resistant panel of stiff, tough, high tensile material formed of woven glass cloth impregnated with a synthetic resin and through which a projectile will cut a clean hole and which panel is hard enough to prevent the metal of a near wall from flowering under the impact of the projectile through the panel into the wound of the puncture sealing layer, said panel being somewhat smaller in area than the layers between which it is secured, whereby a paneled wall can be forced bodily inwardly to reduce the size of the tank by bending the less rigid marginal edge portions.



2,439,563
MANUFACTURE OF SAND CORES
Ralph Dainty, Willenhall, England
Application March 23, 1944, Serial No. 527,714
In Great Britain January 15, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires February 14, 1964
1 Claim. (Cl. 22—10)

Apparatus for the simultaneous manufacture of a plurality of rod-like sand cores or the like comprising a plurality of parallel stationary moulds, movable means for closing the moulds at one end during the formation of the cores, a frame guided to move in a path substantially parallel to the axes of the moulds, means for moving the frame towards and away from the moulds, a plurality of plungers corresponding in number and spacing to the moulds yieldingly mounted in and projecting from the frame and adapted to enter and yieldingly ram sand in the moulds, said frame including two spaced plates, one of said plates being provided with openings

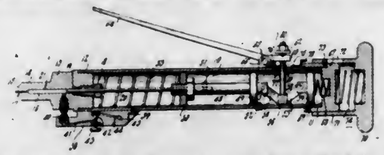


in which said plungers are guided, the other plate being provided with similarly arranged openings and being shiftable in its plane, so that the plungers can move freely through said other plate when the openings of both plates register, but are locked when the openings are out of registry.

2,439,564
MOBILE GUN MOUNT
Walter H. D'Ardenne, Jenkintown Manor, Weber Devore, Horsham Township, Montgomery County, Robert W. Wolf, Philadelphia, and Thomas E. Boyd, Melrose Park, Pa., assignors to Heintz Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application February 28, 1944, Serial No. 524,282
5 Claims. (Cl. 89—40)

1. A mobile gun mount for light automatic fast firing cannon and the like, comprising, a vertical support for a gun cradle and shield, three legs the inner ends of which are detachably secured in the base of said support, two of said legs having pivoted joints intermediate their ends, means on said two legs for supporting wheels, means for securing said jointed legs selectively in straight position with their outer ends resting on the ground and with the wheel axes in upright position or in elbowed position in which their outer ends are positioned to the side and in a position out of the way of supporting wheels, the third leg comprising a towing leg.

2,439,565
CONTOUR AND DEPTH GAUGE OF DIAL INDICATOR TYPE
Basil Egor, Valley Stream, N. Y.
Application April 20, 1946, Serial No. 663,716
13 Claims. (Cl. 33—172)

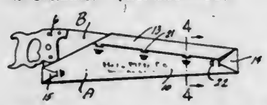


11. A contour and depth gauge, comprising a casing provided with a cylindrical member and a tubular member coaxially of and above said cylindrical member, a vertical rod extending coaxially through said member, a spherical part mounted on the top portion of said rod, a seat for and beneath said spherical part for supporting said rod in order that said rod may oscillate as well as move longitudinally of its own axis, a disc mounted at right angles on said rod at a point within said cylindrical member and having opposed and parallel top and bottom faces provided with bearing points extending annularly coaxially of said rod, a top piston and a bottom piston slidably mounted in said cylindrical member with respect to the top and to the bottom of said disc and having frusto-conical portions engaging said bearing points and furthermore having openings through which said rod passes, a horizontal lever pivotally mounted intermediate of its ends on and diametrically of said top piston, a flexible link connecting the back end of said lever with said bottom piston, resilient means urging the front end of said lever downwards for resiliently engaging said pistons against the bearing points on said disc, and a distance indicating device connecting with said lever for indicating lateral and upward movements of said rod, said resilient means for urging the front end of said lever downwards including a block mounted in said casing, a rod slidably mounted in said block and having its bottom end engaging said lever, and a second resilient means urging said rod downwards, said second resilient means including a spring, and means for adjusting the pressure of said spring.

2,439,566
HYDRAULIC GUN
Armand R. Gamache, Springfield, Mass., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application November 2, 1943, Serial No. 508,753
3 Claims. (Cl. 222—123)

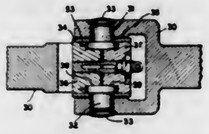
1. An hydraulic gun for forcing a quantity of liquid into the bore of an hydraulic expandable rivet, comprising a gun body having an end portion formed with a pressure chamber and an apertured end adapted for liquid-tight engagement with the entrance to said bore, a plunger slidable in said chamber, toggle means disposed in axial alignment with said plunger and adapted

to be moved from its angular to its straight position to advance the plunger in the chamber and force the liquid through said aperture, and an adjustable stop at one end of the toggle to thereby



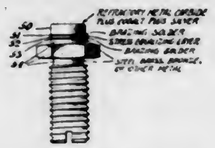
vary the amount of movement imparted to the plunger by straightening the toggle so as to deliver an adjustable measured quantity of liquid into the bore of the rivet.

2,439,567
BRASSIÈRE
Albert A. Glasser, Los Angeles, Calif.
Application October 29, 1945, Serial No. 625,119
1 Claim. (Cl. 2—42)



A brassière comprising a body encircling member having a pair of breast-covering portions and having a pair of side extension panels attached to the outer ends of said breast-covering portions, a pair of four-sided substantially rectangular breast-supporting strips secured to the inner surface of said breast-covering portions along only their lower edges, said strips extending laterally at their lower edges completely across the breast-covering portions and being co-terminous at their lower edges with the lower edge of the brassière, and means suspending the rectangular strips from the respective shoulder straps, the last-named means consisting of a pair of elongated straps for each strip, said straps being located entirely inwardly of said breast covering portions and each pair of straps being secured at their lower ends to the top corner portions of a strip and being secured at their other ends to a shoulder strap.

2,439,568
SAW GUARD
Leyel C. Hall, Connell, Wash.
Application April 24, 1944, Serial No. 532,553
2 Claims. (Cl. 229—88)

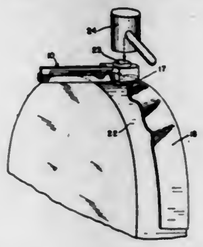


1. As an article of manufacture a saw guard casing comprising spaced flexible side walls connected along an integral fold line, said side walls tapering in width from a point intermediate their ends forwardly, detachable retaining tab means for connecting said side walls together along the normal top of a saw, retaining tab means connecting said side walls at the normal forward end of the saw blade, said side walls including a rear reduced extension for folding about a portion of the rear end of the saw blade laterally of the handle.

2,439,569
UNIVERSAL JOINT
Charles E. Hathorn, Kenmore, N. Y., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application September 9, 1944, Serial No. 553,388
7 Claims. (Cl. 64—17)

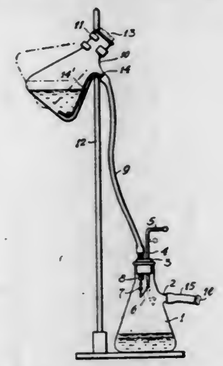
1. A universal joint comprising a pair of cooperating yokes, each having a pair of inwardly opening recesses, a different trunnion element journalled in each of the four yoke recesses, and a block member positioned inwardly of the yokes and around the inner ends of the trunnion elements, said block including two parts, each being substantially identical and each having cooperating recesses which when assembled receive and clamp said trunnion elements in position, the block recesses having bottom walls supporting the trunnions against inward displacement.

2,439,570
ELECTRIC CONTACT
Franz R. Hensel, Earl I. Larsen, and Earl F. Swazy, Indianapolis, Ind., assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application November 10, 1942, Serial No. 465,100
3 Claims. (Cl. 75—136)



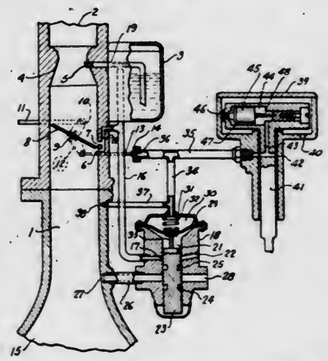
1. An electric contact suitable for operation under conditions of strong vibration formed of a metal composition of 85 to 95% of a refractory metal carbide selected from the group consisting of tungsten carbide, molybdenum carbide, titanium carbide, zirconium carbide, vanadium carbide, columbium carbide and tantalum carbide, from 2 to 10% cobalt and 0.5 to 5% silver said contact being characterized by high abrasion resistance and low material loss.

2,439,571
WRINKLE REMOVING DEVICE
George J. Julian, Columbus, Ohio, assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application April 7, 1944, Serial No. 530,058
6 Claims. (Cl. 78—60)



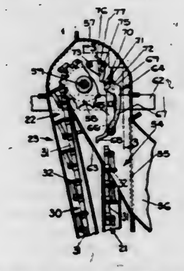
1. A device adapted for use with a backing surface and hammer means for flattening a wrinkled area in an edge portion of a sheet of deformable material, comprising a first member having a substantially flat base surface with a recess for receiving the outer surface of a sheet wrinkle with one end of the recess adjacent to the end of the wrinkle most remote from the sheet edge, said recess being of arched transverse section of progressively reduced width and height toward said

one end thereof, and the surface of said recess at its lateral edges and at its reduced end terminating in the plane of the base surface, a second member having a convex upper surface substantially similar in contour to the surface of the recess for engaging the inner surface of such sheet wrinkle, the second member having the base surface thereof substantially flush with the base surface of the first member when said members are closed in nested relation to provide there-



between a restricting channel for the material of the sheet wrinkle, and means for pivotally connecting said members, said members with such sheet wrinkle therebetween being adapted to be moved outwardly relative to the sheet edge as the first member is hammered upon the second member and a backing surface to progressively reduce the size of the sheet wrinkle in said restricting channel and to flatten it between the base surface and such backing surface.

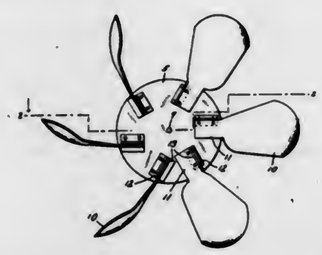
2,439,572
APPARATUS AND PROCESS FOR THE CULTIVATION OF MICROORGANISMS
Samuel Baruch Levin, Jerusalem, Palestine
Application March 15, 1944, Serial No. 526,644
9 Claims. (Cl. 195—79)



6. A microbiological process which comprises forming a circular lamella of liquid culture medium and inoculum, growing a culture of microorganisms in said lamella out of said inoculum under biotic conditions, gradually dropping further liquid culture medium on said lamella in excess of the capacity of the latter for supplying the growing culture with fresh amounts of nutritious substances, and ejecting from said lamella a portion of spent liquor containing products of metabolism of said growing culture and a portion of the microorganisms grown therein.

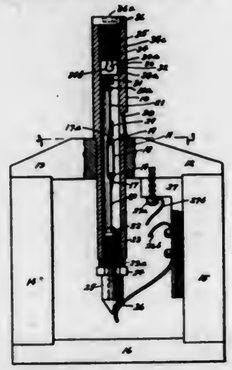
2,439,573
DEGASSER FOR INTERNAL-COMBUSTION ENGINES
Marion Mallory, Detroit, Mich.
Application September 20, 1945, Serial No. 617,510
8 Claims. (Cl. 123—97)

1. In an internal combustion engine having an intake passageway and a throttle valve in said passageway, a port on the engine side of said throttle valve for admitting air into the intake passageway, a second valve controlling said port, means actuated through changes of pressure in the intake passageway on the engine side of said throttle valve for imparting movement to said second valve, an air bleed to atmosphere for said pressure actuated means, means for closing said air bleed whenever the throttle valve is in substantially closed position, and a speed controlled air bleed to atmosphere for said pressure actuated means arranged to close whenever the engine exceeds a predetermined speed whereby when both of said air bleeds are closed said pressure actuated means actuates said second valve to open said port and admit air into the intake passageway on the engine side of said throttle valve.



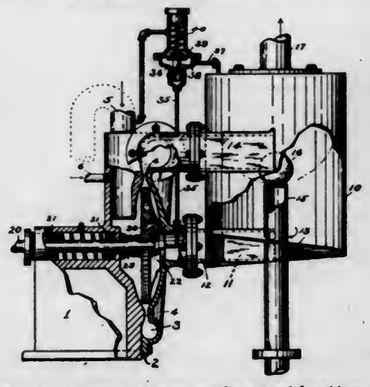
2,439,574
JARRING MECHANISM FOR CONVEYER FLIGHTS
Stanley M. Mercier, Bexley, Ohio, assignor to The Jeffrey Manufacturing Company, a corporation of Ohio
Original application June 25, 1942, Serial No. 448,395. Divided and this application April 24, 1946, Serial No. 664,479½
7 Claims. (Cl. 198—170)

1. In a conveyer, the combination of a casing including a head section having a working and



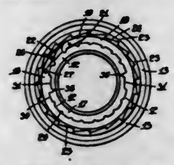
a return leg associated therewith, a head shaft and sprocket in said head section, conveyer mechanism in said casing including a chain having trailing pivoted flights, said conveyer mechanism extending from said working leg over said sprocket and into said return leg, discharge chute means in said head section extending upwardly from said working leg and below said shaft to said return leg, and successive pairs of oppositely disposed cams above said discharge chute, each cam extending sidewardly inwardly from opposite sides of the casing, the pairs of cams adapted to carry said pivoted flights and by which they are tilted to discharging position as they are moved thereover by the chain, the first pair of cams having gradual leading edges and means pivoted thereto forming relatively abrupt trailing edges, the leading edge of the second pair of cams extending from adjacent the trailing edges of said first cams and having relatively abrupt trailing edges whereby said flights in passing over said successive pairs of cams drop from the first pair to the second pair, and in passing from the second pair are dropped therefrom to remove conveyed material not jarred therefrom as the flights drop from the first cams to the second cams, and the trailing edges of the second cams and the pivoted means of the first cams affording guide means for said flights permitting reversal of the direction of travel of said chain and flights.

2,439,575
CURRENT WHEEL
John M. Morris, Atlanta, Ga.
Application May 17, 1945, Serial No. 594,350
1 Claim. (Cl. 170—110)



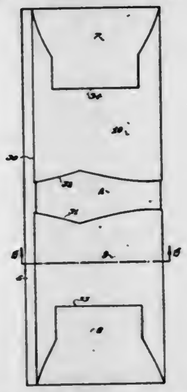
A current wheel comprising a single disc having a central hub for reception of a driven shaft, a plurality of more than two separate spoon-shaped sheet metal blades radiating from the disc and arranged in uniformly spaced relation, each blade having an inner reduced end portion forming a short flat shank, and a leaf hinge mounting each blade on one face of and adjacent the periphery of the disc to turn about an axis coincident with a chord of the disc, one leaf of each hinge being attached to the shank of the associated blade adjacent one side edge of said shank and the other leaf of the hinge being attached to the disc so that upon folding of the hinges the blades may fold in one direction toward and parallel with the disc, the blades on one side of the axis of the disc unfolding by the action of the current and those on the other side of said axis automatically folding up toward and parallel with the disc by the action of the current, and a flange on the other side edge of the shank of each blade, said flange being disposed at right angles to the shank so as to flatly butt the adjacent face of the disc when the blade is unfolded.

2,439,576
GALVANOMETER MOVABLE COIL SUPPORT
Marvin E. Morrow, Tulsa, Okla., assignor to Century Geophysical Corporation, Tulsa, Okla., a corporation of Delaware
Application August 20, 1945, Serial No. 611,847
13 Claims. (Cl. 171—95)



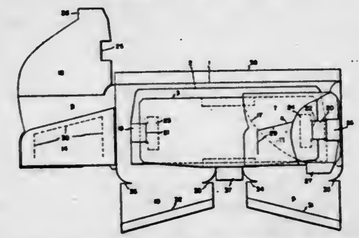
1. A totally enclosed galvanometer of the barrel type, comprising a cylindrical barrel and a vibratory element mounted therein, said vibratory element having an anchoring member connected to each end thereof adapted to form closures for the opposite ends of said barrel, said vibratory element and both of said anchoring members being insertable into said barrel through one end thereof in fully assembled form, and means for locking said anchoring members to opposite ends of said barrel.

2,439,577
CENTRIFUGAL PUMP
Orlo Clair Norton, Erie, Pa.
Application April 30, 1945, Serial No. 591,023
6 Claims. (Cl. 103—113)



1. In a centrifugal pump, the combination with a casing having an intake chamber for receiving air and fluid provided with a surrounding Venturi shaped outlet, a volute conduit leading therefrom, of a hollow impeller provided with jet orifices discharging into said venturi, a reservoir, an inlet conduit connecting the volute conduit with the upper portion of the reservoir and an outlet conduit connecting the reservoir at a lower point with the interior of the impeller.

2,439,578
COUNTING MECHANISM
Herbert Charles Priest, Bexley, near Sydney, New South Wales, Australia
Application April 2, 1946, Serial No. 659,058
In Australia May 2, 1945
3 Claims. (Cl. 235—78)

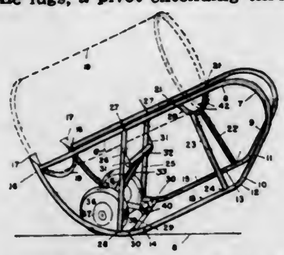


1. Counting mechanism comprising a base plate having a plurality of concentric projecting ribs formed thereon, a cover disposed above the base plate, a plurality of rotatable members disposed between the cover and the base plate each cooperating with one of the said ribs by means of a ratchet pawl, said members being divided into spaces numbered 0 to 9, one of said rotatable members having a pivot, said pawl being mounted on the pivot for engagement with ratchet teeth formed on the adjacent rotatable member; means formed on the concentric projecting ribs for cooperating with the respective pawls whereby movement of the said one rotating member is imparted to the said adjacent rotating member for every ten of the numbered spaces moved relatively to a scale carried upon the said cover.

2,439,579
MULTIPOCKETED BILLFOLD HAVING INTERLOCKED END AND EDGE FLAPS
Emil Karl Renz, Dedham, Mass., assignor, by mesne assignments, to Debonair, Inc., Boston, Mass., a corporation of Massachusetts
Application November 1, 1943, Serial No. 508,539
3 Claims. (Cl. 150—38)

1. A wallet of the type described comprising a pocket formed in the length of the wallet by an outer wall on one side and an inner wall on the other side, said inner wall comprising a free floating stay member forming the back wall of a pair of pockets extending from their respective openings on either side of the center line of fold to the ends of the wallet, means, forming the front walls of said pairs of pockets, extending as flaps from the bottom edge of said outer wall and folded over said stay member and between the latter and the inner face of said outer wall, the openings of said pockets being well spaced from the middle fold of said wallet, and means forming a further set of pockets having their front faces extending as flaps from said outer wall at the ends thereof and having entrance openings in the wall forming fronts of the first mentioned pair of pockets, said last openings being spaced well away from the openings forming the first mentioned pair of pockets, the rear wall of each of said last pair of pockets being formed by a piece of material attached to the rear of the front wall of the first mentioned pair of pockets, said piece extending beyond the opening of the further pair of pockets thus sealing the different pairs of pockets off from each other.

2,439,580
STITCHLESS BILLFOLD WITH INTERLOCKED POCKET FORMING FLAPS
Emil Karl Renz, Dedham, Mass., assignor, by mesne assignments, to Debonair, Inc., Boston, Mass., a corporation of Massachusetts
Application February 27, 1945, Serial No. 579,957
4 Claims. (Cl. 150—38)

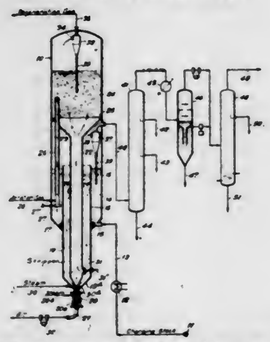


1. A wallet of the type described formed of an outer wall having end flaps and a combination divider and stay member having a joining strip joining the divider and stay member at their ends, the combination member extending substantially the length of the wallet and parallel to the outer wall, a portion of the end flaps lying in between the stay and divider and another portion lying externally of the stay member, the portion of the end flap lying between the stay and divider having means at the end side of the flap adjustably interlocking with the joining strip of the stay and divider providing longitudinal play to permit longitudinal adjustment of the stay and divider with respect to the outer wall.

2,439,581
VERTICALLY ADJUSTABLE BARREL TRUCK
Jack B. Robins, Colorado Springs, Colo., assignor to Aircraft Mechanics Inc., Colorado Springs, Colo., a corporation of Colorado
Application April 22, 1946, Serial No. 663,917
1 Claim. (Cl. 280—43)

A barrel truck comprising two spaced parallel frames each having a long straight top and a shorter base interconnected at their ends by outwardly curved sections, the forward curved sections forming rockers, the upper ends of the rockers extending above the tops to form supports for a barrel, at least two downwardly curved spacer bars connecting the top sections and at least one spacer bar joining the bottom sections, an axle assembly pivoted for movement about an axis perpendicular to the planes of the frames, positioned near the top of the frames, wheels on the ends of the axle, the relationship of the parts being such that the peripheries of the wheels will intersect the rockers when turned

about the axis of the shaft, and means for latching the axle and wheel assembly in a position in which the peripheries of the wheels are outside of the rockers, said means comprising two spaced lugs projecting upwardly from the transverse frame member that connects the front curved sections of the frames, a latching lever positioned between the lugs, a pivot extending through the



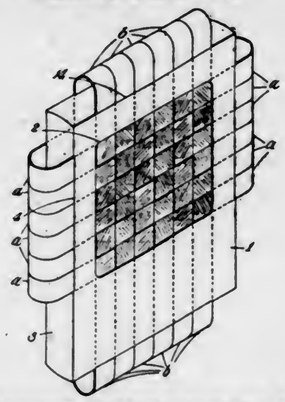
lugs and through the lever, the front end of the latching lever being provided on its underside with a notch for receiving the axle of the pivoted axle assembly, the latching member extending rearwardly from the pivot in position to be engaged to unlatch the wheel assembly, the wheel and axle assembly when unlatched being movable into a position in which the peripheries of the wheels are entirely inside of the rockers.

2,439,582

CATALYTIC CONVERSION SYSTEM

Fred W. Scheineman, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Application March 31, 1944, Serial No. 528,963
11 Claims. (Cl. 23—288)



1. In apparatus suitable for effecting catalytic conversion of hydrocarbons with solid catalyst of small particle size, a vertical cylindrical conversion chamber having inclined bottom walls and top walls, a vertical cylindrical regeneration chamber superimposed above said conversion chamber, the top walls of the conversion chamber forming at least a portion of the bottom walls of the regeneration chamber, a conduit extending downwardly through the conversion chamber and communicating at its upper end with the inclined walls which form the base of the regeneration chamber, a cylindrical stripping chamber surrounding said conduit with its upper end open to said conversion chamber and with its lower walls extending below the inclined walls of the conversion chamber, an expansion joint at the base of said stripping chamber, a compressed air line extending through said expansion joint to said conduit whereby relative movement between the conduit and the stripping chamber walls due to differential thermal expansion may be accommodated, at least one opening in the intermediate part of the stripping chamber wall to provide communication between the conversion chamber and an upper part of the stripping chamber, means for introducing steam at a low point in the stripping chamber, a valve at a low point in said conduit for regulating the flow of catalyst from the stripping chamber to the conduit, means for distributing fluids passed upwardly through said conduit into said regeneration chamber, a standpipe communicating at its upper end with said regeneration chamber at a low point therein, means for removing regeneration gases from the upper part of the regeneration chamber, means for introducing catalyst from the base of said standpipe into said conversion chamber, means for distributing charging stock vapors at the base of said conversion chamber and means for removing conversion products from the upper end of said conversion chamber.

2,439,583

AMUSEMENT DEVICE CONSISTING OF INTERWOVEN ADJUSTABLE PICTURE BANDS

Israel Shamah, Maida Vale, London, England

Application December 8, 1944, Serial No. 567,152
In Great Britain December 20, 1943
2 Claims. (Cl. 40—96)

1. An amusement device comprising a box including a substantially rectangular front wall provided with a square aperture and four side walls, two sets of endless bands extending in directions at right angles to each other and interwoven within the ambit of said aperture, said bands carrying portions of at least one complete picture, letter, sentence or the like which may be formed in said aperture by proper relative adjustment of the bands, each band passing on opposite sides of the box through two slots provided in each of the corresponding side walls and forming outside of said box on opposite sides thereof two closed loops to permit manual relative adjustment of the bands.

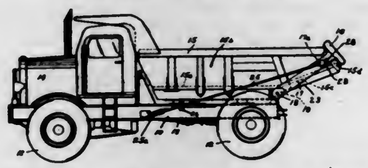
2,439,584

BAG ADAPTED FOR DISPLAY BY SUSPENSION

Harold F. Shumann, Pittsburgh, Pa.

Application November 14, 1944, Serial No. 563,411
1 Claim. (Cl. 229—62)

A bag comprising: a flattened tube formed of moisture-proof, flexible material, the walls of said tube being sealed together at one end to form a closure, the sealed closure being turned against the body of the tube to form an open, crease-free loop forming a relatively narrow channel across the entire width of the tube, said closure being secured to the body of the tube in areas spaced longitudinally of the tube from the turned extremity of the tube so as not to obstruct the narrow channel defined by said loop and being mu-



tually spaced on opposite sides of the center line of the tube to define between themselves, the tube body and said closure a relatively broad channel communicating with said relatively narrow channel, said narrow channel being sized to receive a supporting rod or wire of one type of display rack and said broad channel being sized to receive a supporting plate of a different type of display rack.

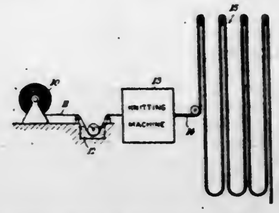
2,439,585

SEMISTATIONARY TAIL GATE FOR REAR DUMP BODIES

Virgil L. Snow, Euclid, Ohio, assignor to The Euclid Road Machinery Co., Euclid, Ohio, a corporation of Ohio

Application February 5, 1946, Serial No. 645,561
3 Claims. (Cl. 298—23)

1. In combination a vehicle frame, a body pivotally mounted near the rear end thereof on the rear end of said frame on a pivotal axis extending transversely of said vehicle whereby said body is mounted for movement from a generally horizontal carrying position to a tilted dumping position, said body having a bottom including a portion sloping rearwardly and upwardly from a zone adjacent said axis, said body having side walls extending upwardly from said bottom to form an open top body with a chute portion at the rear end thereof, said side walls and bottom portion ending in a plane sloping downwardly and rearwardly at an angle to the horizontal when said body is in carrying position to provide an open end for dumping body contents, a tail gate in position for closing said open end when said body is in carrying position, arms supporting said gate and pivotally mounted on said vehicle substantially on said axis, and means connected with said vehicles for holding said gate substantially in its said position when said body is tilted to dumping position.



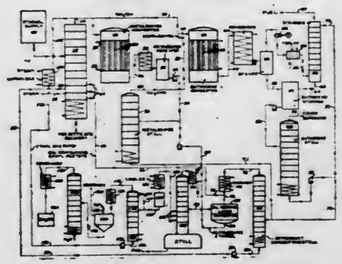
2,439,586

BELTING

George Angus Sowerby, Newcastle-on-Tyne, and William Stanley Short, Seaton Burn, Newcastle-on-Tyne, England, assignors to George Angus & Company Limited, Newcastle-on-Tyne, England

Application July 25, 1945, Serial No. 607,026
In Great Britain August 16, 1944
3 Claims. (Cl. 28—74)

1. A method for the manufacture of belting which comprises stretching a strip of fabric knitted from rubberised yarn and curing the rubber under heat and pressure while the fabric



is maintained stretched, the extent of stretching being such that the extension at break of the cured fabric is from 3 to 17%

2,439,587

MANUFACTURE OF DIENES

Eldon E. Stahly, Pittsburgh, Pa., assignor to Koppers Company, Inc., Pittsburgh, Pa., a corporation of Delaware

Application May 17, 1945, Serial No. 594,213
9 Claims. (Cl. 260—681)

1. A process of making butadiene comprising: reacting a mixture consisting essentially of acetaldehyde with ethyl acetate in the vapor state in the presence of steam and a dehydrogenation-dehydration catalyst and recovering butadiene from the reaction products.

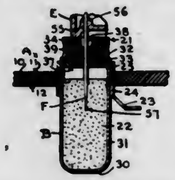
2,439,588

DIRECTION SIGNAL FOR MOTOR VEHICLES

Hyrum Stephenson, Tracy, Calif.

Application November 23, 1946, Serial No. 712,019
4 Claims. (Cl. 116—47)

1. A mechanical signal device for vehicles comprising a supporting tubular body adapted to be mounted on a vehicle horizontally and lengthwise thereof with the rear end of said body in the driver's compartment, a supporting arm projecting laterally from the forward end of the tubular body, the arm being hollow, means mounting the arm on the body and in communication therewith, a pair of sleeves telescoped together and extending through the tubular body



in rotatable relation to each other and said body, radial, axially, spaced levers on the inner ends of the sleeves within the driver's compartment, a vertical spindle rotatably journaled on the arm at its outer end and projecting thereinto, said spindle being hollow and communicating with the interior of the arm, a signal arrow pivoted on the spindle for vertical swinging motion, actuating connections in the arm between the forward end of one sleeve and the spindle arranged to rotate the spindle upon rotation of said one sleeve, and other actuating connections, in part in the arm and in part extending through the hollow spindle, connected between the forward end of the other sleeve and the signal arrow arranged to swing said signal arrow upon rotation of said other sleeve.

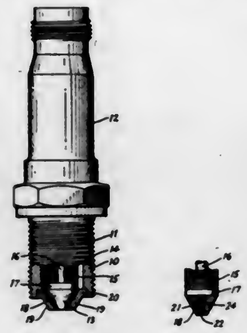
2,439,589

SOCKET CONNECTION FOR RADIO TUBES

Carl H. Sundell, Ithaca, N. Y.

Application September 14, 1943, Serial No. 502,329
1 Claim. (Cl. 173—328)

In an electrical system including an electron discharge device of the type having a frangible base and a plurality of spaced-apart, substantially parallel, electric current-conducting pins extending from the base outwardly of the electron discharge device, a tubular housing of electric current-conducting material for each pin and defining a chamber having a mouth; a stopper of resilient, dielectric material for each housing, inserted into the mouth thereof and in intimate contact with the inner surface of the tubular wall of the housing at only the mouth end thereof, each stopper projecting outwardly of the chamber in which it is inserted and having an outer face with a portion of said base, closely adjacent a pin, cushioned and resting upon said face and the adjacent pin extending through and in intimate contact with the stopper and projecting, from said stopper, into said chamber, said resilient material being characterized by immediately closing any openings, in said stoppers made by said pins, upon withdrawal of said pins; and a volume of fluent electric current-conducting material in each of said housings, sufficient in volume to contact the pin therein in any position in which the housing may be disposed.



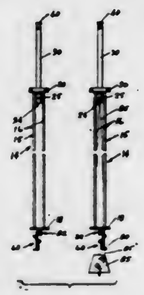
2,439,590

SPARK PLUG ELECTRODE STRUCTURE

Tullio Tognola, Sidney, N. Y., assignor to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware

Application July 7, 1943, Serial No. 493,777
9 Claims. (Cl. 123—169)

5. In a spark plug for internal combustion engines or the like, a center electrode structure comprising an elongated spindle and a head at one end of said spindle, said head comprising an enlarged disc-like portion integral with said spindle, a stem integral with said disc-like portion and extending in the opposite direction from said spindle, a tip piece surrounding said stem, a portion of said stem being pressed outwardly into overlapping relation with said tip piece to mechanically lock the latter in position on said



structure, and fusible means for connecting the adjacent surfaces of said piece and said stem and disc-like portion.

2,439,591

SLIDE-CONTROLLED STOP MOTION

Edward Vossen, Brooklyn, N. Y., assignor to Stop-Motion Devices Corp., Brooklyn, N. Y., a corporation of New York

Application July 9, 1947, Serial No. 759,763
11 Claims. (Cl. 66—163)

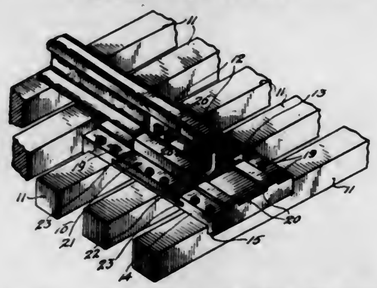
1. A slide-controlled stop motion, comprising a frame having parallel side rails, a slide having an aperture for a traveling flexible element to pass through and slidably mounted between said side rails, a tubular member mounted on the top of said frame, a coil spring of very fine wire having a large number of turns extending through said tubular member and having its bottom end connected with said slide for urging it upwards, adjustment means mounted on said tubular member and connected with the top end of said spring, a switch having an operator lever which is free to move downwards for closing the switch and said operator lever being normally engaged by said slide in its raised position for holding said switch open, another switch having an operator lever which is free to move downwards for closing the switch, and means for guiding said traveling flexible element past said second named operator lever for holding it raised and so holding said second named switch open.

2,439,592

METHOD OF TEMPORARILY REPAIRING ELECTRIC CABLES DAMAGED BY MOISTURE

Johan Valdemar Wallgren and Dag Viktor Ljuslin Lindström, Stockholm, Sweden

Application February 25, 1943, Serial No. 477,158
In Sweden February 17, 1942
7 Claims. (Cl. 154—2.22)



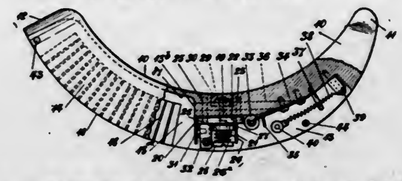
1. The method of temporarily restoring to normal operating value the insulating resistance of conductors insulated with fibrous material in electric metal-sheathed cables out of order due to moisture having penetrated into said fibrous material through a leak in the cable sheath, which method consists in removing the outside cable sheath from the damaged part of the cable and directly exposing the said moistened fibrous insulating material to a solid refrigerant of a temperature substantially below the freezing point of the penetrated moisture.

2,439,593

COMBINATION TIE PLATE AND RAIL JOINT

Irvin Young, Falmouth, Ky.

Application October 8, 1945, Serial No. 620,938
2 Claims. (Cl. 238—188)



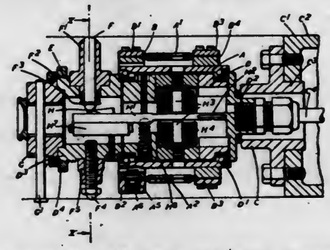
2. In a combination tie plate and rail joint, a bridging plate adapted to extend over at least three ties, a depending flange at each end of the bridging plate adapted to overhang the sides of ties supporting opposite ends of the bridging plate, said bridging plate having a transversely extending depression midway of its length, overhanging flanges at opposite ends of the depression, rail clamps slidable transversely in the depression, flanges at opposite ends of the rail clamps for engagement beneath the overhanging flanges, a rail flange embracing portion on each rail clamp, a rail web engaging portion on each rail clamp, spaced parallel rail positioning ribs on the upper face of the bridging plate adjacent opposite ends whereby the abutting ends of adjacent rails may be properly aligned on the bridging plate for engagement by the rail clamps, said bridging plate having longitudinally spaced pairs of openings along each side edge, each rail clamp having a pair of openings which are adapted to align with certain of the openings in the bridging plate when the clamp plates are in rail clamping position, screws extending through the openings and securing the bridging plate to ties upon which it rests and the clamps against the rails and bolts extending through the clamps and the web of a railroad rail for securing the rails in place.

2,439,594

SHUTTLE FOR CARPET LOOMS

Isaac B. Bassindale, Grasscroft, England

Application February 21, 1947, Serial No. 730,044
In Great Britain February 16, 1946
Section 1, Public Law 690, August 8, 1946
3 Claims. (Cl. 139—124)



1. A selvedge shuttle for a carpet loom, having an arcuate body formed with an open sided cavity to receive a cop, and embodying an adjustable cord tensioning element, a spring-influenced element for putting a drag on the cord being drawn off from the cop whereby to prevent the formation of snarls, and means for preventing the formation of an undesirably large loop of surplus cord outside the shuttle.

2,439,595

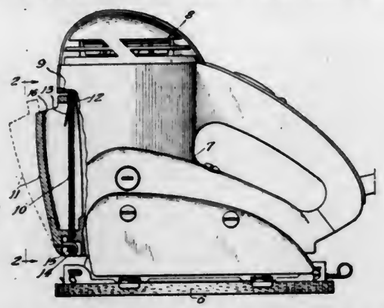
BORE GAUGE

Ernest Albert Cooke, Leicester, England, assignor to Taylor, Taylor & Hobson Limited, Leicester, England, a company of Great Britain

Application March 14, 1944, Serial No. 526,409
8 Claims. (Cl. 33—178)

6. A gauge for effecting precision measurement of the diameter of a cylindrical bore or passage in a tube or other workpiece, comprising a gauge body, two relatively movable gauging elements carried by the gauge body and extending radially with respect to the bore for engaging opposite sides respectively of said bore, means whereby relative movement between said gauging elements controls a measuring instrument, an annulus embracing a portion of the gauge body, a substantially cylindrical guide member embracing a portion of the gauge body and slidable along the bore to be gauged, a pair of spring ligaments connecting the guide member to the annulus, and a pair of spring ligaments connecting said annulus in a floating relation to the gauge body, the two spring ligaments of each pair lying diametrically opposite to each other with the four ligaments substantially equally spaced apart around the gauge body.

2,439,596



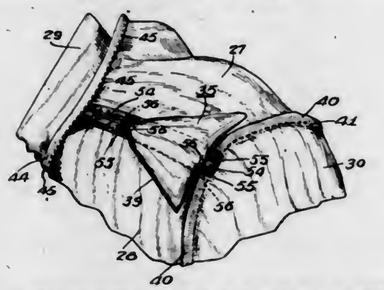
AIR FILTER FOR POLISHING MACHINES

Stephen A. Crosby, Chicago, Ill., assignor to Sterling Tool Products Company, a corporation of Illinois

Application October 2, 1946, Serial No. 700,785
2 Claims. (Cl. 51—170)

1. A motor driven rubbing machine comprising: a rubbing pad; a housing containing a motor

for driving said pad, said motor having an air-circulating fan; an air inlet to said fan in the front of said housing including a door frame; an air outlet to the housing above the fan; a filter screen adapted to fit into said frame; and a door



hinged to said frame so as to hold said screen in the door frame, said door having its body portion spaced from the frame and provided with an opening at its top portion to admit incoming air downwardly to the face of said screen.

2,439,597

SHOULDER PAD

Irvin de Satnick, Philadelphia, Pa.

Application November 24, 1945, Serial No. 630,644
3 Claims. (Cl. 2—268)

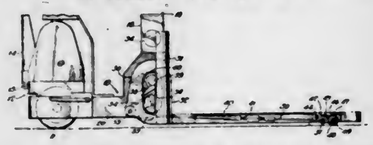
1. A lady's dress having a plurality of seams at the shoulder portion thereof, a tape connected to said dress so as to overlie the shoulder of the wearer by being attached at at least one end to a seam, buttonholes in free portions of said tape extending crosswise thereof, and a shoulder pad formed of a relatively flat covering and having heads projecting therefrom and connected thereto by necks of reduced size, said heads being adapted for insertion into said button-holes so as to be secured therein by means of said necks.

2,439,598

LUMINESCENT SIGNALLING COMPOSITION

Alfred Dinsley, La Canada, Calif.

No Drawing. Application July 5, 1944,
Serial No. 543,615
2 Claims. (Cl. 252—301.3)



1. A composition for producing visible signalling over a predetermined surface area during daylight and darkness, said composition consisting essentially of the reaction product of a mixture of approximately: 100 parts of strontium carbonate, 30 parts of sulfur, 2 parts of sodium carbonate, 0.5 part of sodium chloride and 0.2 part of manganese sulfate, said mixture being heated to a temperature of approximately 2372° F. for a period of approximately 30 minutes; combined with approximately 300 parts of a mixture of approximately: 9 parts of sodium fluorescein and 1 part of titanium tetraiodide.

2,439,599

LIFTING MECHANISM FOR INDUSTRIAL TRUCKS

Herbert J. Framhein, Chicago, Ill., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut

Application April 6, 1943, Serial No. 481,957
12 Claims. (Cl. 254—2)

1. In a truck of the class described, a lifting head having a vertical standard, an elevating platform having a forward vertical standard, rollers on said platform standard moving in channels on said lifting head standard, lifting wheels at the rear end of said elevating platform, means mounting said lifting wheels for lifting movement relatively to said elevating platform, lifting means for lifting the forward standard of said elevating platform relatively to said lifting head, lifting cams pivoted on said elevating platform, means of connection between said lifting cams and said lifting wheel mounting means whereby pivotal movement of said lifting cams effects movement of said lifting wheels in a lifting direction, and means fixed on said lifting head and bearing against said lifting cams to pivot said lifting cams as said cams move with said elevating platform relatively to said lifting head.

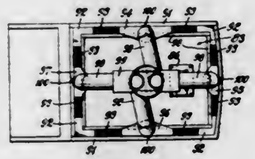
2,439,600

MANUFACTURE OF MOTOR FUEL BY ALKYLATION WITH A LIGHT CRACKED NAPHTHA

Arthur R. Goldsby, Beacon, and Louis A. Clarke, Fishkill, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware

No Drawing. Application April 23, 1943,
Serial No. 484,214
11 Claims. (Cl. 260—683.4)

1. The method in the manufacture of motor fuel hydrocarbons, which comprises cracking hydrocarbon oil under conversion conditions of temperature and pressure to reduce a substantial proportion of the oil to hydrocarbons within the gasoline boiling range, fractionating the conversion products to separate a light normally liquid cracked naphtha fraction and a higher boiling cracked naphtha fraction, the said light naphtha fraction having an end boiling point not in excess of about 200° F. and containing a substantial proportion of olefins but being substantially free from aromatics, subjecting the said light naphtha fraction to contact in liquid phase with a volume in substantial excess of the volume of naphtha being treated of a low-boiling isoparaffin selected from the group consisting of isobutane and isopentane in the presence of a volume ratio of active alkylation catalyst to naphtha of at least about 0.5:1 in a reaction zone maintained under alkylating conditions, whereby isoparaffin is alkylated by the olefins of said light cracked naphtha fraction, and recovering from the alkylation reaction products a substantially saturated gasoline fraction of broader boiling range than that of the said light cracked naphtha fraction prior to the alkylating step.



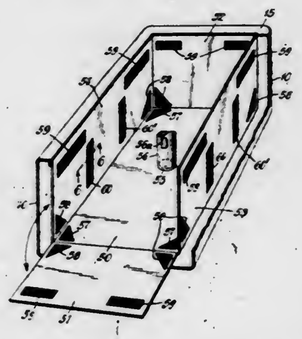
11. A process for the conversion of hydrocarbon oils to form gasoline having a low acid heat, high octane number and lead response which comprises passing the oil to be converted through a cracking zone maintained at active cracking temperature, contacting said oil within said cracking zone while at active cracking temperature with a cracking catalyst, keeping said oil in contact with said catalyst for a period sufficient to convert a substantial portion thereof into gasoline constituents, thereafter separating a light naphtha fraction substantially free of aromatic constituents and containing a relatively high concentration of olefins and a heavy naphtha fraction from the cracked products, passing the light naphtha fraction so segregated through an alkylating zone containing an active alkylating catalyst, introducing isoparaffins into said alkylating zone in an amount at least equal to the amount of olefins contained in said light naphtha fraction to thereby maintain a molar ratio of isoparaffins to olefins of at least one to one, maintaining said alkylating zone under conditions such as to cause said isoparaffins to unite with said olefins to form a saturated alkylate product, and thereafter combining alkylate formed from said last-named alkylating treatment with heavy naphtha from said catalytic cracking treatment to form a gasoline blend containing light naphtha alkylate and heavy catalytically cracked naphtha.

2,439,601

INSULATING CONFINED SPACES

Clark C. Heritage, Cloquet, Minn., assignor to Wood Conversion Company, St. Paul, Minn., a corporation of Delaware

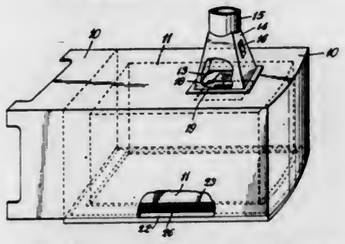
Application March 2, 1943, Serial No. 477,752
4 Claims. (Cl. 20—101)



1. In depositing particles of insulating material into the space defined and confined by walls including the walls of a refrigerator cabinet and of a food compartment mounted therein, and including removable closure means over said space at the door opening of the refrigerator, said closure means having a plurality of introductory inlets opening into said space including one to each panel-form space at the door opening, of which walls the space confining surfaces include a major portion which is substantially resistant to the passage of gas and one or more remaining portions, each in the form of screening means with foramina relatively minute compared with said one or more inlets, for venting gas from said space and for retaining said particles in the space, the method which comprises, suspending in a moving gas, particles of insulating material which pack to a consolidated body that is a gas-filtering body at an insulating density of the so-packed particles; introducing the resulting moving gaseous suspension into said space by conducting the suspension to and through said introductory inlets; simultaneously venting said gas from said space through said screening means, and there filtering said vented gas from particles, thereby depositing and packing particles to form a growing gas-filtered mass thereof in corresponding portions of said space over and extending away from said screening means; simultaneously maintaining in the remaining portion of said space a condition of turbulence of said gaseous particle-suspension by maintaining a high and sufficient velocity therefor in introducing said suspension whereby the turbulence causes deposition and packing of particles in margins of the turbulent space; continuing said introduction, said maintenance of turbulence, and said venting of said gas through said screening means and also through said growing mass at least until a body of said particles begins to form in each of said inlets and said space is completely packed with said particles consolidated to a gas-filtering body at an insulating density and resultingly molded into said space and compressed therein by the differential introduction pressure between said inlets and said screening means; removing said closure means and retaining in situ the material packed into said space; and applying confining material over the open space left by removal of said closure means.

2,439,602

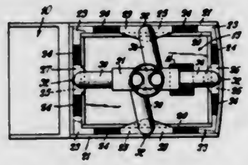
INSULATING CONFINED SPACES



Clark C. Heritage, Cloquet, Minn., assignor to Wood Conversion Company, Cloquet, Minn., a corporation of Delaware

Application March 2, 1943, Serial No. 477,753
5 Claims. (Cl. 20—101)

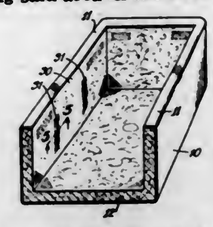
1. The method which comprises inserting a removable fixture into a casing through an opening therein and thereby defining a space by the exterior walls of said fixture and the interior walls of said casing, sealing said space against substantial leakage, introducing into said space at one or more predetermined locations in the fixture a gaseous suspension of particles of thermal-insulation-forming material which are capable of packing to form a consolidated gas-filtering insulating body thereof and turbulently filling said space with said suspension, simultaneously separating said particles from said gas and venting the gas from said space at one or more predetermined locations in the defining walls of said space until said space is packed with particles in the form of said insulating body, and then withdrawing said fixture from said casing.



2,439,603
INSULATING CONFINED SPACES
Clark C. Heritage, Cloquet, Minn., assignor to Wood Conversion Company, Cloquet, Minn., a corporation of Delaware
Application March 2, 1943, Serial No. 477,754
3 Claims. (Cl. 20—101)

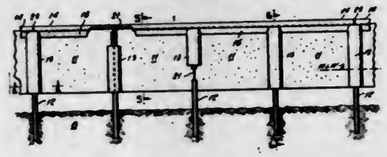
1. In depositing particles to form insulation in situ in a refrigerator formed of inner and outer shells each with an open face together providing an opening for closure by a door, which shells provide a continuous space between them opening through screening means in said door opening, each of said shells having an opening in its wall opposite said door opening to permit installation of a cooling unit, of which two wall openings one provides an introductory inlet to said space of size relatively large compared with the foramina of said screening means, and the other is covered by a closure including like screening means, the method which comprises, suspending in a moving gas, particles of insulating material which pack to a consolidated body that is a gas-filtering body at an insulating density of the so-packed particles; introducing the resulting moving gaseous suspension into said space by conducting the suspension to and through said introductory inlet; simultaneously venting said gas from said space through said screening means, and there filtering said vented gas from particles, thereby depositing and packing particles to form a growing gas-filtering mass thereof in corresponding portions of said space over and extending away from said screening means; simultaneously maintaining in the remaining portion of said space a condition of turbulence of said gaseous particle-suspension by maintaining a high and sufficient velocity therefor in introducing said suspension whereby the turbulence causes deposition and packing of particles in margins of the turbulent space; continuing said introduction, said maintenance of turbulence, and said venting of said gas through said screening means and also through said growing mass at least until a body of said particles begins to form in said inlet and said space is completely packed with said particles consolidated to a gas-filtering body at an insulating density and resultingly molded into said space and compressed therein by the differential introduction pressure between said inlet and said screening means.

2,439,604
INSULATING CONFINED SPACES
Clark C. Heritage, Cloquet, Minn., assignor to Wood Conversion Company, St. Paul, Minn., a corporation of Delaware
Application March 2, 1943, Serial No. 477,755
4 Claims. (Cl. 20—101)



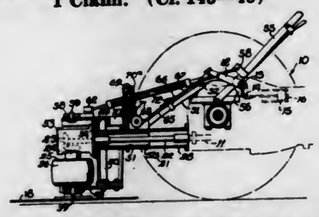
1. In depositing particles of insulating material into the space defined and confined by walls including the walls of a refrigerator cabinet and of a food compartment mounted therein, and including removable closure means over said space at the door opening of the refrigerator, said closure means having a plurality of introductory inlets opening into said space including one to each panel-form space at the door opening, of which walls the space-confining surfaces include a major portion which is substantially resistant to the passage of gas and one or more remaining portions, each in the form of screening means with foramina relatively minute compared with said one or more inlets, for venting gas from said space and for retaining said particles in the space, of which screening means one is located in one of the back walls of said refrigerator, the method which comprises, suspending in a moving gas, particles of insulating material which pack to a consolidated body that is a gas-filtering body at an insulating density of the so-packed particles; introducing the resulting moving gaseous suspension into said space by conducting the suspension to and through said introductory inlets; simultaneously venting said gas from said space through said screening means, and there filtering said vented gas from particles, thereby

depositing and packing particles to form a growing gas-filtering mass thereof in corresponding portions of said space over and extending away from said screening means; simultaneously maintaining in the remaining portion of said space a condition of turbulence of said gaseous particle-suspension by maintaining a high and sufficient velocity therefor in introducing said suspension whereby the turbulence causes deposition and packing of particles in margins of the turbulent space; continuing said introduction, said maintenance of turbulence, and said venting of said gas through said screening means and also through said growing mass at least until a body of said particles begins to form in each of said inlets and said space is completely packed with said particles consolidated to a gas-filtering body at an insulating density and resultingly molded into said space and compressed therein by the differential introduction pressure between said inlets and said screening means; removing said closure means and retaining in situ the material packed into said space; and applying a confining material over the open space left by removal of said closure means.



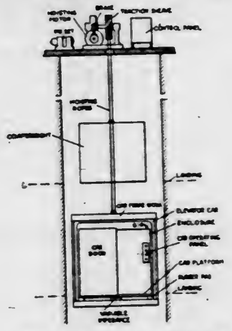
2,439,605
MEANS FOR PACKING INSULATION MATERIAL
Robert D. Pauley, Cloquet, Minn., assignor to Wood Conversion Company, Cloquet, Minn., a corporation of Delaware
Application April 20, 1942, Serial No. 439,678
3 Claims. (Cl. 20—101)

1. A fixture for use in insulating refrigerator cabinets by a pneumatic process, comprising a box-like form in the shape of a dummy for a food compartment for said cabinet, said fixture having a box-like bottom and four side walls corresponding generally to the back and side walls of said food compartment, the total area of said fixture having perforate area and imperforate area, of which total area perforate area in the bottom provides inlet area for introducing moving gas containing suspended particles of insulating material, and of which total area at least one side wall has filtering area and filtering means covering said area in the form of a narrow



elongated area extending in the direction from bottom to top of the fixture intermediate the ends of the containing wall of the fixture, said elongated filtering area being flanked by imperforate area.

2,439,606
RETAINING SEA WALL
Joel Hurt, North Bay Island, Fla.
Application April 12, 1946, Serial No. 661,718
20 Claims. (Cl. 61—49)

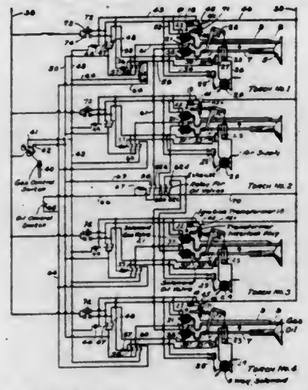


1. In a retaining seawall or bulkhead, in combination, an aligned series of precast interlocking concrete slabs sustained in edgewise posture and constituting the body of the wall, a spaced series of upstanding driven piles located contiguously frontwards of the aligned series of slabs and upon which piles the slabs are suspended, and a series of upstanding concrete pilasters fieldcast in spaced positions adjoining the front face of said slab series, and with each pilaster embedding the upper portion of one of said upstanding piles.

2,439,607
TREE FELLING AND LOG SAWING ATTACHMENT FOR TRACTORS
Samuel E. Irwin, Jr., Ponta, Tex.
Application June 7, 1944, Serial No. 539,061
1 Claim. (Cl. 143—43)

In a saw attachment for a tractor having a vertically swingable lifter arm pivoted thereon for powered elevation and alternative lowering under load upon removal of the application of power thereto, the combination of an elongated arm having a circular saw journaled on the outer end thereof, means pivotally connecting the inner end of said arm to the rear portion of the tractor for generally universal swinging motion with reference thereto, a flexible cable, means for detachably connecting said cable to the lifter arm on the tractor, means for connecting said cable to said arm for raising of the latter upon raising of the lifter arm, a stop supporting member arranged longitudinally along the path of movement of said cable and means including a stop adjustably positionable along said stop supporting member engageable with a coacting abutment fixed to said cable and movable therewith for positively limiting the movement of said cable in the direction of its movement for descent of said arm.

2,439,608
ELEVATOR LOAD WEIGHING APPARATUS
Otto Albert Krauer, Yonkers, N. Y., assignor to Otis Elevator Company, New York, N. Y., a corporation of New Jersey
Application September 8, 1943, Serial No. 501,730
11 Claims. (Cl. 187—29)

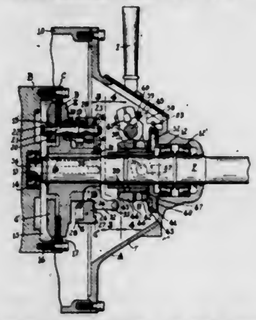


1. In an elevator installation; a variable impedance carried by the elevator car; means for varying said impedance by variation in load in the car; a variable resistance; means for supplying current to said impedance and resistance; electroresponsive means operable at a certain voltage; means connecting said electroresponsive means to be subject to a voltage of a value dependent upon the voltage drop across said impedance and that across said resistance; and means for varying said resistance to vary said voltage drop thereacross to cause said certain voltage to be applied to said electroresponsive means regardless of the load in the car.

2,439,609
CONTROL FOR PLURAL RETRACTABLE FUEL BURNERS
Harvey C. Mittendorf, East Orange, N. J., assignor to Combustion Engineering Company, Inc., New York, N. Y.
Application May 14, 1945, Serial No. 593,697
7 Claims. (Cl. 158—28)

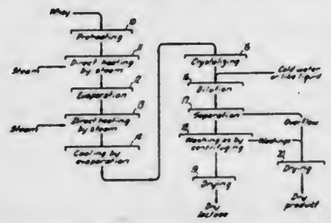
1. In a fuel burner system having a plurality of fuel burners each movable to and from operating position and individual means for moving said fuel burners to and from operating position; gas pilot burners mounted adjacent the operating position of each fuel burner for lighting the fuel therefrom; electrical ignition means for lighting each gas pilot; valves and operating means therefor to supply gas and fuel respectively to said pilot and fuel burners; control means including a starting switch for simultaneously operating all said gas valves, for energizing all said ignition means and for moving all said fuel burners to their operating position; means

also responsive to placement of said switch in starting position and then acting to partly condition said oil valves operating means for actuation; individual means responsive to the move-



ment of each fuel burner to its operating position for completely rendering its fuel valve operating means operable; and means operable thereafter for simultaneously actuating the operating means for the fuel valves for said fuel burners.

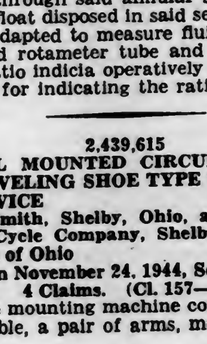
2,439,610
STABILIZED ORGANIC COMPOSITION
Rupert C. Morris and John L. Van Winkle, Berkeley, and Alva V. Snider, Richmond, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application September 26, 1944, Serial No. 555,892
12 Claims. (Cl. 252—45)



1. An organic hydrocarbon composition comprising a beneficial amount sufficient to stabilize said organic composition against deterioration and oxidation of a sulfurized homopolymer of an alkyl substituted 1,3-pentadiene, said alkyl substituent of 1,3-pentadiene having up to two carbon atoms.

2,439,611
AXIALLY ENGAGING FRICTION CLUTCH
Arthur T. Nabstedt, Hamden, Conn., assignor to The Snow-Nabstedt Gear Corporation, New Haven, Conn., a corporation of Connecticut
Application August 29, 1944, Serial No. 551,653
8 Claims. (Cl. 192—68)

1. In clutch mechanism of the spring loaded type in which one of the principal members includes an axially movable friction disk and the other principal member includes a pair of plate members between which said disk is clamped, one of said plate members being axially movable and the other being axially stationary, the combination, with the aforesaid members, of a presser element tied to the axially movable plate member and located at the remote side of the axially stationary plate member, loading springs interposed between said presser element and the axially stationary plate member, levers for shifting the presser element carried by the axially stationary plate member, throwout mechanism including an axially shiftable collar movable into and out of actuating contact with said levers, and means of engagement between said presser element and said levers for limiting the swinging of said levers.

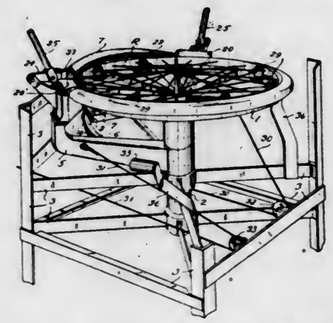


2,439,612
PROCESS FOR MANUFACTURE OF MILK SUGAR
David D. Peebles, Hillsborough, and Thomas V. Marquis, Santa Cruz, Calif., assignors to Western Condensing Company, San Francisco, Calif., a corporation of California
Application September 28, 1942, Serial No. 459,920
8 Claims. (Cl. 127—31)

1. In a process for the manufacture of lactose from a liquid lacteal material containing milk protein and lactose, subjecting the material to evaporation and heat treatment to form a concentrate which is supersaturated with respect to its lactose content, which has the major part of its protein content irreversibly coagulated by heat and which is free of lactose crystals, the heat treatment including directly contacting the material with steam to rapidly transfer heat to the same, seeding a mass of said concentrate with lactose crystals formed in a preceding crystallizing operation of the process, permitting lactose from the concentrate to crystallize out in the mass after such seeding, and then separating out lactose crystals from the mass of material.

2,439,613
PARACHUTE HARNESS
John Raymond Cuthbert Quilter, Woking, England
Application October 19, 1945, Serial No. 623,328
In Great Britain September 27, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires September 27, 1964
10 Claims. (Cl. 244—151)

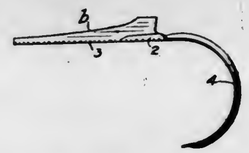
1. Parachute harness for aviators, comprising two parachute connections for carrying the entire load, a seat for the aviator, a leg loop secured to said seat and adapted to be carried up between the aviator's legs when seated, two connectors attached to the respective ends of said seat, means for locking said connectors individually to said connections, said leg loop being engageable with said connectors under control of said locking means, said connections, leg loop and locking means being located in front of the aviator in the



position of wear, and a single member for simultaneous release of said locking means.

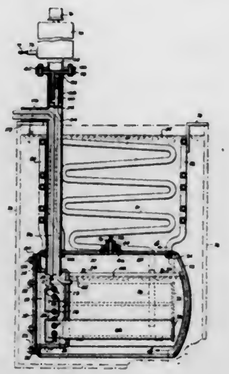
2,439,614
FLOW-RATIO METER
Milton Ernest Schramm, Edwardsville, Ill., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application January 11, 1945, Serial No. 572,381
7 Claims. (Cl. 73—196)

1. In a flow-ratio meter the combination comprising a first rotameter tube, a second rotameter tube extending longitudinally within said first rotameter tube and defining an annular space between said rotameter tubes, a first annular rotameter float slidably mounted on said second rotameter tube and adapted to measure fluid flow through said annular space, a second rotameter float disposed in said second rotameter tube and adapted to measure fluid flow through said second rotameter tube and means including flow-ratio indicia operatively associated with said floats for indicating the ratio of said flows.



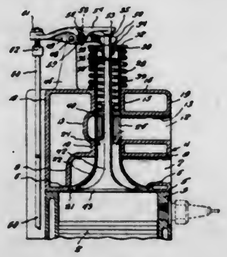
2,439,615
PEDESTAL MOUNTED CIRCUMFERENTIALLY TRAVELING SHOE TYPE TIRE MOUNTING DEVICE
Leon A. Smith, Shelby, Ohio, assignor to The Shelby Cycle Company, Shelby, Ohio, a corporation of Ohio
Application November 24, 1944, Serial No. 564,917
4 Claims. (Cl. 157—6)

1. A tire mounting machine comprising a supporting table, a pair of arms, means supporting the arms for swinging movement toward and away from each other about an axis normal to the plane of the table, rim engaging means on the table for holding a rim thereon with its axis substantially coincident with said first mentioned axis, means operatively connected to said arms for swinging the arms concurrently in a fixed relation toward each other from a starting to a final position, said means comprising segmental discs fixed to the arms respectively and coaxial



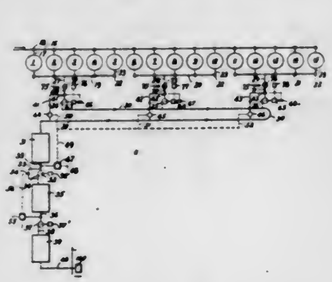
therewith and spaced apart from each other axially, and having peripheral guideways, flexible members secured at one end to the discs, respectively, and accommodated in the guideways, means to exert a pull on the flexible members for swinging the arms from a starting to a final position, tire applying means carried by the arms, respectively, and operative upon swinging of the arms from starting to final position to effect progressive engagement of a tire with said rim.

2,439,616
CONDUCTOR PIPE HOOK
Morton B. Wolfe, Norwood, Pa., assignor to Berger Bros. Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 12, 1944, Serial No. 553,693
1 Claim. (Cl. 248—71)



A conductor pipe support formed from a sheet-metal blank, having a pipe engaging hook at one end, a tapered drive portion at the other end which merge into a hollow reinforcing portion, the hook being curved to engage the pipe and is provided with an outwardly pressed bead extending into the reinforcing portion, pipe engaging flanges extending laterally from said bead, the drive portion comprising two similar members, each having a drive head forming portion over the reinforcing portion formed by folding the blank along the medial portion from the end thereof to the bead, said members extending perpendicular to the pipe engaging flanges, and inwardly curved portions extending from said flanges and merging into the drive head thereby forming the hollow reinforcing portion over the end of the bead and the junction of fold between the drive members.

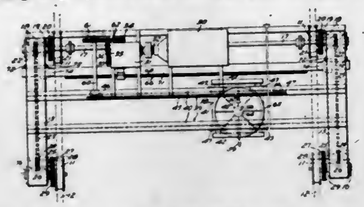
2,439,617
IMMERSIBLE ELECTRICAL HEATER
Robert C. Belgau, Detroit, Mich.
Application July 5, 1945, Serial No. 603,341
12 Claims. (Cl. 219—41)



1. Apparatus for heating material in a container, comprising a tank, liquid heating medium therein, electrical resistance elements extending within said tank for heating said medium, pressure responsive means operative upon the occurrence of a predetermined maximum pressure to deenergize said resistance elements, radiating elements connected to the interior of said tank for transmitting heat from the vaporized heating medium to the material in the container, a conduit leading from said resistance elements to a point above the normal level of material in the container, electrical connections extending through said conduit to said resistance elements, and means associated with said conduit for suspending the heating apparatus in the container in spaced relation from the walls thereof.

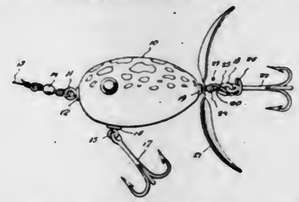
2,439,618
COMBINATION INTAKE AND EXHAUST VALVE FOR FOUR-CYCLE ENGINES
Felix J. Cloutier, Minneapolis, Minn.
Application February 15, 1946, Serial No. 647,869
1 Claim. (Cl. 123—79)

In a combination intake and exhaust valve for internal combustion engines, the combination, which comprises an engine head having a vertically disposed valve chamber extending therethrough with separated intake and exhaust laterally disposed openings communicating therewith, an exhaust valve having a tubular sleeve slidable in said valve chamber with a horizontally disposed bearing partition intermediate the ends thereof and radially disposed openings in the wall thereof below said partition, said tubular valve sleeve having a peripheral flange around the extending outer end, a compression spring around said tubular valve sleeve positioned between the peripheral flange and surface of the engine head, an intake valve having a stem slidably mounted in the sleeve extending through a bearing in the partition thereof, a collar on said valve stem spaced from the partition, a compression spring around said valve stem between the collar thereon and the horizontally disposed partition, a rocker arm pivotally mounted on the engine head positioned to actuate said exhaust valve, said rocker arm having a yoke at the end with arms thereof straddling the stem of the intake valve, and a rocker arm pivotally mounted on the rocker arm of the exhaust valve engaging the end of the stem of the intake valve for actuating said intake valve.



2,439,619
APPARATUS FOR HANDLING VISCOSE SOLUTIONS
Hobart O. Davidson, Swarthmore, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application March 1, 1944, Serial No. 524,583
7 Claims. (Cl. 18—8)

1. Apparatus for handling dispersions of viscose and other materials subject to change in properties with passage of time preparatory to delivery to the product-forming stage comprising a large number of tanks, at least two discharge headers, each of the headers being associated with a separate group comprising a plurality of the tanks, a common header, separate branch lines connecting the respective discharge headers to the common header, pumping means in each of said lines, separate by-pass lines connected to the respective branch lines on the suction side of the pumps therein and to the common header beyond all of the branch line connections thereto.

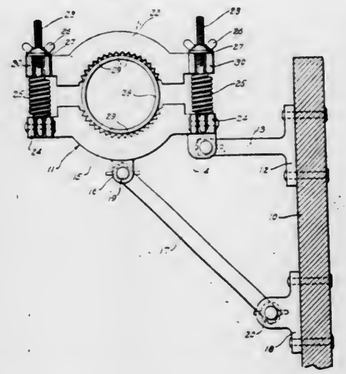


2,439,620
CONCRETE SPREADER
John P. Faber, Dunellen, N. J., assignor to Ransome Machinery Company, Dunellen, N. J., a corporation of New Jersey
Application September 28, 1944, Serial No. 556,129
5 Claims. (Cl. 94—44)

1. A concrete spreader for distributing concrete deposited upon a roadway comprising a carriage adapted to move along the roadway, a horizontal guide mounted on said carriage cross-wise of the roadway, a traveler movable along said guide, a concrete spreading plow having a vertical shaft rotatably mounted on said traveler, said spreading plow being wedge-shaped with a concrete dividing edge positioned to one side of said shaft,

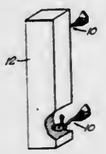
means for rotating said shaft to adjust said spreading plow to different plowing angles, means for propelling said traveler back and forth along said guide to move the spreading plow in a horizontal path over the roadway, and means for adjusting the spreading plow toward and away from the roadway.

2,439,621
FISHING LURE
Waino E. Himottu, Gardner, Mass.
Application April 2, 1946, Serial No. 658,949
1 Claim. (Cl. 43—47)



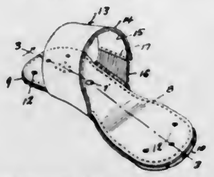
A fishing lure having a wooden body including an eye screw in the rear end of the body, a spinner rotatably mounted on the eye screw, a fish hook secured to the eye of the eye screw and a guard to prevent the fish hook from interfering with the free movement of the spinner, the guard consisting of a wire coil surrounding the neck of the eye screw, the wire extending rearwardly from the coil and, the rear portion of the wire being in the form of a bight and surrounding the stem of the fish hook.

2,439,622
KNITTING NEEDLE
Robert F. Howe, Leominster, Mass., assignor to E. B. Kingman Co., Leominster, Mass., a corporation of Massachusetts
Application March 19, 1947, Serial No. 735,608
4 Claims. (Cl. 66—117)



1. A knitting needle comprising a shank having a pointed end and having an opening adjacent said pointed end extending across the shank and a rigid pin frictionally and detachably mounted in said opening from either end of the opening for preventing the slippage of stitches over said pointed end.

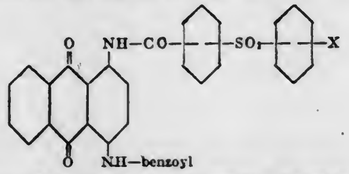
2,439,623
SUPPORT FOR VEHICLES
Thomas G. Howells, Girard, Ohio
Application June 24, 1946, Serial No. 678,730
2 Claims. (Cl. 224—29)



1. A load-carrying attachment for trucks, comprising a load support consisting of a pair of jaws, one of which being fixed on the side of a truck, the other jaw forming a mating cap removably supported on the fixed jaw, and means for tightening the jaws together to firmly secure the load between them consisting of a pair of rods secured in said fixed jaw adapted for holding engagement with said cap, springs on said rods tending to open said jaws, lugs on said cap providing a side opening for sideways entering of the rods in the cap.

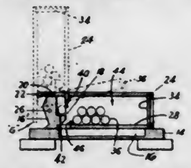
2,439,624
ADJUSTABLE BRACKET
Frederick D. Irwin, Warsaw, Ind.
Application January 12, 1946, Serial No. 640,932
4 Claims. (Cl. 248—200)

1. An adjustable bracket comprising a rigid anchor member adapted to be secured to a support and including a plate portion having an elongated slot, an elongated rigid arm bearing at one end portion upon said plate portion and transversely spanning said slot, means received in said slot for clamping said arm upon said base in selected adjustment relative to both the length of the arm and the length of the slot, and a head mounted at selected longitudinal position on the outer end of said arm spaced from said anchor member, the plate portion of said anchor member having spaced parallel projections transverse of and on opposite sides of said slot engageable by said arm.



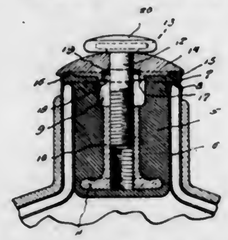
2,439,625
FOOT SUPPORT
Moses Johnson, Indianapolis, Ind.
Application February 13, 1946, Serial No. 647,339
1 Claim. (Cl. 36—71)

A foot appliance comprising a pair of superposed plates of spring steel and equal in length upwardly bowed centrally to support the longitudinal arch and padded with resilient material to provide a metatarsal arch support, and a covering of leather for said plates and resilient material, one of said plates solely having a cut-out edge on one side of the longitudinal arch supporting part thereof for weakening the same to facilitate shaping of the appliance to the arch of the foot under weight thereof, and bottom guard plates at the ends of the lower plate curving around the ends of the upper plate.



2,439,626
ANTHRAQUINONE VAT DYESTUFFS
Walter Kern, Sissach, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland, a Swiss firm
No Drawing. Application October 2, 1944, Serial No. 556,908. In Switzerland November 1, 1943
4 Claims. (Cl. 260—372)

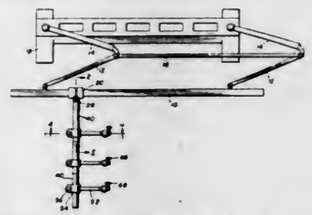
1. A vat dyestuff which is an anthraquinone substitution product of the formula



wherein X stands for a member selected from the group consisting of hydrogen, chlorine and methoxy.

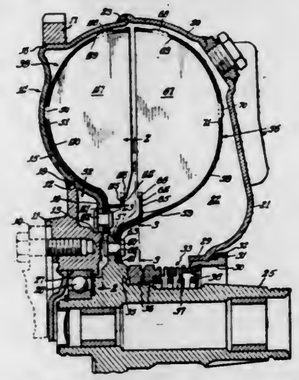
2,439,627
DISPENSING CONTAINER
Tennies F. Kolts, Long Beach, Calif.
Application July 31, 1945, Serial No. 608,063
2 Claims. (Cl. 312—77)

2. In a device of the character described, a base, a container hingedly secured upon said base and being adapted to hold a supply of stacked cigarettes horizontally positioned therein, a block, said block being secured upon said base and being formed with a horizontal step thereon and upon which a cigarette is adapted to rest in horizontal position, and lips, said lips being positioned upon certain of the inner faces of said container and being functionally operable with said block to confine said supply of cigarettes within said container when in raised position, means on said container to apply pressure upon one of the ends of said cigarette upon said step upon upward movement thereof from a lower horizontal position to an upper rearwardly inclined position whereby a cigarette upon said step is swung transversely of its axis to a position in which the longitudinal axis thereof is directed toward an operator of the device, said lips and said block being so positioned with respect to one another that upon lowering said container from the upright functional position to the horizontal non-functional position, clearance is provided whereby a subsequent cigarette will roll from stacked position in the container to a position onto said step prior to a subsequent functional movement of said container.



2,439,628
BOTTLE STOPPER
Donald G. Kopecky, Taft, Calif.
Application February 2, 1945, Serial No. 575,787
1 Claim. (Cl. 215—54)

A bottle stopper comprising a plug made of resilient material adapted to enter the neck of a bottle, the outer end of said plug projecting outwardly beyond the neck of the bottle and being formed with an annular flange overlying the outer edge of the neck of the bottle, said flange being provided on its under surface with a groove adapted to conformably receive the outer edge of the neck of the bottle and on its upper surface with an annular rib, there being a vertical recess in said plug, an internally threaded and rigid sleeve provided with a flange at its lower end mounted in said vertical recess, the flange of the sleeve being imbedded within the plug above its bottom thereof, a rigid cap overlying the annular flange of said plug, said cap being provided on its underside with an annular groove adapted to conformably receive the annular rib on the flange of said plug and on its underside with an annular rib projecting into and bearing against the walls of said vertical recess, there being a recess in the central portion of said cap at its underside, a metal washer seated in the recess of said cap, and a screw extending through the recess and metal washer in said cap and threaded in said sleeve and operable upon manipulation in the proper direction to compress the flange of the plug against the neck of the bottle and to expand the plug within the neck.

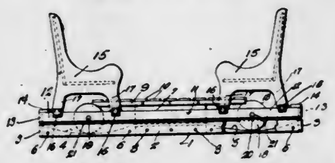


2,439,629
MULTIPLE THERMOCHEMICAL CUTTING ATTACHMENT
Stewart N. Libby, Chicago, Ill.
Application March 20, 1947, Serial No. 736,014
1 Claim. (Cl. 248—214)

Means for mounting a plurality of torches on the torch bar of thermochemical cutting apparatus comprising a bracket longitudinally adjustably mounted on said bar, a plurality of similar longitudinally aligned sections separably secured together and secured to said bracket, clamps longitudinally adjustably mounted on said members and having adjustable attachment means for

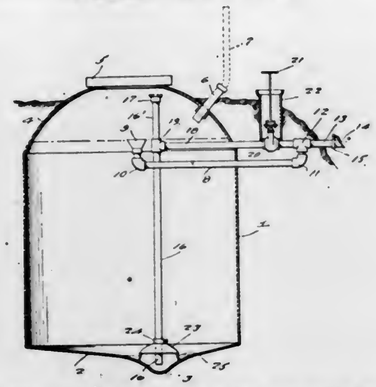
torches, said bracket including a block configured to fit a portion of said torch bar and slidably mounted within a recess in said bracket, a pin inserted through a slot in said block and secured to said bracket, and a thumb screw threadedly mounted in said bracket and operatively contacting said block.

2,439,630
FLUID COUPLING
Harold Nutt, Chicago, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application April 11, 1945, Serial No. 587,652
9 Claims. (Cl. 103—115)



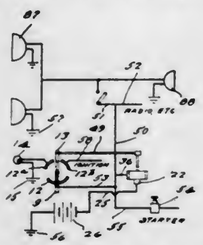
1. In a fluid coupling, rotatable driving hub having an annular flange and a shoulder; a hollow annular housing member forming one portion of an annular fluid chamber; a hollow semi-toroidal housing member forming another portion of said fluid chamber, the inner region of said semi-toroidal housing member resting on said hub shoulder; a driving wheel within said semi-toroidal housing member comprising an annular semi-toroidal shell having a cross-section substantially conforming with the cross-section of said semi-toroidal member and driven thereby; a ring baffle at the radially inward portion of said shell; radially positioned vanes of substantially semi-circular contour within said semi-toroidal shell; said vanes having means coacting with means on said shell and said baffle for mounting of said vanes in said shell; the radially inward portions of said housing, shell, and baffle being arranged in close relation to each other; rivets passed through said radially inward portions to provide a unitary assembly engaged with the flange on said driving means; and a readily accessible continuous exterior weld anchoring said unitary assembly to said driving flange.

2,439,631
COVER FOR BED-FORMING STRUCTURES
Immacolata Pisciotta, New York, N. Y.
Application July 10, 1944, Serial No. 544,218
9 Claims. (Cl. 5—354)



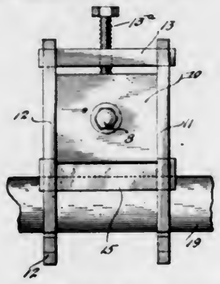
9. A cover for a bed-forming structure, wherein such structure includes at least one device accessible at the outside face of such structure, the cover comprising a plurality of panels dimensioned and assembled with each other to be substantially coextensive with the outside walls of such structure, one of the panels including a plurality of sections, one of the sections of that panel having a cut-out formed therein, the sections being greater in their total length than the length of the panel, the sections of that panel being overlapped sufficiently to coincide with the length of the panel and so that the cut-out is overlapped by one of the other sections of that panel, and the sections of that panel being secured to each other so that a portion of said other section forms a freely movable cover for the cut-out.

2,439,632
ROCKER SWING
Ernest A. Ramirez, Grand Rapids, Mich., assignor of fifty per cent to Florence M. Ramirez, Grand Rapids, Mich.
Application March 11, 1946, Serial No. 653,615
1 Claim. (Cl. 155—57)



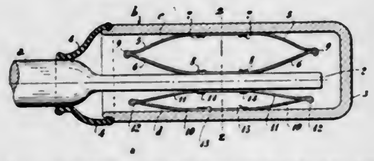
A rocker swing comprising a substantially rectangular fixed supporting frame, oppositely extending track rails having arcuate bearing surfaces disposed at the opposite ends of said fixed supporting frame and secured to the inner surfaces thereof, vertical standards having outturned flanges attached to the sides of said fixed supporting frame between said track rails, a substantially rectangular foot engaging platform supported by said vertical standards above said fixed supporting frame, a substantially rectangular seat supporting frame interposed between said fixed supporting frame and said foot engaging platform, said platform having its opposite sides disposed inwardly of said seat supporting frame, seats secured to the opposite ends of said seat supporting frame, transversely aligned axle bearings extending through the sides of said seat supporting frame, axles disposed for rotation in said bearings, and wheels on said axles having rolling engagement with the arcuate bearing surfaces of said track rails.

2,439,633
AUTOMATIC FILTER APPARATUS
Frederick J. Reinhart, Ludlow, Ky.
Application August 14, 1945, Serial No. 610,729
5 Claims. (Cl. 210—209)



1. The combination of a tank for liquid and a purifying apparatus, said tank having a sediment basin in its bottom and said purifying apparatus comprising an overflow pipe, a sludge pipe, and a valve in said sludge pipe, said overflow pipe limiting the height of the liquid in said tank and being positioned above said sludge pipe to form a head of liquid above said sludge pipe, said sludge pipe extending down into and spaced from the bottom of said sediment basin, whereby when said valve is opened, liquid will be forced out of said tank through said sludge pipe while entraining sediment from said sediment basin.

2,439,634
ELECTRICAL SAFETY DEVICE
Lee E. Robey, Odenton, Md., assignor of one-half to William Reimsnider, Dorsey, Md.
Application July 29, 1944, Serial No. 547,272
4 Claims. (Cl. 177—311)



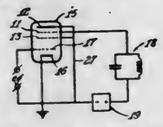
1. A safety device of the character described, comprising an auxiliary switch having means mounting the same on the instrument board of a motor vehicle, said switch including a movable contact element shiftable to a circuit-opening or closing position and having an operating handle, means to releasably lock said movable contact element in circuit-opening position, a signal lamp having a circuit controlled by said auxiliary switch, a master switch having a movable contact shiftable to circuit-opening or circuit-closing position and mounted remote to the auxiliary switch adjacent the vehicle battery, and a flexible operating connection between the movable contact elements of said switches whereby opening of one will cause opening of the other and closing of the one will cause closing of the other, said master switch having means to connect its movable contact element with one side of the battery and including a stationary contact element for connection with the several circuits of the vehicle, whereby opening of the master switch will cause simultaneous opening of all of the vehicle circuits.

2,439,635
TOOLHOLDER
Eugene Ruch, Farmington, Mich.
Application April 11, 1945, Serial No. 587,741
2 Claims. (Cl. 82—36)

1. A boring tool holder for the tool post of a lathe comprising a pair of elongated laterally spaced frames adapted to accommodate said post therebetween and to be moved endwise alongside the same crosswise thereof, a cross member extending through said frames and slidable along the same, said member being adapted to engage one side of the post whereby when said frames are moved endwise corresponding ends thereof are moved into clamping relation to said member to clamp the tool holder when inserted through said frames between said ends and said member, a second cross member extending through said frames at the other ends thereof and slidable along said frames into engagement with said other ends to cause endwise movement of the frames, said other member being adapted to be opposed to said post on the side thereof opposite the side with which the first named member is adapted to be engaged, and an adjusting screw threaded through said second member and adapted to be turned against said post to slide the second member against said other ends of the frames.

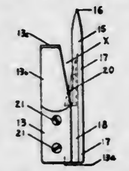
2,439,636
STEERING HANDLE
Vicente Alberto Pedro Saracchi, Buenos Aires, Argentina
Application June 29, 1945, Serial No. 602,338
In Argentina May 28, 1945
4 Claims. (Cl. 74—551.9)

1. In a steering handle bar construction for bicycles, motor cycles and the like, a grip of tubular formation fitted about an end of the handle bar, said grip having a tubular cross-section with a hollow portion several times that of the cross-



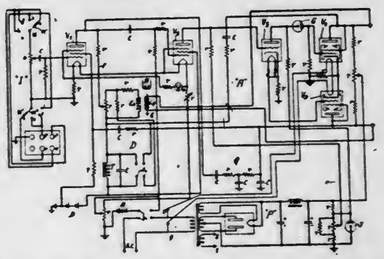
section of the end of the handle bar to which it is fitted, and connecting means for the end of the handle bar and said grip comprising a first spring between the upper surface of the handle bar end and the grip composed of two arc-like members which are substantially elliptically shaped and which when connected together by their respective ends form a double ogive, and a second spring between the lower portion of the end of the handle bar and the grip composed of two arc-like members which are substantially elliptically shaped and which when connected together by their respective terminals form a double ogive.

2,439,637
METHOD OF PREPARING WELDABLE FERROUS MEMBERS HAVING HIGH CARBON FACES
John W. Steinmeyer, Berwick, Pa., assignor to American Car and Foundry Company, New York, N. Y., a corporation of New Jersey
Application November 6, 1943, Serial No. 509,241
5 Claims. (Cl. 148—19)



1. The method of producing a weldable ferrous-metal member having a non-weldable high carbon face and a weldable low carbon center comprising, spraying non-ferrous metal onto a portion of a low carbon member in successive layers of decreasing width to form a protective coating having a relatively thin edge portion gradually merging into a materially thicker portion, subjecting the member to a carburizing treatment to produce a high carbon face which gradually disappears beneath the protective coating substantially in accordance with the coating thickness, and removing a portion at least of the non-ferrous metal coating to expose an uncarburized face portion for reception of welding metal.

2,439,638
CIRCUIT ARRANGEMENT FOR AMPLIFYING OR GENERATING ULTRA HIGH FREQUENCY OSCILLATIONS
Maximiliaan Julius Otto Strutt, Aldert van der Ziel, and Adrianus Johannes Wilhelmus Marie van Overbeek, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application May 21, 1943, Serial No. 487,979
In the Netherlands August 20, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires August 20, 1961
5 Claims. (Cl. 179—171)



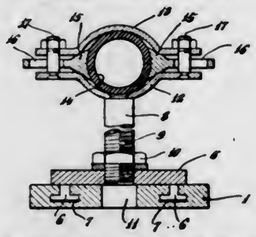
1. A circuit arrangement for amplifying or generating high frequency oscillations comprising an electron discharge tube having arranged in the order named a cathode, a signal control electrode, a first reflecting electrode, a perforated electrode and a second reflecting electrode, means to couple said first reflecting electrode to said second reflecting electrode, means to maintain said reflecting electrode at cathode potential, and means to apply a positive potential to said perforated electrode, said electrodes being so constructed, arranged and spaced and said positive potential having such value with respect to the cathode that the electrons, at least for the greater part, perform an oscillatory movement through said perforated electrode and within a region defined by said reflecting electrodes to thereby increase the mutual conductance of said tube.

2,439,639
ENVELOPE AND PACKAGE OPENER
James O. Tilly, Tulsa, Okla.
Application October 9, 1944, Serial No. 557,905
1 Claim. (Cl. 30—294)

In a letter and package opener device of the kind described; the combination of a one piece handle element of replica form, a guide blade and a knife, said guide blade having a tongue portion and an enlarged rib formation integrally formed on one edge thereof and merging into a long forwardly extending slender pointed blade to form the aforesaid guide blade, said handle element having a longitudinally positioned groove therein in which the tongue portion of the guide blade is seated in such a manner that a portion of the replica diverges from the guide blade to form a V-shaped opening between the replica and guide blade, said knife being in the form of a right angle triangle having an extremely long base and short altitude and the hypotenuse side of the triangle being the sharp edge of the knife, said guide blade having a groove therein in which one side of the triangle knife is seated with the sharp edge of the knife extending diagonally across the apex end of the said V-shaped opening and one corner of the triangle knife engaging the replica as a means of rigidly holding the knife in place, and means passing through both the replica and said tongue to rigidly hold the replica and guide blade in their relative fixed position.

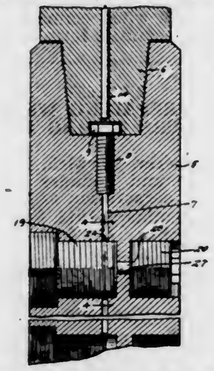
2,439,640
ELECTROCARDIOGRAPH
Paul Traugott, New York, N. Y., assignor to Electro-Physical Laboratories, Inc., New York, N. Y., a corporation of New York
Application May 24, 1944, Serial No. 537,175
7 Claims. (Cl. 128—2.06)

1. In an electro-cardiograph, a movable coil galvanometer, a stylus actuable by the movement of the coil of the galvanometer in a magnetic



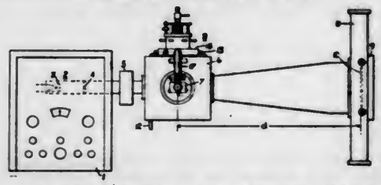
field, and an amplifier circuit connected at its output to the galvanometer and its input to a patient for transmitting the cardiac action from the patient to the galvanometer, and an auxiliary coil operatively associated with the galvanometer coil and with the amplifier circuit said auxiliary coil being simultaneously movable with the galvanometer coil in the same magnetic field, said auxiliary coil being adapted to develop a potential in the amplifier circuit and serving by its movement in a phase opposing the potential developed in the amplifier circuit by virtue of the inertia of movement of the stylus initiated by the galvanometer coil actuation.

2,439,641
ARRANGEMENT FOR CONDUCTING HEAT AND HIGH-FREQUENCY CURRENTS
Harold A. Wheeler, Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application February 21, 1946, Serial No. 649,346
6 Claims. (Cl. 178—44)



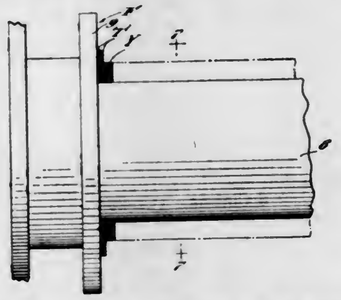
1. An arrangement adapted to convey heat and high frequency currents from a source comprising, a conductor of heat and high frequency currents, a thermal radiator including a plurality of heat-conductive elements of relatively large areas secured in transverse relation to and spaced along the longitudinal axis of said conductor to provide a large heat-dissipating area but presenting a high impedance to the flow of high frequency currents along said radiator, and a plurality of longitudinally extending current conductive elements spaced from each other about the periphery of said radiator and connected to provide around at least a portion of said radiator a shunt path having an impedance to high frequency currents much less than that of said radiator.

2,439,642
ADJUSTABLE HOSE HOLDER
Mayfield C. White, New York, N. Y.
Application July 28, 1945, Serial No. 607,521
2 Claims. (Cl. 248—84)



1. In an adjustable hose holder which consists of a pair of curved clamps adapted to hold a hose between them and having lugs at each extremity and of a vertically adjustable supporting shaft connecting one of said clamps to a base, a pair of wedges from whose narrow portions slotted lugs are extended which are located between the lugs of said clamps, and threaded bolts connecting the clamp lugs to each other and extending through said wedge lugs, all substantially as set forth.

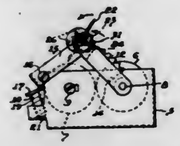
2,439,643
GUN PERFORATOR
Wilmerth R. Atwood, Odessa, Tex.
Application September 6, 1945, Serial No. 614,756
3 Claims. (Cl. 164—0.5)



1. A gun perforator comprising a body having a vertical passage, a pair of plugs threaded in diametrically opposite sides of the body, one of said plugs having a bore forming a barrel, a lateral passage between the inner ends of the plugs adapted to receive a bullet positioned at the inner end of the barrel, the other of said plugs having a powder chamber disposed transversely of the body and intersecting said vertical passage, a soft metal disk closing the inner end of the chamber and having a severable section attached to the rear end of the bullet to retain the bullet in the barrel, said disk forming a closure between the powder chamber and lateral passage, a vertical passage in the last named plug providing communication between the powder chamber and the vertical first named passage, and means operable from a remote part of the vertical passage to fire a charge in the powder chamber.

2,439,644
INDEXING TELESCOPE FOR ELECTRON DIFFRACTION INSTRUMENTS
Charles H. Bachman, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application November 10, 1945, Serial No. 627,
4 Claims. (Cl. 250—49.5)

1. The combination in an electron optical instrument of means including an evacuated structure for producing a beam of electrons, means for supporting a specimen to be examined in the path of said beam, a reference point located on said structure, and means for measuring the distance between said point and the point of incidence of said beam on said specimen.



2,439,645
PREPARATION OF MULTIEND YARN PACKAGES
Wright Bolton, Jr., New Bedford, Mass.
Application September 12, 1944, Serial No. 553,676
13 Claims. (Cl. 28—72.5)

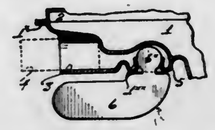
6. That method of warping single-strand or untwisted glass yarn or yarn which is similarly inextensible so as to protect the yarn from abrasion by the heads of the warp beam during winding and unwinding, which comprises arranging the inextensible yarns to form a plain warp sheet, disposing a plurality of yarns of relatively extensible material to form cushioning selvages for said warp sheet, and simultaneously winding the inextensible and extensible yarns on a warp beam.

12. A warp mounted on a beam having a rigid barrel and spaced heads, said warp consisting of a great number of single-strand, untwisted glass yarns each wound to form a coil, the radial faces of adjacent coils being in contact and the endmost coils being spaced from the respective beam heads, and a plurality of coils of organic textile yarn interposed between the beam heads and the radial faces of the endmost yarn coils to support the endmost coils and to prevent them from breaking down.

2,439,646
SHARPENER FOR DOUBLE-EDGED RAZOR BLADES WITH AUTOMATIC BLADE-TURNING MEANS
Rolla B. Rostwick, Pittsburgh, Pa.
Application November 7, 1946, Serial No. 708,294
1 Claim. (Cl. 51—86)

A razor blade sharpener comprising a framework, a pair of sharpening rolls rotatably mounted in the framework intermediate its ends, a bracket pivotally mounted on the framework, adjacent to the outer end of the bracket and one end of the framework, a spring yieldably urging the inner end of the bracket toward the rolls, a holder rotatably mounted on the inner end of the bracket, on an axis parallel to the axis of the rolls, means on the holder for releasably connecting a double-edged blade thereto in position for engagement with the rolls, a gear wheel carried by the bracket, a crank having driving connection with the rolls, and a segmental gear element carried by the crank, in position to engage the gear wheel and raise the inner end of the bracket and also impart a one-half revolution to the holder during each revolution of the rolls.

2,439,647
PHOTOELECTRIC TUBE AND METHOD OF MANUFACTURING SAME
Arthur Bramley, Long Branch, N. J., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application July 21, 1945, Serial No. 606,436
6 Claims. (Cl. 250—165)

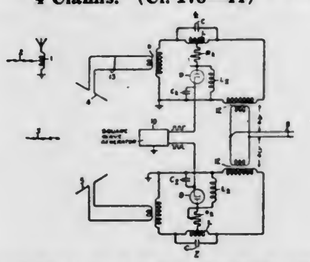


1. A photoelectric tube of the gas-filled type comprising a cathode having a photo-sensitive surface formed upon a base metal, said surface comprising a layer of mosaic silver formed upon the base metal from reduced silver oxide, a layer consisting of a mixture including calcium deposited upon said mosaic, a layer of silver oxide formed upon and within said mixture, a layer of calcium deposited upon said silver oxide, and an outer layer of cesium deposited upon said layer of calcium.

2,439,648
CYCLONITE PURIFICATION
Jerome G. Burtle and Wilfred H. Brandt, Alton, Ill., assignors to Olin Industries, Inc., a corporation of Delaware
No Drawing. Application September 25, 1944, Serial No. 555,764
14 Claims. (Cl. 260—248)

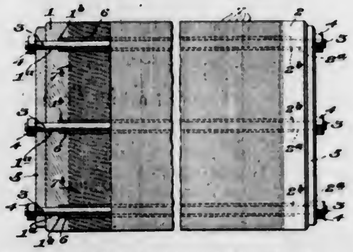
1. The method of treating cyclonite comprising poaching the same in an aqueous bath containing acetone and a nitroparaffin.

2,439,649
TOY PROPELLED BOAT
Irwin Cohn, Leominster, Mass.
Application June 4, 1946, Serial No. 674,276
1 Claim. (Cl. 46—93)



A toy boat consisting of a hull formed of light sheet plastic, the rear of the hull being formed with a tube adapted to receive a propelling chemical, and the hull likewise being provided with an internally projected flexible plastic ring, integral with the hull structure, in combination with a rudder formed of a flat piece of plastic having an upwardly projected disk formation adapted to snap into the ring whereby the edges of the disk will be frictionaly engaged by the ring to hold the rudder in adjusted positions.

2,439,650
METHOD OF MAKING GRANULES
Charles W. Cuno, Wilmington, Ill., assignor to The Lehon Company, a corporation of Illinois
No Drawing. Application January 28, 1944, Serial No. 520,135
12 Claims. (Cl. 117—100)

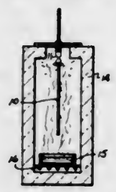


1. The method of making hard weatherproof granules for covering material comprising the steps of mixing expanded slag granules with a solution of magnesium fluosilicate in direct contact with the granules, adding thereto and mixing therewith a substance providing lime for reaction with said magnesium fluosilicate, and thereafter adding and mixing therewith a pigment, thereafter continuing agitation of the coated granules until the coating has sufficiently set to prevent adhesion of the granules to one another.

2,439,651
ATTENUATION CONTROL NETWORK
Robert B. Dome, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application August 9, 1943, Serial No. 497,918
4 Claims. (Cl. 178—44)

1. In combination, a high frequency transmission channel, a parallel combination of inductance and capacity connected in series with said channel and resonant at the frequency of waves to be transmitted therethrough, a source of variable voltage, means to interrupt transmission of waves of said frequency through said channel in accord with said voltage, said means comprising an impedance connected between the midpoint of said inductance and the opposite side of said circuit, and means to vary said impedance in accord with said voltage.

2,439,652
CUTTING BLOCK
Leo F. Exley, Johnson City, N. Y., assignor to Endicott Johnson Corporation, Endicott, N. Y., a corporation of New York
Application June 20, 1946, Serial No. 678,135
6 Claims. (Cl. 164—58)

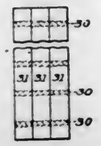


1. A cutting block, comprising a pair of end plates; a series of spaced rods extending through holes in the end plates; means on the ends for drawing the end plates towards each other; tubular sleeves around the rods each having their ends entering enlargements of the holes in end plates; and a series of thin laminations disposed edgewise between the end plates and of same height and width as the end plates, said laminations having holes receiving the sleeves and having preformed offsets between the holes whereby the offsets of adjacent laminations will nest in exact register when the laminations are held compressed between the end plates.

2,439,653
FINGER STALL
William J. Forbes, Joplin, Mo.
Application March 21, 1947, Serial No. 736,226
6 Claims. (Cl. 294—25)

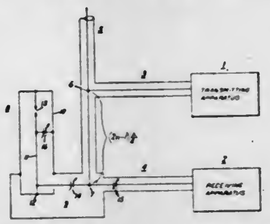
3. A finger stall of the character described including longitudinally extending, relatively rigid non-elastic portions disposed in circumferentially spaced relationship relatively to one another, and transversely disposed longitudinally spaced portions connecting said longitudinal portions and formed of relatively elastic material, said finger stall being tapered from end to end thereof and being provided at its restricted end with an annular tip portion formed of a relatively elastic material and to which corresponding ends of said longitudinal portions are secured.

2,439,654
METHOD OF SILVERING SURFACES
Romey A. Gaiser and Paul T. Mattimoe, Toledo, Ohio, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application September 18, 1943, Serial No. 502,916
10 Claims. (Cl. 117—47)



8. The method of producing a metallic coating on a synthetic organic plastic surface, comprising exposing said surface to the vapors of the tetrachloride of an element of the fourth group of the periodic table having an atomic weight between 28 and 48, wetting the surface so exposed and forming a coating of metal on the wetted surface by the application of a mixture of a silvering solution and a reducing solution thereto.

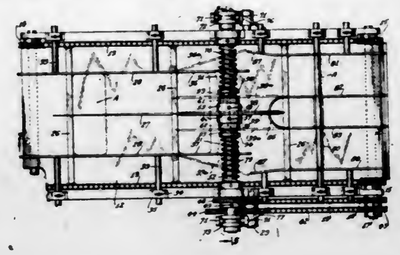
2,439,655
SPLICED LUMBER
Harry C. Graham, Pittsburgh, Pa., assignor to Pittsburgh Screw & Bolt Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application March 16, 1944, Serial No. 526,693
1 Claim. (Cl. 20—91)



A prefabricated wooden construction unit comprising a plurality of side-by-side rows of pieces of lumber of varying lengths, which pieces

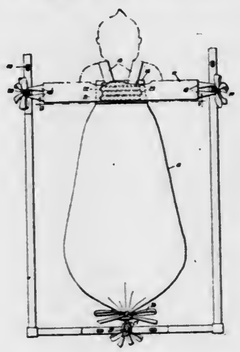
are arranged in end-to-end relationship in said rows, said unit having a plurality of holes extending transversely therethrough and spaced longitudinally thereof, a plurality of driven metallic screw threaded dowels extending

through said holes, the diameter of said holes being approximately equal to the root diameter of said dowels, the threads of said dowels having sufficient steepness of pitch so as to cause rotation of said dowels when driven through said holes.



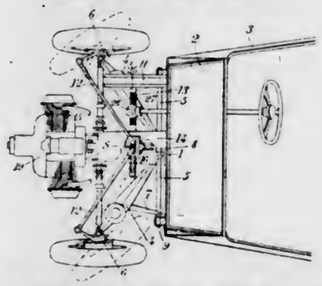
2,439,656
RECEIVER PROTECTIVE DEVICE
Walter Hausz, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 17, 1942, Serial No. 455,050
7 Claims. (Cl. 250—13)

1. In combination, a transmission line, apparatus connected thereto and operating with respect to oscillations transmitted over said line said line being subjected to high voltages of a certain frequency, mean to protect said apparatus from said high voltages, said means comprising a stub line having a length equal to a quarter of a wave length, or odd multiple thereof, of oscillations having the frequency of said high voltages, said stub line being short-circuited at one end and having points spaced from said short circuit connected to opposite sides of said transmission line through a capacitance, and an impedance across the opposite end of said stub line having high value to low voltages and low value to said high voltages, said capacitance having such a value as to resonate with the inductance presented by said stub line when said impedance is low, whereby said stub line and capacitance produce a short circuit across said transmission line during high voltages thereon and high impedance across said line in the absence of said high voltages.



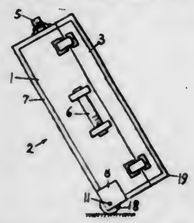
2,439,657
SLICED LOAF DIVIDING MECHANISM
Joseph Hexter and William E. Lanham, Atlanta, Ga.; said Lanham assignor to said Hexter
Application September 12, 1946, Serial No. 696,420
10 Claims. (Cl. 146—153)

1. In an apparatus of the character described, a conveyor for a previously cut loaf, a pair of parallel members normally in face-to-face contact having edges to engage the cut in the loaf, means for moving said members to shift the engaged sections of the loaf apart on the conveyor, and guides receiving the shifted sections and



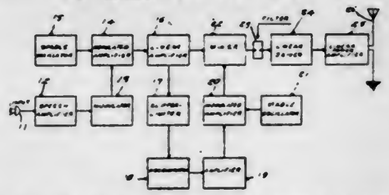
maintaining them in spaced apart relation on the conveyor.

2,439,658
BED GARMENT FOR INFANTS
Irma Holloway, Cedar Rapids, Iowa
Application May 4, 1946, Serial No. 667,301
1 Claim. (Cl. 128—134)



In a bed garment for infants the combination with a fastening band having means at its ends for securing said ends to a bed, of a wrap-around flexible overlap body band adapted to be fastened together at its ends, means connecting the body band to one face of the fastening band to permit a limited relative movement thereof laterally in either direction while said fastening band extends across the bed, said means comprising a pair of separated rolling tapes adapted to occupy parallel planes, the opposite ends of adjacent tapes being secured to the fastening band, with the other end of each tape being secured to said body band to permit a limited lateral movement of said body band relative to said fastening band, a pair of shoulder straps affixed at one end to said body band and adapted to be passed over the respective shoulders of the infant and to be attached at the other end to said body band, a skirt secured substantially along its entire upper edge to said body band, whereby stress on said skirt is received by said body band, the waist end of said skirt being split longitudinally and overlapping at its split edge in conformity with the overlapping structure of said body band for wrap-around cooperation of said skirt with said body band, draw string means for closing the other end of said skirt, and tie string means at said other end of said skirt for securing said latter skirt end to the bed.

2,439,659
VEHICLE CHASSIS BRACKET STRUCTURE AND WHEEL SUSPENSION AND ENGINE CONNECTIONS THERETO
Maurice François Alexandre Julien, Toulouse, France
Application March 6, 1945, Serial No. 581,321
In France November 22, 1944
12 Claims. (Cl. 180—43)



11. An automobile vehicle which comprises, in combination, a chassis, a plurality of wheels including right and left wheels of a pair of wheels, a cross member belonging to said chassis located inside the wheel base of said vehicle, two brackets carried by said cross member on either side of the middle plane of symmetry thereof and extending toward the wheels of said pair, suspension means interposed between each of said wheels and said chassis, said suspension means including at least one transverse spindle carried by said cross member on the same side thereof as said wheels, at least one oscillating arm pivoted at one end to said cross member about said spindle and carrying the wheel at the other end, and a spring interposed between said arm and one of said brackets respectively for elastically opposing upward displacements of said arm, the two arms in question forming a V the apex of which is located in the longitudinal middle plane of said chassis, a third bracket carried by said cross member at the middle part thereof and extending toward said pair of wheels, and an engine for said vehicle carried by said third bracket and located in opening of said V.

2,439,660
WHEELED TRUNK AND THE LIKE
Rudolph Keil, Pelham Manor, N. Y.
Application June 19, 1946, Serial No. 677,860
4 Claims. (Cl. 280—37)

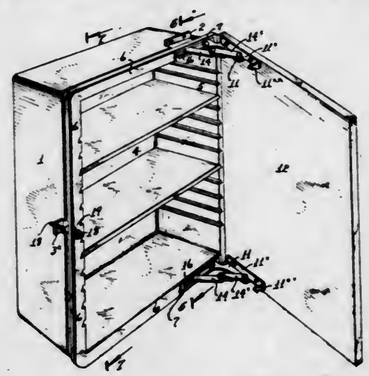
1. A trunk or the like, comprising a portable container having a recess at one of its outer edges, a shaft carried by said container and crossing said recess, a lever carried by said shaft and turnable relatively to said container in a plane substantially perpendicular to said edge, and a wheel rotatably carried by said lever and having an axis positioned eccentrically with respect to the turning axis of said lever whereby turning of said lever shifts said wheel axis between two positions, one nearer to said edge than the other, said wheel having a diameter so measured that said wheel projects out of said recess when its axis is in said first position and is completely withdrawn into said recess when said wheel axis is in said other position.

2,439,661
SYSTEM FOR TRUE AMPLITUDE MODULATION OF RADIO WAVES
Donald B. Keever, Colfax, N. C.
Application October 17, 1947, Serial No. 780,315
10 Claims. (Cl. 179—171.5)

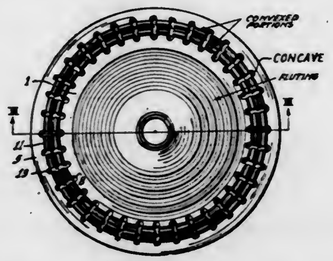
1. A modulation system comprising a source of signalling currents, a first source of carrier frequency, modulating means arranged to modulate the first carrier source with the signalling currents, limiting means responsive to a portion of the modulated currents and arranged to remove amplitude modulation therefrom, frequency discriminating means responsive to the limiting means and disposed to produce an output whose magnitude is substantially proportional to the frequency deviation of the limited currents from the first carrier frequency, a second source of carrier current, further modulating means arranged to modulate the current of the second source with the output currents of the discriminating means, and mixing means disposed to combine the currents of the two modulating means in such degree and in such phase relationship that a modulated current is produced consisting in its entirety of a third carrier frequency modulated in amplitude and unaccompanied by extraneous currents of side-band frequencies.

2,439,662
CHUCK AND FACEPLATE FOR GRINDING MACHINES
Frederick Kidd and Thomas Dargue Kidd, Stockton-on-Tees, England
Application September 28, 1945, Serial No. 619,082
In Great Britain June 30, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires June 30, 1964
4 Claims. (Cl. 51—209)

1. A grinding device comprising a chuck having a casing externally screw-threaded and internally tapered, a split externally tapered ring disposed within said casing, a face grinding wheel disposed within said split tapered ring, a lining of fibrous material interposed between said ring and said wheel, a screw-threaded nut on said casing provided with an internal flange for abutting one end of the said tapered ring whereby when the nut is screwed on to the casing the tapered ring is moved along the internal tapered portion of the casing and compressed, the said tapered ring being provided internally with inwardly directed projecting means and the said face grinding wheel being recessed on its outer periphery to be positively engaged by said inwardly projecting means on the said tapered ring whereby axial movement of the wheel in the chuck is restrained.



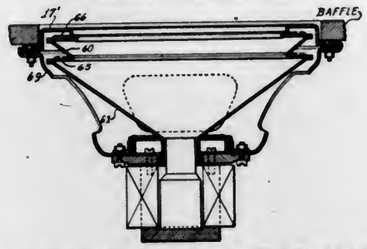
2,439,663
SYSTEM FOR NAVIGATING AIRCRAFT
Harold M. Lewis, Allenhurst, N. J., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application February 26, 1942, Serial No. 432,430
4 Claims. (Cl. 343—104)



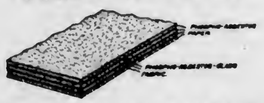
1. A system for navigating an aircraft along a prescribed course toward a carrier-wave reflecting surface to effect a landing operation thereon comprising, a pair of carrier-wave radiating systems each supported in spaced relation above a carrier-wave reflecting surface, means for applying a frequency-modulated carrier wave to each of said radiating systems for radiation therefrom, means carried by said aircraft and adapted to receive the carrier waves radiated by said radiating systems and responsive to the difference frequency of carrier-wave energy traveling directly and by reflection from said carrier-wave reflecting surface from each of said systems to said receiving means for deriving for each of said radiating systems a control signal, each of said radiating systems having the characteristic that its equal-valued control-signal loci are represented by geometric surfaces of revolution, and means for simultaneously utilizing a preselected value of each of said control signals to aid in the navigation of said aircraft along said prescribed course to effect said landing operation.

2,439,664
GLASS-LINED METAL SHELF WALL CLOSET
Adolph Marchand, Jackson Heights, N. Y.
Application January 27, 1945, Serial No. 574,924
3 Claims. (Cl. 312—112)

1. A cabinet for bathrooms and the like, comprising a member having upper and lower walls and sidewalls and being adapted to be set in a wall with its front edge substantially flush with the wall, said member having spaced flanges apertured to receive fastening elements, a unitary glass member disposed in said wall-inset member and having upper and lower walls and sidewalls and a flange around its entire frontal periphery adapted to abut and conceal the edge of the wall-inset member, a pair of box-like holding members fitted in apertures formed in the flange of the glass member, said holding members having a plurality of apertures and having angular lateral flanges overlapping the said flange of the glass member, and fastening members extending through the said apertures of the box-like members and through the spaced flanges of the wall-inset member so as to lock the glass member to the wall-inset member.



2,439,665
SOUND REPRODUCING DEVICE
John F. Marquis, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 31, 1944, Serial No. 520,496
2 Claims. (Cl. 181—31)



1. In a mass controlled sound reproducing device of the direct acting type, an acoustic diaphragm of fibrous material having a stiffened central conical surface portion, a peripheral clamping portion and an intermediate flexible portion integral with the other of said portions and comprising a plurality of embossings extending at least in part in circumferential relation to said central portion for increasing the compliance of said intermediate portion in a radial sense, and a plurality of spaced radial embossings for increasing the circumferential compliance of said intermediate portion at its inner periphery, said radial corrugations each being non-linear in a plane normal to said intermediate portion, said flexible portion constituting a relatively small proportion of the total area of said diaphragm although characterized by a high degree of compliance in the suspension of the base of said central conical surface portion.

2,439,666
LOUDSPEAKER DIAPHRAGM SUPPORT
